There were two ways we could have gone about this. One was on the basis of these surveys; the other was directly from data on enlistment and how enlistments varied as a function of how many people were being drafted. Over time the number of draftees in a given year change. As draft pressure goes up this would have the effect of inducing more volunteers. The numbers we used in our study were the most conservative estimates of true volunteers. That led to a number on the order of 800,000 more true volunteers in the first term of service in 1967 and a similar number really in 1965 before we were involved in Vietnam. So that the Commissions estimates were about 2¼ million or 2 million in terms of the number of true volunteers that exist today and existed in 1965.

When you are talking about armed forces of the size of 2 to 2½ million you are really not talking about many more volunteers than we have now. And the problem there is essentially the problem that Professor Friedman had mentioned; that is we have to get the pay increased enough to encourage additional volunteers in that first-term to fill out this difference and that is not a very large number even if we go to the largest force conceivable, which is 2½ million. In that connection, I should add since the Com-

mission study it has become clearer and clearer that the size of the force that will in fact exist as a permanent peacetime force is likely to be on the smaller side of the estimates we used and not on the larger side. That will make it even easier to achieve the all volunteer force.

Similiarly, in the transition period the announcement has already been made that draft calls for the rest of this year will be reduced to 10,000 a month. If that level of draft calls is continued for the next year you are talking about drafting 125,000 in a year. There will be over 2 million who turn 19 next year, so you are talking about drafting 1 in 10 males. The situation also gets worse as time goes on. The number of 19 year olds will be close to 2½ million by 1980. By that time if we continued the draft we will be probably drafting something on the order of one out of 15 or 20 males. So the discriminating form of tax that Milton talked about will become more discriminatory over time as the male population in this age category increases.

Another important fact that I think people are not aware is that a military of a size of 2½ million in 1975 will be the same size of the one and a half million manned force in 1950—relative to the male population of males who are eligible for military service.

I might add one other thing: The number of volunteers that are now in the military, has an important implication for the allegation that Senator Hatfield mentioned about a mercenary force. The fact is that the mixed force we now have is largely mercenary, to mean by mercenary the people are there voluntary. The present force, especially the officer corps, are virtually entirely mercenary. No one would really claim I think that somehow that is immoral that the majority of our officers and non-commissioned officers are there on a volunteer basis.

I'd be glad to answer any other question you have in respect to the Commissions report. The Commission staff is publishing very shortly—I hope by the middle of August—a thick volume of about 1200 or 1300 pages of backup studies, which led to many of the figures in the Report itself. The papers which were done by various people around the country. The Report will be included that backup study

---

SPEECH BY SENATOR HATFIELD

I'd like to extend to you a word of greeting, as you undertake this conference on the draft. A subject which has been dear to my heart for many years. There is really little that I could add to this as far as the rationale for developing the volunteer military than what already has been offered by the brilliant discourse of Dr. Friedman. I can only indicate that since the years that I filled out hundreds of SS forms 109 for the male students on the University campus where I was serving as dean, I was made much aware of the inequity of the so-called student deferment part of the SS program. The variations that occurred there within the different majors and yet that was not a part of the consideration given to the position that the males found themselves in grade averages whether you were a physics major or a music appreciation major made little difference or whether you came from High School that had great demands upon academic achievement or little demand. And so from those days back in the 50's on through, I have been, as I say deeply involved in the equities that were so apparent in the Selective Service System. In fact, I think the very title itself indicates the discriminatory character of the system. I want to say this morning that there has been very few people who influenced me more than Dr. Friedman's very outstanding participation in this discourse for these many years, because when I came to the Senate in 1967 I introduced the first bill for the repeal of the Selective Service program. And then followed that with another bill in 1969 but now we have behind us and undergirding our efforts the Gates Commission Report which was unanimous as you know and which will be given in greater detail I suppose as you go throughout the day by the gentlemen present. With this Gates Commission, we introduced a new bill to incorporate the exact language as we could and to translate that Commission Report's recommendation into legislative language. I say it was unanimous and this included not only the civilian members but General Gruenther and General Norstad as well. I think sometimes we find ourselves in this basic argument today or debate with the echelons of politics as sort of the old conundrum we hear so often about the military-industrial complex that it is the military versus the civilian. Well, this of course is a very superficial observation if one makes that because we find that really some of the greatest support for a voluntary military comes from within the military organization, and military leadership.

Navy Magazine talked about personnel turbulence upon occasion which they indicated was the single most important problem they faced as a military organization, because of the high rate of turnover they found was part of their problem. I would say today that the prestige of the military is greatly called into question and I think it is unfairly attacked from many quarters. I decry those who use the military as the scapegoat for many of their differences about political issues or political policies. I think one of the things we can do most significantly of all is to restore the military as the rightful arm of the defense of this nation. And to establish it on a voluntary basis. I think by removing one of the most important of all the targets of attack, mainly the draft, we could do the most to reestablish the rightful prestige the military should have in our country, I reject totally those who fear the military eliteism which a so-called professional mercenary army, they like to phrase it, would bring about. I reject that not upon an opinion only but upon the history of this country, upon the Constitution the way this Constitution guarantees our civilian control. Now we have the problem of the ROTC today which I think is often brought into focus, which I feel again is one of the most important parts of our military training program. The same people who fight ROTC are contradicting themselves when they say we want less militarism in this country. While the more we have of civilian involvement in civilian exchange and civilian environment, the greater we will find the military integrated into our total society. I have absolutely no fear, after all, we do have the records of our history of this county to point to as the reasons why we need not fear the military in this country. I think that we have to face up to the reality that the draft will expire in June 1971. We are going to be pushed up against the wall if we do not have any alternative program to present to the Congress and to adopt by the Congress before we face that deadline. If we do nothing in the Congress at this point we will find ourselves in with the only proposition presented to us and that is to extend the draft for another period of time.

So, I say that this is the time, this is the moment when we as a Congress should be undertaking an action which will provide us with other than up against the wall situation of extending the draft for another two years.

I think your conference and the understanding and the knowledge that you will gain from this conference by your distinguished panel members will be very important to our efforts on the Congressional side. Senator Goldwater is the main co-sponsor of my amendment and together we will wage this battle as we have waged battles together on previous occasions and the thing that I think is most interesting about this particular situation is it transcends all political philosophies, all political labels. We have one common cause here and that is for the basic freedom of this country, that we believe in and for an efficient military organization, which Professor Friedman has indicated already, cannot be efficient or effective under the present system of conscription. I would close my comments to you this morning by merely saying that I am most pleased to be able to be here this morning, to welcome your efforts and to ask for your support. We need your help. We will take this as an amendment procedure, directly to the floor of the Senate and I think when young people have involved themselves within the processes of Government which you have to intelligently and peaceably go about making your voices heard. It will be very effectual influencing and creating interest on the part of those in the so-called establishment, and I commend you therefore on establishing the means of communication and of expressing your opinions and moving those opinions into action. I am grateful to have a chance to be here this morning and thank you very much for your invitation.

SPEECH BY SENATOR BARRY GOLDWATER

Mr. Chairman and distinguished guests, I'm here today to tell you that the voluntary military proposal will definitely be brought to the Senate in this session. And what's more I think it has an excellent chance of passing. Now it may not stay in the bill as it comes from conference with the House. But the advantage of having one house act on it is that when it comes up again we know the position of the upper house and that helps a lot.

This plan now has fifteen votes that we can count on. We have that many Senators who are sponsors of the bill. We added Senator Proxmire just a little while ago. And I know several more that have the position for it, but they've not taken it publicly.

I want to make it clear that we are serious about this effort. It is not just something that we're trying to do to placate or trick the young people of this country. It is being done because we feel it is in the best traditions of our country. And it's a normal way of life under our system of government. In fact, up to the time of the Civil War there had never been a compulsory system of military service, in the United States. I might add that Napolean was the rascal who dreamed this all up in the last of his wars. He conscripted everything in France, including horses and women.

The involuntary draft first appeared in this nation in 1863. After that it was dropped and didn't show up again until 1917, when it was used and then, of course, it was dropped after the war. In 1940, the draft came again; it was allowed to expire in 1947. But one year later the Congress passed a draft law and that one is still with us. It stays until the end of June next year, at which time if it is to be renewed, the Congress will have to do it.

I think in the brief history you can see that the fact that the draft has continued since 1946 is contrary to the entire past history of the United States. This practice that has no place in our system of freedom except as a temporary expedient.

Now when the law is used to tell a young man how he shall spend several years of his life, this causes an invasion of the most precious and fundamental of human rights, the right of each citizen to live his own life, or as you young people say today to do your thing. And to do this as you may choose. This is why as a conservative I am so strongly and emotionally committed to the voluntary military approach. Not only do I believe that the draft is wrong, but I also believe it is ignorant to assume that free men have to be forced to fight for their country. I'm just old fashioned enough to believe that there is still a great many Americans among us who think enough of their

freedom that they are willing to fight for it. Furthermore, I think the rest of the Americans are willing to pay those who serve in the military a good and ample wage with fringe benefits for shouldering the task.

I would remind you this morning that this is not a new cause to me. I might say that I came to the conclusion to support this position during the last five years of my military service of 37 years as a reserve officer, during which my assignment was Deputy Chief of Staff for Personnel for the Air Force. As I watched the inefficiency of maintaining the draft I became convinced that we had to institute a different system. In acting on this belief I helped to draft the Republican National platform in '64, which pledged to end the draft altogether and as soon as possible. Also, I remember the very first speech of that cliff-hanging campaign I was engaged in in 1964, when I strongly endorsed the Voluntary system.

Since then we have heard a lot of talk about the plan, but all too often its been discussed in only an academic way. Now in 1970 the picture has changed. The opportunity for dismantling the draft is a real one. Now, all of you here I believe have heard of the findings of the Gates Commission—that is the Commission that was organized under the direction of the President to reach some conclusions on this issue. Their conclusion—to put it briefly—is that a Voluntary system will work.

In fact, it is not all that drastic a change in the system that we have right now. The truth is that our current military forces are made up predominantly of Volunteers. This is something that many people don't realize. We have in my state of Arizona for example such a large number of Volunteers that our draft call in many months has practically been non-existent.

According to the Gates Commission the great majority of servicemen are either individuals who have reenlisted after their original obligation had ended, or first-term enlistees who say they would have enlisted even had there been no threat of the draft looming over their heads. The existing base of volunteers is so large that the Gates Commission found, and I quote, "A fully Volunteer Force of 2.5 million men can be achieved by improving pay and conditions in service sufficiently to induce approximately 75,000 additional young men to enlist each year." Now let me repeat, all it would take to put a fully Volunteer Military force into operation is an additional 75,000 volunteers each year. And I feel this can be achieved.

I disagree somewhat with the cost estimates, the cost estimates say here it would cost no more than 3.2 billion in the first few years and would soon drop to 2.1 billion, once a voluntary force began operating on a continuing basis. Really the reason I was originally interested in this proposal was during my annual tours of duty with the Air Force in Personnel in the Pentagon. I was astounded at the amount of money that it cost just the Air Force alone each year to retrain a man for a slot that had been vacated by another man. This training in a four year term can run as high as $250,000 in the case of enlisted men. In the case of officers it can be double that amount. In fact, you may not know it but in a B–52 first-term pilot we have invested about a million dollars in training. The average enlistee or draftee that goes through let's say training in electronics at Kiesler Air Force Base has over $80,000 invested in him. Now if he dropped out somebody has to fill that slot and the estimate that I came up with, just looking at the figures that I had available was that it would save the Air Force alone about 2 billion dollars a year, if we could have men that we could keep. We have to note that the Commission study doesn't fudge at arriving at its estimates. Contrary to what some critics have said the Commission took full account of the problem which the army had in staffing itself in competition with the other services. The Commission wisely set its compensation tables at levels high enough to provide the army with the quantity and quality of volunteers required by it. The Commission noted "The evidence is overwhelming that if compensation is set at levels which satisfy army requirements, the other services will be able to attract enough qualified volunteers to meet their respective requirements."

Now another misleading question that you will hear raised by critics is "What happens in case of a national emergency?" Of course, the answer is that the first recourse will be to the ready reserves, including the National Guard. I have to say in a rather critical way that both of these sources of manpower have not been completely used in the Vietnam situation. Some Air National Guard groups have served in Vietnam, and some Reserve Air Lift Forces have helped, but there are literally hundreds of thousands of people who could have been used, who wanted to be used, but were not called up.

In the event of a national emergency of course we can always go back to the draft system. It takes just an act of Congress to set it in motion. But conscription cannot provide emergency forces, it never has, and I see no way, after 37 years of Reserve service that it can. We can have a sufficient existing reserve to meet any National Emergency. Thus it will be the Reserve forces which will provide immediate support to the active forces. Like the active duty forces the reserve forces will be recruited on a Voluntary basis.

The legislation which we have sponsored will automatically increase the drill pay for reserve participation, at the same time that it provides pay increases for the active component. In my view, this increase will be sufficient to encourage reserve enlistments adequate to maintain a voluntary reserve force which is large enough to support a Voluntary active duty force. Furthermore, our proposal takes the common sense approach of providing for a stand-by draft, in the case of an emergency. Conscription could be reinstituted by an act of Congress, almost immediately, because our plan provides for the continued registration of all young men in the United States even though the draft itself will be done away with.

In closing I want to repeat that the Voluntary Military Proposal is sensible and morally justified. Next week the members of the Senate will have the opportunity to stand up and be counted on this issue. I believe it will be successful. This is a cause whose time has arrived and for those of you who are staff members of either Senators or Congressmen, I think it would be very helpful if you, after listening to these remarks today, and having studied it, to counsel with them. Not too many people, unfortunately, in the Senate understand the draft or how it works—or even why we have it. While many of them have gone through the experience of being drafted, once they are here they forget about it, and depend on the Armed Services Committee, and unfortunately in the Armed Services Committee we don't have real high excitement about even hearings on this Bill. That is why we are going to try the amendment route and if we fail then we have the recourse to the Committee.

Speech of Major General Thomas Lane, Retired

I, in a sense, have been called off the bench to substitute for General Alfred Gruenther who was a member of the Gates Commission. He was unable to be here for personal reasons. So I come to you not as a supporter of the Gates Commission, not as a supporter of the Hatfield Amendment, not as a supporter of the YAF position on a Volunteer Army. I'm a retired Army officer, presently occupied as a newspaper columnist, writing on Public Affairs, so I come to give you my own personal views on the Volunteer Army. I do come before you as a supporter of the Volunteer Army. I've had some personal experience with the draft. From 1957 to 1960 I commanded Fort Leonard Wood, Missouri, which is one of the big training centers, receiving draftees from the North Central part of our country. More than that, I'm old enough to have served in the volunteer army which we had before World War II. So I've had experience both with the draft and with the volunteer army.

While I was at Fort Leonard Wood I saw the inequities of the draft, which Professor Friedman and others have noted. At that time, the Army Field forces at Fort Monroe were studying personnel problems in the military services, including the draft, and I forwarded the study to the Board of Officers with my recommendation for ending the draft or at least changing it very drastically. At that time, the military had set very high standards for the qualification of men to serve in the military We were screening out the poorer specimens from the bottom. This gave us good material with which to work. We had intelligent young Americans who could learn what they had to learn in the military service, and this made the training problem much easier and in a sense less expensive. This was a beneficial aspect of the draft which it seemed to me induced into the military services a certain complacency with its continuation.

I also saw the other aspects of the draft. The effect of the draft when you are taking only a small part of the eligible age population is to build up a popular escape mentality. People start figuring out how they can avoid the draft, the ways in which they can escape military service. It seems to me that this ultimately was building a poor mentality among the youth in the country. What we had done was to take a draft system designed for a general mobilization in World War II and to apply it in peacetime when we were taking a very small part of the eligible age population. Therefore the law operated so that the young man who accepted this military obligation and went into service, in a sense, had the penalty of losing two years of his civilian life (if you regard military service as a penalty), and the man who evaded that obligation in some way or other, escaped the draft. So the law operated to reward the people who avoided public obligation and service. In other words, it rewarded what you might say would be a selfishness and avoidance of public service, and it penalized those who accepted these obligations. I thought this had a very bad effect on our whole population, and I thought we should put an end to it. But at that time, as I say, the way the system was working, it was very hard to change it.

Another aspect of the draft, part of the holdover, was that while we were taking a small part of the population, and could get out of those coming of age each year enough to man the military forces, we continued the World War II requirement of eligibility up until the age of twenty-six. I saw young men who simply hadn't been called when they were younger, who then were called to active duty when they had families, when they were established in their work and in their business, and at the least opportune time. I saw no necessity at all for the operation of a draft in that manner in time of peace. These were the factors which, I say, affected the decision, and it seemed to me the military made a very bad decision in continuing the draft in peace

time. I tried to persuade them to change it, but had no effect.

The role of the draft as I see it is to provide an equitable distribution of the goods of war in time of a general mobilization. Without some such mechanism it is very difficult to mobilize a total population in time of general war, to have everybody go to his best slot, to make best use of the people you have. But I see the draft as having no place in our society in time of peace. I see no excuse for it at all.

Now when you talk about a draft you have to talk about force requirements—Dean Meckling has mentioned some of these—the problem of manning military services. The question of whether we need a draft at all is very intimately related to the kind of national policies we have and the way in which we use our military power. I have felt throughout these years since the end of WWII, that there has never been any need for a draft at all, that it is only the bad military policies which we have followed which have required the kind of manpower mobilization which we have actually had. If you take the situation in Vietnam, and Southeast Asia, you have some 20 million North Vietnamese who were lost to the Communists in 1954. You have among the Thais, the Laotians, the Cambodians, and the South Vietnamese 60 million people who want to be free. It seems to me obvious that those 60 million can beat the 20 million if the U.S. will simply support them. The real history of the war in Vietnam is that we have failed to support the people in South Vietnam and Southeast Asia who wanted to be free and have intervened ourselves in mistaken notions about how to preserve peace; we have caused the war in Vietnam. I see no excuse for ever having any commitment of men to Vietnam. If our power had been used properly there would never have been a war in Vietnam. Now a similar situation exists in Europe. The protection of Free Europe has been achieved by the U.S. nuclear deterrent.

There has never been any danger since the end of WWII that Russia would invade and conquer Western Europe, not while our military deterrent was committed to the defense of Western Europe. We lost Czechoslovakia in 1948. Thereafter the countries of Western Europe formed in the Brussels pact, a self defense organization. We then joined up in NATO and committed our power to the defense of Europe. Now the building of NATO forces which followed was in large measure window dressing. It did a lot to introduce dollars, but from the military point of view it was absolutely unnecessary to protect Europe. Our allies in Western Europe already had, under the Brussels Pact, ample military power to protect themselves. With the American deterrent Europe was secure. So I have felt in the intervening years there has never been any need for the 5 divisions which we sent to Europe in 1950. Those decisions were authorized by the Congress to be sent there only temporarily, to be replaced as fast as possible by divisions of four European Allies. By 1958 the need for those divisions even on that basis had lapsed. They could have easily been returned but then we were embroiled with the politics of Europe and no politician in Europe, of course, would like to increase his military appropriations and divert funds from social purposes when he can get the United States to provide the troops instead. And so we have played along with the politicians of Europe and allowed our men to stay in Europe.

Well, what I'm coming to, on this question of force requirements is that when you add it all up there's no need for the manpower we have in Europe and no need for the manpower the United States has in Vietnam, and that if we use our power properly we can reduce our forces and get well within the limits set by the Gate Commission. The effect of our overcommitment of manpower and the waste of our substance in this kind of war of attrition which we fought in Korea, which we have fought again in Vietnam, is to undermine our confidence and national confidence in the U.S.A. We have the spectacle now of senators saying well you can't win this war there. But how ridiculous it is to say the United States can't win this war. We never had a president who wanted to win the war in Vietnam. They've all said they didn't want to win the war. Of course we can win the war when we have the will to do it. And we have Senators now who are saying that, well, we can't afford to protect the free world. We have to withdraw from our outposts. Of course we can protect the free world. The free world has two thirds of the world's people, it has five sixths of the world's industry, and to say that the free world can't protect itself is utterly ridiculous. But there is a question of how you do it, and we've been doing it the wrong way.

Now if we're going to change and reduce our force requirements as they should be reduced, you then enter upon a question of timing. I say there's no need for this manpower we have in Southeast Asia and in Europe today. It could be brought back, but it takes time to do these things. In Southeast Asia, what we should do is go into Laos and knock the North Vietnamese out of Laos. That will secure the western border of South Vietnam, put an end to the attacks on that country and you'll have peace. In Europe we have to give the countries there whom we have been protecting a chance to build their own military forces to replace our forces which are being withdrawn, and this may take a little time. So there's a question whether we can do all this within the next year, or whether, perhaps, we should delay the time for the establishment of the volunteer army beyond the first of July, perhaps until the first of January, 1972.

About the bill itself, a lot of details have been taken, as Senator Hatfield said, from the Gates Commission. It would seem to me better simply to make in the bill a statement of policy for the volunteer army and put an end to the draft. Then we should call on the Defense Department to propose the amendments to law, which are required to restore the volunteer army. One point about the draft which I think is important is this: we have had a lot of discussion about the division of powers. How far may the president go in the use of the military forces which we have mobilized in time of peace, in defending the interests of this country around the world without committing us to war? There's been great concern about the buildup in Vietnam. It seems to me the draft can be a very useful instrument in this respect. I would think the draft . . . the provision for the stand-by draft should be this: the draft may be invoked by the President only in time of a war declared by Congress. The President, in time of peace should be limited to the volunteer force which he has and can maintain. In time of war, when he needs a greater mobilization, he must go to the Congress for a declaration of war in order to invoke a draft. I think in this regard the draft would be helpful in drawing that line between the presidential authority and the congressional authority.

One other aspect of this that should be considered in a volunteer army is the question of family allowances. As had been pointed out, the problem of getting volunteers for an army is not unrelated to the economic situation in the country. One of the bad aspects of the draft, I think, is that in continuing the war-time provision whereby everyone taken into service was given family allowances, regardless of his age, we have in these years, tended, I think, to promote child marriages. Young people who felt they were in love while the young fellow was going off into service would get married so the wife would get some income. The British, I think, at the time that I was at Fort Leonard Wood, had a different provision. They had a draft law. They said that anyone who was drafted did not get family allowances until he reached the age of 23. A man was presumed not to be married up to the age 23, and if he got married before that time and was then drafted, he got no family allowances while he was in the British Army. In the volunteer army before WWII we had no family allowances except for what we call the top three grades of the seven enlisted grades. So that a young man had to come into the army and had to work his way up through the lower four grades to the third grade from the top before he could draw family allowance. I think its important that in time of a mobilization under a draft that you have family allowances for everyone who is called a servant. In peacetime armies that is not required. I would think it would be very important not to have any such provision.

What we want in a peacetime army are young men who are looking for adventure and want to go out and see the world and learn a trade, find out what's going on in the world, and who are going to come back and get married after they've had their military service. The only provision for family allowances in a career army should be for those who are committed as career men and are going to spend their lives in the military service. This normally will be those in the upper grades. Well, that's the general picture of the draft from the military viewpoint as I see it. My only counsel at this point would be to do it.

DEEP EAST TEXAS DEVELOPMENT COUNCIL, ITS DIRECTOR C. A. "NEAL" PICKETT DEMONSTRATE EFFECTIVE METHOD FOR REGIONAL DEVELOPMENT

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 18, 1970

Mr. YARBOROUGH. Mr. President, for regional development to succeed, there must be cooperation and coordination among all the governmental units, communities, and people involved. It takes a man of great organizational skills to keep a regional development program moving forward and to pacify the natural and historic civic rivalries within a region.

The Deep East Texas Development Council, encompassing 13 counties, is a fine example of a regional development council at its best. Much of this credit, of course, goes to all the people of the 13 counties, who realize that their best interests are served by working through and with the development council.

However, much credit, too, must be given to C. A. "Neal" Pickett, the executive director of the Deep East Texas Development Council.

A former mayor of Houston, Mr. Pickett became director of the Deep East Texas Development Council in October 1967.

Mr. President, the East Texas Eye, in its July 23, 1970, issue, paid tribute to Mr. Pickett, traced his varied and outstanding career, and told of his work with the Deep East Texas Development Council. I ask unanimous consent that the article entitled "Neal Pickett is Mister Deep East Texas Development Council," written by Calvin Oates, be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"NEAL" PICKETT IS MISTER DEEP EAST TEXAS DEVELOPMENT COUNCIL

(By Calvin Oates)

C. A. "Neal" Pickett wears the title of Executive Director of the Deep East Texas Development Council as casually as most persons do a pair of old shoes that have long since reached the stage of being the most comfortable pair of shoes they own.

To those who know him, "Neal" is the Deep East Texas Development Council.

One comes away from the first meeting with "Neal" Pickett with the feeling that this young man of boundless energy and a quick, sincere smile must stand over six feet tall. It is necessary to force ones self to realize that he will soon be 68 years of age and that in cowboy boots he'd stand about 5'6".

He not only possesses the energy and stamina of a young man, he has that rare ability to make the person with whom he is speaking, feel that he is the most important person present and that what he is saying or is about to say is the one thing that he (Neal) has been waiting to hear!

To those involved in local government in the 13 county area of the Deep East Texas Development Council, "Neal" Pickett is a constant source of information and assistance in the involved and complex workings of the numerous state and federal programs whereby local government can secure financial assistance in providing for their citizens.

To comprehend the extent to which "Neal" Pickett can and does assist local governmental agencies, one must realize that by State order, after September 30, 1969, it was decreed that any agency of State or local government, or any organization or individual, which plans to apply for assistance to a project under any of the fifty-one programs listed in A–95 (A Budget Circular which covers any type project that a local government could or would use) must notify the regional clearinghouse (D.E.T.D.C.).

It was recognized that the success of any local program would be dependent upon the early contact between applicants for assistance and the governmental agency (state or federal) which has or control the funds.

This is the point where "Neal" Pickett begins to stand out like the evening star in the galaxy of East Texas.

A born organizer (and educated as one also) "Neal" informs each member of the executive council of the impending request, (each county in the council has one or more members on the executive council) the agency to which the request will be channeled, (state or federal) and to any other agency which may have an interest in the project.

He determines the need for the project, the availability of funds and in untold ways shortens the often lengthly process of some rural area having an adequate water supply or some small town an adequate sewage system.

The magnitude of work channeled through "Neal's" office in Diboll is astounding when one realizes that during the first half of 1970 more than 37 projects were worked through that office.

The projects cover the spectrum from a poultry processing plant, roads, recreational facilities, water systems, sewage disposal to air pollution problems.

Most everyone at one time or another has had to deal with the government in preparing forms, etc., so it can be readily understood how high a stack of papers 37 projects would make.

All this has been accomplished with one assistant and one secretary.

You may wonder, how did Texas manage to coax this man away from some fabulous position in the East. Texas didn't, she raised him!

C. A. "Neal" Pickett was born December 22, 1902 in the City of Houston, a city which he later served as Mayor.

He graduated from Brazoria and Beaumont High School; attended the University of Texas and Northwestern University.

He began to put his formal education of organization and government to practical use upon completion of college by serving as a chamber of commerce manager; then manager of the Insurance Exchange of Houston.

He moved to the position of Executive Vice President of the Lumberman's Association of Texas, the oldest and largest trade association in Texas. There he engaged in selling the FHA to the Lumbermen and Bankers of Texas.

In 1941, "Neal" was elected Mayor of the City of Houston.

1943 saw "Neal" join the Military Welfare Department of the American Red Cross and 30 months overseas in England and Belgium.

After the war years he served as Civil Defense Coordinator of Houston, moving to the position of Director of The Federal Housing Administration of the Houston District. A position he filled until he took the reins of the Deep East Texas Development Council in October of 1967.

"Neal" Pickett has received much recognition and many awards during the years he has devoted to public service.

To name a few, he was awarded the Medal of Freedom, the nation's highest civilian award for his wartime service. He was honored with The Luther Halsey Gulick Award by the Camp Fire Girls, Inc., the Outstanding Young Man Award of Houston, the International Order of The Lion by Lions International (Neal has been an active Rotarian for 41 years).

He is married to the former Margaret Yarborough and they have three children as well as a number of grandchildren. The Picketts are active in the Methodist Church.

Did I just meet "Neal"?

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

DOMESTIC PRICE OF SCRAP GREATLY AFFECTS THE ECONOMY

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to place in the CONGRESSIONAL RECORD the excellent letter sent to me by Allison R. Maxwell, Jr., Chairman, Wheeling-Pittsburgh Steel Corp. concerning the problem of ferrous scrap exports. With the worldwide demand for ferrous scrap increasing, exports have risen and in consequence, driven up the domestic price of scrap.

As ferrous scrap is necessary in making steel, the inflation resulting from the rising domestic price of scrap greatly effects the economy, and it is the U.S. taxpayer who suffers.

As Mr. Maxwell points out, if the U.S. Department of Commerce would impose general export licensing requirements on ferrous scrap exports, the steadily rising prices on domestic ferrous scrap would stop.

The letter follows:

WHEELING-PITTSBURGH STEEL CORP.,
August 5, 1970.

Hon. JAMES G. FULTON,
House of Representatives,
Washington, D.C.

DEAR JIM: Because of your constituency, I am appealing for your help and support in a matter of most urgent direct consequence to American steel producers, and therefore, to all those who depend on the process which insures a strong and stable domestic steel supply.

The U.S. Department of Commerce has failed to exercise its legal authority to impose general export licensing requirements on ferrous scrap exports from United States to foreign mills. Because of a growing worldwide shortage of iron units in the face of an expanding global demand for steel, scrap exports from the United States have been displaying a dangerously upward trend line in recent years.

In the five years from 1964 through 1968, U.S. Exports of ferrous scrap ranged from a 5.1-million ton low in 1964 to 1967's high of 7.6-million net tons. Annual average for the three-year (1966–68) period was about 6.7-million net tons. But in 1969, this average jumped to 9.2-million tons, up 40 percent over prior year, and second highest on record. During the last 12-month reporting period—June 1969 through May 1970—total ferrous scrap exports were 10.9-million net tons. Current annual rate is still higher at 12-million net tons. There have been two immediate results of this:

1. American steel producers have had to dig into their scrap reserves to the extent of 1.5-million tons;

2. The scrap deficit has driven scrap prices up sharply, threatening financial well-being of American companies and stability of employment in American mills, as well as contributing to inflation already rampant throughout our economy.

The Iron Age composite index tells the price story. At the end of June, this year, the Pittsburgh-Philadelphia-Chicago price of No. 1 heavy melting scrap was $41.17 per gross ton. This was an increase of 41 percent over the same period a year earlier. Composite price of No. 2 bundles was $30.83, up 33 percent over the prior year.

I need not remind you that we cannot make steel without using scrap. In 1969, American steel production by means of the Open Hearth and Bessemer Processes totaled 60,934,000 tons. Scrap makes up from 40 to 60 percent of the Open Hearth materials charge. Basic Oxygen Furnace steel production in 1969 totaled 60,212,000 tons. Scrap makes up 30 percent of the materials charge into the BOF. Electric furnace steel production in 1969 was 19,924,000 tons. Scrap makes up 30 percent of the materials charge into the BOF. Electric furnace steel production in 1969 was 19,924,000 tons. Scrap makes up well over 95 percent of the electric furnace charge.

In all, during 1969, scrap steel consumption by American steel producers totaled 76.7 million tons. To demonstrate the cost effect of scrap price increases during 1969, alone, we need only consider that in 1968, approximate cost of the 3,489,000 tons of No. 2 bundles purchased by steel producers was $80.9 million; in 1969, 3,707,000 tons of No. 2 bundles were purchased at an approximate cost of $114.3 million, an increase of some $33.4 million.

As serious as this added financial pressure is, it is only part of the problem. We are now concerned about maintaining adequate reserves of this vital material.

Currently, we are at that time of year when our domestic scrap supplies should be building. Yet, they are not. We now have dropped to a scrap-inventory position of just 5 million net tons, a 3½-week supply. I leave to your appreciation what effects an unexpected interruption—a transportation strike, or a processors' strike, or an auto strike—could have on this scrap position. I need not remind you that we can't make steel without scrap. So, inadequate scrap supplies jeopardize both the jobs of people who make steel, and steel supplies on which our basic domestic and military positions both depend.

It was to insure adequate scrap supplies that basic criteria were set forth on the Export Administration Act of 1969. Three of these were:

A. to alleviate current shortages of basic raw materials, particularly ferrous scrap;

B. to reduce inflationary pressures on the domestic economy; and

C. to protect jobs of employees in steel plants and foundries.

I feel strongly that the time has come for the Department of Commerce to apply provisions of this act. Specifically, my company shares the industry conviction that Commerce immediately impose controls on export of all grades of iron and steel scrap for a minimum period of one year. These controls should limit monthly exports approximately the 1966–68 annual averages of 6.7-million net tons.

Since the need is so pressing; since the authority wisely has been provided in prior legislation—we feel most justified in asking that you urge Secretary Stans and Chairman Paul W. McCracken, Council of Economic Advisors, to review and without delay act, upon industry recommendations.

I recognize that America's international trade position must always be considered. But at the same time, I feel a 6.7-million net ton level would serve realistic requirements of that position without imposing undue hardship on American companies, their employees and their customers.

Further, I recognize the pressures upon your time, especially at this point in the session, but a solution to this problem is too necessary for me to avoid the risk of imposing on your time. With best personal regards, I am.

Sincerely yours,

ALLISON R. MAXWELL, Jr.,
Chairman.

TRIBUTE TO VINCE LOMBARDI

HON. WILLIAM T. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1970

Mr. MURPHY of Illinois. Mr. Speaker, it gives me great pleasure to join with my colleagues in paying tribute to Vincent Lombardi, coach of the Washington Redskins and a great American. Throughout his association with football Mr. Lombardi has displayed the qualities of excellence, courage, discipline, and dedication that are so important not only on the football field but in every aspect of life.

Vince Lombardi first came to public attention as one of the "Seven Blocks of Granite" at Fordham University. He later served as assistant coach to Col. Earl "Red" Blaik at West Point and then as offensive line coach with the New York Giants. In 1958 he left New York to become head coach of the Green Bay Packers and this was where the "Lombardi legend" really began.

Vince Lombardi has become renowned not only for the winning record he compiled as head coach at Green Bay but also for the way in which his players were willing and eager to play their best to win for him. In just one season as head coach of the Washington Redskins, he was able to inspire this same feeling in the players on the Redskin team and give new hope and pride to football fans in Washington. As one who has been a fan of the National Football League since its very early days I know that he is loved and respected by players and fans, no matter where their team loyalties may lie.

Mr. Lombardi is now in the hospital resting after two serious operations. I know that his courage and faith will help him win this battle as they have helped him win so many before.

The thoughts and prayers of both Mrs. Murphy and myself are with him for a fast recovery.

SENATE—*Wednesday, August 19, 1970*

The Senate met at 9:30 a.m. and was called to order by the Acting President pro tempore (Mr. METCALF).

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Let us pray this morning in the words of the late Reverend Frederick Brown Harris:

"O merciful God, whose law is truth and whose statutes stand forever, we beseech Thee to grant unto us, who in the morning seek Thy face, the benediction which a sense of Thy presence lends to each new day. Unite our hearts and minds to bear the burdens that are laid upon us.

"In the vast difficulties confronting the makers of peace in these days so full of tension, restore and strengthen and sustain our souls and lead us in the paths of righteousness: for Thy name's sake.

"We seek in Thy presence a saving experience of inner quiet and certainty.

"With clear eyes, may we see Thee as our Father, our fellows near and far as our neighbors, and ourselves as our brothers' keepers. In that vision splendid of divine fatherhood and of human brotherhood, may we dream our dreams, fashion our lives, enact our laws, build our Nation, and plan our world until this shadowed earth, which is our home, moves in the orbit of Thy redeeming love.

"We ask it in the hallowed name of Him for whose coming kingdom we pray. Amen."

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Tuesday, August 18, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from South Dakota (Mr. McGOVERN) is recognized for not to exceed 30 minutes.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. McGOVERN. I yield.

THE STANDING ORDER ON CALLING OF THE CALENDAR

Mr. BYRD of West Virginia. Mr. President, Senators will note that the Daily Digest does not state with regard to the program, in accordance with the standing order of Monday, that the call of the calendar of any unobjected-to bills which have been cleared on both sides would be undertaken on each legislative day prior to the recognition of Senators pursuant to special orders.

I want to explain this as an inadvertence on my part and as being due to force of habit. On yesterday, when I asked for a special order for recognition of the able Senator from South Dakota (Mr. McGOVERN), I failed to recall that the Senate had entered into a standing agreement on Monday under which the call of the calendar of unobjected-to bills would occur immediately after the disposition of the reading of the Journal

on each remaining legislative day of this session.

I make this explanation so that the majority leader and the acting minority leader will both understand the oversight.

Mr. President, it is my understanding, on the authority of the majority leader, that any unobjected-to bills cleared on both sides today may be called up later during the day following the vote on the pending Brooke amendment and special orders for the recognition of Senators.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. The Senator from South Dakota has the floor.

Mr. McGOVERN. I yield.

Mr. WILLIAMS of Delaware. Does that mean that later in the day there will be a calendar call; that we will lay aside the pending bill, and take up the calendar bills?

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. McGOVERN. I yield.

Mr. MANSFIELD. Only because of the inadvertence. Because of the failure to make the announcement, we think that the pending bill may be laid aside and those measures taken up. As a matter of fact, I do not know that there are any such bills to be called up.

Mr. WILLIAMS of Delaware. I do not know, either, but I think it would be a bad procedure to follow. Therefore, I will now file an objection to calling up unobjected-to bills today. I think it would be much more orderly procedure if we knew in advance when they were going to be called up, because if they are to be called up at any time during the day, we would be back to the old procedure.

Mr. BYRD of West Virginia. I am embarrassed because of my inadvertence. I will make sure it does not happen again.

Mr. WILLIAMS of Delaware. We all understand.

NEW TEXT OF AMENDMENT TO END THE WAR

Mr. McGOVERN. Mr. President, I have asked for time today, on behalf of myself and Senators HATFIELD, CRANSTON, GOODELL, and HUGHES, so that we might announce to the Senate our intention to substitute revised language for the present version of amendment No. 609, widely known as the amendment to end the war.

I want to note, first of all, that the concept of setting a legislative timetable for withdrawal of U.S. forces from Vietnam was first proposed by Senator GOODELL in his bill, S. 3000, introduced in September of 1969. That plan, which I had the privilege of cosponsoring, would have barred the use of funds for maintaining any troops in Vietnam beyond December 30, 1970. Senator GOODELL deserves special recognition for his initiative and for his important contribution to the creation of a viable, responsible means of ending our involvement in Vietnamese affairs.

Our present joint effort—introduced first on April 30 of this year and in slightly different form on May 5—builds on the time-certain disengagement concept with several strengthening variations. The language we are announcing today further clarifies and consolidates the essential provisions of those proposals.

This new draft retains the central purpose of the original version—the establishment of a definite timetable for the withdrawal of all American forces. We continue and reaffirm our conviction that unless such action is taken we must accept the dismal prospect of many more years of brutal and futile warfare. We suggest further that our proposal will reestablish the joint control by the President and Congress over military affairs which was contemplated by the Constitution.

Because several months time have passed since we first introduced the amendment, we have moved the deadline for withdrawal of American troops from June of 1971 back to December of 1971. On this point it is significant that a Harris survey published earlier this week, reflects strong majority support for legislative action to require complete withdrawal by the end of 1971 by respondents expressing an opinion. Some 44 percent of those polled favor withdrawal through congressional action of all U.S. troops from Vietnam by the end of 1971. Only 35 percent oppose this plan, with 21 percent unsure.

The revised language deletes a provision in the original version which would have limited funds to specified purposes after December 31 of this year. We intend no interference with the President's authority to conduct the withdrawal with full tactical flexibility. If there has been any concern over the relationship between our amendment and Commander in Chief powers, it should be quickly dispelled by this change.

The original version assured that funds would remain available past the withdrawal date for assistance to South Vietnam in amounts separately authorized, for arranging the release of prisoners of war, and for the provision of asylum for any South Vietnamese who might be physically endangered by the return of American troops. Those provisions are retained.

As was made painfully clear by the action in Cambodia, the conflict with which our amendment concerns itself must be regarded as regional in scope, including all of Indochina. The new language treats it as such, substituting a single uniform termination date for any military activities by U.S. forces in or over any of the three countries, Laos, Cambodia, and Vietnam. This replaces the separate dates we had previously proposed.

The new language places special emphasis on the search for means to assure joint executive-legislative responsibility over any further actions in Indochina. The Senate vote to repeal the Gulf of Tonkin resolution, seen by many as the sole source of Presidential authority to use military force in Vietnam, underscores the need for a new definition of policy, developed through the collaboration of the White House and the Congress.

The revised amendment incorporates specific procedures for that purpose. It calls upon the President to submit to the Congress any recommendations he might have on the conflict, along with his evaluation of the withdrawal process set by the amendment and any requests for further authority which he deems appropriate. They would be considered by the military and foreign affairs committees of the Congress, which would, in turn, report to the House and Senate, respectively.

It is clear that congressional responsibilities and powers on issues of war and peace are much broader than the simple power to declare war. The amendment itself would implement other constitutional provisions, primarily the power to raise and support armies and the obligation to review all military actions at least once every 2 years.

We have, therefore, eliminated any superfluous reference to a declaration of war in Indochina, and propose instead the use of the more flexible and limited vehicle of a joint resolution for action the Congress might take subsequent to adoption of the amendment. This procedure could, for example, be used upon a determination that additional time might be needed to assure that the withdrawal is completed with maximum safety.

What we seek by this amendment, in short, is to restore a measure of constitutional government to this body and to our parliamentary system.

Before I yield to the Senator from New York, Mr. President, I wish to make one side observation about some of the comments that were made by the Vice President earlier this week with respect to the integrity and the patriotism of Members of this body.

The Vice President said he was not questioning our patriotism, but only our judgment in offering this amendment. I want to underscore the patriotic character of the sponsors of this amendment by stating that more than 80 percent of them are combat veterans who have participated in war at firsthand, some of it very bloody combat, one cosponsor, the Senator from Hawaii (Mr. INOUYE) having lost an arm in World War II.

But whether the sponsors are veterans or not, all of them seek to restore constitutional government. They seek to establish a date certain, so that we can stop the killing in Vietnam, stop the killing in Indochina, stop the bloodbath that is now in progress there, and bring this war to an end.

Mr. President, in order to further clarify the specific changes we have made, I ask unanimous consent that the text we are announcing today be printed at this point in the RECORD, followed immediately by the version introduced on May 5 and the one Senator HATFIELD and I originally proposed on April 30.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

AMENDMENT 609—AMENDMENT TO END THE WAR—NEW LANGUAGE

Section . (a) No part of any funds appropriated pursuant to this Act or any other law shall be used after December 31, 1971,

to maintain or introduce any military personnel of the United States in or over Indochina, unless the Congress (after examination of the recommendations to be submitted under subsection (c) of this section) shall by joint resolution specifically otherwise provide.

(b) Nothing in this section shall preclude the otherwise authorized use of funds in connection with Indochina for provision of assistance in amounts and for purposes specifically authorized by the Congress, for the release of prisoners, and for the arrangement of asylum for Indochinese who might be physically endangered by the withdrawal of United States forces.

(c) Within sixty days after the date of enactment of this Act, the President shall submit to the Congress his recommendations of United States policy in Indochina, including his assessments of both the military and political consequences of the withdrawal required pursuant to subsection (a) of this section, his recommendations on steps to secure the release of United States prisoners of war, and his evaluation of the ability of United States forces to conduct a safe and orderly withdrawal from Indochina by December 31, 1971. It is the sense of Congress that such recommendations (and such supplementary recommendations as the President may elect to submit at a later time) should be examined in the Senate by the Committees on Armed Services and Foreign Relations and in the House by the Committees on Armed Services and Foreign Affairs and that such committees should report their recommendations to the Senate and House respectively.

(d) For purposes of this section, the term "Indochina" shall mean North and South Vietnam, Laos, and Cambodia.

AMENDMENT NO. 605

On page , line , insert the following:

SEC. . (a) Unless there has been a declaration of war by the Congress with respect to any conflict in Vietnam, no part of any funds appropriated pursuant to this Act or any other law shall be expended in connection with such conflict after December 31, 1970, for any purpose other than to pay costs relating to the withdrawal of all United States forces, to the termination of United States military operations in that country, to the arrangement for exchange of prisoners of war with the Government of North Vietnam, to the provision of food and other nonmilitary supplies and services for the welfare of the Vietnamese people, and to arrangements for asylum in friendly countries for Vietnamese who might be physically endangered by the withdrawal of United States forces.

(b) Unless there has been a declaration of war by the Congress with respect to any conflict in Laos, no part of any funds appropriated pursuant to this Act or any other law shall be expended to furnish, after December 31, 1970, to Laos or to personnel of Laos any defense article of any military assistance or advice.

(c) Unless there has been a declaration of war by the Congress with respect to any conflict in Cambodia, no part of any funds appropriated pursuant to this Act or any other law shall be expended to furnish to Cambodia or personnel of Cambodia any defense article or any military assistance or advice.

(d) For purposes of this section, the term "defense article" shall have the same meaning given such term under section 644 of the Foreign Assistance Act of 1961.

AMENDMENT NO. 609

On page , line , insert the following:

SEC. . (a) Unless the Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended in Vietnam after December 31, 1970, for any purpose arising from military conflict: *Provided*, That funds may be expended as required for the safe and systematic withdrawal of all United States military operations, the provision of assistance to South Vietnam in amounts and for purposes specifically authorized by the Congress, the exchange of prisoners, and the arrangement of asylum for Vietnamese who might be physically endangered by the withdrawal of United States forces *And provided further*, That the withdrawal of all United States military personnel from Vietnam shall be completed no later than June 30, 1971, unless the Congress, by joint resolution, approves a finding by the President that an additional stated period of time is required to insure the safety of such personnel during the withdrawal process.

(b) Unless Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended after December 31, 1970, to furnish to Laos any military advisers, or to support military operations by the forces of the United States or any other country in or over Laos.

(c) Unless the Congress shall have declared war, no part of any funds appropriated pursuant to the Act or any other law shall be expended, after thirty days after the date of enactment of this Act, to furnish to Cambodia any defense article or any military assistance or military advisers, or to support military operations by the forces of the United States or any other country in or over Cambodia.

(d) For the purposes of this section, the term "defense article" shall have the same meaning given such term under section 644 of the Foreign Assistance Act of 1961.

Mr. GOODELL. Mr. President, the Senator from South Dakota and I have joined as coauthors of this amendment, together with Senators HATFIELD, CRANSTON, and HUGHES, in announcing a revision of the wording of the amendment to end the war.

The basic language of the revision—barring use of funds for maintenance or introduction of U.S. forces in or over Indochina after a specified date—is language that I prepared. It adopts the concept—and utilizes the format—of my original Vietnam bill, S. 3000, proposed last year. That bill was the first legislation introduced in Congress to prohibit the expenditure of money for keeping any U.S. military personnel in Vietnam after a stated deadline.

I would emphasize that this group of Senators has been unvarying in embracing that concept of cutting off funds by a fixed date in the future, in order to establish congressional responsibility in ending the war.

The revised language prohibits the expenditure of money to maintain or introduce any military personnel of the United States in or over Indochina after December 31, 1971. Indochina is defined as North and South Vietnam, Laos, and Cambodia.

Mr. President, there may be some question about pushing the termination date back to December 31, 1971. I would emphasize however, that from the very beginning, in September of 1969, it was my conviction, that it would take about a year to withdraw all our forces from Vietnam in an orderly and safe manner. That is why, in the original S. 3000, I proposed a fixed date for withdrawal, a little over a year from the time I introduced S. 3000. That is why, last spring, when the five of us, subsequently joined by a total of 24 including the original five, cosponsored the amendment to end the war, we fixed the date approximately a year hence from the introduction of the legislation, taking account of the time that would be required for passage of the amendment.

Mr. President, when I introduced my bill last year, President Nixon said it was defeatist, that he wanted to get the troops out sooner than December 31, 1970. We all want to see our troops out sooner. We all devoutly wish that that could come about. But from the beginning, it has been our position—certainly it has been my position—that Congress should exercise its responsibility in this area in a reliable, sober, and responsible fashion. We could not simply call for immediate withdrawal, because immediate withdrawal was obviously impossible. We feared that those who demanded immediate withdrawal might really find themselves, 2 or 3 years hence, still shouting "Get out now" while our troops still remain there. S. 3000, the blueprint for the amendment, was an attempt to present a feasible means for Congress to exercise its direct responsibility in matters of war and peace.

Unfortunately, the comments of the Vice President in the last few days would indicate, I fear, that the administration is moving toward a confrontation—I believe an unnecessary confrontation—with Congress on this issue. I think it would be far better if the administration had recognized that what the sponsors of the amendment to end the war are saying to the administration is, "Yes, we hail your reversal of policy in Vietnam. We hail the fact that we have started to deescalate and withdraw troops. Any President must bear considerable onus in dealing with this chaotic situation in South Vietnam and Southeast Asia. However, Congress stands ready to share that responsibility with the President. This should not be a political or partisan matter. Almost all Americans today concede that, the war was wrong yet we find ourselves bogged down there, unable to withdraw."

Mr. President, I believe it is important that the amendment to end the war be passed by the U.S. Senate. The revision which we are offering makes it clear that U.S. bombing missions over Vietnam as well as Laos and Cambodia must cease by the termination date of December 31, 1971, and thus plugs a loophole in the existing language, which failed to expressly bar bombing missions over Vietnam from Thai or Guam bases. The revision also omits the language which was added to the amendment to end the war but was not included in my original bill, S. 3000. This language makes reference to Congress declaring war as a preface to the amendment to end the war. We said that, in the absence of a declaration of war, all troops must be out by the fixed date set forth in the amendment to end the war.

The revision thus makes it clear that the sole objective of the amendment is to secure U.S. disengagement from Indochina. The power to declare war is reserved to Congress under the Constitution, in any case. Certainly by putting in

that preface, we did not imply that we would recommend any circumstance known to us or anticipated by us in Southeast Asia, and reason for a declaration of war.

The revision creates a mechanism to give Congress the full benefit of the President's recommendation and advice in deciding upon any extension of the deadline.

It authorizes Congress to extend the termination date by joint resolution—after considering recommendations of the President. The President is required to submit his recommendations within 60 days after enactment, and may submit supplemental advice at any time of his choosing.

These Presidential recommendations would include his assessment of the military and political consequences of withdrawal, his analysis of the ability of U.S. forces to be withdrawn in a safe and orderly manner by the termination date, and his proposals as to the steps to be taken to secure the release of U.S. prisoners. The President's recommendations would be referred to the House and Senate Committees on Armed Services and Foreign Relations, which would be required to report to the Senate and House, respectively.

The ultimate decision of whether or not to extend the deadline, however, would remain with Congress, in accordance with its constitutional responsibility.

Like the existing language, the revised amendment would allow the expenditure of funds for the provision of economic and military aid, the return of prisoners, and the provision of asylum for Indochinese—provided these expenditures were authorized elsewhere.

The revised language establishes a single clear withdrawal deadline for all Indochina instead of the three separate deadlines now in the amendment. Recent events in Cambodia have shown that the war is one conflict that ignores national boundaries within Indochina. This makes separate withdrawal timetables for Vietnam, Laos, and Cambodia impracticable. A single withdrawal timetable for all Indochina is needed, and that is what the revised language provides.

Mr. President, I ask unanimous consent to have printed in the RECORD the text of the revised amendment, the text of the original amendment to end the war, and the text of my original bill, S. 3000.

There being no objection, the text of the amendments and bill was ordered to be printed in the RECORD, as follows:

AMENDMENT TO END THE WAR—NEW LANGUAGE

"SECTION . (a) No part of any funds appropriated pursuant to this Act or any other law shall be used after December 31, 1971, to maintain or introduce any military personnel of the United States in or over Indochina, unless the Congress (after examination of the recommendations to be submitted under subsection (c) of this section) shall by joint resolution specifically otherwise provide.

"(b) Nothing in this section shall preclude the otherwise authorized use of funds in connection with Indochina for provision of assistance in amounts and for purposes specifically authorized by the Congress, for the release of prisoners, and for the arrangement of asylum for Indochinese who might be physically endangered by the withdrawal of United States forces.

"(c) Within sixty days after the date of enactment of this Act, the President shall submit to the Congress his recommendations on United States policy in Indochina, including his assessments of both the military and political consequences of the withdrawal required pursuant to subsection (a) of this section, his recommendations on steps to secure the release of United States prisoners of war, and his evaluation of the ability of United States forces to conduct a safe and orderly withdrawal from Indochina by December 31, 1971. It is the sense of Congress that such recommendations (and such supplementary recommendations as the President may elect to submit at a later time) should be examined in the Senate by the Committees on Armed Services and Foreign Relations and in the House by the Committees on Armed Services and Foreign Affairs and that such committees should report their recommendations to the Senate and House respectively.

"(d) For purposes of this section, the term 'Indochina' shall mean North and South Vietnam, Laos, and Cambodia."

AMENDMENT TO END WAR—OLD LANGUAGE

SEC. . (a) Unless the Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended in Vietnam after December 31, 1970, for any purpose arising from military conflict: Provided, That funds may be expended as required for the safe and systematic withdrawal of all United States military personnel, the termination of United States military operations, the provision of assistance to South Vietnam in amounts and for purposes specifically authorized by the Congress, the exchange of prisoners, and the arrangement of asylum for Vietnamese who might be physically endangered by the withdrawal of United States forces: And provided further, That the withdrawal of all United States military personnel from Vietnam shall be completed no later than June 30, 1971, unless the Congress, by joint resolution, approves a finding by the President that an additional stated period of time is required to insure the safety of such personnel during the withdrawal process.

(b) Unless Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended after December 31, 1970, to furnish to Laos any military advisers, or to support military operations by the forces of the United States or any other country in or over Laos.

(c) Unless the Congress shall have declared war, no part of any funds appropriated pursuant to the Act or any other law shall be expended, after thirty days after the date of enactment of this Act, to furnish to Cambodia any defense article or any military assistance or military advisers, or to support military operations by the forces of the United States or any other country in or over Cambodia.

(d) For the purposes of this section, the term "defense article" shall have the same meaning given such term under section 644 of the Foreign Assistance Act of 1961.

ORIGINAL GOODELL VIETNAM BILL, S. 3000

Chapter 1 of part III of the Foreign Assistance Act of 1961 is amended by adding at the end thereof the following new section:

"SEC. 602A. Presence in Vietnam.—No part of any amount authorized to be appropriated under any Act shall be used after December 1, 1970 to maintain military personnel of the United States in Vietnam."

Mr. McGOVERN. Mr. President, on Monday, August 17, the New York Post published the results of a Harris poll indicating that a majority of the American people now favor this amendment. Curiously enough, the sponsor of the poll, Mr. Harris, actually described it as a resolution of Congress calling for withdrawal from Vietnam by the end of 1971. So he had the revised language even before it was offered, and it is good that he did, because this gives us a test on the new language that is referred to as the resolution introduced by the Senators who are now in the Chamber.

By a vote of 44 to 35 percent, "a plurality of the public would favor a congressional resolution 'requiring that all U.S. troops be withdrawn from Vietnam by the end of 1971.'"

So, for those who follow public opinion polls with some interest, I ask unanimous consent to have the article printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HARRIS: MOST FAVOR VIET PULLOUT BY 1972

(By Louis Harris)

The desire on the part of the American people to see U.S. involvement in the Vietnam war liquidated runs so deep that, by 44 to 35 per cent, a plurality of the public would favor a Congressional resolution "requiring that all U.S. troops be withdrawn from Vietnam by the end of 1971." Such a resolution has been put forth in the Senate by Republican Mark Hatfield of Oregon and Democrat George McGovern of South Dakota.

On the other hand, when asked about the amendment offered by Sens. John Sherman Cooper (R-Ky.) and Frank Church (D-Ida.) which would have prohibited the President from spending military appropriations on U.S. troops in Cambodia, the public came down in opposition by 44 to 34 per cent. The Cooper-Church amendment passed the Senate, but was defeated in the House.

CAMBODIA AND NIXON

The difference in public reaction to these two measures illustrates graphically the state of public opinion following the U.S. ground operations in Cambodia. Despite widespread initial doubts about the Cambodian move, Nixon made good his promise to take American ground troops out by the end of June, and public confidence was restored in the viability of his pledge to withdraw 150,000 troops from Vietnam by next May.

The American people seem to be saying that they are willing to back the President's judgment as long as he gives assurances that it will pave the way for further troop withdrawals and an end to U.S. involvement in Vietnam.

The depth of feeling that this country should get out of Vietnam can be seen in the support for the Hatfield-McGovern resolution. It is ironic that although enough votes were mustered in the Senate to pass the Cooper-Church amendment, the Hatfield-McGovern resolution has been lagging for want of such support.

The patterns of public support and opposition to the resolution requiring withdrawal of all U.S. troops by the end of 1971 captures much of the deep division that exists across the country on the war itself. A substantial number of Americans are undecided on the issue, and neither side has a clear-cut majority.

A cross-section of 1300 households was asked between July 25–30:

"It has been proposed that Congress pass a resolution requiring that all U.S. troops be withdrawn from Vietnam by the end of

1971. Opponents say such a resolution would tie the hands of the President. Would you favor or oppose a resolution in Congress which would require all U.S. troops to be withdrawn from Vietnam by the end of 1971?"

WITHDRAW ALL U.S. TROOPS FROM VIETNAM BY END OF 1971

[In percent]

	Favor	Oppose	Unsure
NATIONWIDE			
By region:			
East	54	26	20
Midwest	45	37	18
South	38	39	23
West	36	40	24
Border States	41	39	20
By politics:			
Republicans	37	42	21
Democrats	46	32	22
Independents	51	38	11
By sex:			
Men	39	45	16
Women	49	26	25
30-49	43	38	19
Under 30	55	31	14
30-49	43	38	19
50 and over	36	36	28

By regions, the East and Midwest combine to provide a plurality in support of the Hatfield-McGovern resolution, despite opposition from the South and the West. Republicans tend to oppose total liquidation of the war by the end of 1971, while Democrats are inclined to favor it. But the marginal difference tipping the scales can be found among people who view themselves as Independents in their politics. Nixon and Wallace voters in 1968 are against the measure, but Humphrey voters are heavily for it.

SEX, AGE SPLIT

Perhaps the most significant divisions, however, are along sex and age lines. Men are opposed to legislation requiring an end to the war before 1972, but women favor such a bill by a wide margin. Older people split down the middle, but those under 30 are heavily for the Hatfield-McGovern bill.

On the Cooper-Church amendment, the balance was tipped the other way, by switches among residents of the Midwest, Democrats and those in the 30-49 age group. Independents, women, young people, and residents of the East stood their ground in support of both Cooper-Church and the Hatfield-McGovern resolution.

This analysis points up that the division over Vietnam at home is close and by no means do either the all-out proponents or opponents of the President's policy have a commanding position. The key turning point in the battle for public opinion clearly will be over the question of U.S. troop withdrawals and whether Nixon is liquidating American involvement in Vietnam fast enough to suit the public's desire to bring American fighting men back home.

Mr. GOODELL. Mr. President, will the Senator yield on that point?

Mr. McGOVERN. Yes.

Mr. GOODELL. Mr. President, I think it is important, when we look at polls, to recognize that the American people do not know about the alternatives available to them for ending the war. They want peace, overwhelmingly. That is clear from every poll that has been taken.

I recall that last year, with respect to my bill, S. 3000, Mr. Gallup conducted a poll that showed that 57 percent of the people favored it and 31 percent opposed it—about a 2-to-1 margin.

The poll by Mr. Harris indicates that a substantial majority of the American people, favor the amendment we have offered in its revised form. But I would say there is a great difference between a poll on a specific suggestion such as this—with a specific date named, and a mandate that Congress exercise its constitutional responsibility to end this war by that date—and support of the President.

Mr. McGOVERN. The Senator is correct.

Mr. GOODELL. This is the case because the American people do not know what the President's plan is. They know that it is a gradual withdrawal. They do not know whether there are any specific dates, other than interim dates the President has already announced.

Thus, a poll of this nature lends specific support for Congress ending the war by a specific date—acting legislatively to do so.

Mr. McGOVERN. I think the Senator's point is well taken.

I yield to the Senator from Oregon.

Mr. HATFIELD. I thank the Senator from South Dakota.

Mr. President, I join with my colleagues this morning, Senator McGOVERN, Senator GOODELL, Senator CRANSTON, and Senator HUGHES, in submitting the new language or the modified language of our amendment to end the war.

I wish to draw attention to one particular aspect of this amendment which I believe is of crucial importance. That is the provision enabling the administration to present to the Congress its own plans and recommendations with respect to Vietnam, and for Congress to examine through its duly established committees the whole issue of disengagement from Vietnam. We all know that there are great uncertainties and complexities involved in the future of our policy in Vietnam. We know that in establishing guidelines for future policy, we need to have careful and thorough examination of all these issues. We cannot correct a mistaken policy of the past by a hasty or rash decision about our policy in the future.

That is why we have proposed that a procedure of hearings be established in order to examine in depth the considerations relating to our future policy.

All of us in Congress want there to be the proper constitutional balance between the legislative and executive branches as we formulate our course of action in Indochina. In particular, we have been searching for the method and procedure by which Congress should play its part, and fulfill the constitutional responsibility it has so long neglected in this process.

We believe that this amendment provides for that opportunity. It puts forth a procedure by which Congress shall play its role, in cooperation with the executive branch.

Seen in this way, the amendment sets forth the goal for our complete disengagement from Indochina at the end of 1971. But more important, it maintains that such a deadline shall be no inflexible or unalterable time; instead, that timetable is actually made contingent upon the process of hearings that are set forth, and upon full consideration of the administration's recommendation and viewpoints. This time frame can be changed simply by a joint resolution of Congress—the same vehicle that was used, in fact, for the Gulf of Tonkin resolution.

Thus, it cannot be said that this amendment in any way hinders our flexibility.

Rather, the amendment advocates the following: If the administration finds it necessary to maintain our troops in Indochina beyond 1971, then Congress should be told why this is necessary, and must give their approval by joint resolution.

In my mind, that is an utterly reasonable approach. It puts forth the time frame for withdrawal that is favored by the majority of the American public, as indicated by the Harris poll and other polls. It allows for Congress to play its Constitutional role. And it provides that our future policy in Vietnam shall be established in a clear and concise manner, restoring our constitutional integrity allowing us to bring this tragic chapter of our Nation's history to a reasonable and perhaps even redeeming conclusions.

Mr. McGOVERN. Mr. President, I believe that completes our time.

I do want to take 1 minute to commend the Senator from Oregon for the excellent statement he made yesterday—a most thoughtful and courageous statement.

I yield back the remainder of my time.

PRISONER-OF-WAR FATE STILL UNCERTAIN

Mr. HATFIELD. Mr. President, it is the middle of the monsoon season in Southeast Asia—a time of torrential rains and steaming heat. The season of dreary, damp heat adds to the discomfort and malaise of those hundreds of Americans who are held in grimly unpleasant detention by the North Vietnamese Communist regime. Their quarters are cramped and their shelter inadequate. They suffer unendurable hardships and do so with little complaint.

We must at all times bear in mind the conditions under which these men exist. We must continue our every effort to win their earliest possible release. Until such time as they are rescued we must do all in our power to make their tenure in prison more comfortable by restoring communications between them and their families on a normal, nonpropaganda basis.

So long as these men are held prisoner, we must not forget them.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The ACTING PRESIDENT pro tempore. The hour of 10 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The assistant legislative clerk read as follows:

A bill (H.R. 17123), to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test,

and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The Senate resumed the consideration of the bill.

The ACTING PRESIDENT pro tempore. The question is on agreeing to amendment No. 821 of the Senator from Massachusetts (Mr. BROOKE).

Time is now under control. Who yields time?

Mr. McGOVERN. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll, and the time will be charged equally to both sides.

The assistant legislative clerk proceeded to call the roll.

Mr. BROOKE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

PRIVILEGE OF THE FLOOR—UNANIMOUS-CONSENT REQUEST

Mr. BYRD of West Virginia. Mr. President, will the Senator from Massachusetts yield for a unanimous-consent request?

Mr. BROOKE. I yield.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that today, during consideration of the amendment offered by the able Senator from Massachusetts (Mr. BROOKE), all staff personnel be excluded from the floor and the lobbies, with the exception of the staff of the Secretary of the Senate, the staff of the Sergeant at Arms, the staff of the majority and the minority and the assistants thereof, the office personnel of the able Senator from Massachusetts (Mr. BROOKE), who is the author of the amendment, members of the Armed Services Committee, and any office personnel that the able Senator from Mississippi (Mr. STENNIS), the manager of the bill, may feel are required to assist him on the Senate floor during debate.

It is, of course, understood that any other Senator could, by unanimous consent, get permission for his staff to be on the floor.

I think I should state that a gallery is set aside for staff personnel of Senators and that it would aid, I think, in expediting matters on the Senate floor and would certainly lend to the dignity of the Senate if, on a very controversial vote, such as will occur today at 1 o'clock, the floor could be as clear as possible of staff personnel—certainly those personnel not needed by their Senators in connection with the pending amendment.

Mr. BROOKE. Mr. President, reserving the right to object, is it the intent of the junior Senator from West Virginia that members of the staff be off the Senate floor prior to the vote at 1?

Mr. BYRD of West Virginia. Mr. President, it is the intent of the Senator from West Virginia—and I would so specifically state—in my request to the Chair that the order begin running now and that it extend throughout the period of debate until the vote is announced on the pending amendment.

The Senator understands that I have in my unanimous-consent request reserved the right of the Senator from Massachusetts to have his personnel on the floor of the Senate.

Mr. BROOKE. Yes; I certainly understand that. I am very grateful for the consideration of the distinguished Senator from West Virginia.

Mr. President, this is an important issue. Unfortunately, many Members of the Senate are not in the Chamber at present and will not be on the floor until it is time for the vote.

It is important to me that as many members of the senatorial staff as possible, who might be able to assist their Senators when they come on the floor, hear the debate and be knowledgeable about the issue in all of its ramifications.

I believe that members of the senatorial staff will be quiet and courteous and considerate. They can be seated at all times.

I frankly see no valid reason why, on this particular amendment, we have to clear the floor. Because I feel that way, I respectfully object.

Mr. BYRD of West Virginia. Mr. President, I am sorry that the Senator has objected to the request. As I indicated, a Senator who wishes his staff to be present on the floor could ask unanimous consent. I would interpose no objection.

Staff members can sit in the gallery to my right, which is reserved for staff personnel. They can meet any Senator outside the Chamber at any time he indicates he wishes to see them.

I do this not because of any personal whim or wish. I present this request in the interest only of decorum and order in the Senate.

I sit in the Chamber day after day, week after week, and month after month when important votes occur. I see staff members of Senators sitting on the floor in the rear corner of the Chamber, and running all over the floor, and up and down the aisles.

Mr. President, I have made this request in order to expedite the business of the Senate and in order to preserve dignity and decorum and order in the Senate. It is not done with any desire to inconvenience any Senator.

As all may observe, the request will enable any Senator who wishes his staff to be on the floor to simply ask that they be given permission to enter the Chamber.

I hope the Senator will not again object.

Mr. BROOKE. Mr. President, the able Senator from West Virginia certainly has my respect. I understand his motive in making this unanimous-consent request.

And I agree with the Senator: We want decorum in the Senate. But I would also point out that in my limited time in the Senate, I have observed that many of the problems we have experienced have come, not so much from the senatorial staff, as from the Senators themselves. I say that very respectfully.

Mr. BYRD of West Virginia. The Senator from West Virginia knows that.

The ACTING PRESIDENT pro tempore. I think it is fair to point out that during this colloquy time is running against the Senator from Massachusetts.

Mr. BROOKE. Mr. President, I generally agree with my distinguished and able friend, the Senator from West Virginia. I would certainly go so far as agreeing not to have any staff members sitting on the floor of the Senate. But I feel so strongly that staff members should have the right to listen to this debate, and they cannot always get into the galleries, since the galleries at the last minute are filled, that I must respectfully object.

The ACTING PRESIDENT pro tempore. Objection is heard.

Mr. BYRD of West Virginia. Mr. President, I wonder if the Senator from Massachusetts is aware of the rule which places a duty on the distinguished Presiding Officer, on his own initiative and without request from the floor by any Senator, to enforce the rules and maintain order in the Chamber. By that rule, a Presiding Officer may take it upon himself to exclude staff members, in the interest of order, and no unanimous-consent request is needed.

I certainly hope, in view of the objection that has twice been voiced by the able Senator from Massachusetts (Mr. BROOKE), that the Presiding Officer will exercise his discretion today and will exclude from the Senate floor the clerks of Senators if those personnel are not on the floor in the actual discharge of official duties.

Often we have a request by the able majority leader, the able minority leader, or another Senator to exclude from the Chamber all except authorized personnel. The difficulty with that request is that when the Sergeant at Arms goes to talk to the clerks of Senators congregated in the corners and elsewhere on the floor, they all say that they are authorized personnel. That leaves the Sergeant at Arms uncertain as to his authority to exclude office staff personnel from the Chamber.

I have no objection to any staff personnel being present to aid their Senators. I realize that Senators do need assistance on the floor from their personal staffs at times. But some Senators have been known to have two, three, or four members of their staff on the floor at any one time. Other Senators seldom have a staff member come to the Chamber.

I must say, with all due deference to the staff personnel who do come to the floor, that the majority of them conduct themselves as they should. They sit in the rear of the Chamber and do not run up and down the aisles of the Senate Chamber. However, some staff personnel do abuse their privilege of the floor, and they can abrogate that privilege individually or collectively. Senators should not permit such abuse of the Standing Rules of the Senate.

If the Senator is going to object—and I respect his right to object—and he has twice objected to the request, I hope that the Presiding Officer today will, on his own initiative, take care to see that staff members who are on the floor are indeed here to aid their Senators, and that otherwise they be excluded from the Chamber and the lobby until the vote is announced; and that those staff members who are here stay in the seats at the rear of the Chamber and remain seated.

The ACTING PRESIDENT pro tem-

pore. The Chair says to the acting majority leader that several rulings of the Chair support the view he is expressing, some of which the Chair will quote:

The Vice President, in 1929, expressed the opinion that a clerk was not entitled to the privilege of the floor for the purpose of polling a committee on a matter.

In 1908, the Chair ruled under a strict application of the rule relating to the privilege of the floor, that a committee clerk on the Senate floor reporting, under instructions, to the chairman when a quorum was not in fact present, was not in the actual discharge of his official duties.

The rule is in the negative. It states:

No person shall be admitted to the floor of the Senate while in session, except as follows:

Then a paragraph at the end of the rule reads:

Clerks to Senate Committees and Clerks to Senators when in the actual discharge of their official duties.

I assure both the Senator from Massachusetts and the Senator from West Virginia that there will be decorum in the Chamber so long as this Senator is presiding.

Mr. BROOKE. I have great confidence in the Chair, as I do in the Senator from West Virginia, and as I do in members of the senatorial staff.

Mr. President, considerable time has been expended. This is an important matter. I am well aware that it is important and that the Senator from West Virginia has very strong feelings about this subject. He has voiced them on many occasions. I agree with him that we have had a problem with decorum. I think, however, that we can leave it up to the Chair to use good judgment with respect to whether the floor should be cleared of staff members. I would agree to that.

But I would object, most respectfully again, to unanimous consent on this matter.

Mr. President, is there any possibility the time that has been taken for this discussion might be charged equally to the opponents and the proponents of the amendment?

Mr. BYRD of West Virginia. The Senator has now objected a third time. However, in fairness to the Senator, I think the time consumed should be equally divided because the request which I proposed was a matter of importance to all Senators on both sides of the amendment and on both sides of the aisle.

Mr. President, I ask unanimous consent that the time that has been consumed be equally divided.

The ACTING PRESIDENT pro tempore. Without objection, the time will be equally divided.

Mr. BROOKE. I thank the Senator from West Virginia for his customary fairness. I am grateful.

The ACTING PRESIDENT pro tempore. Objection is heard to the unanimous-consent request of the Senator from West Virginia.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield to me for 30 seconds?

Mr. BROOKE. I yield.

Mr. BYRD of West Virginia. I assure the distinguished Senator from Massachusetts and all other Senators, that I, as chairman of the Subcommittee on Standing Rules of the Senate of the Senate Committee on Rules and Administration, intend to take up this matter before the full committee tomorrow to see if somehow we cannot tighten up the rules and regulations to guarantee a little more decorum and order in this body on the part of staff personnel of Senators who are permitted in the Chamber.

Mr. BROOKE. I would like to associate myself with the remarks of the Senator from West Virginia.

Mr. BYRD of West Virginia. I thank the Senator. I am pleased to know he so associates himself.

The ACTING PRESIDENT pro tempore. How much time does the Senator from Massachusetts yield?

Mr. BROOKE. Mr. President, I yield myself 25 minutes.

The ACTING PRESIDENT pro tempore. The Senator from Massachusetts is recognized for 25 minutes.

THE BROOKE-M'INTYRE COMPROMISE: DEFENSE IN DEPTH

Mr. BROOKE. Mr. President, the issue before the Senate is one of the most difficult we shall face. How can we find a consensus on a vital issue of national security, an issue in which technical and political and strategic and diplomatic judgments vary widely? I know that every Member of this body is primarily concerned with finding a course which will both protect our Nation's security and promote an early success in the urgent strategic arms limitation talks.

In working to find such a course I wish to propose to the Senate a simple concept. It is one which, in my judgment, most nearly meets the basic objectives of both the proponents of ABM deployment and the opponents of further deployment. The amendment I offer is one which I developed over several months in discussion with colleagues on the Armed Services Committee and with knowledgeable experts in the Department of Defense and elsewhere. It enjoyed substantial support in the committee, and I believe it provides a reasonable basis for a Senate accommodation on this controversy.

The amendment I propose is brief. It reads:

Funds authorized pursuant to this Act for the procurement of anti-ballistic missile defenses may be used only for defense of Strategic forces deployed at Grand Forks Air Force Base, North Dakota, and Malmstrom Air Force Base, Montana.

This modest geographical limitation takes no money from the President's request. By leaving full funds in the authorization it permits the Defense Department to pursue the option of defense in depth at the first two ABM sites, an option which many of the technical professionals in the Safeguard program themselves preferred to an extension of the system to new sites.

The option of defense in depth has long been considered in the Safeguard program and for a very good reason. Defense in depth at the first two sites enjoys important technical advantages over a simple expansion of the system. By deepening the defense at the initial sites, especially by increasing the number of radars, the serious problem of radar vulnerability is significantly reduced. With additional radars the defense is able to survive much heavier attacks and to protect the Minuteman force to a substantially higher degree.

Thus there is a major technical attraction to this concept. It in fact meets the principal technical objection which has been stated to the proposed deployment.

As one who opposed the deployment of phase I, I remain doubtful about the technical aspects of the Safeguard system and believe we should have the benefit of further experience with the system before making a larger commitment. At the same time, however, I appreciate the concern of the system's supporters that an expanded defense of the deterrent is likely to be required by a growing Soviet threat. Significantly, the Department of Defense is seeking to invest over $50 million in more advanced radars to supplement the large missile site radars proposed by Safeguard. My own preference would be to accelerate work on those radars and deploy them, if necessary, rather than the large and expensive MSR's now being constructed.

Given the fact that Safeguard phase I is being deployed, however, my plan would achieve several important objectives:

First. It would provide a comparable degree of protection of the Minuteman force to that which would be achieved through the administration's proposed deployment of an additional Safeguard site at Whiteman Air Force Base;

Second. It would maintain sufficient momentum in the ABM program to sustain it during the intricate SALT negotiations;

Third. It would limit the Safeguard deployment specifically to the two bases already approved by the Congress; and,

Fourth. Since it would take some time before additional radars could be installed at those two sites, it would increase the likelihood that progress on more advanced technology might permit deployment of improved radars.

The matter is obviously a complicated one, but I believe this amendment comes closest to meeting the objectives of both the opponents and proponents of further ABM deployment.

For those who feel we must go forward with ABM deployment at the rate proposed by the President, this amendment would permit a technically sound and sufficient program to meet the projected threat to Minuteman. It would maintain production lines at the same rate as the committee bill. Thus, it will be evident to the Soviets not only that we are protecting our deterrent but that, if SALT produces no satisfactory agreement, the United States will be able and prepared to expand the ABM deployment as seems necessary. Because of these advantages this plan fully meets both the strategic and diplomatic objectives which the administration has and which all of us, I am sure, respect.

At the same time, for those reluctant to see further expansion of the ABM system at this time, this alternative provides significant restraint. Most impor-

tantly it would mean that we would meet our strategic and diplomatic needs without going beyond the first two sites authorized by the Congress.

This body works best when it follows the line of reason to a sensible compromise. I cannot believe members will fail to see that this is the constructive middle ground for which we have all been groping on this divisive issue.

What I propose is a plan which enhances the prospects of SALT and which provides adequately for the contingency of failure in that historic negotiation.

All of us are concerned with continued expansion of Soviet strategic forces, particularly the large payload SS9 missiles which pose a grave potential threat to the American Minuteman force. The United States cannot permit such a threat to develop without taking suitable countermeasures to guarantee the survivability of sufficient strategic weapons for credible retaliation and confident deterrence. We hope that the strategic arms limitation talks will succeed in establishing strategic stability, but prudence demands that the United States take appropriate measures to guarantee its retaliatory capabilities should the threat continue to expand.

Preferable to a potentially destabilizing increase of American offensive forces, especially at this delicate stage of arms control negotiations, is the addition of further anti-ballistic-missile defenses to protect the Minuteman force. The President has voiced the informed judgment that defense of the deterrent in no way jeopardizes the mutual deterrence on which American and Soviet security rests. In fact it may provide additional incentives for the Soviet Union to enter a substantial arms limitation arrangement. Secretary Laird has testified that the diplomatic value of ABM in the context of SALT depends squarely on the system's contribution to the survivability of American retaliatory forces and not on its capacity to provide thin area defense against possible attacks by countries other than the Soviet Union.

Recognizing the primacy of the strategic relationship between the Soviet Union and the United States, the Armed Services Committee concluded that the United States should not undertake a nationwide area defense which might be misconstrued as the infrastructure for a heavy ABM system. Such a deployment might well trigger compensating increases in Soviet offensive forces and make more difficult the creation of stable security arrangements between the two principal nuclear powers. Thus the committee has already taken a highly constructive step in defining the mission of our ABM as defense of the deterrent. I commend our able and distinguished chairman of the committee and our colleagues for taking this important step.

My own amendment would further emphasize the system's purpose of Minuteman defense. Under this plan additional deployments for fiscal year 1971 would be concentrated at the phase I sites—Malmstrom Air Force Base, Mont., and Grand Forks Air Base, N. Dak. By installing additional ABM radar and computer capability together with a suitable increase in the number of interceptors, the system would provide a progressively deeper defense. The system will acquire the opportunity for so-called preferential defense and other important features to insure the survivability of an adequate number of Minuteman missiles.

As I mentioned, the proposed option has been studied for some time in the Safeguard program. It could consist of the following: A second radar, together with associated computer capability and an appropriate number of defensive missiles, could be installed at Malmstrom and at Grand Forks for defense of the high value Minuteman force there. The crucial advantage of this deployment is that it would impose on a potential attacker an exponential increase in the number of offensive missiles required to attack the defended targets.

By locating an additional radar at each base, together with Sprint missiles positioned to protect either or both of the radars at each base, the defense could choose to protect only one of the radars, if that proved tactically advantageous. Since the Safeguard firing doctrine can be computerized to determine whether such preferential defense should be adopted, a potential attacker would not know which of the radars would in fact be defended, forcing him to target both radars much more heavily than he would have to target a single radar to assure its destruction. Thus radar survivability increases dramatically and with it, the system's capability to insure the survivability of the Minuteman force.

Department of Defense analyses show that such a deployment would provide almost exactly the same degree of protection of the deterrent as the addition of a third ABM site at Whiteman Air Force Base.

Thus, the recommended deployment will meet the President's objectives of insuring a sufficient degree of Minuteman survivability against the emerging Soviet counterforce capability, of maintaining the momentum of the American ABM program should subsequent deployments be required, and of providing clear diplomatic incentives to the Soviet Union for earnest negotiations in SALT.

Precisely how to implement this concept would, of course, be left to the Department of Defense. For this fiscal year the Department could elect to use the available funds to start one additional missile site radar which would provide a total of three MSR's and would mean a substantial increase in capability over the present phase I system. The long-term costs of this would be quite comparable to the proposed Whiteman site. At some additional long-term costs a fourth MSR could be deployed at phase I sites, and would tremendously augment the net survivability of the Minuteman force.

This is exactly the type of contingency plan to which Secretary Laird himself alluded in his letter of August 7 to the distinguished Senator from Washington. The Secretary stressed that—

> Should the threat grow with extreme and unexpected rapidity so that it exceeds the Safeguard defense level before hardsite is available—something we do not predict at this time—we could strengthen the four-site Safeguard defense of Minuteman by deploying more Sprints and more MSRs in the same four Minuteman fields.

This is in substance the concept of defense in depth and it is also workable at the two phase I sites.

As I mentioned earlier, a number of experts in the Safeguard program actually suggested that the first two sites be beefed up prior to expansion to a third and fourth site. The Senate should be aware that the decision to seek a third site at Whiteman was a close technical judgment which was resolved largely on political and diplomatic grounds. In view of this fact, and of subsequent political and diplomatic developments unknown at the time the Whiteman site was proposed—I refer particularly to the close political balance here in the Senate and to the promising evolution of the SALT discussions—there is good reason for us to choose the credible technical option of a deeper defense at the first two sites.

Yet another way of implementing this option would be preferable to many. If the pace of the threat and technological progress permit, it may be possible to accelerate work on advanced radars to supplement the costly MSR's. Those advanced radars are already being worked on, and while there is some difference of opinion as to when they could be ready, they appear to be the best means of deepening the defense. If they were ready in time, then both the short-term and the long-term costs of this option could be less than the proposed extension to the Whiteman site, and system effectiveness could be much superior.

This option was the preferred course even of the O'Neill panel which advised the Department of Defense on ABM deployment options for the coming year. That panel explicitly concluded:

> If the only purpose of Safeguard is defined to be to protect Minuteman, Phase II–A as defined in March 1969 should not proceed.

The panel emphasized that a more cost effective defense of the deterrent can be devised, specifically a dedicated system of hard-point defense using smaller, more numerous, and less expensive radars and computers. The Department itself has repeatedly stressed that the use of Safeguard to defend Minuteman is only sensible in cost terms if the larger area defense is also built. In other words, if one is buying a thin, nationwide defense, then Department of Defense considers the marginal costs of defending Minuteman with this technology acceptable.

Since the time the panel reported and since the time the Department recommended a modified phase II, the Armed Services Committee has itself wisely declined to authorize an area defense. The committee's important decision to restrict ABM deployment to defense of the deterrent certainly underscores the O'Neill panel's recommendation that intensified efforts should be made to perfect a true hard-point defense. Passage of the Brooke-McIntyre amendment would provide a strong inducement in this direction. It is generally recognized that the complex programing for the Safeguard system is the pacing factor; that is, the ultimate deployment schedule depends primarily on how soon the computer programs can be written. With

the greatly simplified programing of a dedicated system, the defense might well be deployed about as soon as the presently planned system can be ready.

I stress, however, that this decision is left to the Department by my amendment. If required by the threat, the Department could do exactly what Secretary Laird described to our able colleague, Senator JACKSON, in his letter of August 7, namely, use existing MSR technology to reinforce the defense at the phase I sites.

To sum up, this amendment would meet the objectives stated by the committee and by the administration but it would do so at the two sites already authorized. It would take no funds from the bill, but would allow their use for defense in depth at Malmstrom and Grand Forks. This would permit the same protection of the deterrent as the addition to the Whiteman site; that is, the same number of surviving Minuteman could be guaranteed under this plan as under that recommended by the committee. Furthermore, production lines would remain open and we would retain all the diplomatic leverage of an ongoing ABM program. The program's momentum would in no way be disrupted and the Soviets would know that, unless SALT succeeds, the United States could readily expand its ABM system. There would be no question that this country is going to do whatever is required to insure that it always has a sufficient retaliatory capability.

When issues are so complex, the debate can easily be lost in murkiness. I believe, however, that Senators who think through this alternative will see that it is a reasonable and responsible course for the Senate to follow. No other plan so completely satisfies the conflicting interests and views which have emerged on this issue.

Let us decide this matter by the light of reason and good will, promoting both the security of our country and the integrity of independent Senate judgment on vital issues. This amendment will meet these objectives. I commend it to my colleagues and to my country.

The ACTING PRESIDENT pro tempore. The Senator's time has expired.

Mr. STENNIS. Mr. President, may I inquire how much time I have remaining?

The ACTING PRESIDENT pro tempore. The Senator from Mississippi has 79 minutes.

Mr. STENNIS. I thank the Chair. Mr. President, I yield myself 20 minutes.

First, I want to thank the Senator from Massachusetts for his very valuable services to our committee since he has been a Member of the Senate. I thank him, too, for his work on the ABM. Although I think he is going too far in this amendment, he knows much about the subject, and I appreciate his willingness to work on it.

Whatever I say here, I am totally opposed to the amendment, for reasons which I shall state, but nevertheless I pay my compliments to the Senator from Massachusetts as a member of the committee.

Mr. President, everything has its practical side. The cold, hard facts are that after full debate on this entire subject matter, the Senate voted a week ago today, with an unusually high percentage of its membership being recorded—99 out of 100 Senators were recorded, and the other was absent only because of illness—and by a vote of 52 to 47, after considering all of the evidence and all the debate and everything about it, voted for a minimum of four sites for this defensive weapon, ABM, and that approval carried with it the money to carry out a year's program for those four sites. The amount to be expended on the fourth one was very slight, but it is a beginning. The third is the one in which I am vitally interested, because it will add at least 40 percent to our capacity to defend ourselves.

Anyway, the Senate voted for the four sites, with the money provided to carry on the program. Now, 1 week later, without one single change in any relevant fact—certainly no substantial change—no additional information, no event in world affairs, no difference whatsoever, we are asked to say that a week ago we made a mistake, that we want to retrace and retract and take a step backward, and make this only two sites after all.

Mr. President, I do not believe that the Senate will do that. There has been no change in the facts. There has been no change in the recommendations of the President or the Secretary of Defense, who are responsible in this field.

It is a rerun of the same proposition. With great deference to the author of this amendment, I think it would have fit in as a substitute for the Cooper-Hart amendment. There may be reason for it now in the Senator's judgment, and I accept his judgment. I am talking about the legislative standpoint. Whatever place it had has past, and today it is a rerun and a backing up with respect to a position that already has been taken and has been written into permanent record. There is no difference. This amendment does not change the money. It leaves the money in the bill, but says that the money shall not be spent for the third and fourth sites but for something else. With all deference to the Senator, if the money is to be taken from the sites, the money should be taken out altogether. That is just commonsense.

I do not complain about our going the matter again. That is entirely all right. It is part of our system.

Mr. President, I want to discuss again some of the matters on which we based our judgment on a week ago.

We are asked to consider an amendment to the military authorization bill submitted by the distinguished junior Senator from Massachusetts. The proposed amendment would restrict Safeguard deployment to the two phase I sites at or near Grand Forks, N. Dak., and Malmstrom Air Force Base in Montana.

In view of the intense debate on the ABM that has already ensued, and the large number of issues that have been raised and resolved, I believe it would be appropriate at this time to summarize the points that still remain at issue.

THREAT

Underlying any discussion of Safeguard should be an awareness and understanding of the threat.

That is why we are here this morning on this subject. As I reported to the Senate, our committee has examined with concern the continued expansion of Soviet strategic forces which poses a serious potential threat to our land-based deterrent.

The Senator from Kentucky (Mr. COOPER) spoke on that subject. He recognized these continuing developments, and he has more and more concern about them. He said so in the debate.

Their continuing momentum in deploying ICBM's capable of attacking our Minuteman force, together with the ongoing expansion of their nuclear ballistic missile submarine fleet capable of attacking our strategic bomber force, has raised a grave question as to the potential viability of our strategic deterrence—not now, but in the second half of this decade. This is the only time we have in which to get ready for the second half of this decade.

Let us again review the Soviet ICBM force.

Today, the Soviets have about 300 of the monster SS–9's deployed or under construction. It has been estimated—this was predicted last year and was scoffed at by some, but it is confirmed now—that 300 to 500 MIRVed SS–9's could very well give the Soviets the capability for neutralizing virtually all of our Minuteman force if we do not deploy an effective ABM system. I say that is where there is almost complete agreement—that we need an effective ABM system. It is now getting to the point that if size of enemy forces keeps growing against us, we will have to have one to be effective.

In addition, there are in operation more than 800 SS–11's. This is a smaller missile than the SS–9 that with improved accuracy could also have a kill capability against our Minuteman silos.

I recall the days when I did not want to listen to these facts and kept pushing the threat back in my mind; but I had to wake up some time ago, with great regret, to the facts of this threat.

Even if the Soviets should not install additional missile launchers, as they have been doing recently, the present number already deployed or under construction constitutes a delivery capability which, with qualitative improvements—do not ever discount them—would pose a serious threat to our land-based Minuteman deterrent unless we defend it in some way by the mid-1970's. That is what I want Senators to remember. We are not talking about now. We are talking about the mid-1970's, but now is the only time to prepare for it.

We simply cannot watch such a threat develop without taking suitable countermeasures to provide for the continuing survivability of our strategic weapons. We depend on credible retaliation and confident deterrence to prevent nuclear war.

That is our policy, in one sentence. We are not an aggressor nation. We have no plans to fire the first shot. We depend,

instead, on capable retaliation and confident deterrence to prevent a nuclear war. We want them to realize that we do have this deterrent and the capability of protecting it. I think that is the only real defense we have. Let them know that we are ready and that we have everything that is necessary to protect us.

I have said many times in this Chamber that if we give them doubt on that subject, we invite trouble; and it may be that after they have fired the shots, it will be too late on both sides. I think that millions and millions of lives would be lost on both sides should we ever turn these weapons loose against each other. That underscores the necessity for letting them know all the time that there is no weakness about our position or our capacity.

ARMED SERVICES COMMITTEE POSITION

It was for this reason that the Committee on Armed Services supported that portion of President Nixon's request which provided for the continuation of the Safeguard program to those sites devoted to the defense of the deterrent. In doing so, we wished to establish the primacy of active defense to increase the survivability of the land-based deterrent as opposed to increasing our offensive forces to achieve this end. In this regard we shared the President's judgment that defense of the U.S. deterrent in no way jeopardizes the security of the Soviet deterrent and, in fact, provides additional incentives for the Soviet Union to enter a substantial arms limitation agreement.

That is the very thing that is going on now. At long last, it seems that the worm has turned a little, and these two powerful nations of the world are sitting down at a table in earnest, trying to work out a mutual ground. If they do not go more than an inch forward, that is a start. Now, right in the middle of that, are we going to take back from the President's hand—I am not talking about Mr. Nixon; I am talking about the President of the United States, whoever he may be—the position that he has already told them he was standing on? Are we going to take a step backward from what we did last Wednesday? I do not think we want to do that. I do not believe the people want us to do that.

By the same token, the committee affirmed its conviction that there is no compelling need to move now to the deployment of an area defense of our population against a Chinese Communist ICBM attack by striking from the authorization the House-approved administration request to proceed now to advanced preparation of four area defense sites. That is a horse of another color. That is a defense system for another purpose. In our judgment, the prime threat—the threat that today poses the greatest danger to our security—is the Soviet threat to our strategic deterrent. That is where the soft spot is—the threat to our capacity to retaliate with our ICBM's, our influential deterrent. Therefore, our resources should not be diverted from the primary task of defending our deterrent from this threat. That is my answer. That is the committee's answer to all that has been written and said about our recommendation on that point.

In short, the action of the committee recommends—that of authorizing continuation of phase I with additional Sprint missiles for the two phase I sites, authorizing deployment of a third Safeguard site at Whiteman Air Force Base in Missouri, and authorizing advanced preparation of a fourth site at Warren Air Force Base in Wyoming—represents what we sincerely believe to be the minimum response we can make now to meet an urgent need—the minimum response. And, Mr. President, we must make it now—not 1 or 2 years from now, but now. I say this because throughout the past weeks of debate, I got the impression that some of us in this body are either not aware of, have forgotten, or have simply ignored a basic fact of life common to all complex, sophisticated engineering efforts such as Safeguard. That fact of life, Mr. President, is lead-time. We cannot go down to 12th and Pennsylvania Avenue and say, "I want to buy an ABM." We cannot get them that way. We must anticipate, plan, experiment, do research in engineering, testing, and developing further.

I keep hearing suggestions to "wait until phase I is completed," or "wait until we can deploy a better system." These suggestions are all fine in themselves, except that they ignore the fact that there is nothing we can do to make the Russians wait. That waiting has to be a one-way street. They might decide to stop deploying the SS–9; we might reach a satisfactory agreement with them at SALT; they might not upgrade the accuracy of the SS–11 or put MIRV's on the SS–9. Whatever they do, it will be based on their decisions, not ours. If we wait several years, doing nothing in the hope that the Soviets will accommodate us, we are playing real Russian roulette—for stakes we cannot afford.

My whole point, Mr. President, is that we cannot have an ABM defense overnight. We cannot wait until we are sure we need it, and then take items off the shelf, throw them in a truck, and be ready the next morning. We must make decisions now in order to achieve a capability 4 or 5 years from now. If we decide to deploy now, as the committee recommends, and the Soviet threat fails to materialize, then at worst we would have wasted some money. If, on the other hand, we do not decide to deploy and the threat does materialize, we have lost far more than money. We have lost our capability to deter nuclear war. I find that unacceptable. But further, if we do defer and lose this time, our adversaries around the world will realize, before all of us do, what a mistake we have made. It opens the door and invites them to make their plans as against an unprepared America. Regardless of whether they would use their weapons or not, it leaves us open to blackmail of the most vicious and effective kind.

Let us look now at the amendment proposed by Mr. BROOKE, and see how it compares with the committee's recommendation. Since funds are not reduced in the amendment, I must assume that it is permissible to deploy additional Safeguard radars and interceptor missiles at Malmstrom and Grand Forks Air Force Bases, the two we already have now and are working on.

Mr. President, to make the record clear, Senator BROOKE's amendment was considered by the Armed Services Committee and turned down by a large majority, while all of this was fresh on our minds.

EQUAL COST—LESS PROTECTION

If we deploy Safeguard components equivalent in cost to the committee recommendation and under the restrictions of the amendment, we would have a third Safeguard site at either Grand Forks or Malmstrom rather than at Whiteman. Since no analysis or survey work for a second site at either Grand Forks or Malmstrom has been done, this would impose about a 12-month delay in that site's achieving an operational capability. In other words, a 12-month delay beyond the time when the Whiteman site could be operational under the committee proposal. This is because most of the significant analysis required for the Whiteman site had already been accomplished under the old Sentinel program.

In addition to imposing a year's delay, deploying a third site under the restrictions of the amendment would also result in a reduced capability to defend Minuteman. This is caused by two factors—first, because of the shape of the Minuteman fields, the number of Minuteman silos that could be protected by a third site at Grand Forks or Malmstrom would be about 70 percent of the number protected by a site at Whiteman. However, if the funding is the same as the Whiteman cost. I am informed that only about 35 percent of the number of the Whiteman interceptors could be installed at a third site at either Grand Forks or Malmstrom.

Mr. President, that means for an equal cost, we get one-third the protection. That is far from being a cost-effective proposition.

The ACTING PRESIDENT pro tempore. The time of the Senator from Mississippi has expired.

Mr. STENNIS. Mr. President, I yield myself 3 additional minutes.

The ACTING PRESIDENT pro tempore. The Senator from Mississippi is recognized for 3 additional minutes.

Mr. STENNIS. Mr. President, I, for one, will not recommend to this body the authorization of funds when it is obvious that we are not getting the most for the dollar.

Mr. President, I shall discuss that part of this matter later. I wish to reserve 15 minutes of time for my own use in closing debate on behalf of the committee.

I yield the floor now, Mr. President.

Mr. BROOKE. Mr. President, will the distinguished chairman of the Armed Services Committee yield to me, to answer some questions?

Mr. STENNIS. I shall be very glad to answer the Senator's questions.

The ACTING PRESIDENT pro tempore. Does the Senator from Massachusetts want to yield a specific amount of time?

Mr. BROOKE. How much time remains, Mr. President?

The ACTING PRESIDENT pro tempore. Fifty-four minutes to the Senator from Massachusetts.

Mr. BROOKE. Fifty-four minutes?

The ACTING PRESIDENT pro tempore. Yes.

Mr. BROOKE. And to the Senator from Mississippi?

The ACTING PRESIDENT pro tempore. Fifty-six minutes.

Mr. STENNIS. Shall we begin with 10 minutes equally divided?

Mr. BROOKE. Yes. Mr. President, I yield myself 5 minutes, from my time, with 5 minutes to be taken from the time of the Senator from Mississippi.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BROOKE. Mr. President, does the chairman favor an area defense for the country? Or does the Senator agree that area deployment could well be self-defeating, by forcing the Soviet Union to increase its offensive capabilities to insure that it can retaliate?

Mr. STENNIS. I think, with all deference to the Senator, that is an academic question now. We are not discussing area defense at all under this amendment, or even under the bill.

Mr. BROOKE. Might I point out to the Senator that the House, as I understand it, would grant not only a deterrent defense but also an area defense as well in the bill it passed. If we go into conference with the House with the committee bill, there is a possibility, and perhaps even a probability, that we could end up with area defense. That prompts my question to the distinguished chairman.

Mr. STENNIS. I do not think there is any probability. We would all go to conference to represent the views of the Senate and vigorously represent that position.

My idea is that, everything considered, the high probabilities are that that position would prevail.

I have never been strong for this area defense. However, I do not close the door on it. I do not think that the threat there is imminent.

I think the primary purpose is to put the money on this deployment, as we have now, for these four sites, and perhaps on more.

There is no doubt in my mind about that. That is my purpose. That is what I propose to stay with.

If we are going to go into an area defense that would be debated in the Senate fully. But I do not believe the urgency is there. I do not have really a thought of urgency there. It is something in the future. The Senator is correct. However, this is not the time for it, as I see it.

Mr. BROOKE. Mr. President, is the distinguished chairman aware that the O'Neill Panel which advised the Department of Defense on this year's deployment options concluded that if the system's only purpose was designed to be defense of the deterrent, Safeguard technology is not cost effective and should not be used?

Mr. STENNIS. What was that question?

Mr. BROOKE. The O'Neill Panel advised the Department of Defense on this year's deployment options, and concluded that if the system's only purpose is designed as a defense of the deterrent, the Safeguard technology is not cost effective and should not be used.

Mr. STENNIS. The Senator means it should not be used as a defense for the missile sites we have here?

Mr. BROOKE. The technology should not be used because it is not cost effective.

Mr. STENNIS. The Senator means it should not be used for an area defense.

Mr. BROOKE. That is part of it.

Mr. STENNIS. Yes; I am familiar with that in a general way. It would not be used for area defense. However, we stayed out of the area defense altogether in the committee bill.

I think that when we get into that, we have to weigh a lot of other things. I am concerned about the ICBM's, and I know that the Senator from Massachusetts is, also. That is where our protection is going to be. That is protection for our people through protecting the arsenals.

Mr. BROOKE. Mr. President, I certainly agree wholeheartedly. As I think the Senator will recall, in my statement I not only give credit but also commend my colleagues on the committee for moving away from area defense.

I was raising the question of cost effectiveness.

As I understood the O'Neill conclusion, it was not only referring to area defense, but was also saying that Safeguard technology should not be used in any event.

I wonder if the chairman was aware that the O'Neill panel had reached that conclusion.

Mr. STENNIS. Mr. President, Dr. O'Neill—and I have here the statement that Dr. O'Neill gave in his testimony to the committee subsequent to the report—expressed the opinion that the missile site radar—MSR—would be required.

The O'Neill report did not recommend against Safeguard as a Minuteman system. That is very clear.

Mr. BROOKE. Mr. President, does the Senator acknowledge that the use of Safeguard technology is not cost effective at three sites any more than it is cost effective at two sites?

Mr. STENNIS. No; it is my understanding that the three-site defense is considerably more cost effective than the two-site defense. However, in weighing these matters, the scientists will disagree, cost analysts will disagree, and the budget people might disagree. The fact remains that we need an ABM first for our deterrent defense, and I believe the committee's recommendation is the cost-effective way to go about it.

I frankly think that we cannot weigh the matter of cost effectiveness at this time. The big program is to try to get an effective defense, an effective ABM.

With all due deference to the Senator, this is getting off on a side issue.

Mr. BROOKE. Mr. President, I raised this question with the distinguished chairman because he certainly has had a wealth of experience in conference committees.

It is my understanding that in conferences sometimes it is customary to split the difference. I am very much concerned that if we were to go into conference with the committee bill and the House bill, we could very well come out of the conference not only with Whiteman but with Warren as well, and perhaps an advanced site in the Northeast and the other areas which would, in effect, give us area defense.

I think that is a matter of very serious concern for our conferees, because of the House action initially.

Let me say to the distinguished Senator that this does not mean that I do not have the utmost confidence in our chairman and in the conferees. I know that they will do all they can to maintain the Senate position. But I wonder, since we have a rather extreme position taken by the House where we would be if a "middle ground" is adopted.

Mr. STENNIS. The Senator is speculating on something here that no one can give an answer to.

I can give an answer as far as attitude is concerned. There is no motive except what I have given for this committee acting as it did in bringing in this recommendation.

No one has in his mind, so far as I know, any idea of having this matter pass the Senate and then going to conference and bringing a whole hog back. There is not the least intention to do that.

If the Senator's amendment is rejected—and I believe it will be—everyone connected with this matter will be willing to settle on this for this year in the Senate bill.

That is the practical side of it. That is what I am going to fight for. I will tell everyone that.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. TOWER. Mr. President, I think the point should be made that, notwithstanding phase I, even if it were to occur at both Whiteman and Warren, it would still not provide area defense—and it could not—for the major population centers in the Northeast, the east coast, and the west coast.

It could be used to protect Houston, Dallas, San Antonio, St. Louis, and some of the cities in the middle part of the country. Those four sites could not serve the purpose of area defense.

Mr. BROOKE. Mr. President, the Secretary of Defense on "Face the Nation" this Sunday, I believe, included some area defense at Whiteman itself. And if we get into these four sites, we will have area defense.

Mr. TOWER. But we will not have it in the major population centers.

The PRESIDING OFFICER (Mr. MUSKIE). The Senator's time has expired.

Mr. STENNIS. Mr. President, I ask unanimous consent that we be permitted to continue for an additional 5 minutes.

Mr. BROOKE. Mr. President, I ask unanimous consent that we be permitted to continue for an additional 5 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BROOKE. Mr. President, I am very much buttressed by the statement made by our distinguished chairman that he believes that if we should reject this

amendment—and I am hopeful that we shall not and I do not expect that we shall—and go to the conference with the committee bill, that he will press for the Senate position.

Mr. STENNIS. There is no doubt about that in my mind. In addition, the Brooke amendment does not have a thing in the world to do with that situation. If we agreed to it or rejected it, the situation would be the same.

Mr. BROOKE. I do no think that is correct. Under the Brooke amendment there is a limitation on sites. You could not go beyond the existing first and second sites of phase I. So I think if we went into a conference with the Brooke amendment, we would be in a stronger position to maintain the distinguished chairman's position than we would if we went in with the committee position. That is my thinking on the subject.

Mr. STENNIS. I thank the Senator. I appreciate his suggestion.

Whatever area defense would come from Whiteman is purely incidental. That is not the object of the site at all.

Mr. BROOKE. I agree it is not the object of the site, but it is there; and I point that out to the disinguished Senator from Texas, who raised the question.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. TOWER. I wish to remind the Senator that the committee rejected area defense. That is the committee position. The bill, as it came out of committee is, indeed, itself a compromise.

Mr. BROOKE. The Senator is correct, but the House did not reject area defense. That is my point.

Mr. TOWER. Since we have rejected it, that is the Senate position and I do not see that going in with the Brooke amendment would give us a better bargaining chip in that connection than the committee version.

Mr. BROOKE. I point out to the Senator, and I hope he understands what the amendment provides, that limitation would be helpful in conference—it would help the conferees on the Senate side to maintain the position which the committee bill has set forth.

Mr. TOWER. Mr. President, will the Senator yield further?

Mr. STENNIS. I yield.

Mr. TOWER. I wish to read the following language from the committee report:

> In taking this action, the committee wishes to establish the primacy of active defense to increase the survivability of the land-based deterent. The authorization the House approved at administration request to proceed now to advanced preparation of four area defense sites, the committee affirms its conviction that there is no compelling need to move now to the deployment of an area defense of our population against the Chinese Communists ICBM attack.

There is our position.

Mr. BROOKE. That is the committee position. The Senate has not taken a position yet.

Mr. TOWER. If we adopt the committee bill it is the Senate position.

Mr. BROOKE. We have not done that yet.

Mr. TOWER. But the Senator's amendment would put us in no better bargaining position with the House than the committee position.

Mr. BROOKE. I disagree with that; and I make the point my amendment would put us in a better position. Secretary Laird on Sunday stressed that a major reason for going to the Whiteman deployment was to keep open "the follow-on options for either area coverage or for accidental launch coverage."

In my opinion, that is an area defense option. I think the Secretary is keeping clear that option. That is why I asked the question of the Senator that I did.

Mr. STENNIS. We have tried to answer as fully as we know how.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. GOLDWATER. I think I understand what the Secretary is getting at. He made no commitment to area defense, but any weapons planner would be foolish not to be looking ahead. You cannot say that site protection would not provide some area protection. There may be some small town within the radius of the cone of destruction. Whether they like it or not, they might be saved by the ABM designed to protect that particular missile. But I do not think anyone in the weapons business in his right mind would ever stop his thinking at this wall; namely, the protection of a missile site, because when we can prove a missile site protection system will work without danger to a community, we are going to see an about face by small towns and some large cities that now do not want the ABM near them.

I would not advocate that we go into area defense at this particular time, but I think the Secretary would not be acting in the way a Secretary should act if he is not thinking a long way ahead with respect to all problems connected with the ABM, including the possibility at some time of its use as an area defense.

Mr. BROOKE. Of course, any decision is reversible, depending upon the circumstances. As I understand it, he made this decision to go to deterrent defense rather than area defense not so much because people living in these various areas are objecting to it, but because we believe it gives us maximum security.

Our committee discussed that matter thoroughly; and the chairman made clear he supports it. But this language by the Secretary would indicate some possibility he might be seeking to restore that area defense when we go to conference.

I think it is important that we discuss this matter on the floor of the Senate. I am much buttressed by what the chairman has said.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. GOLDWATER. I do not believe the Secretary of Defense is trying to restore anything. The Senator, being a member of our committee, recalls that there was almost universal objection when the Secretary made his report to the so-called Chinese threat, and, in fact, there were quite a few members of that committee that I think would not have supported that. I have my doubts as to what I might have done. But when the committee came out with the language we arrived at, it ignored that part of it, and the Secretary agreed with that, and I feel that is the Secretary's position.

What the House of Representatives does is something else. It will be found the House goes beyond the Senate in practically every area of this bill. We will spend so much money on the B–1 and they are going to spend twice that much. We will have an amendment to strike $284 million from the F–15, but the House will think they should get the whole thing.

I think the Senator's experience on the committee will convince him that the House always goes beyond the Senate in this particular area. So when it comes to the work of the conferees, I do not think the Secretary has any weight at all because I do not think there are many things in this bill from the House that the Secretary either pushed for or did not push for. It is a House bill.

Mr. BROOKE. Mr. President, if I may refer another question to the chairman in the time allotted, the distinguished chairman raised a very serious question about the time factor. If we were to agree to this amendment and install additional radars at Malmstrom and Grand Forks, it is estimated it would take 12 months. In other words, there would be a 12-month delay, I believe the chairman said, because of the necessity for surveying for the location of the sites.

I certainly agree, as the proposer of the amendment, that it would take time to survey for the location of sites if we did add additional radar at each of the present sites. But my best information is that it could take as little as 2 or 3 months, not a year; the very most it could take would be a year. In this time, and I want to point this out to the chairman, of the $50 million we already allocated for advance work on radar technology——

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. BROOKE. Mr. President, I ask unanimous consent that we may proceed for 3 additional minutes.

Mr. STENNIS. I am happy to accommodate the Senator but I have an obligation of time.

Mr. BROOKE. We could finish this question in that time.

Mr. STENNIS. Very well; the time to be divided.

Mr. BROOKE. This time could be used to rush to readiness this radar technology, which would enable us to use more accurate and less costly radars than the costly MSR which is costing over $200 million each to construct. Also during this so-called delay SALT will be taking place at Helsinki beginning in November. Hopefully, at that time we may have come to some agreement with the Soviet Union which would do away with the necessity of spending these billions of dollars for this ABM system.

Mr. STENNIS. My quick answer to the Senator is that, however he puts it, the Brooke amendment just stops this program in its tracks so far as going beyond the two sites is concerned.

Mr. BROOKE. The production lines are open. We still have the production lines open on the MSR's, the computer capability, and the Sprint missiles. We are not closing those up, as they would have been under other amendments.

Mr. STENNIS. So far as additional sites are concerned, the amendment takes them out of the program and cuts them out, and the Senator knows there will not be any further legislation on this subject for another 12 months.

Mr. BROOKE. But if we are going to get more survivability of the Minuteman force, the improvement of the defense in depth of the two sites——

Mr. STENNIS. Well——

Mr. BROOKE. There is a scientific difference of opinion here as to whether or not that is true.

Mr. STENNIS. I have a memorandum here specifying how this money is going to be used. I have here four possible options that are available. We will go into that later.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield 12 minutes to the Senator from Washington; more, if he wishes.

Mr. JACKSON. Mr. President, I wish to discuss briefly the pending amendment introduced by the distinguished Senator from Massachusetts (Mr. BROOKE). This amendment is not new to me or to other members of your Committee on Armed Services where it was originally introduced and, after discussion, rejected by a substantial majority.

I believe that the committee acted wisely in rejecting the pending amendment when it was before us, because I am convinced that it is basically unsound. This is not a judgment that I alone have made, although I have given this amendment careful consideration. The Secretary of Defense shares, I believe, my view that its adoption would be a poor use of the defense dollar because it would provide a less effective defense of Minuteman at the current budget level, or, alternatively, would cost substantially more for the same level of effectiveness. I will explain precisely why the proposal to deploy the same hardware scheduled for Whiteman Air Force Base at Grand Forks or Malmstrom—the phase I sites—would be a wasteful and unwise investment. But as I do so, I would call to the attention of the Senate that what is at issue here is the particular location at which the $320 million for phase II can best be spent.

First, Mr. President, if the proposed amendment is to provide a capability to protect Minuteman equal to the protection afforded by the Armed Services Committee recommendation, it would add to the cost of the committee's recommendation an additional $500 million. This substantial sum is greatly in excess of the phase II funds in the committee bill, and about equal to the total expenditure for the Whiteman site. In other words, the adoption of the amendment could add to the program cost twice the amount the Hart-Cooper amendment would have struck. Moreover, it entails some serious disadvantages with no offsetting advantage.

However, Mr. President, the proponents have not seen fit to amend the committee position so as to provide the funds necessary to implement their amendment. One is forced to the conclusion, therefore, that the crucial effect of the adoption of the amendment would be to reduce the effectiveness of Safeguard in protecting Minuteman by a significant amount. I must say that I am at a loss to explain the advocacy of this amendment by those who have opposed Safeguard with the argument that it is not cost effective.

Second, the amendment is difficult to evaluate because it is unclear whether its sponsors are advocating that the hardware scheduled for Whiteman be deployed at either Grand Forks or Malmstrom alone, or, alternatively, whether they mean to recommend that two additional radars be deployed, one each at Grand Forks and Malmstrom. In either case they are faced with the following dilemma: either they mean to suggest one additional radar, along with its complement of missiles, in which case there is a sharp decline in overall protection and a $100 million price increase, or they mean to suggest two additional radars, in which case the effectiveness is maintained but at double the price. Neither interpretation commends itself as an alternative to the system as presently designed.

Mr. President, my friend, the distinguished Senator from Massachusetts, appears to be under the impression that the addition of a second radar or radars at the phase I sites would provide "defense in depth" at these bases and, even more, "an exponential increase in the number of offensive missiles required to attack the defended targets." He has reference here to the tactic of "preferential defense," a concept that is fine in theory but that can be applied only in certain and rather precise circumstances. Had hearings on the proposal been held it would have been made clear that preferential defense cannot be beneficially employed at either Grand Forks or Malmstrom.

Mr. President, the reason why this tactic, attractive in theory, cannot in fact be employed has to do with the geography of the phase I sites and the range of the Sprint interceptors. I have examined detailed maps of the sites in question on which were drawn the actual deployment option for which the Senator is arguing. In an effort to give the amendment every consideration, the optimal deployment under this amendment was studied. The simple fact is that the addition of a single MSR and its complement of Sprint missiles at Grand Forks, the more favorable of the two sites, would bring under additional protection an astonishingly small number of Minuteman—a number, in fact, that is less than one-third of the number protected by deployment of the same hardware at Whiteman.

Alternatively, the addition of two radars and associated missiles—one each at both Grand Forks and Malmstrom—would add, as I have said, some $500 million to the cost over what it would be at Whiteman.

Third, there would be an unavoidable delay of at least 15 months in the operational readiness date of the fourth radar deployment—the only deployment that could—at greatly added cost—buy comparable effectiveness.

Fourth, the potential effectiveness of the possible eventual addition to Safeguard of a new smaller and less costly radar would be seriously reduced. The proponents of the amendment may hope that this radar can be developed in time to substitute for the third and fourth MSR's. I believe that they are in error here as this radar will not be available in time to substitute for these MSR's but may be available later should the threat require augmentation of the defense. However, the optimal use of a supplementary radar would be achieved by its use at a larger and not a smaller number of sites. Since this new radar, when and if developed, would function in harmony with the MSR thereby increasing the effectiveness of both, the MSR's would be optimally deployed at geographically separated sites.

Fifth, the dispersal of Safeguard at more rather than fewer sites seriously complicates the problems faced by a potential attacker. I could go into detail here, but suffice it to say that the effect of leaving two-thirds of the sites completely undefended simplifies the attacker's requirements.

Sixth, the choice of Malmstrom or Grand Forks over Whiteman would sacrifice the very considerable protection of our SAC bombers based in the vicinity of Whiteman. A minimum of 10 percent, and perhaps as much as 20 percent, of the bomber bases can be protected with the addition of the site at Whiteman, as compared with less than negligible bomber protection at the phase I sites.

Against all of this, Mr. President—against the increased costs or reduced effectiveness—or possibly both—against the technical complications, against the loss of bomber protection, must be set the merely rhetorical counterweight that the amendment would be a "geographical limitation on the system." Never mind that the geographical limitation is the source of the many disadvantages I have outlined. Never mind that the price paid for it is high. The fact is that the "geographical limitation" is of no consequence, save as a pointless and ill-considered symbolic defeat for Safeguard.

I hope that my colleagues will appreciate the full implications of the pending amendment. Its adoption would mean rejecting a planned deployment on which many thousands of hours have been spent in costing, analyzing, drafting, engineering and design, and substituting for it a proposal that is seriously deficient, that was rejected by the Armed Services Committee, on which no hearings have been held and which will have received the sum total of 3 hours consideration on the floor today.

This is not the way the Senate should decide these issues. It would be unwise to make our decisions in this way, even if there were, on the surface, some concrete advantages to the amendment itself. Its passage would be, in substance, nothing more than a symbolic victory over the Department of Defense and an unwarranted defeat for the President.

Mr. President, the proponents of the Brooke amendment have taken great pain to suggest that its adoption would leave our negotiating position in the SALT talks unimpaired. Their most affirmative claim is that the adoption of the amendment would not adversely affect our capacity to positively influence the Soviets in the direction of accommodation and agreement at the negotiations. This is the most the proponents have claimed for the amendment and even this claim, I believe, is based on only a partial appreciation of the relationship between Safeguard and SALT.

I have tried, in recent weeks, to point out to my colleagues that Safeguard is, in my view, a carrot and not a stick. It is a carrot in the sense that the real capability of the system to cancel the costly increases to the Soviet offensive forces should convince them of the utter futility of continuing to deploy more ICBM's. If the Soviet leadership comes to understand, as I hope they will, that every SS–9 on which they spend $30 million will be offset by an increment of defense at substantially lower cost, they will realize the wisdom of mutual limitation. For this reason Safeguard is an incentive to agreement, and for this reason it is quite beside the point to argue, as some have, that Safeguard cannot be an inducement to accommodation because it does not threaten the Soviet Union.

My analysis leads me to conclude that any revision of the deployment plans for Safeguard that reduces the real capability of the defense to protect Minuteman reduces our bargaining leverage proportionally.

In addition, Mr. President, there is an even more significant reason why the utility of Safeguard as an incentive at the SALT talks would be diminished by passage of the Brooke amendment.

The simple fact is that the futility and wastefulness of the continuing Soviet offensive deployment can only be demonstrated if it is clear that the Safeguard response will keep pace with any level of offense the Soviets might consider. An affirmative vote on the Brooke amendment, however, far from indicating our determination to offset increases in the Soviet offense, signals an irresolute and tentative support for the Safeguard system.

I think it is clear that the Soviets would read the passage of the Brooke amendment as an indication that Safeguard is being terminated by the first in a series of indirect and oblique senatorial attacks.

I have heard it argued, by proponents of the Brooke amendment, that its passage would be a compromise—as though compromise, in and of itself, were necessarily a good thing. I believe, and I am confident that many Senators share my view, that the careful and deliberate compromise worked out in the Armed Services Committee deserves to be sustained on the floor.

I am also persuaded that a compromise that imposes severe technical burdens on the Safeguard system and increases its cost by $500 million is a compromise in name only. What is compromised by the Brooke amendment is sensible defense planning and the utility of the defense dollar.

I am hopeful, Mr. President, that the SALT talks will result in limitations on both offensive and defensive weapons that can be adequately constrained, sustained, and verified. We should do nothing that will diminish the likelihood of success in Helsinki or Vienna or impair the quality of our defenses in the event we fail to reach agreement.

Mr. President, I yield the floor.

Mr. STENNIS. Mr. President, I thank the Senator for a very fine exposition on this subject, on this occasion as well as on others.

Mr. BROOKE. Mr. President, I yield 10 minutes to the distinguished Senator from New Hampshire.

TO MAXIMIZE PEACE AND SECURITY

Mr. McINTYRE. Mr. President, I rise to support the amendment introduced by my friend, the distinguished Senator from Massachusetts (Mr. BROOKE) which I cosponsor along with the distinguished Senator from Kentucky (Mr. COOK).

I will be brief—and I hope I can go to the heart of the decision we will make here today.

Nearly 15 months ago in a speech in my hometown of Laconia, N.H., I spoke on the ABM-Safeguard system. On that occasion I said:

> Only a few times in our Nation's history have we faced a more far reaching, more profound, more truly significant debate than we face today in dealing with the proposal to deploy the Safeguard system.

In that same speech I focused on basic issues which I felt must be confronted in reaching the decision:

Would Safeguard work?

Would it intensify the arms race?

Would it help in negotiating with the Soviets?

Would it be the best way to maintain the strategic balance in the world?

I have followed the same guidelines this year in arriving at my decision to support this amendment.

Will it provide the "bargaining chip" the administration and our negotiators at SALT feel is necessary?

Will it let us continue to develop the ABM so that we are certain we have a system which will accomplish its mission?

Will it escalate the arms race by provoking a response and thereby undermine SALT?

Will it meet any imminent Soviet threat to the strategic balance on which nuclear peace and our national security depend?

Will it provide a common meeting ground for the Members of the Senate who share divergent views on the action the Senate should take this year in this important area?

I have considered the various proposals on ABM within these guidelines. After a great deal of study on my part, after consulting with experts who were available to me, and after discussions with many of my colleagues here in the Senate, I am convinced that this amendment will accomplish the goals I seek within the guidelines I have set forth.

When I first announced my cosponsorship of this amendment, I reported that I had consulted, by telephone, with the highly placed officials at SALT while sessions were still underway in Vienna. We discussed the various ABM proposals then before the Senate, and I was told that in their view a "bargaining chip" on ABM was crucial to a successful outcome of these vital talks with the Russians. The officials I talked with are convinced that a static ABM would not provide that "chip." They believe there must be solid evidence that ABM is moving forward.

Others who have spoken on the amendment we have before us have made it quite clear that this proposal would, indeed, move ABM forward. I need not repeat their arguments.

I am assured that this amendment would provide the necessary forward momentum. And having considered the comments made to me by officials in Vienna, I have reached a firm and clear conviction that this amendment provides the "bargaining chip" they ask.

Now as to my second guideline, there is this question to consider:

Will this amendment allow us to proceed in the ABM system's development so as to make certain the system will work should it ever become necessary to use it?

As chairman of the Subcommittee on Research and Development of the Senate Armed Services Committee I want to make sure that the deployment of such a costly and complex system is firmly anchored to the soundest possible technical base.

You may recall that in last year's debate on the military procurement bill I offered an amendment designed to provide additional research and development to assure just such technical competence for the system. I believe the amendment we have before us today is consistent with the position I took last year and builds on the action of the Congress to deploy the first two sites.

The amendment we are now considering continues the deployment at those first two sites, strengthens deployment there, and provides additional research to eliminate technical flaws and weaknesses before we move too fast in additional deployment. Such indepth, onsite research should meet many of the technical criticisms of the Safeguard system.

Since we are talking here about the defense of our Nation—as well as the possibility of achieving a peaceful accommodation with the other leading world power—I think that the least we can do is to make sure, through research, that we are not buying a pig in a poke—or, should I say, silo?

I think the people want it this way. I would hope that the administration wants it this way. And I know from speaking to many of my colleagues that they want it this way.

As to the question of whether this amendment would encourage a dangerous escalation, I do not feel that it moves in that direction at all.

The ABM, as proposed to Congress this year, called for full deployment of the ABM system, including the concept of area defense. I believe this proposal would be esclatory to the point of danger.

I was pleased that the Armed Services Committee, after full consideration of this aspect of the program, took the posi-

tion that area defense was escalatory and might even be considered the first step toward the development of a first strike capability.

I believe the Brooke amendment makes the opposition of the Armed Services Committee to the area defense concept a matter of law. It expresses in forceful terms the Senate opposition to this part of the system. It gives our conferees additional support as they meet with their counterparts from the House.

On the question of meeting any threat to our strategic balance:

Since last year's debate, the Soviets have continued to deploy the SS–9's they had under construction. More disturbing, they have begun fresh installations of this same weapon even while we have been meeting at the SALT negotiations in Vienna.

We have heard persuasive testimony before the Senate Armed Services Committee that the size of these SS–9 missiles imply that they would be most logically used to attack our land-based missiles rather than used as instruments of deterrence.

We all hope and pray that this Soviet activity will be halted by a secure strategic arms limitations agreement.

But, if SALT is not successful and if the Soviets foolishly mean to try to degrade our deterrent, I know we all want to be sure that we have prepared a sufficient response to maintain the strategic balance.

My able and distinguished colleague, the Senator from Massachusetts (Mr. BROOKE), with whom, incidentally, I serve on the Armed Services Committee and on my Subcommittee on Research and Development, has designed his amendment with this grave issue especially in mind.

He has argued forcefully and persuasively that his amendment would enable us to meet the same, perhaps even a greater, threat level as we would be able to meet by moving to a third site.

Now, to my final guideline. Will this proposal provide a common meeting ground for the Members of the Senate who share divergent views on the ABM?

There are many sincere positions held by my colleagues. I respect their views, for I know that they were arrived at only after long hours of consideration, discussion, and decision.

Their positions range from severe cutbacks in ABM to full deployment of the system without any qualifications.

Many of these diverse positions appeared in the Senate Armed Services Committee when this matter was considered. The committee position obviously reflects the views of some members.

Then, too, we have voted on two proposals here on the floor of the Senate which have represented still other viewpoints.

None of these positions has yet achieved a majority in this body.

If those with varying viewpoints on ABM can agree on a common ground, we can resolve this issue and simultaneously restore a degree of unity at a time when there are far too many evidences of disunity.

I am not asking any faction to compromise their principles on this issue. I am asking them to seek the area of agreement, for I sincerely believe there is a common ground which can satisfy the basic concerns of all.

It is my honest conviction that the Brooke amendment offers the best possible accommodation of the varying views held by the Members of the Senate. I do not say this lightly. I say it only after considerable discussion with my colleagues, who will shortly be casting their votes.

Mr. President, I want to maximize our security at the same time we maximize the possibility of success in our strategic arms limitations negotiations. I am convinced that all of my colleagues share this desire.

The urgent desire of all of us is to arrive at peace in our world. This is the ultimate goal for each of us—in his or her own way.

The road to this goal is difficult, full of obstacles, fraught with complex problems to which each must seek the solutions.

I feel with great conviction that the adoption of the Brooke amendment will help move us along that difficult road, and I urge my colleagues to look at it in the terms I have set forth and to join in its support.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. BROOKE. I yield myself 1 additional minute.

I thank the able and distinguished Senator from New Hampshire. I know of the long and tedious work he has done as chairman of the Subcommittee on Research and Development of the Committee on Armed Services. I know that he has labored long with this amendment. He is one of its distinguished cosponsors. I am very grateful to him for what he has done, and I commend him for his very thoughtful and very scholarly speech on this subject this morning.

Mr. McINTYRE. I thank the Senator from Massachusetts. I want to say, too, that I know of the long hours that he and members of his staff have spent on this difficult problem, and I congratulate him on his amendment.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. I yield 5 minutes to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, the debate on this important subject will be over in about an hour. It will terminate weeks of debate on whether we should or should not have an ABM. Although I recognize that the Brooke amendment does not go as far as the Cooper-Hart amendment, still, I think we can arrive at pretty much the same conclusions.

Judgments of the Safeguard antiballistic missile system proposed by President Nixon depend on the answers to six controversial questions.

The first question is, Does the Soviet Union intend to—or indeed can it—press the arms race so hard it develops a first-strike capability against the United States?

Opponents of Safeguard say the Soviet Union almost certainly cannot develop a first-strike capability against the diversified second-strike force of the United States, whether it wants to or not. At least some ABM foes say the Soviet Union has no intention of striking first anyway.

The Nixon administration, unwilling to judge Soviet intentions, believes the Soviet Union could be on the way to achieving the capability for a first strike in the 1970's and therefore wants to prepare the United States to defend against this possibility if necessary.

Mr. President, all the testimony and all the evidence I have seen—which I cannot discuss because of its privileged nature—has forced me to believe that the Soviets will pass us sometime in the next 12 months in the total ability to deliver nuclear weapons upon us.

The second question that I think has to be answered is this: Will Safeguard force an escalation of the arms race?

Critics of the system say the Soviet Union will be forced to upgrade its offense to compensate for the assumed effectiveness of Safeguard, and this Soviet move in turn will force a reaction from the United States.

Since Safeguard is purely defensive and will be installed in phases, proponents say, there is no reason the Soviet Union or any other enemy should react by increasing its own arms capacity.

The third question which has developed is this: Will the Safeguard system work?

Foes of the system say it is too easily overpowered by the offense, which has many options for deception. In addition, they dispute those who believe the system can ever be brought up to the peak of operational perfection required, much less maintained at that peak for the many years it may be necessary.

Its backers acknowledge it has not been fully tested but maintain that, on past experience with systems almost equally complicated, they have good reason to expect it will. Moreover, merely deploying the system complicates whatever enemy plans there may be for surprise attack. Safeguard's main value may be achieved without ever firing a missile.

The fourth question is this: Are the costs acceptable?

Opponents say Safeguard is a waste of money which could be better spent at home on the country's serious domestic problems. They say the current price tag is a serious underestimation, that the eventual cost may be up to 50 times as high as the $7.8 billion now estimated.

Mr. President, this is getting to be rather an everyday phrase used by opponents on every appropriation or authorization, that it will cost 20 to 50 times as much. While I do not say that we will keep costs within present estimates, I have to remind those who speak like that, that the cost expectations of Federal aid to education, medicare, the highway system, and so forth, have all gone up far greater than the cost, percentagewise, of our weapons system.

We heard some discussion this morning about cost effectiveness. If former Secretary of Defense McNamara did one thing that was more dangerous than anything else, it was the institution of the idea of cost effectiveness.

My argument is that there is no cost effectiveness measure that can be applied to the defense of 204 million American people. If it works, and if he can

afford it, any American will be glad to pay the whole cost.

I say that the billions of dollars we have spent on this have been wisely spent.

Proponents of Safeguard believe the United States must be able to afford whatever is necessary for its own defense, especially against enemies whose economies are inferior. Safeguard, they say, is necessary insurance to preserve the United States second-strike deterrent.

The fifth question is: Can the United States afford to delay deployment of the Safeguard system?

Critics believe the United States can take the risk of delaying a year or longer while the State Department and the Arms Control and Disarmament Agency try to work out an agreement to stop the arms race. The Soviet Union cannot mount by the mid-1970's, they say, the highly coordinated attack necessary to wipe out America's bomber, Polaris, and ICBM forces simultaneously.

The PRESIDING OFFICER (Mr. SPONG). The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield 2 additional minutes to the Senator from Arizona.

The PRESIDING OFFICER. The Senator from Arizona is recognized for 2 additional minutes.

Mr. GOLDWATER. Mr. President, unless the Soviet Union is sure of a simultaneous kill of all three American forces, she must expect a devastating retaliatory blow. This devastation, Safeguard's foes say, the Soviet leadership will not risk even if the United States delays in building Safeguard for a year or longer.

President Nixon has chosen what he considers to be the minimum next step in the broad development of a nonprovocative anti-ballistic-missile system which could be needed if the Soviet Union presses on toward a first-strike capability. Even 1 year's delay could give the Soviet Union enough of a jump in developing its attack forces to threaten the U.S. deterrent.

The last question, the sixth question, which has come up in my mind is: What effect would rejection of President Nixon's Safeguard system have on the U.S. bargaining position in the pending arms control talks?

Delay in deployment of Safeguard, critics of the program claimed, would provide time and improve chances for progress in arms-control negotiations with the Soviet Union—before a new cycle in the spiraling arms race got underway.

Proponents of Safeguard warned, however, that a Congress-ordered delay or cancellation of Safeguard would be read in Moscow as repudiation of President Nixon, who was heavily committed to beginning installation of the system in 1969. Delay or refusal of funding might also be taken as a signal, it was said, that the Soviet Union need make no arms-limitation concessions of its own, since Congress was forcing the President's negotiating hand to give U.S. concessions in advance.

Mr. President, I ask my colleagues to reject this proposal. With all due respect to the Senator from Massachusetts, I think this is a dangerous step in a dangerous time in our history, when the world is beginning to doubt that the United States has the courage, the willingness, or the ability to defend itself, let alone to take care of the commitments it has made around the world.

All of the debate we have had in Congress over the past going-on 5 weeks has been of more help to the enemy than anything we could have done, when we question the wisdom of our military leadership and the wisdom of our President. I think it gives great aid and relief to those whom we do not want to give those things to.

Mr. COOK. Mr. President, will the Senator from Massachusetts yield?

Mr. BROOKE. Mr. President, I yield 10 minutes to the distinguished Senator from Kentucky.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 10 minutes.

Mr. COOK. Mr. President, I should like first to read an editorial published in the New York Times this morning. It reads:

CLARITY ON ABM

An Administration-created haze hangs over the vote the Senate will take today on the Brooke amendment. The White House, in opposing the amendment, is still leaning on the chief argument it used last week to defeat moves to suspend expansion to the Safeguard ABM system beyond its present two Minuteman sites. But that argument has no real pertinency to the Brooke amendment.

The decisive Administration contention in the earlier voting was that "the momentum" of Safeguard expansion is a vital bargaining tool in the missile curb talks with Moscow. Forty-seven Senators rejected that view last week, as does this newspaper. But others with deep reservations on the worth of ABM hesitated to challenge the Administration's judgment about these supersecret negotiations.

The Brooke proposal responds to these concerns. While limiting immediate Safeguard deployment to the two existing sites in Montana and North Dakota, it would provide more effective Minuteman protection than the Administration-supported authorization bill. That measure would divert $322 million to two additional Minuteman bases in Missouri and Wyoming.

The Brooke amendment would authorize the full $1.3 billion the Administration has requested for ABM, but would require that the controversial $322 million be spent to improve the two present installations. That improvement could be achieved in any of several ways.

The Missouri project involves long-range Spartan antimissiles and expensive missile site radar (MSR) as well as the fast, short-range Sprint antimissiles which provide the chief Minuteman defense. If all these funds were spent for additional Sprint missiles to be used at the North Dakota and Montana sites, substantially more Minuteman could be expected to survive a heavy Soviet attack.

Another alternative would be to extend radar coverage at the Montana base along with the installation of more Sprints. The Pentagon has admitted that one MSR radar, as presently budgeted, is insufficient to cover the 200-mile stretch of this Minuteman field. Installation of a second MSR there would double the number of attacking missiles the Soviet Union would have to fire to achieve the same destruction.

Even more useful would be expenditure of the added $322 million on development for close-in Minuteman defense of a better ABM system than Safeguard, which was designed for quite different purposes. Leading defense scientists on an Administration-appointed panel have confirmed the view of Safeguard critics that much more effective Minuteman defense could be achieved at much less cost in this way.

It is not Safeguard, but the certainty of a vastly more dangerous and expensive new round in the missile race that provides the real incentive for Moscow—as for Washington—to achieve an arms limitation agreement. Nevertheless, those Senators reluctant to challenge the Administration argument that it needs the Safeguard "bargaining chip" can vote for the Brooke amendment with the conviction that it would also provide a much better defense if the SALT talks fail.

Mr. President, having just read that into the RECORD, let me continue by saying that I am one of the few who will vote for the Brooke amendment because I think last year, when the ABM succeeded by a small margin, the Defense Department, in fact, asked for the most minimum and barest programs it could get by with. They are asking for another minimum program at the two additional sites. As a matter of fact, an argument in the remarks of the distinguished Senator from Washington (Mr. JACKSON), which he just finished making, states:

If the proposed amendment is to provide a capability to protect Minuteman equal to the protection afforded by the Armed Services Committee recommendation, it would add to the cost of the Committee's recommendation an additional 500 million dollars.

He admitted himself that the recommendation of the Armed Services Committee to protect the sites will be at greater cost and a far higher degree than the cost that has been expended in the ABM system itself as approved last year. I might also——

Mr. TOWER. Mr. President, will the Senator from Kentucky yield for a question?

Mr. COOK. Let me just finish this thought and then I shall be delighted to yield to the Senator from Texas.

I would also like to quote from page 4 of the remarks of the Senator from Washington:

Fifth, the dispersal of Safeguard at more rather than fewer sites seriously complicates the problems faced by a potential attacker. I could go into detail here, but suffice it to say that the effect of leaving two-thirds of the sites completely undefended simplifies the attacker's requirements.

I might suggest that we could have two-thirds of them undefended at every site we establish in the country, because we cannot establish an adequate radar system. Thus it will make it easier for the enemy at any place in the United States under the other financial proposal at two additional sites.

I can only say that I voted against the ABM last year. I voted against Cooper-Hart because I felt that one of the real weaknesses and one of the real unexplained problems we faced last year was the total and complete softness and weakness of the radar.

If we can have the two present positions totally and completely defendable and then work from that point of view to the next one and the next one, our defense system will truly be adequate.

Obviously if SALT does not succeed,

Congress will be asked for two more sites next year and two more sites the next year. And each of them will be an inadequate defense system as stated by the Armed Services Committee itself.

If we are to protect a system or the system let us try to really do it right. Let us not come back to the American people 2 years from now or 4 years from now, after the unsuccessful SALT talks—as they may be, but let us all hope that they will not be—and then say that we must ask the American people for $2 billion or $3 billion to make the system truly functional.

I am not concerned about overruns where the safety of the people are concerned. And I know that the Senator from Arizona is not either. In this we are in total agreement.

If we have to do this, let us do it right so that we do not have to ask the American people again. Let us do it right and completely defend each of these present sites as adequately as the Safeguard and the Defense Department can provide.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. COOK. I yield.

Mr. TOWER. Mr. President, would the Brooke amendment enable us to provide that additional manned bombers be protected?

Mr. COOK. The Senator has asked me a question which I am not sure I can answer.

Mr. TOWER. I submit that it would not.

Mr. COOK. I did not say that it would. I would only say that it would give us capability by reason of adequate radar facilities at two sites to defend far more Minutemen than the program now intends.

Mr. TOWER. Mr. President, under the Brooke amendment, does the Senator admit that the preferential defense theory would be adopted?

Mr. COOK. I do not think so. I will tell the Senator why.

Mr. TOWER. Then, if it is not adopted, that means that we will deploy two additional radars at two sites for the same cost that we could deploy one at Whiteman. Is the Senator maintaining that position?

Mr. COOK. Mr. President, we are talking about defending more Minutemen. The Senator from Washington said in his remarks that it would defend more Minutemen.

Mr. TOWER. Does the Senator contend that it would defend more Minutemen at the cost anticipated here—that is to say, the amount that is in the budget? I submit that it would cost $0.5 billion.

Mr. COOK. It would not, because the committee itself said that it would cost $500 million. This is $322 million.

I might say to the Senator from Texas that if one suggests an alternative to what the Defense Department wants, it will always cost a half billion dollars more and will always take 15 or 20 months.

The Senator from Massachusetts said that he received information that these facilities could be upgraded and the protection extended to the Minutemen in a period of time of as little as 3 months.

Mr. TOWER. Mr. President, that is not borne out by the facts as outlined to me in confidential briefings by the Defense Department. Has the Senator from Kentucky received this classified briefing?

Mr. COOK. Mr. President, having been a cosponsor of this for more than a week, I would have loved to have the Defense Department contact me in my office and offer me the opportunity to have these briefings.

Mr. TOWER. The Senator did not ask for it?

Mr. COOK. No. I have been briefed on the ABM last year.

Mr. TOWER. I am afraid that the Senator is accepting some facts presented by the Association of American Scientists.

In this instance we have to trust the scientists and engineers and the planners of our Defense Department more than the Association of American Scientists, which is an organization opposed to the deployment of the ABM system. Therefore, the Association of American Scientists can be counted on to oppose the system.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. COOK. Mr. President, I ask unanimous consent that I be permitted to continue for 1 additional minute.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. COOK. Mr. President, I wish that the Department of Defense could answer this question before 1 o'clock this afternoon. I would like them to answer for me in the record whether they feel that the sums they asked for last year for the two sites and the sums they are asking for this year for the two sites really give them all of the defense for all the missiles they really want to defend the respective sites.

Mr. TOWER. Is the Senator suggesting that we go into a closed-door session and get into classified material?

Mr. COOK. It would be perfectly all right with me.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr President, I yield 8 minutes to the distinguished Senator from South Carolina.

The PRESIDING OFFICER. The Senator from South Carolina is recognized for 8 minutes.

Mr. THURMOND. Mr. President, the Brooke amendment No. 821, now being considered by the Senate, differs only slightly from the Cooper-Hart amendment which this body rejected by a vote of 52 to 47 last week.

In fact, of the two amendments, the Cooper-Hart amendment made more sense if the Senate wants to pull back on the Nation's anti-ballistic-missile program. Fortunately, the Senate rejected the Cooper-Hart amendment and the same refusal should be given to the Brooke amendment.

The Brooke amendment limits ABM deployment to two sites, just as the Cooper-Hart amendment. The only difference is that it would allow the money scheduled for the two additional phase II sites to be spent at the phase I location approved last year.

Mr. President, the Army does not want extra money for the phase I sites. The approval of additional money by the Senate for the initial two phase I sites would be wasteful and create problems in present schedules.

Thus, it is easy to see this amendment is merely designed as an attempt to sweeten the pie, so to speak, in hopes of picking up a few votes and bringing the Senate to a decision which would repudiate its action of last week and last year.

It must be realized that the wording of the amendment is such the Army could possibly take actions at the initial two sites which should not be taken without hearings by the appropriate committees of the Congress.

The amendment reads:

> Funds pursuant to this Act for the procurement of antiballistic missile defenses may be used only for defense of strategic forces deployed at Grand Forks Air Force Base, North Dakota, and Malmstrom Air Force Base, Montana.

Thus, if this amendment passes, the Army would be free to speed along the present deployment at the two phase I sites or build a third site or even a fourth site at Malmstrom or Grand Forks.

The amendment merely restricts use of the funds in the bill to these two locations without mentioning for what purpose the additional funds would be used.

Mr. President, the money in the committee bill scheduled for the two phase II sites amounts to some $322 million. Of this amount $298.4 million is scheduled for Whiteman Air Force Base and $15.4 million is scheduled for Warren Air Force Base. Why shift this money to Malmstrom and Grand Forks where it is not needed?

If the Army gets this additional money they should have to justify to the Congress how it would be spent. Can the author of the amendment say how it would be spent? The Army cannot because they have not requested it.

Further, we should ask the question as to whether these unrequested funds for phase I of the ABM could be used in a cost effective way. Would this expenditure amount to gold plating? Certainly there are Members of the Senate who would want these questions asked before supporting this amendment.

Mr. President, as I mentioned earlier, this amendment brings us full circle back to the Cooper-Hart amendment which the Senate has already rejected. They are identical except that the Brooke amendment would give the Army over $300 million they do not want. That is a lot of money to misdirect.

Mr. President, I submit it would be inconsistent and unwise for the Senate to accept this amendment. Supporters of the amendment admit they have no firm recommendation as to just how the $320 million the Army has not requested should be used at the sites where it is not needed.

If the Senate is of a mind to accept this amendment the members would have been wiser to take the Cooper-Hart amendment—at least it would have saved us from tossing out $320 million for unknown purposes. The Brooke amendment offers less goods for more money. I urge my colleagues to reject this amendment.

Mr. President, I want to say further that the work on the Whiteman site in Missouri and protection of our Minuteman missiles there would be delayed a minimum of 1 year if this amendment were agreed to. This is the estimate of the Department of Defense.

I wish to say further that use of $320 million at Whiteman in Missouri and Warren in Wyoming would provide 15 percent protection of our bomber force, whereas we would get protection of only about 5 percent of our bomber force at the Montana and North Dakota sites.

I wish to make the further statement that this amendment would result in a revision of extremely complex technical programs which have been planned by experts. It would be a great mistake, in my judgment, for the Senate to agree to this amendment.

The Brooke amendment would maintain the momentum of ABM spending but not ABM capability. Mr. President, which do we want: ABM capability or ABM spending? I am sure the Senate wants ABM capability and not just ABM spending, as would be provided by the Brooke amendment.

Again I say it is my hope the Senate will reject the amendment.

Mr. BROOKE. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from Massachusetts has 21 minutes remaining and the Senator from Mississippi has 17 minutes remaining.

Mr. BROOKE. Mr. President, I yield myself 7 minutes.

The PRESIDING OFFICER. The Senator from Massachusetts is recognized for 7 minutes.

Mr. BROOKE. Mr. President, it is said "Defense in depth" at the first two sites will provide less defense for more cost. I think that is not accurate. Studies I have seen indicate that how much additional defense one can acquire at the first sites will depend both on how resources are used at those first sites and on the level of threat one is considering. Generally, it appears that, for about the same amount of money, one should be able to cope better with the higher threat levels through defense in depth than by expanding the deployment to additional sites.

For my part I would prefer to insure that 100 Minutemen survive against an attack of perhaps 1,200 warheads than to concentrate on a deployment like Whiteman which might have no Minutemen surviving at those threat levels although more would survive at lower attack levels. I understand that defense in depth can provide more surviving Minutemen at those higher threat levels and it makes good sense to hedge against a greater, not a lesser threat.

It is obvious that if the Department's analyses focus only on relatively low threat levels and if they consider only the option of adding two additional missile site radars at the first two sites, defense in depth can be made to look relatively poor, compared to a three-site deployment. However, adding two radars is by no means the only option for beefing up the first two sites.

The Department could choose from a broad range of deployment, including as I have said, adding one or two radars and increasing the number of Sprint interceptors.

The arguments made here today have all revolved around deployment of two additional site radars at Malmstrom and Grand Forks. The Department of Defense has the option of choosing several different programs that might be deployed. They might go to one additional MSR, and if the secretary does that, it is suggested it be at Malmstrom; or he could not buy the very expensive and costly Spartan missiles, and purchase more Sprint missiles. He has several other options. He does have this broad range of deployment. I think the opponents of this amendment have almost entirely overlooked those options.

It is a fact, I am told, that the long-range Spartan missiles for area defense contribute very little to defense of Minuteman, while they cost substantially more than the Sprints. Thus, if one forgoes the number of Spartans contemplated for the Whiteman site, it would be possible to purchase a sizable increase in the Sprint interceptors available for use at the first sites. Let me review for you a brief technical analysis of the options which I introduced into the record yesterday.

TECHNICAL ADVANTAGES OF DEFENSE IN DEPTH UNDER THE BROOKE AMENDMNT

The technical arguments for the Brooke amendment derive from the fact that the planned Safeguard defense of Minuteman sites is grossly inadequate in two respects: the radars are vulnerable and the number of Sprint interceptors is severely limited. If the Brooke approach is adopted, money not used for defense of Whiteman—and later Warren—Air Force Base could be used to accelerate work on a dedicated hardpoint defense, an option not discussed further here, or to strengthen the planned defenses at Malmstrom and Grand Forks. This can be done either by buying more Sprints and an extra missile site radar or by buying many more Sprints and forgoing the extra radar.

If the former approach were adopted, it would be possible to have two radars at Malmstrom. If they were properly sited; that is, far enough apart so that they both could not be destroyed by a single nuclear burst, yet close enough together so that either could control most of the Sprint interceptors at the base, there would be substantial advantage for the defense against heavy attacks. To negate the defense, the attacker would have to destroy both radars. The defense need defend only one. Thus, in effect, the defense would have to intercept only one-half of the warheads the attacker might deliver against the radars.

If radars were cheap, it would obviously be advantageous to have several at each base to be defended. However, since MSR's cost about $190 million each—including data processing systems—using two radars at Malmstrom implies buying many fewer Sprints. Thus, it is not obvious that one should deploy two radars for Malmstrom or buy more Sprints. It depends on the weight of the hypothesized attack.

To illustrate these points some simplified calculations have been made and the results are shown in table I. The calculations are based on the following assumptions.

First. If the deployment recommended by the Armed Services Committee is pursued, the number of Sprints at Grand Forks, Malmstrom and Whiteman Air Force bases will in each case be sufficient to intercept 60 arriving Soviet warheads.

Second. Each Soviet arriving warhead is assumed to have a 100-percent probability of destroying its target, be it an MSR or a Minuteman missile. (A retargeting capability for Soviet ICBM's is implied in this arrangement).

Third. The effective radius of the Sprint missile is such that 100 Minuteman silos can be defended at each base if only a single MSR is used.

Fourth. If the Spartans for Whiteman are not bought, it will be possible to buy enough additional Sprints to accomplish 50 additional intercepts.

Fifth. If the MSR for Whiteman is not bought, it will be possible to buy Sprints to accomplish 80 additional intercepts.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a table setting forth certain figures under the options available.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE I

	Minutemen surviving the arrival of N Soviet warheads				Number of arriving warheads to destroy all Minutemen
	300	260	120	0	1,180
Options under Brooke amendment:					
Case II: Defense of 2 bases 1 MSR at each, plus added interceptors	300	200	155	100	1,310
Case III: Defense of 2 bases 1 MSR at Grand Forks, 2 widely separated MSR's at Malmstrom, plus added interceptors	300	277	153	30	1,230
Case IV: Defense of 2 bases 1 MSR at Grand Forks, 2 closely spaced MSR's at Malmstrom, plus added interceptors	300	200	100	100	1,400

Note: N= 700, 800, 1000, 1200.

Mr. BROOKE. Mr. President, the intercept capabilities assumed are, of course, only approximate since the number of Sprints to be deployed at each base is not public and since kill probability against adversary warheads is un-

known. However, the assumptions in this regard and also as regards tradeoffs between Sprints, Spartans and MSR's seem consistent with cost figures given by the Defense Department and assumptions used by them in analyses they have made.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. BROOKE. I yield myself 3 additional minutes.

Case I of table I is for the deployment advocated by the committee. The other three cases are all consistent with the Brooke proposal. They assume that the same level of funds as proposed for the Whiteman deployment is available to reinforce the defense at the first two sites. A number of observations can be made.

At the lowest attack level indicated, the same number of Minutemen (300) survive regardless of the defense. This is because the defense is irrelevant at these low attack levels. Seven hundred Minutemen are undefended (by Sprints) in all cases. Therefore, if the Soviet Union could deliver only 700 warheads, it would presumably limit the attack to undefended Minutemen.

If the money saved from forgoing the Whiteman deployments were expended entirely for Sprints, case 2, it is seen that the defense is not as effective as that recommended by the Armed Services Committee against 800 delivered Soviet warheads, but it is considerably better than the deployment recommended by the committee if the Soviets can deliver 1,000 warheads or more.

Under these assumptions, if two MSR's are deployed at Malmstrom and if they are widely separated (case 3) so that essentially all of the Minutemen at that base are defended (instead of only half as would be the case with only one MSR per base), the number of Minutemen surviving is larger than with the committee's recommended deployment at all attack levels—except, of course, at low levels where it is the same.

If two MSR's are deployed at Malmstrom and are sited so that each can control all the interceptors at its base, case 4, the number of surviving Minutemen is relatively low if the number of arriving Soviet warheads is 800–1,000, but relatively high for heavier attacks. In this case the Soviets would have to deliver some 1,400 warheads to destroy the Minuteman force, while only 1,180 would be required if the system were spread more thinly at three bases.

The preferred outcomes for each Soviet attack level are indicated by underscoring on my chart. It is seen that deployment 3 on the chart is superior or at least as good as the committee proposal at all levels of attack and that deployment 4 is the preferred deployment for the heavier Soviet attack. To repeat, these deployment options assume the same dollar level for all cases, including the committee proposal.

The calculations are, of course, inexact because the actual numbers of Sprints are not public knowledge and other assumptions are open to some question.

In particular, the assumptions made regarding both Sprint and Soviet ICBM effectiveness, although consistent with those generally used by the administration, are probably optimistic. Moreover, tactics other than simply exhausting U.S. Sprints, that is, an attack based on saturating the U.S. defense capability, an attack based on a Soviet warhead leaking through the defenses, or an attack based on blackout bursts at successively lower levels might be used by the U.S.S.R.

However, different assumptions regarding numbers of Sprints, their effectiveness, or Soviet effectiveness and tactics could not change the general conclusion: Defense in depth, as allowed by this approach, could provide a more effective defense of Minuteman than the committee approach against a heavy Soviet attack and at least as good a defense against low levels of attack.

A similar analysis has been made assuming, on the one hand, that under the Armed Services approach, Warren as well as Whiteman Air Force Base would be defended; and on the other, that with the Brooke approach the money for both Whiteman and Warren would be diverted to strengthening the two northern base defenses. The conclusions are qualitatively the same. This approach provides a better defense at high levels of attack and at least as good a defense at low levels.

I repeat, because this was the question that was raised, this was the issue that was debated: The conclusion is that this approach provides a better defense at high levels of attack and at least as good a defense at low levels.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield 10 minutes to the Senator from Texas (Mr. TOWER).

Mr. TOWER. Mr. President, several alternative deployments have been examined pursuant to the Brooke amendment. Deployment has been examined for two assumptions about the total amount of equipment deployed at the two phase I sites. In one case, constant total program cost is maintained; that is, the amount of equipment was adjusted so that the estimated total cost under the amendment would be the same as the total cost of the three-site deployment recommended by the committee. For the second deployment examined, the amount of additional equipment deployed under the amendment was adjusted at the Safeguard design threat level to maintain the same Minuteman defense effectiveness that was predicted for the three-site deployment recommended by the committee. For each of these cases one alternative deployment of the additional components under the restrictions of the Brooke amendment was laid out so as to make possible a tactic called "preferential defense."

"Preferential defense" is a well-known concept and it has been studied for many years. Whether or not it is advantageous depends on the detailed nature of the defense system, the size of the defense, the size, shape, and orientation of the defended missile field, the size of the threat and the probable attack techniques.

To illustrate, facing the direction from which attack would come, there are two defense batteries, each of which has a radar and 50 interceptor missiles, and that one battery is deployed to your right and the other to your left.

The defense batteries are far enough apart so that one penetrating warhead cannot kill both radars; yet the batteries are close enough so that the interceptor missiles at either battery can defend both radars. If these conditions are met, the defense can use the tactic of preferential defense, which means it can choose to defend one of the radars with all 100 interceptors and sacrifice the other radar. The attacker, not knowing which radar will be defended, would then target 100 warheads against each radar, with the result that the attacker would use 200 warheads to make certain that he negates a defense with only 100 interceptors. In theory, the scheme is attractive. In practice, it may or may not be advantageous. In past years preferential defense has been considered in analyses of the defense of Minuteman. It was found that, at each location, preferential defense has no evident advantage at the threat level Safeguard is designed to counter. This is primarily a result of the geography, or layout, of the Minuteman silos deployed in those wings. Stated briefly, when the two defense batteries are placed close enough together to allow their interceptors to protect both radars, the number of silos protected by the "umbrella" of Sprint interceptor coverage shrinks to the point where two separate batteries without preferential defense do as good or a better job for the same cost. Consequently, the following comparison of modified phase II as recommended by the Senate Armed Services Committee and deployment under the Brooke amendment are valid whether preferential defense is used or not.

For a program cost approximately equal to that of modified phase II, a third site at either Grand Forks or Malmstrom would result in reduced capability to defend Minuteman. This is due to two factors. First, because of the shape or layout of the Minuteman fields, the number of Minuteman silos that could be protected by a third site at Grand Forks or Malmstrom would be about 70 percent of the number protected by a site at Whiteman. Second, for an equal cost program, fewer interceptors could be deployed with the third site at Grand Forks or Malmstrom. This further reduction, resulting in only about 35 percent of the interceptors that would be deployed at the Whiteman site, is caused by the necessity to compensate for the program stretchout costs resulting from the delayed availability of a third site at Grand Forks or Malmstrom.

If, alternatively, a Minuteman defense capability equivalent to that of the modified phase II—the two phase I sites and Whiteman—were provided under the Brooke amendment, then, instead of three Safeguard sites, four sites would be required—two at Grand Forks and two at Malmstrom. The fourth site is necessary to provide a sufficient number of Sprint protected Minuteman silos under the restrictions of the amendment. The increased equipment requirements and the program stretchout would result in an increased program cost of $0.5 billion to provide equivalent capability.

In addition to comparison of performance and cost, there is the question of the impact of the amendment on deployment schedules. The three-site deployment under the amendment restrictions would be delayed about a year beyond the time the recommended three-site deployment would be available. This is due in part to the advanced engineering for Whiteman that was done under the Sentinel program, and in part to the more limited construction period available because of severe winters at Grand Forks and Malmstrom. For the four-site deployment under the amendment, a delay of about 15 months is incurred to get a level of defense equivalent to the proposed three-site modified phase II. Either way the amendment is interpreted—less defense for the same cost or more cost for the same defense—defense of Minuteman lags what we could do if modified phase II were approved.

The stretchout described above naturally contributes to increased costs. It is stretchout, plus the cost of an additional missile site radar and its Sprints, that results in the increase of at least $0.5 billion over the recommended program. This increase does not take into account inflation, which would probably further increase the added cost of deployment under the Brooke amendment.

Quite apart from considerations of cost and schedule, which do not favor the amendment, it has no other advantage. There is no advantage as far as strategic arms limitations talks are concerned. The Soviets would see little difference whether we restricted deployment to North Dakota and Montana or proceeded with deployment in North Dakota, Montana, Missouri, and perhaps later in Wyoming. Safeguard batteries in any or all of these States clearly cannot defend the very heavily populated regions in the Chicago-Boston-Washington triangle or the Seattle-San Francisco-Los Angeles area. Consequently, Safeguard defense of Minuteman, no matter how it is distributed in the Minuteman fields, does not degrade the Soviet deterrent force.

Although Safeguard sites at Whiteman, and possibly later at Warren, would not degrade the Soviet deterrent they would provide much greater protection for our strategic bomber force than additional deployment at the phase I sites. They would also provide the ability, if required in the future, to proceed more efficiently with protection of the bomber force.

Mr. President, I wish to reiterate the fact that the administration is very much opposed to the Brooke amendment. It favors the committee position as the minimum position that it can, indeed, endorse and support.

At this point, Mr. President, I make reference to a chart inserted in the RECORD yesterday by the Senator from Massachusetts (Mr. BROOKE). I regret to say that this chart, which appears on page 29406, is in error, and leads to inaccurate conclusions.

The reason that the defenses discussed under the Brooke amendment appear to be favorable when compared to the three-site defense recommended by the Senate Armed Services Committee, is that unfounded assumptions have been made with regard to Safeguard component capabilities, costs, and the geography of the Minuteman fields.

First, the erroneous assumption is made that "the effective radius of the Sprint missile is such that 100 Minuteman silos can be defended at each base if only a single MSR is used." This is simply not correct. No combination of Sprint performance and the geography of the Grand Forks and Malmstrom Minuteman fields permits protection of this many silos by Sprints that can protect the MSR. In fact, it is deployment at the Whiteman site which provides the greatest number of defended Minuteman silos for a single missile-site radar.

Second, in the case where a preferential defense strategy is assumed, the geography of the Minuteman fields appears to have been ignored. The addition of a second missile site radar close to the approved MSR at either Grand Forks or Malmstrom does not provide an increase in defense effectiveness as great as that provided by the addition of the Whiteman site. This is true at any threat level projected in the table.

The second MSR defends only a few additional Minuteman silos—about 70 percent fewer silos than the radar could defend if deployed at Whiteman.

Finally, the argument that the "Brooke" Safeguard provides the same defense as the Armed Services Committee Safeguard at the same cost is unsound. Proponents of the amendment ignore the substantial increase in costs which results from the stretchout in the program required by the Brooke amendment.

If the Department of Defense is forced to deploy at only Grand Forks and Malmstrom instead of at Whiteman, they will have to reduce the number of deployed Sprints to about 35 percent of those presently planned in order to avoid the expenditure of additional funds. Even so, the defense we get for our dollars will be greatly reduced.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator from Mississippi has 6 minutes remaining. The Senator from Massachusetts has 10 minutes.

Mr. BROOKE. I am sorry; I did not hear the Presiding Officer.

The PRESIDING OFFICER. The Senator from Massachusetts has 10 minutes remaining.

Mr. BROOKE. Mr. President, some question was raised as to the O'Neill panel report, and I think that it is not only relevant but essential that I read from that report the pertinent sections thereof, which I have referred to earlier in the discussion and colloquy with the distinguished chairman of our Committee on Armed Services.

Mr. STENNIS. Yes.

Mr. BROOKE. It reads as follows:

If the only purpose of Safeguard is defined to be to protect Minuteman, phase IIA as defined in March 1969 should not proceed. Instead, a dedicated system for active defense of Minuteman should replace or, if the need for the MSR is proved, augment phase IIA. As a minimum step, the complement of Sprints at Grand Forks and Malmstrom could be incorporated.

Mr. STENNIS. Mr. President, may we have order?

The PRESIDING OFFICER (Mr. TALMADGE). The Senate will be in order. The Senator from Massachusetts may proceed.

Mr. BROOKE. The report continues:

In view of the possibility that the expected number of surviving Minutemen may be low for several years, techniques other than active defense should be vigorously pursued and necessary advanced developments related to such techniques should be undertaken. Among the techniques that should be considered are those of alternate basing, including techniques for increasing the number of aim points at which Minutemen might be placed. Techniques other than active defense should be evaluated for cost effectiveness when used to replace active defense and when used in conjunction with active defense.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield myself my 6 remaining minutes.

As I said this morning, and have stated before, say what you wish, take it as you will, the Senate has already made a judgment on this matter. This is a rerun and a rehash. I say that with all deference. The Senate made a solemn, firm judgment here last Wednesday in a recorded vote, by a margin that was not just razor thin, that the Senate wanted the four sites, and wanted the money put in to go with it.

That news went out all over the world, and has been accepted as such. I did not hear any terrible reaction from our people. But here we come, a week later, on the same issue, with the same facts, with no new light on the subject and no new developments, on the same basic facts, the same position by the President, the Secretary of Defense, the committee, and everyone else, and propose now to strike out what we did a week ago, reverse ourselves, and limit this matter to two sites only. It is proposed to leave the money in that was going toward the four, to be used in some uncertain way. I do not think it is all needed at all, but we are going to use it on these first two sites.

Mr. President, I do not believe that the Senate is now going to reverse itself, on the same facts. I believe we ought to get along with the bill, and I think that our people as a whole understand the situation and expect that.

Furthermore, Mr. President, I do not have any doubt in my own mind that, if we are going to carry out the purposes that we have in mind, of necessity, for proper defenses for the 1975-to-1980 period, we must start now, not 5 years from now, but now, as we started a year ago, putting our energy, our efforts, and all of our skill and learning toward perfecting the very best ABM system that we can possibly get. Otherwise, we leave ourselves open to blackmail. We discredit our President—and I am not talking only about President Nixon, but the Chief Executive, whoever he may be—at the conferences that are now going on, where, in the SALT talks, at long last, things

have started moving, and we all feel better about it. We feel that there is an underlying current that may produce something positive and affirmative, that will lead to some real steps. I do not expect much as a beginning, but a beginning is a beginning.

We have made public announcements about a proposal having been made—I mean that our Government has, our President has—and we recessed the meeting and are going to reconvene soon, and that is the proposal before the world.

Now we come along, just 1 week later, after taking that affirmative stand, and propose pulling the bung out of the barrel, so to speak, and spilling out everything that we have done, and saying to the President: "We have reversed ourselves. You cannot stand as you stood a week ago. We are going to take some of the air out of your tires." We can argue a long time about how much we took out, but I do not think anyone can say that this would not be a letting out of the air from the tires, a lessening of the pressure on the other side, and a setback for our team at the SALT talks, of which the actual head is our Chief Executive, as it should be.

I believe that the cause has been defined, the need has been described, and the vote has been taken; and I do not believe that we are going to turn back now.

EQUAL MINUTEMAN PROTECTION—GREATER COST

If the interpretation of the amendment is to provide a capability to defend Minuteman equal to that of the committee's recommendation, then a fourth site would be required at either Malmstrom or Grand Forks.

The fourth site is necessary to provide a sufficient number of Sprint-protected Minuteman silos. It would not be available until at least 15 months after the Whiteman site can be available. Because of program stretchout and increased equipment requirements—an extra missile site radar and its Sprints—this deployment would result in an increased program cost of from $0.5 to $0.7 billion to provide equal capability.

Mr. President, it is clear to me that we must move forward now to protect the Minuteman deterrent. It is equally clear that there just is not enough Federal money to meet all of the competing claims for the dollar.

The Armed Services Committee spent almost 4 months conducting hearings resulting in printed testimony of 2,715 pages on the military authorization bill. We were acutely aware of the severe financial condition of the Federal Government and the need to recommend the lowest possible authorization consistent with our national security requirements. The committee recommended a $1.3 billion reduction in the defense request.

Yet, under Senator BROOKE's amendment we are asked to spend $500 to $700 million more to give the same Minuteman protection the committee recommends. In my opinion, we would ultimately be spending one-half to three-quarters of a billion dollars to no advantage.

PROTECTION OF STRATEGIC BOMBER FORCE

Another consideration of restricting the Safeguard deployment to only Grand Forks and Malmstrom is the reduction in the protection that can be provided for our strategic bomber force. The deployment recommended by the committee can provide protection to 15 to 20 percent of the strategic bomber force bases. A defense of Minuteman constrained to Grand Forks and Malmstrom would, in contrast, protect only about 5 percent of the strategic bomber bases.

With regard to the SALT talks, I see no particular advantage in the amendment as compared to the committee's recommendation. Neither poses a threat to the Soviet's deterrent, and neither has the capability of providing a significant defense of our population.

In short, Mr. President, I am somewhat baffled by Senator BROOKE's amendment. It has no advantage that I can detect over the committee's proposal. It provides less Minuteman defense for the same cost or the same Minuteman defense at significantly greater cost; it is less timely in achieving operational availability; it provides less protection for the strategic bomber bases; and it provides no additional negotiation advantage, if indeed as much. For these reasons, Mr. President, I urge my colleagues to vote against it and continue to uphold the spirit that rejected the previous attempts to degrade the defense of our deterrent.

There has been talk about what the Defense Department position might be with respect to the Brooke amendment. I have here a very recent letter from the Secretary of Defense. I do not think there is time to read the letter, but the Secretary certainly covers the point and makes it clear that he is not in favor of any part of the Brooke amendment. He believes that our 40-percent increase in capacity should be continued and that this matter should be left as the committee brought it to the floor of the Senate.

I ask unanimous consent to have the letter printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF DEFENSE,
Washington, D.C., August 18, 1970.

Hon. JOHN STENNIS,
Chairman, Committee on Armed Services, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I am pleased to respond to your request that the Defense Department comment officially on the Brooke amendment (No. 821) to the Defense Procurement Act (H.R. 17123).

The Department of Defense cannot support, and is opposed, to the Brooke amendment. It is the view of the Department that adoption of the amendment would both increase the cost and reduce the effectiveness of the Safeguard defense of Minuteman.

Analyses conducted at my direction indicate that the cost of providing under the provisions of the Brooke Amendment for a level of Minuteman defense equivalent to the protection gained by deployment at Whiteman Air Force Base would be a minimum of $500 million over and above the cost of the Whiteman deployment. Alternatively, under the constraints imposed by the Brooke amendment. Alternatively, under the constraints imposed by the Brooke amendment a defense designed for the same cost as the Whiteman deployment would be less effective because it would protect substantially fewer Minuteman missiles.

If the Department of Defense were forced to deploy Safeguard at only the Phase I sites, two additional Missile Site Radars (MSR) and associated equipment would be required to reach an effectiveness level equal to the defense obtained for $500 million less at the Whiteman site. The continuing growth of the Soviet threat and the necessity for an orderly Safeguard response would leave the Department no recourse but to request additional funds in this amount.

Moreover, the necessity of operating within the constraints of the Brooke amendment would impose burdens of schedule and technical effectiveness that are clearly inimical to an efficient and cost-affective deployment. A level of defense equivalent to the Whiteman deployment would achieve operational status some 15 months later.

The Department of Defense is, as you know, actively pursuing the development of a system of "dedicated hard-point defense." If and when this defense is successfully developed, and if the threat has then grown so as to exceed the level we now expect, we would anticipate deployment of new components to augment Safeguard. Unfortunately, one effect of the Brooke Amendment would be to prejudice the optimal deployment of this possible supplement to Safeguard since it can be most efficiently deployed when more rather than fewer Minuteman silos are defended. The Whiteman site geography is ideally suited to defense of a larger number of silos.

An additional disadvantage that is inescapable under the terms of the Brooke Amendment would be the loss of Safeguard protection to a substantial number of SAC bombers which are based within the protective umbrella at Whiteman. The cost of keeping on air alert the bombers otherwise protected by the Whiteman deployment is estimated to be a minimum of $250 million per year.

I can find no compensating advantages in the Amendment, and certainly none that would justify an increased cost of $500 million, the costly loss of bomber protection and an unacceptable delay in an adequate level of Minuteman defense.

Sincerely,

MELVIN R. LAIRD.

Mr. BROOKE. Mr. President, not long ago, this body adopted a resolution by a vote of 72 to 6 asking that the President of the United States propose to the Soviet Union a mutual moratorium on ABM and MIRV. Today, we are voting on an amendment to the committee bill providing for further expansion of ABM.

The opponents of the Hughes amendment and the Cooper-Hart amendment argued most eloquently before the Senate that what we needed most at the negotiating table at SALT was a bargaining chip. We had to prove to the Soviet Union that we were not stopping the momentum; that we were going forward; that we were not closing down the production lines; that if they did not negotiate with us, we were prepared to further expand, deploy, and continue to improve our ABM system. I was a supporter of the Hughes amendment. I voted for it. I voted for the Cooper-Hart amendlast year, on which the Senate divided equally, 50–50. This year, I was also a supporter of the Cooper-Hart amendment, which prohibited expansion of the ABM beyond the two bases already authorized, Malmstrom and Grand Forks, and reduced the amount expended for

the ABM program by approximately $322 million.

I then suggested an amendment which I had previously discussed in the Committee on Armed Services, proposing that we reach an accommodation with the President whereby we could limit the expansion of ABM to the existing sites but provide the full amount requested for development and deployment. This amendment would still give our negotiators at Vienna a bargaining chip, still keep open the production lines and give the Secretary of Defense an option to add additional radars at both of the existing sites—in other words, to give us indepth defense of the present sites—without moving on to Whiteman Air Force Base and to Warren, in Wyoming, or in any way incorporating anything which would indicate an area defense.

I want to commend again the chairman of the Armed Services Committee and my colleagues on that committee for recognizing the provocation implicit in an area defense, and authorizing only a deterrent defense. An area defense gives us less security. I am pleased that our committee has recognized that. But I am very much concerned about going into conference, as we will, with the House, which passed a bill giving the Defense Department everything it has asked for—expansion at Whiteman Air Force Base, a new site at Warren Air Force Base, and the advanced preps there and in several additional sites in the Northeast and elsewhere.

If we try in conference to reach a "middle ground" between the House bill and the committee position, we could conceivably end up with area defense as well.

I think the history of past conferences would indicate that both sides generally give up something. If we go in with the committee bill, the something that conceivably could be given up would be an insistence on deterrent defense only, and I think it would be a great tragedy.

I was somewhat buttressed and heartened by the chairman's very forceful statement today that he certainly would hold out for deterrent defense over area defense. That itself is reassuring, I am sure, to many of us. But the fact remains that if we do not adopt this amendment—and I certainly am hopeful that we will—we have then expanded the system. Symbolically, it could be very harmful to us when our negotiators again meet in Helsinki. I have argued—very persuasively, I hope—that we would get comparable protection of our Minuteman force with additional radars at the two existing sites at Malmstrom and Grand Forks, as we would get if we went beyond into Whiteman.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. BROOKE. I yield.

Mr. COOPER. I wish to say to the Senator that I support his amendment completely. He has provided the best security for our missile force and, that being true, I think he provides a better bargaining point at the SALT talks. I hope his amendment is adopted.

Mr. BROOKE. I thank the distinguished Senator from Kentucky, who has been the leader in this fight.

The fact remains, in these waning moments, Mr. President, that last year 50 Members of this body voted against ABM.

The PRESIDING OFFICER. The Senator from Massachusetts will suspend. The Senate will be in order.

The Senator may proceed.

Mr. BROOKE. Mr. President, just a week ago, 47 Members of this body voted in support of the Cooper-Hart amendment which was a limitation of the ABM. It is obvious that the Senate is very closely divided on the issue. I cannot see that anyone who voted for the Cooper-Hart amendment could fail at this time to support my amendment which, admittedly, does not go as far as the Cooper-Hart amendment, but which I think is a substantial compromise.

Mr. RANDOLPH. Mr. President, the Brooke amendment does not reduce the amount of money that the defense procurement bill would authorize for the anti-ballistic-missile system.

I am on record on the Cooper-Hart amendment as having supported that effort to reduce the ABM authorization.

Inasmuch as there seemingly is only a geographic limitation in the Brooke amendment, I am not persuaded that it would actually do more than have the result of giving our country less defense at the same cost figure provided in the basic defense procurement authorization measure.

By its defeat of the Cooper-Hart amendment, for which I voted, the Senate already has rejected a reduction in the money to be authorized for the ABM system.

I cannot see any real purpose to be served by limiting the system only as to its geography, and not as to money amount also. Therefore, I cast my vote against the Brooke amendment.

IMPORTANCE OF RESTRICTING DEPLOYMENT OF THE ABM

Mr. KENNEDY. Mr. President, I support the amendment to restrict deployment of the ABM to the two existing sites and urge my colleagues to vote for its adoption.

I have argued, time and again, that the Safeguard system is technically unworkable. I have pointed out that even Pentagon officials admit the vulnerability of the system's missile site radar and the need for research into smaller, cheaper radars which could be part of a dedicated hard point defense.

The Brooke amendment encourages the Defense Department to seek a more effective ABM system, if such a system should prove necessary. It limits ABM expenditures to the two phase I sites, rather than permitting the administration to expand the defective Safeguard system to yet another site. It does not reduce the amount of money to be spent on ABM this year, but at least offers the hope that the money will be spent more wisely.

I do not subscribe to the theory that the Senate must support Safeguard in order to give bargaining chips to our negotiators at the SALT talks. But even supporters of that theory can have no quarrel with the Brooke amendment. The amendment leaves the amount of the administration budget request intact. Surely this is a sufficient bargaining chip.

I also support the Brooke amendment because it is an excellent way for the Senate to make absolutely clear its opposition to the area defense concept.

The Armed Services Committee deleted funds for area defense. Because of this, proponents of Safeguard have been arguing that the system is not provocative or destabilizing. But the administration has never withdrawn its commitment to area defense, and the House bill expressly provides for such defense. There is a real danger therefore that the most provocative aspects of the Safeguard system will be retained.

This danger was accentuated by a television interview given by the Secretary of Defense on Sunday. The Secretary was asked why he opposed the Brooke amendment. He replied that the amendment "would not give us the coverage of the Minuteman field that the third site would give us if constructed in Missouri, and would not give us the follow-on options for either area coverage or for accidental launch coverage that would be available should the third site go forward in Missouri."

In light of this statement by Secretary Laird, I think it is incumbent upon all those who reject the area defense concept, including the members of the Armed Services Committee, to vote for the Brooke amendment. We must make clear to the administration and to the House that the Senate is firmly opposed to any ABM system which purports to do more than protect our deterrent.

Mr. President, the Brooke amendment encourages the Defense Department to seek a more effective ABM system and helps lay to rest the area defense concept. For these reasons, I strongly urge its adoption.

The PRESIDING OFFICER (Mr. TALMADGE). The hour of 1 p.m. having arrived, the Senate will now proceed to vote on the amendment offered by the Senator from Massachusetts.

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Mississippi will state it.

Mr. STENNIS. What is the pending question?

The PRESIDING OFFICER. The pending question is on agreeing to the amendment offered by the Senator from Massachusetts (Mr. BROOKE), No. 821.

Mr. STENNIS. I thank the Chair.

Mr. BROOKE. Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to amendment No. 821 offered by the Senator from Massachusetts (Mr. BROOKE).

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. GRIFFIN. I announce that the Senator from South Dakota (Mr. MUNDT) is absent because of illness and, if present and voting, would vote "nay."

The Senator from Ohio (Mr. SAXBE) is detained on official business.

The result was announced—yeas 45, nays 53, as follows:

[No. 260 Leg.]

YEAS—45

Aiken	Harris	Mondale
Anderson	Hart	Montoya
Bayh	Hartke	Moss
Brooke	Hatfield	Muskie
Burdick	Hughes	Nelson

NOT VOTING—2

Mundt	Saxbe

So Mr. BROOKE's amendment was rejected.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. TOWER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT NO. 843

Mr. McCARTHY. Mr. President, I call up my amendment No. 843.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk proceeded to state the amendment.

Mr. McCARTHY. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered. The amendment will be printed in the RECORD.

The amendment, ordered to be printed in the RECORD, is as follows:

AMENDMENT No. 843

At the end of the bill, add a new section as follows:

SEC. . Notwithstanding any other provision of law, no live ammunition may be used in any weapon by any member of the National Guard of any State against the civilian population of any State if the weapon in which ammunition is to be used or the ammunition to be used was paid for in whole or in part with Federal funds, unless the Governor of such State has requested permission from the President of the United States for such use of such weapons or such ammunition in a specific locality for the duration of one week and the President of the United States has granted permission for such use.

Mr. MILLER. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the time on the pending McCarthy amendment be limited to 1 hour, the time to be equally divided between the Senator from Minnesota (Mr. McCARTHY) and the Senator from Mississippi (Mr. STENNIS) after the time already allocated to the joint leaders to show our respect, regard, and affection for Mark Trice and after the remarks of the Senator from California (Mr. MURPHY).

Mr. STENNIS. Mr. President, reserving the right to object—and I shall certainly not object to this request—I have said before that I believe, with the ABM matter disposed of now, that the bill can and should move along very rapidly. I think it is possible to get very reasonable consent agreements. I know that the leaders on both sides are very much interested in this matter.

I want to express my opinion on the bill. Almost everything has been rather fully debated. There are some important amendments that will require some time. There is an amendment that brings the whole war into issue. There are other amendments that are rather far reaching. However, they have already been debated somewhat.

I believe that if Senators will stay on the floor, the ones who are interested and feel that they have a chance to get over the substance of their arguments, that will produce agreements to vote.

I think we can move with reasonable rapidity. Certainly it would be tragic if we were not to finish this bill well before the so-called Labor Day recess. I believe that all Senators want to do that. However, we all have to make personal sacrifices in order to do it.

Mr. MANSFIELD. Mr. President, I am in full accord with the views of the distinguished Senator. The distinguished minority leader and I have discussed the matter of meeting even on Saturdays as well as staying in session later in the evenings. I think the prospects for getting time limitations are reasonably good at the moment. If this pending request is obtained, time limitations will very likely be agreed to on other amendments. I ask for the question.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCOTT. Mr. President, will the Senator yield to me?

Mr. MANSFIELD. I yield.

Mr. SCOTT. I thank the distinguished majority leader.

The PRESIDING OFFICER. The Senate will be in order.

Mr. SCOTT. Mr. President, I know what I am going to say, and I can hardly wait. I wanted to make the same point. If only we could agree on a time limitation now, we could be more accommodating to all Senators as we draw near this brief 2- or 3-day recess.

I believe there is an amendment by the distinguished Senator from Oregon (Mr. HATFIELD), having to do with the draft and/or volunteer service. I do not know whether he is amenable to a definite time or not.

Then there is a McGovern-Hatfield amendment. I do not know how many other amendments there are, but there was a clear indication at the meeting of Republican Senators yesterday that we are ready collectively, as far as I know, to see action on this bill completed as briefly as may be possible, with all due respect to those Senators who feel they need some time to explain their amendments.

So I do not know whether the Senator from Oregon has any time in mind on the draft amendment.

Mr. HATFIELD. Mr. President, will the Senator yield?

Mr. SCOTT. I yield.

Mr. HATFIELD. Mr. President, I would respond to my distinguished minority leader by saying that a number of people have indicated that they would like to be heard on this proposal. I would think no less than 10 hours would be required to hear various presentations. I have been ready to go forward on this amendment for quite some time but I am not going to deny Senators who want to be heard on this matter the right to be heard.

Mr. MANSFIELD. Did the Senator say 10 hours?

Mr. HATFIELD. Yes; I think so.

Mr. SCOTT. On the draft amendment.

Mr. HATFIELD. Yes. If I might ask the Senator to yield again, I do not think we are talking about a simple amendment that would change the language in a particular bill. We are talking about a basic system of military manpower procurement. This goes much to the heart of the Nation's problem today, having to do with our young people. It is a philosophical issue. It is one of the most fundamental issues we will be disscussing in this session of Congress.

Therefore, I think it is more than a mere amendment. As I say, it addresses itself to one of the most fundamental issues in the Nation today. I do not think we could do it in less than 10 hours.

Mr. MANSFIELD. Ten hours is an awfully long time. I say that as one of the cosponsors of this amendment to the bill.

Mr. SCOTT. As I recall the amendment, I would be very brief.

Mr. HATFIELD. I have a 4-hour speech, and then there are other speeches.

Mr. MANSFIELD. As an alternative, rather than agree to a 10-hour limitation, perhaps we should go ahead and take our chances and trust to the good judgment of the Senate as a whole. What I have to say on the matter I can say in 3 minutes, and explain my position—to my satisfaction, anyway—because I am in favor of the Hatfield proposal. The issue is clear. It is easy to determine what is involved.

The Senator is correct when he says that the amendment is important; but I point out that all the amendments are important. However, I must admit they are of a different nature than the amendment initiated by the Senator from Oregon.

Mr. HATFIELD. Mr. President, will the Senator yield further?

Mr. SCOTT. I yield.

Mr. HATFIELD. I would be agreeable to setting a time certain, a definite time, for a vote to be taken within a reasonable period, and leave to individual Senators the responsibility to present the facts and to be heard as long as they wish.

I have to be very candid with respect to this matter. I understood there was

some possibility that an effort would be made to make a determination of this matter on a procedural motion. I want to avoid that if possible.

Mr. MANSFIELD. Does the Senator mean a tabling motion?

Mr. HATFIELD. Yes.

Mr. MANSFIELD. As far as the majority leader is concerned, a motion to table will be resisted tooth and nail, unless matters get out of control. I think we have at times been too prone to use that procedure when it is in order to vote on the merits. In ordinary circumstances I am not in favor of tabling actions because again, in ordinary circumstances, every Senator should be allowed to express his views and obtain Senate disposition on the merits. There are times, understandably, when tabling actions are in order but those occasions arise out of special circumstances in my judgment. And I speak as one who himself has resorted to the use of the tabling device. I do not believe such circumstances are here involved to warrant such action.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. SCOTT. I yield.

Mr. GOLDWATER. We have many other amendments that have to be considered, and if we reach an agreement today to vote, for instance, next Tuesday, we are going to preclude the consideration of many other amendments.

I would suggest, if it is in order, that we recognize that the Senator from Oregon will offer this amendment on a day of his own determination, probably Monday, and in the meantime all of us who have something to say on it could discuss it and discuss other amendments, and take care of other amendments; and on Monday, Friday, or whatever day the distinguished Senator deems proper, he could offer the amendment with the understanding that at a certain time on a certain day we will vote.

I do not want to see us agree now to any prolonged period of discussion on this amendment where we would preclude consideration and passage of other amendments. Is that possible?

Mr. MANSFIELD. The Senator, I think, placed his finger on the dilemma which confronts us. As the Senator from Mississippi said, and I am sure he speaks for all of us, we not only want to finish this bill, if possible, by the time we go into our Labor Day recess, but we want to complete action before that. There is other business that is being held up. I do not think it becomes the Senate to spend as much time as we have on this bill and to have wasted as much time as we have on this bill. I hope we can get to these amendments. Various Senators have indicated a desire to be cooperative and to place limitations on amendments.

For example, the Senator from Arkansas (Mr. FULBRIGHT), has an amendment on which he is prepared to agree to a 2-hour limitation. The Senator from Illinois (Mr. PERCY) has an amendment on which he is willing to agree to a time limitation of 1 hour; the Senator from Maryland (Mr. TYDINGS) has an amendment on which he is willing to agree to a time limitation of 1 hour; the Senator from Indiana has an amendment on which he is willing to agree to a time limitation of 1 hour. The Senator from Massachusetts (Mr. BROOKE) is willing to give consideration to a 2-hour limitation on an amendment he very likely will offer. So progress is being made. We must now get underway.

I am waiting only the approval of the distinguished chairman of the committee before making the requests covering these amendments.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. SCOTT. I would inquire whether or not the Senator from Oregon would be willing at the conclusion of the amendment which has been read to lay down his amendment with an agreement to take 7 hours on it and to vote thereafter.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. SCOTT. I yield.

Mr. BAKER. With respect to that suggestion, might I suggest as a possible alternative that we attempt to obtain a unanimous-consent agreement that the germaneness rule would not apply, with the understanding that early in the day, those of us cosponsoring the amendment might speak over a period of time without dedicating a great length of time, and still proceeding with amendments as they come up under controlled time.

Mr. SCOTT. I thank the Senator for his suggestion. The germaneness rule would not apply here if debate deals with the overall matter contained within the broad four corners of the bill. That is a very good suggestion and might enable us to use some of the time during the morning period.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. SCOTT. I yield.

Mr. MANSFIELD. As far as the amendment offered by the Senator from Oregon (Mr. HATFIELD) is concerned, may I say that I would oppose to the best of my ability, any tabling motion. That goes for all of these amendments.

Mr. HARRIS. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. HARRIS. Mr. President, I shall offer an amendment to the amendment of the Senator from Oregon, and that amendment would be in order, so in any time limitation discussion that thought might be taken into account.

Mr. HATFIELD. Mr. President, if the Senator will yield, I would suggest that if we could get some idea of the various amendments that might be offered to my amendment on the draft, we could sit down and figure out a reasonable period of time, and I would be agreeable to a time limitation. In fact, I would initiate the idea of establishing one.

The only reason I was hesitant to suggest it at this time was that I understood a motion to table would be offered at some point before the Senate had had an opportunity to consider this matter and vote it up or down. I want an up or down vote.

Mr. SCOTT. Mr. President, if the Senator will permit me to make a suggestion here, if there is a time certain fixed, then the unanimous consent will be so phrased that no tabling motion can occur save at the expiration of the time. Of course, no Senator could be prevented from making a tabling motion after that time, but a Senator is prevented from cutting off his debate.

Mr. BYRD of West Virginia. Mr. President, if the Senator will yield, except if the unanimous-consent request required a vote on the amendment at a specific time, at which point the tabling motion would be shut off.

Mr. SCOTT. That is the point I was making. A tabling motion would be shut off if the unanimous-consent request would state in so many words that a vote up or down would occur at a certain time; but if it were simply an extension of time, after which the Senate could dispose of it in any way it wished, and did not provide for an up or down vote, the motion would stand.

Mr. HATFIELD. Mr. President, I would be willing to agree to a time limitation provided that at the expiration of the time limitation we would have an up or down vote.

Mr. SCOTT. I would have no objection to that.

May I leave it this way: that the Senator from Oregon will be good enough to ascertain later how many amendments will be offered to his amendment, and then discuss it with the leadership, and that we will again propose a unanimous-consent request, perhaps later on today?

Mr. HATFIELD. I thank the Senator.

UNANIMOUS-CONSENT AGREEMENT

Mr. BYRD of West Virginia. Mr. President, the following Senators have indicated an intention to call up amendments, and at the request of the majority leader I have contacted each of the Senators involved and they have agreed to a time limitation on each of their respective amendments. The matter has also been discussed with the able manager of the bill, the chairman of the Committee on Armed Services (Mr. STENNIS).

The Senators have agreed to limitations on each of their amendments as follows:

Mr. PERCY, 1 hour to be equally divided between himself and the manager of the bill (Mr. STENNIS).

Mr. TYDINGS, 1 hour, to be equally divided and controlled in the same way.

Mr. BAYH, 1 hour, to be equally divided and controlled in the same way.

I, therefore, ask unanimous consent that such time limitations be effected.

The PRESIDING OFFICER. Without objection, it is so ordered.

The unanimous-consent agreement, subsequently reduced to writing, is as follows:

Ordered, That during the further consideration of H.R. 17123, the military procurement authorization bill, debate on any amendment to be offered by the Senator from Illinois (Mr. PERCY), the Senator from Maryland (Mr. TYDINGS) or the Senator from Indiana (Mr. BAYH) be limited to 1 hour with the time to be equally divided and controlled by the proponents of the amendment and the Senator from Mississippi (Mr. STENNIS).

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations and transmitting a protocol were communicated to the Senate by Mr. Leonard, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer (Mr. GRAVEL) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations received today, see the end of Senate proceedings.)

J. MARK TRICE

Mr. SCOTT. Mr. President, one of the first people a newly elected Republican Senator meets is the present secretary to the minority, Mark Trice, and it has ever been thus. For 50 years now Mark has been the man who has taken the newly elected Senator by the hand and led him into the strange world of the U.S. Senate.

With dedication and deep devotion to duty, Mark Trice epitomizes the unseen and unheralded public servant whose anonymity could never cloak the distinction with which he does his job.

Fifty-four years ago—before many distinguished Senators were born—Mark Trice came to this Chamber. Ten years ago, our late, beloved Senator Dirksen said on the floor of the Senate that he had urged Mark to write a book and title it, "Senators Who Have Known Me." I would like to urge today that Mark do just that. When one thinks of the events that have occurred in the last 50 years and the great men who have graced this Chamber, one can hardly wait for a book like that to be written.

In addition to the service Mark performs for all Republican Senators, I want to personally express my thanks for the help he has given me in my role as Republican leader. As he guided me through my first days in this Chamber 12 years ago, so did he give me invaluable assistance and wise counsel when I was elected Republican leader.

Finally, Mark, I can think of no better words to express how I feel, and how I am sure my colleagues feel, about your dedicated service than the words uttered on this floor just 10 years ago today by Senator Dirksen:

> Deep is our affection, high is our esteem, wide is our admiration for the work you have done and for the service you have rendered.

I salute you, Mark, and I wish for you and your charming wife, Margaret, and your family, pleasure, happiness, and satisfaction in the years ahead.

Mr. President, I ask unanimous consent that all Senators may be given 5 days in which to extend their remarks in tribute to Mark Trice.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCOTT. Mr. President, I yield to the distinguished Senator from South Carolina (Mr. THURMOND).

Mr. THURMOND. Mr. President, it gives me great pleasure to pause and pay tribute to a man of uncommon ability and thorough dedication, J. Mark Trice.

Mark came to the Senate as a page at age 14 and, except for a 4-year period during which he practiced law here in Washington, he has served the Senate and the Republican Party with distinction ever since.

Mr. President, Mark's 50 years of service in this great body eclipses that of any other Senate official now in office, and it is a record approached by few in the history of the U.S. Senate.

This is an achievement in itself, Mr. President, but it does not tell the whole story. Mark can be best described as a man who is "always there when you need him," and he is there with the facts. No matter what the situation, Mark remains calm and professional, and this enables him to carry out his duties with a high degree of expertise.

Kipling said:

> If you can keep your head when all about you are losing theirs and blaming it on you . . . then you'll be a man, my friend.

Mr. President, Mark Trice is the kind of man as described by this well-known line.

Mr. President, I do not believe I have ever known a man who performs his responsibilities with as much consistent effectiveness, quiet tact, and helpful and considerate manner as does Mark Trice.

Mr. President, we are blessed with a man of quality and ability in a time when such virtues are of greatest importance, and I fervently hope that Mark will continue to serve for many, many years to come.

Mark Trice is fortunate to have such a lovely and capable wife, Margaret Trice, and she has been not only a devoted companion but also a great inspiration to him.

Gratefully I salute my friend, J. Mark Trice, a dedicated public servant, a true patriot, and a great American.

Mr. SCOTT. Mr. President, I now yield such time as he may desire to the Senator from New Hampshire (Mr. COTTON).

Mr. COTTON. Mr. President, I am sure that most of the Senate knows of my close personal friendship with Mark Trice, and I will take only a moment to participate in this time of appreciation of him.

I am not the most senior Senator in this body, but I claim to be the most senior Senator in this body as concerns Mark Trice, because 45 years ago I came here as an assistant clerk of a Senate committee under the late George H. Moses and served in and about the Senate for 4 years.

When I came here 45 years ago Mark Trice had been an attaché of the Senate for several years; and when I came back to the Senate I came to know him again, more intimately and closely than almost any other man with whom I have been associated.

I am proud of being possessed of his friendship. It is one of the treasures that will remain with me when I leave this body.

I cannot phrase adequately my admiration, respect, and affection for him. It is shared, I believe—and justly—by every Member of this body on both sides of the aisle. We hail Mark today as he completes 50 years of service here, and wish for him more years, we hope, of service here, and certainly many more years of the happiness and satisfaction, which he has earned and so richly deserves.

Mr. SCOTT. Mr. President, I now yield to the distinguished senior Senator from Utah (Mr. BENNETT) such time as he may require.

Mr. BENNETT. Mr. President, in a situation of this kind, my mind turns not to the public service that my friend Mark Trice has given to the Senate, but to the many personal kindnesses and forms of assistance he has given to me—things that, by themselves, did not seem to amount to much, but which over the years added up to a great service.

He has always been willing to help me with my problems. He has always been willing to give me advice, and I have always enjoyed the points of view that he has expressed, both on his job and on the doings of this very interesting body.

I think it is fortunate that, if we have men who serve in the Senate for long periods of time, we can have among them a man like Mark, whose seniority and experience have not turned his head, and who has always continued, through the years, to do his job quietly, unobtrusively, efficiently, and with a very pleasant sense of humor.

I am looking forward hopefully to the day when he can recover the job he held for a brief period of time as Secretary of the Senate. With all apologies to Mr. Valeo, I think this would be a wonderful crowning to his 50 years of service. I hope that particular thing will not wait too long, Mark, and I hope once you get it next time, it will last longer than it did the last time, because I think the service you have rendered this body, not only to the Members of your party but to all Senators, deserves that kind of recognition, and I shall add that as an issue in the campaign speeches that I make around the country this fall.

Mr. SCOTT. Mr. President, I yield now to the distinguished majority leader.

Mr. MANSFIELD. Mr. President, may I say to my colleagues how happy and how personally pleased I am to participate in this tribute to a great gentleman, an official of the Senate for the past 50 years in one form or another, a lawyer, a friend, and a good counselor.

When one stops to think what has happened in the history of this country since 1920, when Mark Trice first came to the Senate, and during the intervening 50 years, one begins to wonder about the fast pace this country leads. One begins to recognize the worth of an able official of the character of Mark Trice, who, though the chief official on the Republican side, is neverthelss courteous, kind, considerate, and impartial toward those of us who happen to reside on the Democratic side of the aisle.

He is a good friend who has made his "Mark" in this body. He is a man whose word is as good as his bond. He is a man whom I am privileged to call a friend. He is a man to whom I go for advice as the need arises, and a man whom I have always found forthright and fair in his dealings with all Members of the Senate.

In short, like so many of my colleagues I have come to rely upon Mark Trice and, in my small way, I pay tribute to him today as a man who has contributed much to the welfare of this body, and in so doing, to the welfare of the Republic as a whole. I only hope, may I say to Mark, that I will be around when the next 50 years are concluded.

Mr. SCOTT. Mr. President, I now yield such time as he may require to the distinguished assistant minority leader, the Senator from Michigan (Mr. GRIFFIN).

Mr. GRIFFIN. Mr. President, in the Senate we are so accustomed to having Mark Trice here among us that we almost consider him to be a permanent part of the Capitol. But contrary to public belief, as he told the Republican policy luncheon yesterday, he was not born in the Capitol, and he did not lay the cornerstone.

But there is a certain permanence about Mark Trice which is reflected in some statistics that have come to my attention.

Since the beginning of the history of the Senate, there have been about 1,800 Senators who have served in this body. Since Mark first came here as a page in 1916, he has served with 620 Senators, more than a third of the total number.

So, it will be seen that while Senators come and go—Mark Trice stays on and on—we hope, forever.

In the course of his long service, Mark has been a firsthand witness to the making of history, and often he has been a participant, too. He has seen the Senate meet and deal with many crises, and in the discharge of his official duties he has faced a few crises of his own.

One of these, I am informed, occurred in connection with the inauguration of President Eisenhower in 1953. At the time, Mark was Secretary of the Senate and he served as staff director of the inaugural committee which Senator Styles Bridges headed.

About 9 a.m. or so on the day of the inauguration, just a few hours before the ceremony, someone came to Mark and said the lectern to be used on the occasion could not be located.

Some urgent calls went out to the White House and to other points in the city. Finally, the lectern was located at a warehouse out on Wisconsin Avenue. Truckers were dispatched to rush it to the Capitol steps; it arrived just a short time before the ceremony.

As he has on every occasion, Mark met that particular crisis calmly and effectively—and the lectern was in place when the inaugural ceremonies were to begin.

Mr. President, 50 years is a considerable span of time in any man's life. It is difficult for me, as one of the more junior Senators, to realize that Mark, with his good health, continuing vigor and enthusiasm could have reached such a milestone in his career. Of course, it is also eloquent testimony to the loyalty, integrity and outstanding service he has performed.

Along with so many others who have come to the Senate over the years, I am deeply indebted to Mark Trice in many ways. Although I had spent a number of years in the other body, I came to the Senate as a relative stranger. Needless to say, the ways of the Senate are somewhat different from the ways of the other body. From the beginning of my Senate service I found in Mark Trice a wise guide and counselor.

Day in and day out, from one session to another, he has been here on the floor or in his office, cheerfully making available the great store of knowledge and wisdom he has accumulated since he came to the Senate as a page.

Mr. President, in addition to the extraordinary length of his service, it should be noted that few men have ever served the Senate in so many different ways as Mark Trice.

At various times, Mark Trice has been a page, the Deputy Sergeant at Arms of the Senate, the Secretary of the Senate, as well as secretary to the majority or the minority, as indicated by political circumstances from time to time.

So, I am pleased to have this opportunity to express my personal gratitude to Mark Trice for all the assistance he has given me as a junior Senator and as a Member of the leadership. On and off the floor, his advice and understanding have been invaluable.

It has been written that a man with many friends is a friendly man. This is certainly true of Mark Trice. Mark's friends, in and out of the Senate, are legion. I am delighted to join with them in wishing Mark Trice many more years of distinguished service to the Senate.

Mr. President, if Mark Trice was missed from his accustomed place on the Senate floor a little earlier today, I can report that he had good reason to be absent. He was at the White House for a visit with President Nixon. During the visit, Mark received from the President citation—the second such Presidential citation, I understand, that has ever been awarded—for his distinguished service to the Senate.

Mr. President, I ask unanimous consent that the text of the commendation be printed at this point in the RECORD.

There being no objection, the commendation was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C.

The President of the United States of America awards this Commendation to J. Mark Trice for his 50 years of dedicated service to the Senate of the United States, starting as a page and now as Secretary for the Minority, during which time he has earned the respect and admiration of the Members of the Senate, his colleagues, and many friends.

RICHARD NIXON.

THE WHITE HOUSE, *August 19, 1970.*

Mr. SCOTT. Mr. President, I yield now to the distinguished chairman of the Senate Republican policy committee, the senior Senator from Colorado (Mr. ALLOTT).

Mr. ALLOTT. Mr. President, approximately 54 years ago, a young boy came to the Senate as a page. He served well and faithfully and became known among the others by his cheerful demeanor and his outstanding willingness to participate in everything demanded of him by the Senators whom he served.

In 1919, in recognition of his abilities, he was appointed Secretary to the Sergeant at Arms of the Senate, which position he held until 1929.

In the meantime, this young lad had studied law and was admitted to the bar. In 1929, therefore, he left the Senate to take up a law practice in the city of Washington.

But the call of the Senate of the United States was too strong—and after 3 years he returned to this building as a Deputy Sergeant at Arms. In 1946 he was elected secretary for the majority of the Senate for the 80th Congress during one of the few periods subsequent to World War II when the Republican Party had the good fortune to organize the Senate. Subsequently, through no fault of his own, he was relegated to the position of secretary of the minority, in which he served until 1953. But in January 1953, in another one of those rare recent occasions, there was a Republican Senate and this ex-page was again elected secretary to the majority, in which capacity he served for 2 years until again, by the vicissitudes of politics, was appointed to the position he now holds.

The ex-page boy to whom I refer is well known to all of us on both sides of the aisle. J. Mark Trice today celebrates his 50th anniversary of service to the U.S. Senate and to the Republican Party.

Those of us who have had occasion to deal with Mark Trice, whose lives have had the good fortune to intersect with his, have come away with the deep and certain knowledge that there stands one of the bulwarks of this body. Here, in his person, is one of the men little known outside the circles in which he moves, anonymous outside the walls of this building because he prefers it that way, but inside, and in this Chamber, one of its supporting pillars.

The Senate is better for having had Mark Trice serving it for 50 years. Seldom has any man achieved a record comparable to his. I know I speak the sense of everyone here in saying that we honor him and respect him, and wish for him many more years of continued service on the rolls of the U.S. Senate and in this Chamber.

Mr. President, Mark Trice is one of that very strong and quiet breed of men who have made our country and its institutions what they are. I know I can speak for everyone in thanking him for his extraordinary contribution to each of us and to the Senate.

Mr. SCOTT. Mr. President, I yield now to the distinguished Senator from Oklahoma (Mr. BELLMON).

Mr. BELLMON. Mr. President, as a new Member of the Senate, I want to join my colleagues in expressing respect and admiration for Mark Trice.

I am a new Member of this body, but in the brief time I have been here, I have found that Mark Trice is eminently fair to the junior Members of the Senate. I have found him to be a source of knowledge and wisdom, based upon the lifetime of service and devotion to duty with which he has characterized his service here. I have found him to be completely able and always willing to be helpful to junior Senators.

I should like at this time to thank him personally for the help he has given me,

as he has given to others in my situation over the years.

I am very proud, in this way, to join in paying tribute to Mark Trice upon the completion of a half century of service to the Senate, and to join others in wishing for him many more years in the same capacity.

Mr. SCOTT. Mr. President, I yield now to the distinguished Senator from Florida (Mr. GURNEY).

Mr. GURNEY. Mr. President, I take great pleasure in joining this tribute to Mark Trice.

He has served the Senate in various capacities since the administration of Woodrow Wilson. We are talking today about his 50 years with the Senate. But in looking at my Who's Who, I note that his service as a page began not 50 years ago but 54 years ago. He attended Georgetown Law School during his tour as Secretary to the Sergeant at Arms 1919 to 1928; had a brief stint in private practice, 1929 to 1932, and came back to the Senate as Deputy Sergeant at Arms from 1932 to 1946.

He was secretary to the majority in the Republican controlled 80th Congress, 1947 to 1949, and went back to minority status in 1950.

He has been an employee of the Senate longer than many of our younger Senators have lived. President Kennedy was born in 1917—the year after Mark became a page. When Mark came to work here, Charles de Gaulle was a prisoner in a German prison camp; Conrad Adenauer was the mayor of Cologne; Franklin Roosevelt was an Assistant Secretary of the Navy; Dwight Eisenhower had just graduated from West Point; and Lyndon Johnson was in grammar school. President Nixon was still a preschool youngster at Whittier. The span has been enormous, and the list of illustrious men who have served in the Senate during Mark's tenure is legion.

Mr. President, we in the Senate are blessed in having men like Mark Trice to assist us. We are deeply indebted to him and to the nameless gentleman who first convinced him to come to work for the Senate, and I wish him further long, continued service in this great legislative Hall.

Mr. SCOTT. Mr. President, I yield now to the distinguished Senator from Oregon (Mr. HATFIELD).

Mr. HATFIELD. Mr. President, among my warmest and most pleasant memories of the first days I spent in Washington as a very junior freshman Senator, was the greeting I received from the gracious and generous secretary of the minority of the U.S. Senate. Mark Trice not only made me feel welcome but by his words, his actions, his very presence, imparted that feeling of belonging which is so vital to a newcomer to the Senate.

I soon found that this warmth and generosity were matched by his efficiency and effectiveness in helping me to establish my office and the routine necessary to the conduct of business. His helpful suggestions and ideas were numberless. And his knowledge about the Senate was so encompassing as to be staggering.

In succeeding days he has ever been ready at hand to help and to share his knowledge.

I have found that I am not alone in my deep admiration for the way in which Mark Trice greeted me and helped me. For over two decades he has been doing the same thing in the same easy, gracious way for every new Republican Senator.

Mark Trice does not come by these enormous assets through some miraculous gift, but rather through long and assiduous attention to the details of the many and varied tasks he has performed for the Senate and Senators. If there is any man alive whose very life and love have been the U.S. Senate that man is Mark Trice.

From boyhood he has served this body, as a page, as a secretary, and as an officer of the Senate. His entire life has been dedicated to the smooth functioning of the Senate as a parliamentary body, and to the well-being of individual Senators.

His devotion to the Senate and to its Members is deep and all consuming.

This great love of the Senate is such that it is easily transmitted to others. Those who are fortunate enough to see the Senate through his eyes find in it more than a mere political institution, but rather find it a very cornerstone of the American democracy.

Mr. President, let me say that in Mark Trice we have an extraordinary example of a man who has dedicated himself to the service of his country and the welfare of his fellow men.

It is with great pleasure and deep feeling that I add my voice to the chorus of those who say to Mark Trice after a half century, "You have done great and honorable service." It is with equal feeling that I add, "The past is but prelude to an even greater service."

Mr. SCOTT. Mr. President, I yield now to the distinguished Senator from Florida (Mr. HOLLAND).

Mr. HOLLAND. I thank the distinguished Republican leader for yielding to me in this connection.

Mr. President, the Senator from Florida happens to be a mere freshman in point of service in the Senate compared with Mark Trice. I have served here only 24 years. But from the time I came here I have received kindness and frequent acts of service and every bit as much consideration as I would have received had I sat on the other side of the aisle.

I had the pleasure of traveling with him and his lovely wife, and others, to the statehood celebration in Hawaii, and I want to say that on that trip I found him to be of valuable service and kindness not only to me but also to all who traveled with us. He was one of the indispensable members of the delegation because of his uniform courtesy to everyone and the fact that he joined in all the worthwhile things that took place on that trip.

I want this word, coming from this side of the aisle, to be added to the encomiums which have been spoken from the other side of the aisle.

I do not believe that anyone in the Senate could be happier about the Presidential award and honor which has come to Mark Trice today than the senior Senator from Florida.

I congratulate him. I am happy for him.

Mr. SCOTT. Mr. President, I now yield to the distinguished Senator from Maryland (Mr. MATHIAS).

Mr. MATHIAS. Mr. President, I thank the Republican leader for yielding to me and allowing me to say just a word at this point.

The tourist guides point out the place in the center of the Capitol, deep under its dome, where George Washington was supposed to have been buried.

I predict that future tourist guides will find a spot in the Capitol where, in spite of his denials, Mark Trice was supposed to have been born.

It is rare that a man can be so identified with his profession as to be actually a part of the fabric of the Capitol itself. I believe that that is why the legend has arisen that Mark Trice was born in the Capitol, because he is so nearly a part of the Capitol itself.

Mark Trice has made the Senate his profession. For some Senators the Senate is a laborious vocation. For other Senators it is an elegant avocation. For Mark Trice it has been the object of a career of dedicated professionalism, a dedication that is rarely seen in ordinary walks of life.

As a Senator from Maryland, I have a special reason to be thankful for Mark Trice's 50 years in the Senate.

His experience in the mysterious ways of the Senate, his knowledge of the traditions of the Senate and the way its mores affect its deliberations and determinations, and his instinct in finding a way through the parliamentary maze, are all talents beyond any price.

Maryland is fortunate in being able to count Mark Trice among her citizens because he, in a sense, gives Maryland the unique distinction of having three Senators.

I personally share in the deep sense of appreciation which has been expressed here today for the kind of service and for the quality of service that Mark Trice has rendered to the people of the United States through his service in the Senate.

I thank him for it and for the example he has set before all—every one of us who attempts to serve the people of this Republic.

Mr. SCOTT. Mr. President, I now yield to the distinguished Senator from Delaware (Mr. WILLIAMS).

Mr. WILLIAMS of Delaware. Mr. President, it is a tradition in the Senate, when we speak of one of our own associates, always to use flattering terms, but today the remarks being made about Mark Trice are not idle flattery.

Seldom does the Senate have an opportunity to greet and pay respects to one of its own who has had such a long and distinguished record as has Mark Trice with his 50-year record, and never has the Senate taken time to pay tribute to a more highly respected public servant.

Mark Trice during his 50-year record of service in the Senate has brought honor to himself, his family, and the Senate.

Mark's most brilliant achievement, however, was not his career in the Senate but in persuading Margaret to be his

bride and guiding counsel, and his luckiest day was when Linda came to join their happy home.

I am proud to join my colleagues in extending to Mark and his family our best wishes.

Mark, I congratulate you on a job well done.

Mr. SCOTT. Mr. President, I now yield to the distinguished Senator from Hawaii (Mr. FONG).

Mr. FONG. Mr. President, I want to thank the distinguished Republican leader for yielding to me.

Mr. President, I desire to join my colleagues on both sides of the aisle in congratulating Mark Trice, secretary for the minority, on completing one-half century of service in the U.S. Senate.

It seems like only yesterday that we extended our best wishes to him on 45 years of service. At that time, only the then President pro tempore of the Senate, the beloved senior Senator from Arizona, Carl Hayden, surpassed Mark in point of tenure.

With Senator Hayden's retirement, now Mark "outranks" us all.

This is truly a remarkable record.

I should like to repeat what I said 5 years ago in saluting Mark on his Senate seniority, for it is just as applicable today, with even greater emphasis. His is a remarkable record in point of ability, for though the political tides have shifted and though many Senators of diverse views have served in this body during the past 50 years, Mark Trice served all with the same diligence and the same selfless devotion to duty. We could not want a more faithful assistant.

It is remarkable in point of deportment, for Mark Trice has maintained an exceptionally high standard of conduct over five decades. We all know him as a man of impeccable integrity.

It is remarkable in point of esteem, for regardless of party affiliation, all who have come in contact with Mark have held him in highest regard. He is a gentleman and a scholar.

It is remarkable in point of disposition, for in spite of the pressures, in spite of the rigors, in spite of the frustrations of his arduous position, Mark has remained calm, cool, collected, and courteous. We could not ask for a more even-tempered aide.

I personally am indebted to Mark for many courtesies and kindnesses shown me since coming as a freshman Senator to this body in August 1959. His assistance has been invaluable. As we say in Hawaii, "Mahalo nui loa," thank you very, very much.

I would be remiss if I did not note for the record, that despite 50 years of hard work in the U.S. Senate, Mark Trice retains his youthful vigor and energy. I wish him many more years of continued health and happiness and hope that he will continue to accumulate many more years of seniority in the Senate.

Mr. SCOTT. Mr. President, I yield to the distinguished Senator from Colorado.

Mr. DOMINICK. Mr. President, I take great pleasure in adding my few remarks to the universal words of praise for the work of Mark Trice on the celebration of his 50 years of service.

I have only been in the Senate for some 8 years. However, on all occasions I have not only enjoyed working with him on Senate procedures but have also enjoyed his courtesy, his humor, and, on several occasions, his hospitality. It has been most pleasant.

I have an aide who started his service in the Government as a page in the Senate. But even he has not achieved this august maturity of having acquired 50 years of knowledge of Senate procedure.

Mark, I salute you. I have enjoyed my association with you. I hope that we will have together many more years in the Senate.

Mr. COOPER. Mr. President, when I came to the Senate for a 2-year term in 1947, Mark Trice was the second person I met, Senator JOHN WILLIAMS of Delaware, who was entering the Senate, being the first Senator I met.

In the years since that time, during my service in the Senate, I have seen Mark Trice quietly and effectively carrying out his duties, serving all the Members of the minority, and indeed serving the U.S. Senate, with honor and dignity.

I remember that in 1964, at the time of the unfortunate incident of Mr. Baker, we were proud but not surprised that Mark Trice was untouched in integrity and honor.

I am glad to join in this tribute to Mark Trice as an effective public servant, as a faithful official of the U.S. Senate and our country, and as a man of character. I also extend to Mrs. Trice, a gracious woman, congratulations and best wishes.

Mr. PROUTY. Mr. President, as we commend J. Mark Trice for his 50 years of service in the U.S. Senate, it is easy to allow one's praise to become lofty. I would like to keep my praise down to earth. The best way I can put it is: Mark, there are so many times that I recall when I could not have done my job without you.

In his role as Secretary for the minority, Mark's assistance and counsel has been invaluable.

I share the appreciation of my colleagues for Mark's service. I commend Mark for a proud record of a half-century of service to the U.S. Senate.

Mr. MILLER. Mr. President, it is a pleasure for me to join with many of my colleagues in paying tribute to J. Mark Trice, the able secretary to the minority, on the occasion of his 50th anniversary of service to the U.S. Senate.

When I realize that this is my 10th year in the Senate, those 50 years of service seem like an impossible achievement. And it is obvious that such an achievement would not have been possible were it not for Mr. Trice's deep love of the Senate and its Members.

It is this attitude which bespeaks the high quality and character of the service he has provided—knowledgeable, prompt, patient, accurate, good humored, respectful, and tolerant. What more could any of us ask?

Mark Trice has been so much a part of the Senate that, except when a rollcall vote is taken, it seems as though we have always had 101 members.

I share the prayerful hope of all of us that we will have the benefit of more years of splendid service from this outstanding public servant, whose personal friendship I highly esteem.

I would be remiss if I did not add that we also appreciate the fact that the man on the firing line usually performs in direct proportion to the loyalty and steadfastness of his wife back home, so Margaret Trice should also be accorded our fond salute.

Mr. PERCY. Mr. President, when I first heard of the plans to pay tribute to Mark Trice on his 50th-year anniversary, I was all prepared to join my colleagues in a rousing chorus of "Happy Birthday" and cheer Mark on as he blew out the candles on his cake.

Now, I have learned that we are paying tribute to Mark's 50th year of service to the Senate as secretary to the minority, and my reaction is one of admiration and reverence. All the times I have looked across the Chamber and wished I had the stamina and spirit Mr. Trice has, even when we were conducting business into the wee hours of the night, my wishes were predicated on the understanding that we were approximately the same age. Now I am really taken aback.

Seriously, I want to express my personal gratitude to Mark for his unfailing assistance to me and my staff during the 3 years I have served in the Senate. He has helped me to find my way around the Senate and has taught me that I can rely on him when I need to. I am confident that if the rest of the Senate business were conducted as smoothly as Mark handles his, we could adjourn every year by Labor Day.

I am sure that in this election year, Senators are especially sensitive to the rigors of achieving a long tenure in the Senate. That one's history in the Senate should be both long and very distinguished is especially noteworthy. Mark Trice has such a record, and I commend him for his long and devoted service.

Mr. PEARSON. Mr. President, I share with Senators this afternoon the feelings which have been expressed toward Mark Trice.

It is something for a man to start at the bottom in this great institution of our Government, the Senate of the United States, as a page, and to come up through the various steps into the position which he occupies as the secretary to the minority. He spans 50 years in this body, and obviously and factually he has seen men come and go.

It was only a little more than 8 years ago that I had the privilege of coming into this body as a Senator from Kansas. I quickly found that one of the most helpful men in the Senate was Mark Trice.

He can keep confidences; he is and has been fair; he has been more than helpful on many occasions; he is a model public servant.

Mark, I congratulate you on 50 years of distinguished public service and would offer you my thanks, as a U.S. Senator and a Republican, for your service, dedication, and devotion over the years. I wish you many more years of happiness and health.

It is a pleasure for me today to join in these tributes to you.

Mrs. SMITH of Maine. Mr. President,

this is Mark Trice Day in the U.S. Senate, and I am delighted to pay a richly deserved tribute to him on this 50th anniversary of his affiliation with the U.S. Senate. For 50 years he has given outstanding and distinguished service to the U.S. Senate.

No one has been conducting Senate business that long. And one of the most remarkable facets of this brilliant record of Mark Trice is that it has been achieved at such a relatively young age. I do not know what his age is, but, from his youthful appearance, it seems to me that Mark Trice must have been born in the Senate Chamber to have been with the Senate for 50 years.

He does so many things to facilitate and expedite the work of the Senate and he is such an indispensable executive on the minority side that it would be futile to try to list all of his indispensable activities. About the best way I can summarize his role is to say he is to the Republican side of the Senate what John McGraw was to the New York Giants, or Miller Huggins, Joe McCarthy, and Casey Stengel to the New York Yankees, or Knute Rockne to the Irish of Notre Dame, Bud Wilkinson to the Sooners of Oklahoma, and Vince Lombardi to the Green Bay Packers.

For while they were not the players of these teams on the baseball diamond and the football gridiron, they were the brains of the teams and they devised the plays and the strategy. In equal manner, while Mark Trice has not been a Senator from the standpoint of actually casting votes, engaging in debate, or making motions and offering amendments, he has been the manager and coach on the Senate Republican sideline and in the Senate Republican dugout masterminding the Republican team that he fielded in the Senate.

Among the many fine things that he has done for me and which I shall never forget has been his constant vigilance to help me prevent missing rollcall votes. Without him I could not have accomplished the string of 2,941 consecutive votes.

We all—regardless of political party—on both sides of the aisle—wish him well today—and another 50 years as the coach and manager of the Republican team in the Senate.

Mr. JORDAN of Idaho. Mr. President, this week marks the 50th anniversary of service to the U.S. Senate by one of the most dedicated men who has ever served the Senate.

J. Mark Trice, beginning as a page 50 years ago, has held all of the major positions auxiliary to the Senate. Recently, he has been invaluable as secretary to the minority.

Because of his tremendous background in the traditions of the Senate, I know of no one else who is of more help to the new Senators than Mark Trice, especially during the difficult early days of a Senator's first term in office. His fairness, honesty, and impartial dedication have made him a very important Senate tradition and we hope he shall have many more years of assstance under the dome of the Capitol.

I am pleased to add my voice to those of my colleagues in expressing my admiration, my deep respect, and my warm affection for Mark Trice.

The Senate is a better institution for his service, and I am a better Senator for having his wise counsel and never-failing support.

Mr. YOUNG of North Dakota. Mr. President, I think it is most remarkable that our good friend, Mark Trice, secretary to the minority, is today observing his 50th anniversary of service to the Senate of the United States.

Few people, if any, have served so faithfully and so effectively over such a long period. During half of Mark's 50 years here, I have been privileged to serve with him and have always found him to be most courteous and considerate.

Mr. President, Mark Trice must have been especially created for this job. He has handled many difficult and delicate assignments with his rare combination of good judgment, tact, and diplomacy. I know of no other person who could have survived as long in this position.

One of the nicest things about Mark is that he has not slipped a bit. In fact, he is just as good at his job now as when I first got to know him, if not better. This, along with all the other reasons, gives him little excuse to retire. I hope Mark Trice will be with us for many more years.

Mr. BOGGS. Mr. President, today marks the culmination of a half century of service by Mark Trice to the U.S. Senate and the Nation.

The distinguished secretary for the minority came to Capitol Hill as a page in 1916. With the exception of a brief interlude to practice law from 1929 to 1932, he has been here ever since and his contributions to the workings of this body over the years are many.

He has served as secretary to the Sergeant at Arms, as Deputy Sergeant at Arms, as secretary of the Senate, and as majority and minority secretary; and he has served continuously in his present capacity since 1955.

It has been a great privilege and pleasure for me to work with Mark for the past 10 years. I am certain that all Senators, not only those on the Republican side, share the great respect I have for his ability and counsel.

His tall, quiet presence on the Senate floor has become a familiar figure over the years. This is truly the place where he belongs. Much of the credit for the smooth and efficient operation of this body belongs to Mark. Necessarily, many of his accomplishments go unnoticed and unheralded. His best work often is taken for granted, but, without it, the Republicans would have been confused and in chaos.

Mr. President, many Senators have come and gone from this body since Mark Trice arrived. He has often served as their trusted confidant.

In fact, he has almost become an institution in himself. As he begins his 51st year of service to the Senate and the Nation, I wish him well and will continue to count on his service in the future.

Mr. SCHWEIKER. Mr. President, it is indeed a pleasure for me to join with my distinguished colleagues on both sides of the aisle in paying tribute to a friend and a great public servant, Mark Trice, for his 50 years of faithful service in the Senate of the United States.

Though I served in the House of Representatives for 8 years prior to coming to the Senate, I was still a stranger to many of the Senate's procedures, and I thank this distinguished secretary for the minority for being a tremendous help to me during this transitional period, as well as throughout the entire 91st Congress.

Mark has been a part of the Senate from the time he first served as a page in 1916 to his present position in 1970, with the exception of 3 years when he practiced law, and his dedication and devotion to the institution he has served so well deserves wide recognition.

Mark Trice represents the 20th-century Senate. His outstanding guidance, his friendly manner, and his vast knowledge have been an asset to all Senators. I commend this distinguished personality for his outstanding efforts.

Congratulations Mark, on this, your 50th anniversary, and best wishes for the years to come.

MARK TRICE: FRIEND AND MINORITY SECRETARY

Mr. SMITH of Illinois. Mr. President, I wish to add a few simple words of appreciation to those that have already been spoken about our friend and minority secretary, Mark Trice. As the newest Member of the Senate, I have probably known Mark Trice for a shorter time than any of my colleagues, but in that time, I have probably had reason to seek his assistance and good counsel more often than those of my colleagues who enjoy the benefit of longer Senate tenure. Mark Trice has never failed to offer that extra measure of assistance that made my transition from service in the Illinois House of Representatives to service in the U.S. Senate just a little easier, more convenient, and less bumpy. It is a pleasure to congratulate Mark on this anniversary of the beginning of his long and valuable service to the Senate, and to the people of the United States.

MARK TRICE: 50 YEARS OF DISTINGUISHED SERVICE

Mr. BROOKE. Mr. President, seldom in anyone's lifetime does the opportunity arise to salute a friend and colleague on the fulfillment of 50 years of service to a single institution. Even less often does a man of Mark Trice's quality and caliber devote himself so untiringly to the service of representative government in a free society.

I could not help thinking back, last evening, over all the many events in which Mark has participated during his 50 years in the Senate. When he first took office here, Senator Warren G. Harding had just been nominated for President of the United States. Mark served during his incumbency, and that of Calvin Coolidge. He served while Herbert Hoover was in office, and during the great depression. He served the 16 years of President Franklin Roosevelt and the New Deal, through the Second World War, the Marshall plan, and the rebuilding of Europe, the Korean war, the Eisenhower years. He has served through the turbu-

lent decade of the sixties. And now, still vigorous, still patient, and very wise, he is prepared to face a new decade here in the U.S. Senate.

Mr. President, it takes a very great man to grow with so many ages, to adapt to change and, in the parlance of the day, not "lose his cool." Mark Trice is such a man. He has the highest respect of his associates in the Senate, and I humbly join them in saluting him and Mrs. Trice on this great anniversary.

MARK TRICE HAS ENDURED

Mr. RANDOLPH. Mr. President, I join today in expressing tribute to J. Mark Trice, the secretary for the minority, who is completing a half century of service in the U.S. Senate. Others have been here longer, but no other man has held all the positions of trust in the Senate. Hundreds of Senators have come and gone during those 50 years, but Mark Trice has endured. His period of service covers the terms of 10 Presidents—and the most eventful period in our Nation's history.

When Mark Trice started as a Senate page, this Republic was just months away from entering into a world conflict, a "war to end wars." He is living witness to triumphs and tragedies, the first noble experiments in social engineering, the boom and bust and boom again of America's economy.

Mark Trice has seen America's horizons raised from an ocean hop to a moon landing, and the scientific genius that produced nuclear energy for destruction turn hopefully toward the salvation of mankind.

The loyalty, diligence, and ability that Mark Trice has given to the Senate and to America should not be forgotten, for certainly it canot be duplicated.

Mr. TOWER. Mr. President, I would like to join my colleagues in commending Mark Trice, who is today celebrating the completion of 50 years of service in the U.S. Senate.

Mark Trice's record speaks for itself. Over the 50-year span he has served as a page, an Assistant Sergeant at Arms, Sergeant of Arms, Secretary of the Senate, and now secretary to the minority. He has undertaken all of these tasks with a sense of dedication and pride. Anyone who knows Mark, as we in the Senate do, recognizes the contributions which he has made to the legislative process. I think I speak for all in saying he has truly facilitated the Nation's work.

Anyone who knows him must also marvel at his youth. I am sure we have it on good authority that he has been in the Senate for 50 years, but—considering his remarkable appearance of youth and vigor—one can be forgiven for asking if he was born in this Chamber.

Mark, I congratulate you and wish you well. Also, my thanks for your unfailing assistance and many courtesies, both to me and to my staff.

Mr. STEVENS. Mr. President, today we in the Senate are privileged to commemorate the 50th anniversary of Mark Trice's service.

As a young Senator, I have often turned to Mark for advice and information. He has never failed me. Each of us has his own reason for dedicating himself to public service. It is rare that we encounter the selflessness and dedication of a public servant such as Mark Trice. I feel that it is a privilege to be able to extend my congratulations to him.

MARK TRICE STAYED IN THE SENATE MORE THAN A TRICE

Mr. HRUSKA. Mr. President, although Webster's dictionary defines "trice" as a brief space of time, it has been 50 years since Mark Trice began his service to the Members of this body. It is my great privilege today to join my colleagues in paying heartfelt tribute to Mark for his half century of loyal and dedicated service to all of us and to the many great men who have stood in this historic Chamber in years past.

Starting 50 years ago as a page, Mark Trice has humbly and quietly watched the Nation's legislators come and go. He has been a friend to all—the great and the near great—and he has served them all with distinction, with understanding, and with true friendship. His helpfulness has known no bounds nor tolerated any distinctions.

Throughout the nearly 16 years of my own association with him, he has consistently represented the highest type of public service. We all know what a priceless commodity such selfless public service is, and it would be well to stop a moment to consider how fortunate we on this side of the aisle are to have the privilege of such service from a man like Mark Trice.

It is also appropriate, Mr. President, that we are able to join in this tribute while Mark is still with us. It has often been my regret that we have stood in this Chamber and spoken such words as these while mourning the departure of a beloved colleague. No matter how great the praise, there is unfortunately a quality still wanting in such a tribute. Is there one among us who has not yearned on such occasion for one fleeting opportunity to direct the praise to our colleague himself?

Of course, it is an opportunity which will not return once it is lost. It is a most rewarding experience, therefore, to be able to deliver these words of friendship and tribute to the gentleman while he is still in our midst. It is my conviction we would all benefit if more words of praise were offered under circumstances such as these.

There are many, many things which could be said about Mark Trice, Mr. President, though it would be difficult to summon words which do justice to our gratitude for his service. May it suffice to say we hope Mark will be with us as long as he would like. It certainly would be a different Senate without him.

Mr. JAVITS. Mr. President, 50 years of Mark Trice is an unalloyed pleasure and I say that even though I have been here for only 14 of the 50 years. The universality of Mark's appeal is shown by the unanimity of that opinion whether a Member has been here for a few months or decades. Mark not only senses the mood of the Senate but he senses the mood of each of us. He has that ineffable combination of grace and affection which attributes to each Member the faith and patriotism which alone sustains us in these arduous tasks. I join all Senators in bespeaking for him the ancient blessing of my faith for his lifetime until 120 and for his family, peace and goodness all their days.

Mr. SCOTT. Mr. President, it has been a great privilege for the Senate to pay tribute to so fine a friend, so good a civil servant, so devoted a public official, and to make here a record of our affection and our very high regard for him and for this great half a century of distinguished service.

Mr. President, at this point I yield to the distinguished Senator from West Virginia (Mr. BYRD).

Mr. BYRD of West Virginia. Mr. President, I join with my colleagues in the tribute which has rightfully been paid to Mark Trice today in recognition of his 50 years of invaluable service to the U.S. Senate. His service, as has already been stated, goes back to the days immediately following the administration of President Woodrow Wilson, almost spanning my entire lifetime. He has seen hundreds of Senators come and go in that period, and he has worked with the great and the near great.

In my 12 years in the Senate I have found Mark Trice to be a very warm, congenial, and affable friend—one who is always ready to listen to the problems of those of us who are elected to the Senate and, may I say, he has always been equally ready to assist in any way he can.

His accommodation of Senators extends across the aisle to those of us on the side where I stand. He is highly respected by all Members of the Senate. He is a man of integrity, an able man in whom we all place our trust.

I look upon the service of a man like Mark Trice—a service which is unequaled as far as I know—as a pearl of great price in a chalice of silver.

I wish for him many more years of rewarding service in his important position. I wish also that his family and friends will be able to cherish the thoughts that have been expressed today by the Members of the Senate.

Mr. President, the Senate could not function without men like Mark Trice. We Senators could not serve our constituents as well as we are able to serve them were it not for public servants like Mark Trice who stand at our sides and answer our beck and call and assist us in many, many, many ways.

Mr. President, I want personally to recognize that assistance by expressing to Mark Trice my own appreciation by saying that if that appreciation could somehow be miraculously transmuted into jewels, I would immediately lavish upon him more diamonds, sapphires, and rubies than were worn by the Queen of Sheba when she visited King Solomon, and I would bestow upon him more precious stones than Cleopatra ever displayed before Mark Antony and Julius Caesar.

Mr. SCOTT. Mr. President, after the Egyptian interlude, I yield now to the Senator from Kansas.

Mr. DOLE. Mr. President, I want to add my words of commendation to Mark Trice.

I served in the other body for 8 years. The other body from time to time takes a dim view of this body and of the Members of this body. I am not certain what the genesis of that may be.

I was not acquainted with many of the Senators when serving in the House. I was told when elected to the Senate that I should get acquainted with the Senators, but particularly get to know Mark Trice because he is an outstanding man, he is a gentleman, and he is always most helpful to any Member of the Senate—particularly any new Member.

That advice was good advice. I have followed that advice as a fledgling Member of the Senate and have sought advice almost daily from Mark Trice.

I can only say, as a junior Member of the Senate—and I speak for every freshman Member—that the assistance rendered by Mark Trice has been invaluable. He works quietly, effectively and tirelessly.

I wonder when he has time for any personal business or personal pleasure, because he is constantly doing something for the Senate or performing some service for a Senator.

I was most impressed in the early days of my first year in the Senate, with the day-to-day help and the day-to-day advice and consultation Members of the Senate had with Mark Trice and his unyielding and unending desire to be of assistance.

Fifty years of service is a long time. It has been 50 years of devoted service.

Mark Trice has made his mark. Above all, he has been and is a gentleman and I am proud to know and work with him.

Mr. MURPHY. Mr. President, I have been most fortunate in so many things in life that I do not know of anyone with whom I would trade. One of the most fortunate experiences I have enjoyed has been the friendship of Mark Trice who has done such a magnificent job in this Chamber.

I met him first back in 1935, when I came here on missions connected with problems of the motion picture industry. Then, I got to know him well during the Eisenhower inauguration in 1953. I was charged with programing that inauguration. I assure you, Mr. President, it would not have been possible to do the job we did had it not been for the great help, patience, wisdom, and knowledge of Mark Trice. At that time I did not have the slightest idea I would ever have the good fortune to become a Member of this body, but since I have been here over the last 6 years I know of no one who has done a finer job and who is always available, who is ever patient, whose wisdom and knowledge of the workings of this great body make it possible for fellows like me to do their job to represent their States in this Chamber.

So I shall be eternally grateful to you, Mark Trice, and I am certain all who know Mark Trice as well as I have over the past years value his friendship to a degree beyond words of mine to explain.

Now that he has arrived at this maturity it would be my fondest hope that he will spend another half century guiding Members of the Senate in the proper representation of their constituents, to the strength and well-being of this great Nation.

I congratulate you, Mr. Mark Trice.

Mr. FANNIN. Mr. President, only a few months after I entered the Senate, I experienced the observance of Mark Trice Day. It was in observation of his 45th anniversary of distinguished service.

So, today as we observe his 50th anniversary of service, it is quite normal of me to think of Mark Trice as a permanent fixture who ever will remain in service in these great Halls.

A lot of history has passed his way in the half century he has served as a page and as an officer of the Senate. He has watched five Members go on to become President of the United States—Harding, Truman, Kennedy, Johnson, and now Nixon.

I congratulate him for such a remarkable record while at the same time he remains so youthful in appearance and spirit. Mark Trice is clearly dedicated.

He is such a part of the Senate that he reflects the feeling of the Senate. I am grateful to his assistance during my brief tenure here. His great storehouse of knowledge is an asset to us all.

Many times have I called on the knowledgeable Mark Trice for advice in times of need.

To Mark and his lovely wife, Margaret, I join my colleagues on both sides of the aisle in paying tribute to them and wishing them well many years into the future.

Mr. HANSEN. Mr. President, it is a happy occasion when all of us in the Senate can join in paying tribute to such a man as Mark Trice.

True, Republican Senators for 50 years have had first call on the services of Mark Trice. But, he also served the Senate well, and this means Senators on the other side of the aisle. It means the Congress of the United States, it means our unique and enduring American form of government.

I know of no other Senate staff career which parallels that of Mark Trice. He literally grew up and matured in the Senate. His responsibilities became broader, more delicate, more essential for all of us, as he passed from youth to manhood, to the fullness of years—years of service now measured as five full decades.

Always ready, moving about with that quiet, unobtrusive easy manner, Mark Trice has been much like a sort of maestro helping to keep the legislative process going.

I cannot help commenting on his ready candor—he speaks his mind, he tells us what he thinks we should know, whether or not it is agreeable to our own particular opinions. This is perhaps his most valuable contribution. We know he is a man who says all that is necessary, but only that which is necessary.

Mark, thank you. We are all better Senators for your devoted duty to the Senate.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. SCOTT. Mr. President, I understand that the senior Senator from California waives the special order previously entered into with regard to granting him 20 minutes.

Mr. President, I yield 3 minutes for the present purpose to the distinguished Senator from California.

Mr. MURPHY. Mr. President, I greatly appreciate the courtesy of the distinguished minority leader.

The PRESIDING OFFICER (Mr. GOLDWATER). The Senator from California is recognized.

THE B–1 SUPERSONIC BOMBER

Mr. MURPHY. Mr. President, I had asked for time today in order to comment on a report that was made on the floor of the Senate regarding the B–1 supersonic bomber. The report of the ad hoc Subcommittee on Research and Development recommended that $50 million of the suggested $100 million appropriation for this aircraft be deleted.

I read the remarks of the distinguished Senator from New Hampshire, who is the chairman of the subcommittee. As the ranking minority Member, I want the record to show that I did not agree with the report of that subcommittee nor did I agree with the logic that was presented or their reasoning for cutting $50 million from this very badly needed aircraft.

I would emphasize that at one point it was noted that someone in the Department of Defense or the Air Force had said that with certain new configurations the B–52 would be operational into the 1980's. I would point out that the B–52's now doing an excellent job—unfortunately they are still needed in Vietnam—average from 16 to 22 years in age. In another 10 years they would be 26 to 32 years of age.

I am quite certain that under certain conditions they could be kept flying, but this is beside the point. This is like comparing apples and oranges, roller skates with model T Fords, or model T Fords with modern Cadillacs.

Here we are talking about a new supersonic bomber. The B–52 is subsonic. It is getting old. We need this new supersonic bomber and we need it as fast as it can be built.

The only logic I can understand in view of projected circumstances is that we provide the funds for research and development and get on with production of the B–1 as quickly as possible so that the safety of this Nation may be made secure.

Many years have passed since we have had any new type of military aircraft. We find that the Air Force, unfortunately, has had to "make do" in some cases; and I think this is not the time nor is the world condition such that simply because we think this might be expensive, or simply because it might be complex to put together, or simply because there might be some confusion

about the manufacture, that we should cut the funds for the B–1 that have been suggested as needed by the Air Force, and as originally contained in the budget of the Department of Defense.

Therefore, I would recommend most highly to the Senate that we consider the restoration of the $50 million and to do everything possible to assure that the B–1 supersonic bomber which is so badly needed, may be put on the production line as quickly as possible and that it be made operational as quickly as possible so that the viability, strength, and dependability of our military posture may once again be restored.

As I recall, at the time President Eisenhower left office it was acknowledged that we had a 4-to-1 superiority in military strength, not to make war but to guarantee the peace. I am sorry to state that during the past 10 years we have allowed that military strength and superiority to slip away so that now there is some question whether we have any superiority at all. I think it would be dangerous and of very dubious wisdom to do anything except to get on with the construction of the badly needed weapons systems as quickly as we can achieve it. The B–1 is such a system and we should proceed on it immediately.

The PRESIDING OFFICER (Mr. GOLDWATER). The Chair reminds the acting majority leader that the time limitation agreed to on the amendment of the Senator from Minnesota (Mr. MCCARTHY) now begins.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that I may proceed for 1 minute, without the time being charged against the time on the amendment, and that another quorum call may then be ordered without the time being charged against the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

REMOVAL OF INJUNCTION OF SECRECY FROM EXECUTIVE J, 91ST CONGRESS, SECOND SESSION

Mr. BYRD of West Virginia. Mr. President, as in executive session, I ask unanimous consent that the injunction of secrecy be removed from Executive J, 91st Congress, second session, the Protocol for the Prohibition of the Use in War of Asphyxiating, Poisonous or Other Gases, and of Bacteriological Methods of Warfare, transmitted to the Senate today by the President of the United States, and that the protocol, together with the President's message, be referred to the Committee on Foreign Relations and ordered to be printed, and that the President's message be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The message from the President is as follows:

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith the Protocol for the Prohibition of the Use in War of Asphyxiating, Poisonous or Other Gases, and of Bacteriological Methods of Warfare, signed at Geneva, June 17, 1925. I transmit also the report by the Secretary of State which sets forth the understandings and the proposed reservation of the United States with respect to the Protocol.

In submitting this Protocol for approval, I consider it desirable and appropriate to make the following statements:

—The United States has renounced the first-use of lethal and incapacitating chemical weapons.

—The United States has renounced any use of biological and toxin weapons.

—Our biological and toxin programs will be confined to research for defensive purposes, strictly defined. By the example we set, we hope to contribute to an atmosphere of peace, understanding and confidence between nations and among men. The policy of the United States Government is to support international efforts to limit biological and toxin research programs to defensive purposes.

—The United States will seek further agreement on effective arms-control measures in the field of biological and chemical warfare.

Today, there are 85 parties, including all other major powers, to this basic international agreement which the United States proposed and signed in 1925. The United States always has observed the principles and objectives of this Protocol.

I consider it essential that the United States now become a party to this Protocol, and urge the Senate to give its advice and consent to ratification with the reservation set forth in the Secretary's report.

RICHARD NIXON.

THE WHITE HOUSE, *August 19, 1970.*

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, in accordance with the unanimous-consent agreement, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senator from North Carolina (Mr. ERVIN) be recognized for not to exceed 3 minutes on a matter of routine business, without the time being charged against the time on the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE JOINT RESOLUTION 231—INTRODUCTION OF A JOINT RESOLUTION PROPOSING AN AMENDMENT TO THE CONSTITUTION TO ABOLISH UNFAIR LEGAL DISCRIMINATION AGAINST WOMEN

Mr. ERVIN. Mr. President, I have today introduced a proposed constitutional amendment to abolish unfair legal discrimination against women without robbing them of necessary legal protection. For the information of Senators and Representatives, and the general public, I ask unanimous consent that a copy of the resolution proposing such amendment be printed at this point in the body of the RECORD.

The PRESIDING OFFICER (Mr. GOLDWATER). The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 231) proposing an amendment to the Constitution of the United States to abolish unfair legal discrimination against women without robbing them of necessary legal protection, introduced by Mr. ERVIN, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

S.J. RES. 231

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States within seven years of the date of its submission by the Congress:

"ARTICLE —

"SECTION 1. Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex. This article shall not impair, however, the validity of any law of the United States or any State which exempts women from compulsory military service or which is reasonably designed to promote the health, safety, privacy, education, or economic welfare of women, or to enable them to perform their duties as homemakers or mothers.

"SEC. 2. The Congress and the several States shall have power, within their respective jurisdictions, to enforce this article by appropriate legislation.

"SEC. 3. This amendment shall take effect two years after the date of ratification."

Mr. ERVIN. Mr. President, my proposed amendment is offered as a substitute to the House-passed equal rights amendment. The tragic truth is that no adequate hearings have ever been held on the House-passed equal rights amendment and no reasonable attempt has been made by any of its advocates to analyze its provisions or give the Congress or the country any reliable information concerning the constitutional and legal chaos which would be produced in America if it should be adopted by the Congress and ratified by three-fourths of the States.

An impartial, intellectual, and unemotional analysis of the House-passed equal rights amendment reveals that it represents a potentially destructive and self-defeating blunderbuss approach to this worthy objective; namely, the abolition of the unjust discriminations which society makes against women in certain areas of life.

While the advocates of the House-passed equal rights amendment seem to be unaware of its drastic implications, members of the State legislatures will undoubtedly learn of them if such

amendment is approved in its present form and submitted to the States for ratification.

It is inconceivable that a majority of the members of three-fourths of the legislatures of the 50 States will ever vote to ratify an amendment which nullifies all existing laws making any legal distinction whatever between the respective rights and responsibilities of men or women, no matter how reasonable the distinction may be in particular cases, and incapacitating Congress and the legislatures of the 50 States of any constitutional power ever to enact such laws at any time in the future.

On a subsequent occasion, I shall explain on the Senate floor the details of my proposed amendment and why it should be adopted instead of the House-passed equal rights amendment.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate resumed the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

AMENDMENT NO. 843

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum, and ask unanimous consent that the time for the quorum call not be charged against the time on the amendment offered by the able Senator from Minnesota (Mr. McCARTHY).

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. McCARTHY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

Mr. GRIFFIN. Mr. President, reserving the right to object, I wonder if the Senator, in view of the fact that his amendment was not read earlier, and I know it is a brief amendment, would permit the clerk to read the amendment now.

Mr. McCARTHY. I have no objection. I ask that the amendment be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read amendment No. 843, as follows:

SEC. . Notwithstanding any other provision of law, no live ammunition may be used in any weapon by any member of the National Guard of any State against the civilian population of any State if the weapon in which ammunition is to be used or the ammunition to be used was paid for in whole or in part with Federal funds, unless the Governor of such State has requested permission from the President of the United States for such use of such weapons or such ammunition in a specific locality for the duration of one week and the President of the United States has granted permission for such use.

Mr. GRIFFIN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER (Mr. GOLDWATER). The Senator will state it.

Mr. GRIFFIN. Under the agreement that has been entered into, is an amendment to this amendment in order?

The PRESIDING OFFICER. An amendment to this amendment would be in order, but not until all time on the amendment had expired.

Mr. GRIFFIN. Is the time on this amendment controlled, half to a side?

The PRESIDING OFFICER. Yes. The time agreed to is 1 hour, 30 minutes under the control of the Senator from Minnesota and 30 minutes under the control of the Senator from Mississippi.

Mr. GRIFFIN. I thank the Chair.

The PRESIDING OFFICER. Who yields time?

Mr. McCARTHY. I yield myself 10 minutes.

Mr. President, the amendment, I think, is clear in its wording. It would require Presidential approval before a State Governor could send National Guardsmen with weapons and live ammunition against the civilian populations of their States.

"Live ammunition" refers to ammunition which can kill or maim.

The phrase "against the civilian population" includes not just the firing of live ammunition, but also the carrying of it to a locality for potential use. A Governor would have to seek and get Presidential approval if he wanted to send live ammunition to a locality. The Governor could not send the ammunition and then wait for a moment of crisis to seek Presidential approval.

Each Presidential approval of a Governor's request would apply to one locality or incident and would last for only 1 week. If a second civil disturbance arose within the same State or community in the same week, the Governor would have to obtain a second Presidential approval before sending armed guardsmen to that second disturbance. The purpose of this limitation is, obviously, to prevent some kind of blanket approval. If a disturbance continued for more than 1 week, the Governor would have to gain further Presidential approval to keep live ammunition on the scene for a second week.

The original responsibility for decision would remain the Governor's but this amendment would give the President an opportunity to prevent a Governor's use of federally supplied weapons and ammunition against civilians. The amendment does not, of course, limit the use of live ammunition by local and State police forces, and we know that there have been misuses of that authority in recent cases.

Gubernatorial control over National Guard units is a contradiction. As its very name indicates, the National Guard is a part of the Federal Military Establishment. The Federal Government pays for 100 percent of all National Guard equipment and 90 percent of its operating, maintenance, and training funds. The membership of the National Guard is directly related to the Federal Selective Service System which accepts service in a National Guard unit under certain conditions as of equivalent usefulness to the national defense as is active duty in the Regular Armed Forces of the country.

The reason why the National Guard is provided with half a billion dollars in Federal funds every year and 400,000 mostly draftable young men is to keep the Guard available for use in foreign wars and against foreign enemies, not for controlling, threatening, or shooting our own citizens.

The bill we are now considering, H.R. 17123, sets a nationwide force level for the National Guard of 400,000 men, the level which has been maintained for the last decade.

It is ridiculous to claim, as the chief of the National Guard Bureau recently claimed, that—

> The States are empowered to have a National Guard through Article I, Section 8 of the Constitution. (Maj. Gen. Winston P. Wilson, July 17, 1970, testimony before the Scranton Commission.)

It is Federal funds and the threat of being drafted into active military service which give the States their National Guard units, not the Constitution.

As for the Constitution, its references to "the Militia" gave the Federal Government certain powers over forces which were maintained at State and local expense, such as State and local police forces and volunteer fire departments of today.

The effect of the Constitution is to say that under certain conditions, the Federal Government can use State militia and State police officers. Article I, section 8, provides a degree of Federal control over military units in the States which do not receive Federal support.

This has been turned around to suggest that the Federal Government has to maintain State militia—the National Guard—to be used by the Governors.

In my judgment, the responsibility of Congress is clear. Congress supports the National Guard by providing it with men and money. When Congress provides men and money, it can and should set appropriate conditions for the controlled use of those resources. When Congress provides weapons and live ammunition, it can and should require the Governors to have Presidential approval before directing those weapons and ammunition at the civilian populations of their States.

Beginning with the Berkeley and Watts disturbances in California in 1964 and 1965, many State Governors have been faced with civil disorders. They have called out their National Guard units to contend with over one hundred civil disorders.

The Guard, for example, was called out in the Detroit riots of 1967.

The lieutenant general of the U.S. Army sent to command the National Guardsmen subsequently described them as "green" and "trigger-happy." In order to stop indiscriminate firing by the Guardsmen, the Army general ordered all units to unload their weapons, but less than 10 percent of the units actually obeyed this order; at that time they were acting as a federalized unit of the U.S. military.

At Kent State University this year, four students were killed by National Guardsmen, we understand, and 10 were wounded.

The FBI investigation has, according to press reports whose substance has not been denied, condemned the firing of live ammunition under the conditions that existed at that time.

It appears that only good luck has prevented more fatalities from the dispatch of guardsmen with live ammunition and weapons to troubled areas.

In Detroit, at Kent State, and in many other civil disturbances, indiscriminate firing by police or guardsmen has often been justified as a response to initial fire by "snipers." In some cases, careful investigations after the fact have shown that there was no fire by snipers at all. Even when there have been snipers, indiscriminate fire by policemen and particularly by guardsmen not trained for this action and not trained as sharpshooters has not solved the sniper problem, but has compounded it.

The Kent State tragedy is particularly important because it illustrates the danger of the Congress's putting soldiers and live ammunition under the command of State Governors without any check on the part of the Federal Government itself. The Governor of Ohio was then running in a closely contested primary for his party's nomination for the U.S. Senate. Two days before the voting, the Governor came into the small town of Kent, Ohio, bringing with him some 800 guardsmen, and delivered an inflammatory speech. The Governor referred to students whom he described as "worse than the 'brownshirt' and Communist element and also the night riders in the vigilantes—the worst type of people that we harbor in America." Then he made his promise to the voters:

We are going to eradicate this problem. It's over with in Ohio.

The guardsmen used their weapons the next day. Though they later claimed to have been threatened by a sniper, the guardsmen responded with a desperate remedy, a barrage of indiscriminate fire into students who were harassing them and into students who were walking between classrooms. Though they later claimed that they were about to be overrun physically by approaching students, the guardsmen killed no one closer than 75 feet away from them.

The dispatch of National Guard units by Governors may be appropriate for some civil disorders and for emergencies, but the dispatch of National Guard units with live ammunition should be an extraordinary measure subject to Presidential approval. If a riot really must be suppressed with the threat or use of live ammunition, Federal troops are surely more likely to remain cool under fire and to obey orders than are National Guardsmen.

The PRESIDING OFFICER. The time of the Senator from Minnesota has expired.

Mr. McCARTHY. Mr. President, I yield myself 5 additional minutes.

The PRESIDING OFFICER. The Senator from Minnesota is recognized for 5 additional minutes.

Mr. McCARTHY. National Guard officials are expressing some concern over the fact that the rules of procedure which they generally apply when a National Guard is federalized have not been adopted by all States. There is no indication how many States have accepted that manual of procedure. But on those occasions in which the Guard has been federalized, their actions have been restrained and their direction much more prudent.

If this amendment is enacted, a President can stop a Governor from sending armed guardsmen into action, if he feels that he should. A President could make the choice of authorizing the Governor to send in the Guard, under the direction of the Governor and State officials, or with a federalized guard, as has been done in the past—and send it in under Presidential authority, under Presidential control, and Presidential direction.

Mr. President, it seems to me that this amendment would not, except under the most unusual circumstances which might be conceivable, which are highly unlikely to arise, in any way interfere with the proper use of National Guard units in the kind of emergency in which the use of live ammunition and weapons would be justified as absolutely necessary. It leaves many options open to officials of the State, and, of course, the local authorities, and also it leaves, I think, the President with all the options that he should have.

The responsibility of Congress is quite clear. Training guardsmen is primarily under our direction under the law. Under the law and the regulations of the Federal Government, the financing of these operations is almost 100-percent Federal. In view of this fact, I think we have an obligation to look to the manner in which this kind of military power is used within the confines of the United States itself.

This is the very limited purpose of the amendment which I have offered.

Mr. HART. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Who yields time?

Mr. McCARTHY. I yield 1 minute to the Senator from Michigan.

Mr. HART. I am embarrassed to know which side of this amendment I am on at this point. I do not know which side of the argument I will come out on. I am not sure whether time should be yielded to me by the Senator from Mississippi or the Senator from Minnesota.

Mr. McCARTHY. I yield 3 minutes to the Senator from Michigan.

The PRESIDING OFFICER. The Senator from Michigan is recognized for 3 minutes.

Mr. HART. As I understand it, under the Constitution, unless the Guard is federalized, the Federal Government cannot direct the use, deployment, or conduct of the troops. However, the Senator from Minnesota uses the peg in such cases as the Federal Government, in whole or in part, finances certain material; namely, guns and ammunition, so that we can constitutionally set up conditions as to the employment of those using such material. I assume that is a solid constitutional base.

I share with the Senator from Minnesota the unease that results when we see the indiscriminate use of firearms by National Guardsmen, whether on or off campus.

I would think that we might approach it more effectively and, in the long run, with greater safeguard both to State and Federal jurisdictions, if we could attach as a condition for the grant of the materiel, and its employment and requirement, that the State shall have adopted and made applicable to its Guard, when in the field, the Federal field manual requirement that would apply and operate on the Guard; and, if it had been federalized, might it not be better to condition the issuance of ammunition by guardsmen to those cases where the State Guard had adopted the Army field manual that bears on troop conduct in civil disobedience.

I wonder whether the Senator from Minnesota would think it appropriate to insert that as a condition, rather than an approval from the President. I take it that the sweep of the amendment is concerned not only with the use but also the issuance of it?

Mr. McCARTHY. The Senator is correct.

Mr. HART. Has the Senator from Minnesota given any thought to the appropriateness of trying to tie the Army field manual to the conduct of troops during civil disobedience, to the ammunition limitation he suggests?

Mr. McCARTHY. I have generally opposed that kind of refinement of the amendment to the general statutes. It seems to me that if the President is concerned over that, by direct communication with the respective Governors he could say, "You will accept and establish, first, that you will conform to the provisions of the field manual, 19–15, and if you do that and give me any indication that you want to call out the Guard, you will go ahead and have permission immediately." That is, in effect, what we are saying.

It seems to me, in the interim, until we find out what the National Guard is doing, what it has done about trying to get the State guard to establish some of these standards, we could simply give the President approval and the President could say, "Get the manual in shape and you will have no problem. Call me up and I will say 'go ahead, Governor.'" Until we have that protection, I want to take a look at each Governor, because if we look at the record, some Governors are especially prone to call out the National Guard. They called out the National Guard in the motorcycle riots, we remember. In California, they have called out the National Guard seven or eight times, I believe, in the past 2 years. South Carolina and North Carolina are States which have called out the National Guard.

Mr. HART. Will the Senator from Minnesota yield me 2 more minutes?

Mr. STENNIS. Mr. President, I would be glad to accommodate the Senator, but we have very little time——

Mr. McCARTHY. The Senator from Michigan is on the side of the Senator from Mississippi on this one. I will yield 2 minutes to the Senator from Michigan, or 3.

The PRESIDING OFFICER. The Senator from Michigan is recognized for 3 additional minutes.

Mr. HART. I thank the Senator.

Mr. President, when a guardsman is called out, even if it is on an occasion that seems to us lacking in justification—for example, a motorcycle crowd in convention and their riot—I wonder whether it would not be a little easier to permit officers of the Guard at least to be in a position to move the troops who do have ammunition, although, perhaps, not issued to them, because, maybe, when we get to the motorcycle riot it is a real Donnybrook and the option might be to try a feint and move away, or run—which is not an appropriate way for a soldier to perform, of course. I think I am familiar with what the field manual suggests is the appropriate method of handling small arms in the case of civil disobediences, assuming that the manual would be adhered to, so that I think we would be doing justice, both to the innocent bystander, to the motorcycle rioter, and to the guardsman. Why can we not condition the grant of the ammunition—for the release of the ammunition—provided that each State national guard department has certified that it has ordered, even though it remains in State status, the field manual requirements with respect to the handling of ammunition?

Mr. McCARTHY. That would be helpful if we had any assurance that it would be handled properly.

The PRESIDING OFFICER. How much time does the Senator yield himself?

Mr. McCARTHY. Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield myself 4 minutes.

The PRESIDING OFFICER (Mr. HUGHES). The Senator from Mississippi is recognized for 4 minutes.

Mr. STENNIS. Mr. President, we find ourselves here in the midst of a Senate debate on a far-reaching amendment that has legal complications and upon which there have not been any hearings and no judgment rendered by any responsible official, including a judgment from the standpoint of the Governors.

Let us remember that the National Guardsmen are members of a State organization. They are responsible primarily to the Governors of their States.

I think the Senator from Michigan has made a fine point here, that there should be effective regulation and that we cannot let them have these guns and ammunition in the first place until they have made a showing that they have restrictions.

I would add with reference to the enforcement of the law by the National Guardsmen, that it would have to be limited to trained and seasoned troops who had been specially trained in this field.

It is impossible to get an intelligent consideration of this matter on such short notice. I do know that this is an affront to the honest, efficient, and loyal National Guardsmen in every State. They might be called out for riot duty or anything along that line and be cut off from the right of self-defense.

I want to see that this matter is regulated and that there are restrictions and that we make whatever safeguards we can. But I do not think that we can legislate here on a subject that we are not advised on and do not know the regulations in the different States.

We have men serving in the Senate that have been members of the National Guard.

Mr. President, I yield 3 minutes to the Senator from Arizona, a former member of the National Guard of his State.

Mr. GOLDWATER. Mr. President, the forces of the National Guard are the militia. Under the Constitution, Congress can regulate the militia, even to calling them out. But they do not come under Federal regulation until they are called out for active duty. The commander of the National Guard is the Governor of the State.

We would be taking a very serious and dangerous step if we were to try to go into a State and regulate the only weapon the Governor has with which to defend the people in his State when matters get so bad that the local police, the sheriff's office, and the highway patrolmen cannot handle it.

Mr. President, I might say to my good friend, the Senator from Minnesota, that this might work if we can get the people in this country who carry guns and demonstrate with Molotov cocktails and knives and chains to stop their activities. Then we would be able to get the National Guardsmen to agree not to use bullets.

This is extremely dangerous. I have been in the National Guard. The Governors I have known have been very judicious in the use of the National Guard.

I think I am safe in saying that the majority of the State National Guardsmen have been trained under the Regular Army concept of mob control and that the States operate in that way.

I might ask my good friend, the Senator from Minnesota, what we would do if we had a serious uprising like the ones in Newark, Watts, or Chicago? This seems to be constantly going on in Chicago. Are we going to write the President a letter and say, "Dear Mr. President: A number of our people have been shot and a number of stores have been burned down. We think the only way to handle the situation is to send out the National Guardsmen with live ammunition."

That would take a week.

I suggest this is no way for a Governor to maintain law and order in his State. I think it would be extremely dangerous to ban the use of weapons by the National Guard.

I do not like what is going on in this country and in some of our cities any more than the Senator from Minnesota does.

I suggest that it would get worse, in my opinion, if the hoodlums and fascists and people in this country who set about to disturb our country and, in fact, create a new form of government in our country, knew that they could do anything they wanted and that nothing would happen to them. In fact, I think our National Guard should have the right to defend themselves. I think that the police should have the right to defend themselves.

It is time that the American people call loud and clear for protection in their homes. I would say that there has never been a time in the history of our country when so many people have armed themselves in their home against the danger of being invaded.

There has never been a time when so many people have spent money for electronic devices or other means of protecting themselves.

I think the amendment is dangerous. I do not think it is called for in the bill. It is a completely new concept.

I hope that the amendment will be rejected.

[Applause in the galleries.]

The PRESIDING OFFICER (Mr. HUGHES). If there is any further display in the galleries, the galleries will be cleared.

Mr. STENNIS. Mr. President, I yield 3 minutes to the Senator from Ohio.

The PRESIDING OFFICER (Mr. GOLDWATER). The Senator from Ohio is recognized.

Mr. SAXBE. Mr. President, I speak with some knowledge of the National Guard, having served for over 30 years at every level from private to battalion command and general staff officer. I cannot see where this would operate in such a way that it would help the National Guardsmen.

As we know, when the guardsmen are called out, it is against their wishes. They do not want to go. It is a distasteful service. It would be especially distasteful to be called out in the face of armed opposition. I am not speaking of kids who are out for a good time. We have seen the Weathermen faction and what they can do in New York and in Chicago. They are people bent upon mischief. They are armed and they mean business.

A young man called out on this type of duty, duty that he does not want, certainly should not carry an ad saying, "I do not have any live ammunition."

That is what we would be doing if we required the Governor to go to the President to ask for permission. Even if it involved a telephone call, it would then be too late for them to do the job they are supposed to do.

The National Guard consider civil disturbances as one of their minor duties. Their principal duty is to train as trained forces of the U.S. Army or Air Force. Ninety-five percent of their training involves training as combat units. To achieve a combat skill does not mean skill in handling a civil disturbance. That is one of the incidental duties.

I believe that the Governors of the several States do exercise control. I know for a fact that there are times when there is no live ammunition. But I do not believe there should be a general policy that advertises to every hoodlum that there is no live ammunition.

There are times when it is necessary. There are times when ammunition must be close at hand, even if it has not been issued.

This type of amendment, no matter

how well intended, will contribute to the loss of morale and contribute to the confusion that now exists in the Guard.

I can foresee the time when the States will say, "We have to have effective law enforcement based on a State level. We will forget about the National Guard and go back to our own militia and buy our own ammunition."

It has not been too long ago when there was a militia in most States and not a National Guard. I want to keep it the way it is at the present time.

The National Guard has served valiantly in many wars. They are always ready to go. I feel that if we are going to restrict the National Guard in this manner, we should do away with it. Let us not make it a Sunday afternoon group of picnickers, as we will be doing if we reduce it to a status of not having ammunition.

These men are soldiers. They are trained to kill; they are trained to serve their country. If you do not want them to do that, do not call them out; but do not make them into something less than they are supposed to be. They deserve this recognition and this honor.

I fail to see how this proposal would work to make them a more effective arm of the State, or how they would be able to control anything.

Mr. STENNIS. Mr. President, I yield 2 minutes to the Senator from California.

Mr. MURPHY. Mr. President, the experience of the city of Berkeley was mentioned earlier. Last week I had in my office the mayor, chief of police, members of the city council, and some business leaders of the city of Berkeley. I assure Senators they are not concerned with whether or not the militia has live ammunition. They were here to beg me to make a plea to the Secretary of Defense that they be supplied with flak jackets, helmets, and gas masks so they would have a chance to try to preserve law and order in an area where organized disruptions are taking place almost on a regular timetable.

I think the suggested amendment would be a complete invitation to more permissiveness where already too much permissiveness exists.

Mr. STENNIS. I wish I had more time. I yield 2 minutes to the Senator from Iowa, who is the former Governor of his great State.

Mr. HUGHES. Mr. President, I thank the Senator for yielding.

I want to say, as I began, that I have stood with the distinguished Senator from Minnesota in the midst of very trying times; and I have advocated his candidacy for the office of President of the United States. I stand with the goals he is trying to accomplish today because I think the misuse, misdirection, and perhaps miscommand of National Guard troops can be a very bad force in this country.

But over three terms as Governor of my native State of Iowa I have had to call out the National Guard many times. There was never a time when I willingly called up the National Guard for use in my State. There was never a time in my State that ammunition was fired to protect the lives of people or to protect property. They were well commanded, and they were basically well trained. They acted well under the most tense conditions.

Many times I had to call out the National Guard when there was no trouble. I did it, even though I was highly criticized for it, because the presence of the National Guard prevented trouble from developing.

I am sure that the circumstances the distinguished Senator from Minnesota has described could be satisfied by calling the President of the United States, and I agree it could be done. But the Governor, as the commander in chief of his National Guard, has to make decisions, he is basically responsible for the training of the National Guard, and he hopes to see them as the best equipped force in his State. They are used for broad and diverse reasons. I would hope they would never be used on campuses of colleges in the United States. I am opposed to the use of the National Guard on the campuses of colleges in our country.

I would like to point out one thing that has not been brought up. We could use the National Guard without making arrests, whereas, when we mobilized the State police, the county sheriffs, or the local police, they were compelled to make arrests for every single violation that seemed evident. That could result in a more severe confrontation than by the exercise of the use of the National Guard to maintain peace and order by their presence.

In my opinion the National Guard has been under excellent command in my State.

It is with some reluctance that I rise to say that I would vote against the amendment offered by the distinguished Senator from Minnesota, but while I shall vote against the amendment I want Senators to know that I am sympathetic with the goals he is trying to achieve. We should look into this matter and determine a better way to control the use of guns and ammunition in the hands of people in all circumstances, particularly on the campuses of the colleges of this country.

I thank the Senator for yielding.

Mr. STENNIS. Mr. President, I yield 3 minutes to the Senator from Oregon, the former Governor of his State.

Mr. HATFIELD. Mr. President, I would like to associate myself with the comments which have been made, and particularly those which have been made by my former fellow Governor, the Senator from Iowa (Mr. HUGHES), who is now my colleague in the Senate.

Any one who has been in the role of commander in chief of the National Guard, as the Governor is, and who has the responsibility for the maintenance of law and order in every community of his State appreciates the fact that the National Guard plays a very vital role, and it must be maintained on a very flexible basis.

I would like to share two experiences that occurred while I was Governor of my State in which we had riots in one of our coastal communities. We had anticipated the problem and, therefore, had called the National Guard leadership together and indicated our feeling that there should be special riot control training for certain elements of the National Guard. The National Guard had certain elements prepared for this type special duty and they were placed in this riot city.

The point is that the State police of my State were in command of the force. To maintain law and order, they worked with the county sheriff and the city police, and they had the National Guard backing them up. That is a vital role. I do not think we could maintain law and order as we were able to if we had not had that show of force of the National Guard.

If anyone in the Nation today questions the National Guard, let him assume the role of a Governor, who is the commander in chief, and who must be responsible for the actions and the training of the National Guard, or the lack of training of the National Guard.

Therefore, I plead that we reject the amendment, not because I disagree with the Senator's concept or his goal, but because as a former Governor I recognize that it is imperative that we maintain flexibility to have the National Guard able to move in and meet any occurrence in any crisis.

Mr. STENNIS. Mr. President, I yield 2 minutes to the Senator from Florida.

Mr. GURNEY. Mr. President, I thank the Senator from Mississippi.

Mr. President, the permanent Subcommittee on Investigations, otherwise known as the McClellan committee, has just completed extensive hearings on bombings and terrorism in this country. The hearings were most revealing. They showed that bombing, terrorism, and violence in general increased dramatically in the last 10 years, but even more dramatic is the fact that in the last year or 2 years the scale of increase is sharply rising. Therefore, it would seem to me that a more inappropriate time could not be chosen to offer an amendment like this. It seems to me that this is an open invitation to more violence.

We found in our investigations by the permanent subcommittee that violence is being committed by people who are revolutionaries, and who have in their hearts and minds the destruction of this Government and our society. Certainly any society should have the right to protect itself.

Of course, one of the chief means of protection from civilian violence in this country is through the use of the National Guard. Certainly, at this time in our history we should not do anything to make this organization less effective; if anything, we should make it more effective.

I urge Senators to reject the amendment.

Mr. STENNIS. Mr. President, I am sorry I do not have more time. I am going to yield to the Senator from Rhode Island.

First, Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. There is not a sufficient second.

Mr. STENNIS. I yield 2 minutes to the Senator from Rhode Island, who is the former Governor of his State.

Mr. PASTORE. Mr. President, I real-

ize the emotional impact that is behind this amendment. I do not question the motive of the sponsor of the amendment. However, as a former Governor of my State, I realize the danger of this particular amendment.

I had the honor of serving as Governor for 6 years. I never once called out the National Guard. I do not know of any Governor in this Republic of ours who relishes the idea of calling out the National Guard. But if we are going to call out the National Guard and say to a young man in a soldier's uniform, "You can carry a gun, but you can't have a bullet in it," then I say do not give him a gun at all. Do not give him a gun at all.

Not only that, but in many instances we find that these men are called out not through any choice of their own, but are ordered to do so.

I am afraid that unless we do this in a proper manner, we are going to invite anarchy. When we realize that it would mean a young man in a soldier's uniform could have stones thrown at him or bags of fecal matter smashed into his face, or snipers, without having anything with which to defend himself, I am afraid we are toying here with explosive situations. I would regret the day when we would come to that kind of thinking and that kind of action in this country.

I know what happened at Kent. I regret that, too. I made a statement in my State that it was a pity that the lives of these four young people should have been snuffed out. I regret very much that it happened. But we must take the long view. If the National Guard is to be called out to repress anarchy, to suppress riots, the young men who are in those soldiers' uniforms must be properly equipped to cope with the duties and the dangers to which they are assigned. Moreover, the proper response to these situations is training and restraint on all sides.

Mr. STENNIS. Mr. President, how much time do I have left?

The PRESIDING OFFICER. The Senator has 5 minutes remaining.

Mr. STENNIS. Mr. President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. There is not a sufficient number.

The yeas and nays were not ordered.

Mr. STENNIS. Mr. President, I yield 2 minutes to the Senator from Wyoming (Mr. HANSEN), a former Governor of his State.

Mr. HANSEN. Mr. President, I should like to associate myself with the observations just made by the distinguished Senator from Rhode Island. Let me say that no Governor relishes the duty and responsibility of calling out the National Guard, but I think it must be apparent to everyone in this country that if we are going to put an end to anarchy, if we are going to restore and maintain order, there must be some mechanism by which the States can face emergencies and can deal with those emergencies adequately. It is with that thought in mind that it seems wholly unthinkable to me that we should ask young men serving in the Guard to assume the very grave responsibility of maintaining order, of seeing that the law is adhered to, and not giving them the proper equipment, in all manner, in order that they may enforce an order issued by a Governor.

During the 4 years I was Governor of Wyoming, I called upon the National Guard on several occasions. Historically, its mission has been, generally, to respond to emergencies such as floods, fires, and blizzards. Insofar as I know, never in the history of Wyoming has a guardsman fired a shot in order to quell a riot situation, but I think the very knowledge that the members of the Guard have ammunition obviates the necessity for firing a shot.

Mr. STENNIS. Mr. President, I yield 1 minute to the Senator from Michigan.

Mr. GRIFFIN. Mr. President, because it would not be in order, until all time had expired, for me to offer an amendment, I merely send an amendment to the desk as an amendment which I may offer at the appropriate time.

The PRESIDING OFFICER. The amendment will be stated by the clerk.

The legislative clerk read as follows:

At the end of the proposed amendment, add the following: This provision shall be applicable if all the participants in any riot or civil disturbance shall have certified to the Governor in advance that they will use no live ammunition in their weapons.

The PRESIDING OFFICER. The Senator from Michigan.

Mr. President, I would have the roll called on my amendment, which provides that the amendment offered by the Senator from Minnesota shall be effective only if all——

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HANSEN. Mr. President, I ask for the yeas and nays and suggest that if there is not a sufficient number of Senators present, a live quorum be called.

The PRESIDING OFFICER. A Senator's time has to be yielded for that purpose.

Mr. STENNIS. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 2 minutes remaining and the Senator from Minnesota has 13 minutes remaining.

Mr. PASTORE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. PASTORE. Mr. President, will the Senator yield for that purpose?

Mr. STENNIS. I yield.

Mr. PASTORE. Is an amendment in order until all time has been yielded back or consumed?

Mr. GRIFFIN. I have not offered the amendment.

Mr. STENNIS. It was read for the information of the Senate.

I yield 1 minute to the Senator from Wyoming.

Mr. HANSEN. Mr. President, I again request the yeas and nays, and if there is not a sufficient number of Senators present to have the yeas and nays ordered, I suggest the absence of a quorum, and suggest that it be followed by a live quorum.

The PRESIDING OFFICER. The Chair would suggest that the Senator would have to wait until all time on the amendment had expired, because under the precedents there is not sufficient time left for the calling of a quorum.

Is there a sufficient second for the ordering of the yeas and nays on the amendment?

There is now a sufficient second.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. The Senator has 1 minute remaining.

Mr. McCARTHY. Mr. President, how much time do I have?

The PRESIDING OFFICER. The Senator has 13 minutes.

Mr. McCARTHY. Mr. President, I think possibly all former Governors will disqualify themselves on this question as having a conflict of interest. I do not expect that suggestion to be honored; it is just a suggestion, since all former Governors who have spoken have said, "As a former Governor, I have had experience."

All this talk about sending guardsmen into action without ammunition or means of defending themselves against rioters, anarchists, and all the other people that have been listed here is completely irrelevant.

The substance of my amendment is that guardsmen could not be sent in to use live ammunition under present conditions unless the Governor had requested it and the President had honored that request with an affirmative reply.

The essence of the argument has been that the guardsmen are not prepared to deal with situations into which they have been sent. The President could say to any Governor, "I am satisfied that your Guard is not prepared for this kind of riot activity; therefore, I hope it will be trained," or at least that the provisions of the manual which is used when the Guard is federalized be recognized and adhered to under the Governor's direction.

It seems to me a simple proposition. Some of the debate here suggests that communications are still carried out by pony express. Someone has suggested that a Governor could not get to the President for a week. On an issue of this kind, I assume the Governor could get in touch with the President in 5 or 10 minutes. I cannot think of any National Guard in which the officer of the Guard could not be found in 5 minutes if the Governor were looking for him. So there would be as much access to the President as to the commanding officer of the State.

The question is whether we want the Guard to be used rather freely, as it has been under the various Governors, without any real assurance that they have been adequately trained or that they are subject to careful regulation, or whether we want a minimal regulation or requirement that the Governor of the State have the approval of the President before he acts—with the hope that this kind of pressure will provide some incentive for training the Guard properly and put some restraint on Governors who have too readily sent the Gaurd into situations in which they have no business being.

Mr. President, I reserve the remainder of my time.

Mr. THURMOND. Mr. President, I

oppose Amendment No. 843 proposed by the distinguished Senator from Minnesota (Mr. McCARTHY).

The amendment would prohibit the use of live ammunition in the weapons of members of the National Guard unless the Governor of the particular State requested permission from the President of the United States for use of ammunition in the weapons of the National Guardsmen.

First, it should be realized that the responsibility for law enforcement in each State is vested in the Governor of that State and not in the President of the United States.

Under the Constitution, the Governor is the chief law enforcement officer of his particular State and he must have the authority to act quickly in maintaining order, should such action be necessary.

If this amendment had been law during the riots which occurred throughout the Nation following the assassination of Martin Luther King, we would have had a chaotic situation. At that particular time each Governor exercised his authority in applying what force he felt necessary to maintain order.

Mr. President, it should also be realized the President of the United States has tremendous responsibilities which require his attention. He is often far away from situations in the various States to which the Governor would be able to give close attention. The Governor could obtain facts quickly and act on the authority under the Constitution; whereas the President would be placed in the decisionmaking process possibly with only second-hand information.

Even worse, Mr. President, adoption of this amendment might lead to a national police system if unnecessary powers are handed to the President of the United States. Most Americans abhor suggestions of a national police system which could spring from this amendment.

I urge my colleagues to join with me in rejecting this proposal to the military authorization bill.

Mr. MUSKIE. Mr. President, the aim of the amendment before us is laudable; namely, to help prevent the senseless and tragic killing of civilians involved in a volatile situation like the one that occurred at Kent State last spring. However, the amendment raises two important questions which concern me.

First, it fails to provide for exceptions for National Guardsmen who might be involved in situations requiring a reasonable right to self-defense.

Second, on those occasions when the Governor of a State did seek Presidential approval for the use of live ammunition, the President might be forced to make a quick and difficult decision without the benefit of the most up-to-date, on-the-spot information about the current situation. That information is available only to officers on the scene.

Mr. President, the Department of the Army has developed a reasonable set of guidelines governing the use of force by Federal forces involved in civil disorders. I ask unanimous consent that these guidelines be printed in the RECORD at this point.

There being no objection, the guidelines were ordered to be printed in the RECORD, as follows:

GUIDELINES

4. Application of Force:

(a) Operations by Federal forces were not authorized until the President was advised by the highest officials of the state that the situation could not be controlled with the non-Federal resources available. Your mission therefore is to help restore law and order and to help maintain it until such time as state and local forces can control the situation without your assistance. In performing this mission, your Task Force may find it necessary actively to participate not only in quelling the disturbance but also in helping to prevent criminal acts and in helping to detain those responsible for them. You are authorized and directed to provide such active participation, subject to the restraint on the use of force set forth below.

(b) The principal rule of use of force which controls all others is that you will at all times use the minimum force required to accomplish your mission. Due respect will be shown for the great number of citizens whose involvement in the disturbance is purely accidental. Your force options for determining how your troops may be armed to accomplish your mission are enumerated in Appendix 9 to Annex C of Department of the Army Civil Disturbance Plan.

(c) You are authorized to use non-deadly force, including riot control agents, to control the disturbance, to prevent crimes, and to apprehend or detain persons who have committed crimes, but the degree of force used must be no more than that reasonably necessary under the circumstances. For example, riot control agents should not be used if saturation of an area with available manpower will suffice. You are authorized to delegate the authority to use riot control agents and other forms of non-deadly force at your discretion.

(d) The use of deadly force (i.e., live ammunition or any other type of physical force likely to cause death or serious bodily harm) in effect invokes the power of summary execution and can therefore be justified only by extreme necessity. Accordingly, its use is not authorized for the purpose of preventing activities which do not pose a significant risk of death or serious bodily harm (for example, curfew violations or looting). Use of deadly force is authorized where (1) lesser means have been exhausted or are unavailable, (2) the risk of death or serious bodily harm to innocent persons is not increased by its use and (3) the purpose of its use is one or more of the following:

(i) self-defense to avoid death or serious bodily harm;

(ii) prevention of a crime which involves a substantial risk of death or serious bodily harm (for example, to prevent sniping);

(iii) prevention of the destruction of public utilities or similar property vital to public health or safety;

(iv) detention or prevention of the escape of persons against whom the use of deadly force is authorized in subparagraphs (i), (ii), and (iii) immediately above.

In addition the following policies in the use of deadly force will be observed:

(1) When deadly force is used, aim where possible to wound, not to kill.

(2) In order to avoid firing which creates a hazard to innocent persons and can create the mistaken impression on the part of citizens that sniping is widespread, warning shots will not be employed.

(3) Where other means have failed and firing is necessary to control sniping, well-aimed fire by expert marksmen will be used wherever possible and the number of rounds will be kept to a minimum to reduce the hazard to innocent persons.

(e) You are authorized to have live ammunition issued to personnel under your command. They are not to load or fire their weapons except when authorized by an officer in person, when authorized in advance by an officer under certain specific conditions, or when required to save their lives (including the prevention of serious bodily harm). You will insure positive control over use of weapons. You may at your discretion delegate that authority to use deadly force provided such delegation is not inconsistent with this paragraph and that the persons to whom such delegation is made understand the constraints upon the use of deadly force set forth in paragraph d.

5. Custody and Detention of Civilians:

Whenever possible, civilian police authorities should take civilian personnel into custody; however, when assistance is necessary or in the absence of the civilian police, Federal military forces have the responsibility to detain or take into custody rioters, looters, or others committing offenses. . . .

Mr. MUSKIE. Mr. President, following the incident at Kent State last May, I wrote to Secretary Laird inquiring whether all National Guard units throughout the country complied with these regulations. I learned that this is not presently the case. It seems to me that we should be working toward insuring that all National Guard units in every State comply with these Army guidelines, which are reasonable and seem to me to provide an appropriate balance between preventing indiscriminate use of deadly force by Federal authorities on the one hand, and protecting lives on the other.

Because of the reservations I have listed, I shall vote against the McCarthy amendment, but I shall work to help insure that all Federal forces, including the National Guard, comply with Army regulations.

Mr. McCARTHY. Mr. President, I am ready to yield back my time, if the chairman is agreeable.

Mr. STENNIS. Mr. President, I yield back the remainder of my time.

Mr. McCARTHY. I yield back the remainder of my time.

The PRESIDING OFFICER. All remaining time having been yielded back, the question is on agreeing to the amendment of the Senator from Minnesota.

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. What is the pending question?

The PRESIDING OFFICER. The pending question is on agreeing to the amendment (No. 843) of the Senator from Minnesota (Mr. McCARTHY).

Mr. STENNIS. This is the question on whether the amendment will be agreed to or rejected?

The PRESIDING OFFICER. Up or down; the Senator is correct.

On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. KENNEDY. I announce that the Senator from Tennessee (Mr. GORE), the Senator from South Dakota (Mr. McGOVERN), the Senator from Minnesota (Mr. MONDALE), the Senator from New Mexico (Mr. MONTOYA), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Maryland (Mr. TYDINGS),

and the Senator from Ohio (Mr. YOUNG) are necessarily absent.

I further announce that, if present and voting, the Senator from Ohio (Mr. YOUNG) would vote "yea."

Mr. GRIFFIN. I announce that the Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senators from Illinois (Mr. PERCY and Mr. SMITH) and the Senator from Pennsylvania (Mr. SCHWEIKER) are necessarily absent.

If present and voting the Senator from South Dakota (Mr. MUNDT) and the Senator from Illinois (Mr. SMITH) would each vote "nay."

The result was announced—yeas 2, nays 87, as follows:

[No. 261 Leg.]

YEAS—2

Kennedy	McCarthy	

NAYS—87

Aiken	Fannin	Metcalf
Allen	Fong	Miller
Allott	Fulbright	Moss
Anderson	Goldwater	Murphy
Baker	Goodell	Muskie
Bayh	Gravel	Nelson
Bellmon	Griffin	Packwood
Bennett	Gurney	Pastore
Bible	Hansen	Pearson
Boggs	Harris	Pell
Brooke	Hart	Prouty
Burdick	Hartke	Proxmire
Byrd, Va.	Hatfield	Randolph
Byrd, W. Va.	Holland	Russell

Dominick	Mansfield	Tower
Eagleton	Mathias	Williams, N.J.
Eastland	McClellan	Williams, Del.
Ellender	McGee	Yarborough
Ervin	McIntyre	Young, N. Dak.

NOT VOTING—11

Gore	Mundt	Smith, Ill.
McGovern	Percy	Tydings
Mondale	Ribicoff	Young, Ohio
Montoya	Schweiker	

So Mr. MCCARTHY's amendment (No. 843) was rejected.

Mr. KENNEDY subsequently said: Mr. President, the amendment we voted on today to provide new procedures for the utilization of deadly force by National Guard units dramatizes the urgent need for a major overhaul of the practices in this field to assure that we do not have any more "Kent States."

The investigation I have conducted in my Subcommittee on Administrative Practice and Procedure convinces me that the Ohio National Guard, apart from any question of whether or not it violated any State or Federal law, clearly violated the words and the spirit of the applicable Army Field Manual in several respects. That manual permits the use of deadly force only where lesser means have been exhausted or are unavailable and only when the risk of death or serious bodily harm to innocent persons is not increased by its use. It requires that when firing is necessary to control sniping, well-aimed fire by specially trained expert marksmen should be used and the number of rounds kept to a minimum to reduce the hazard to innocent persons. It requires that whenever guns are used they are to be aimed to wound, not to kill. It permits general unit firepower to be utilized only as an extreme last resort, only after all other measures have failed, and only when failure to use such firepower would result in imminent overthrow of the Government, continued mass casualties, or similar grievous conditions.

At hearings we held in June, I asked representatives of the Army how the Kent State shootings could have occurred in the face of such clear and strong standards on the use of deadly force, and I was told that while the Army could promulgate training standards for National Guard units, it felt it could not enforce these standards when guardsmen were under State control. As I pointed out in a subsequent letter to President Nixon, a copy of which I ask to be printed in the RECORD at the end of my statement:

> If this is so, then we are left with the specter, as at Kent State, of troops in Army uniform and using Army guns and bullets and trained at Army expense applying deadly force in a manner and under procedures contrary to the Army's own requirements.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. KENNEDY. Mr. President, for no other reason than the fact that the National Guard units might be federalized at any time for civil disturbance duty under Army control, it would seem that the Army must have the power and the right to assure that such basic elements of National Guard training and standards as the use of deadly force are consistent with and at least as stringent as those of the regular Army. It is difficult enough for a part-time soldier to keep in mind the vital details of one set of standards and unreasonable and dangerous to require him to have two conflicting sets in mind.

The materials our subcommittee has collected from the various States, as well as the history of the performance of National Guard units under State control, show not only that they are not adhering to Federal requirements in practice, but also that the training materials they use are in conflict with the Federal training materials issued under the constitutional provision requiring the State to train their militias "according to the discipline prescribed" by the Federal Government.

Nevertheless, in replying to my letter to President Nixon, the administration has indicated that both the Justice and Defense Departments continue to deny that the Army can do anything more to require the National Guard units to comply with Federal standards of citizen protection. I am not persuaded by the arguments tendered to support their conclusion, and I expect to pursue the matter further with them at forthcoming hearings of the subcommittee.

I cannot accept the view that innocent citizens in the several States, and our society as a whole, must continue to be subjected to the individual risks and social consequences of gunfire from federally supported National Guard units according to the personal preferences of Governors and State commanders which may be in direct conflict with the rules that govern Army troops and are constitutionally required to govern National Guardsmen as well.

I think Senator MCCARTHY's amendment serves to highlight the glaring need for action in this area, and while it is not the only route, or even perhaps a sufficient route, my vote for it reflects my sense of urgency of this need.

EXHIBIT 1

JUNE 16, 1970.

DEAR MR. PRESIDENT: Last week, at a hearing before the Senate Subcommittee on Administrative Practice and Procedure, which I chair, several extremely disturbing facts came to light which involve so many federal agencies that I believe you should be aware of them.

1. Our Subcommittee has surveyed all the states to determine what rules their National Guard units use in the application of deadly force. While the results are not yet all in, the responses received thus far indicate clearly that there is a wide disparity in these rules from state to state and that there are vast departures from the Army's own guidelines in the contents, tone, and presentation of the various state National Guard standards. According to the testimony we received at our hearing, the Army has doubts whether it has the power to set minimum standards or uniform standards for the use of deadly force by National Guard units while on state-ordered civil disturbance duty. If this is so, then we are left with the specter, as at Kent State, of troops in Army uniform and using Army guns and bullets and trained at Army expense applying deadly force in a manner and under procedures contrary to the Army's own requirements. For no other reason than the fact that National Guard units might be federalized at any time for civil disturbance duty under Army control, it would seem that the Army must have the power and the right to assure that such basic elements of National Guard training and standards as the use of deadly force are consistent with and at least as stringent as those of the regular Army. It is difficult enough for a part-time soldier to keep in mind the vital details of one set of standards, and unreasonable and dangerous to require him to have two conflicting sets in mind.

2. The Applicable Army Field Manual FM 19–15, even as revised in October 1969, contains potential ambiguity as to whether the conditions for the use of deadly force must *all* be present, or whether firing is permitted whenever any one of them is present:

"Use of deadly force is authorized where—

"1. Lesser means have been exhausted or are unavailable.

"2. The risk of death or serious bodily harm to innocent persons is not increased by its use.

"3. The purpose of its use is one or more of the following:" (listing permitted purposes).

This ambiguity has been recognized in the form letter of instruction for civil disturbance task force, which changes punctuation and inserts an "and" to add some clarity, and in the actual letter of instruction which was sent to the Washington Task Force by the Army May 8, 1970, which adds the words "where all three of the following are true." Nevertheless the possibility for misunderstanding remains in the Field Manual itself, which is the last word from the Army as far as National Guard units are concerned and which is the primary training text for regular Army units.

3. Although there are a large number of diverse agencies which may be called upon to perform law enforcement functions in the District of Columbia concurrently, including the Park Police, Metropolitan Po-

lice, National Guard, Regular Army, Secret Service, White House Police, F.B.I., Narcotics Bureau, U.S. Marshals, and others, they have no common coordinated policy on the conditions and procedures for use of deadly force by their officers, and in fact their policies conflict in some respects. For example, some agencies direct their officers, when their criteria for firing weapons are met, to shoot to wound, some to shoot to kill, and some are silent on this factor. The lack of consistent instructions is especially important in the case of mass gatherings or civil disorders where several of these agencies may be involved in joint operations and where misuse of weapons, as we have seen elsewhere, could produce a tragedy of massive proportions.

4. The so-called "Special Orders" card carried by every Army and National Guard officer and enlisted man on civil disturbance duty anywhere in the country contains none of the conditions and criteria for the use of weapons set forth in the current version of Army Field Manual 19–15, especially the "minimum force" order, the requirement that "the risk of death or serious bodily harm to innocent persons is not increased by its (deadly force's) use," the requirement that limited fire by designated expert marksmen be used in case of sniper fire, and the shoot-to-wound order. The reason may be that the card was last revised in October of 1969 at which time many of the criteria and conditions were first set forth. Thus federal and National Guard troops on civil disturbance operations are presently carrying orders which are obsolete under the Army's own standards.

(An additional minor problem with the card is that it carries the historic Army seal, which includes the words "United States of America War Office," hardly a felicitous choice of words to be read by men under tension entering civil disturbance duty.).

I believe that each of these facts presents a continuing threat to the safety of our citizens and the stability of our nation. We are facing another mass gathering in Washington early in July, and it is not unlikely that National Guard units elsewhere in the country may have to be called in for civil disturbance duty in the coming months. I therefore recommend and urge that you take the necessary steps on an expedited basis to secure immediate action by the responsible officials along the following lines:

1. The General Counsel of the Army, in consultation with the Attorney General, should determine the outer limits of the Army's ability to enforce uniform standards of training and operations on National Guard Units in regard to the use of deadly force in civil disturbance operations. To the extent of that ability, the Army should insure that every National Guardsmen in the nation has been trained in and is prepared to apply standards and procedures at least as stringent as those of the Army. I am informed that the Secretary of the Army is prepared to proceed in this direction on a crash basis, and I urge that he be directed to do so.

2. Army Field Manual 19–15 should be revised to remove the possible ambiguity referred to above, and its rule for the application of force should be reviewed to determine whether the previous language which was retained even after the October 1969 revision needs to be altered to emphasize the restrictions imposed in that revision.

3. Every federal and district agency with current, standby, or potential law enforcement responsibilities in the District of Columbia should be directed to coordinate immediately on the adoption of a common policy on the use of deadly force. Efforts should be made to encourage and receive inputs from local human rights agencies, citizen groups, and bar associations, as well as such groups as the International Association of Chiefs of Police, in the formulation of guidelines.

4. The "Special Orders" card carried by troops on civil disturbance duty should be updated and revised to reflect all of the conditions and requirements for the use of deadly force set out in Army Field Manual 19–15; and the Seal of the Army should be replaced by the Defense Department seal both to remove the word "war" and to reflect the fact that units of other services use the card as well.

I know you join me in the belief that our nation can protect the rights of assembly and free speech as well as community safety even in times of great national division, and that we cannot afford another tragedy such as those at Kent State and Jackson State. It is in the spirit of mutual concern that I write, and express the fervent hope that you will take action on these matters.

Sincerely,

EDWARD M. KENNEDY.

Mr. MANSFIELD. Mr. President, may we have order in the Senate?

The PRESIDING OFFICER. The Senate will please be in order.

Mr. MANSFIELD. Mr. President, there are some amendments on which there is a time limitation but I do not see any of the sponsors here at the moment.

Mr. ANDERSON. Third reading.

Mr. MANSFIELD. Not yet. [Laughter.]

Therefore, if the Senate will indulge me, I suggest the absence of a quorum, briefly.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I understand that the distinguished Senator from Oregon (Mr. HATFIELD) is prepared to start speaking on his amendment and, hopefully, at an appropriate time we shall be able to obtain a reasonable time limitation on the discussion. I think this is good procedure on the part of the Senator from Oregon. He wants to be protected and should be protected, as any Senator should, and will be, insofar as the joint leadership is concerned.

The Senator from Oregon has indicated a willingness to consider a time limitation. He has been most cooperative and understanding of the difficulties which confront the Senate.

May I say that the same applies to the distinguished Senator from Mississippi (Mr. STENNIS).

Thus, hopefully, during the course of this discussion on this most important amendment, it may be possible to arrive at a time limitation, which will be satisfactory to all concerned.

Mr. SCOTT. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. SCOTT. May I suggest that at this time the distinguished majority leader suggest the hour at which we may convene tomorrow?

Mr. MANSFIELD. Oh, yes.

ORDER FOR RECESS UNTIL 10 O'CLOCK TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 10 a.m. tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

(Later this order was modified to provide for the Senate to adjourn until 9:30 a.m. tomorrow.)

TIME LIMITATION ON AMENDMENTS

Mr. SCOTT. Let me point out that there is now an agreement on limitation of time on three amendments. There is no agreement on limitation of time on the amendment of the Senator from Oregon (Mr. HATFIELD), or on the so-called Hatfield-McGovern amendment, or on the amendment of the Senator from Arkansas (Mr. FULBRIGHT).

I state this merely for the record, so that Senators will know.

ORDER FOR RECOGNITION OF SENATOR JAVITS TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that on tomorrow, immediately after the disposition of the unobjected to items on the calendar, the Senator from New York (Mr. JAVITS) be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF PENDING BUSINESS TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, following the remarks of the Senator from New York (Mr. JAVITS) on tomorrow, the Senate proceed to the consideration of the pending business, H.R. 17123.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. HATFIELD. Mr. President, I should like to preface my remarks by expressing my thanks to the majority leader and the minority leader in trying to work out a time limitation agreement.

Let me reiterate the fact that we stood ready at 3 p.m. this afternoon to make an agreement of 6 hours on the amendment and 1 hour on any amendment to the amendment.

I did ask that there be included in the amendment a "no tabling" clause. That seems to be our difficulty at this time, because I feel that the Senate has a right to engage in sufficient time in debate on this vital issue, and that the Senate would prefer to vote the issue up or down rather than make a determination on a procedural motion.

Therefore, Mr. President, at an appropriate time, I intend to bring up amendment No. 844.

However, at this time, I should like to address myself to the amendment only, and to the purpose of the amendment.

I might say that there is an extensive amount of material that should be included in this debate. Therefore, it may necessitate an extended period of time to present the material and the arguments on behalf of the amendment.

Mr. President, this amendment would implement the recommendations of the President's Commission on an All-Volunteer Armed Force, the Gates Commission, which made a thorough analysis of the economic factors including pay, recruitment, retention, administration, and training for various manpower levels of our Armed Forces affecting the creation of an all-volunteer force. At the completion of its study the Commission concluded that an all-volunteer armed force would be more efficient, equitable, and just than one recruited by any other system, and that we should begin to move now toward that end with an eye to abolishing conscription at the expiration date of the present Selective Service Act, June 30, 1971.

Today there are approximately 3.3 million men in our Armed Forces; but due to efforts to reduce this level to at least 2.5 million within the next few years, by this time next year, according to present Defense Department projections, our force level will be at 2.9 million men. To maintain our present force level at an all-volunteer basis of over 3 million men, 225,000 more volunteers would have to be recruited each year; but to maintain the necessary accession rate to keep our troop level at the eventual goal of 2.5 million men, only an additional 75,000 volunteers would be needed annually than are presently enlisting voluntarily. While the Gates Commission recognized that pay is not the only incentive for joining the Armed Forces, what seems surprising is that fewer men do not voluntarily enlist under the present pay scale. The first-term enlistee today receives a total compensation including basic pay, room, board, post exchange and commissary privileges, retired pay, specialty pay, bonuses and medical services, $3,251. Yet in the civilian sector he would have the total compensation of $5,202. In other words, computing income tax with the respective earnings, the first-term enlistee is being taxed 51 percent of what he would be earning in civilian life. The Commission found that by raising basic pay to a level comparable to compensation in the civilian sector we would insure the necessary accessions to maintain our troop levels on a purely voluntary basis. And if this and other inducement measures were taken now, continuing the draft until its expiration date of June 30, 1971, we would have enough data to support the discontinuation of the Selective Service Act.

The budgetary increase for fiscal 1971 to implement the transition to an all-volunteer force would be a maximum of $3.24 billion, according to the Gates study. Of this amount $2.7 billion would be for basic pay increases, the remainder being for such items as proficiency pay, ROTC, and Medical Corps expense. Yet when one computes the annual return in income tax—$540 million—savings in transportation costs—$68 million—savings in training and administration—$675 million—reduction of costs due to the civilization of certain military jobs—$100 million—the gain of productivity made by men not trying to avoid the draft—$3 billion—and other efficiencies, the cost of an all-volunteer force to society within 3 years will be negative. That is, by projecting these various cost factors ahead 3 years, a volunteer military will save the country money. Those who might argue that the additional expenditure to create an all-volunteer military would be inflationary fail to recognize the distinction between budgetary cost and the cost borne by the country in general. A volunteer military, while reflecting a budgetary increase, would be saving the country money and be counterinflationary. Yet even if this were not the case, from the point of equity the cost of maintaining our military should be shouldered by the entire country and not by the men who in many cases are forced to join. Irrespective of the fate of conscription, every taxpayer should share the financial responsibility for the defense of his country. I must point out that this amendment, or any legislation for that fact, does not and cannot commit the next Congress to extending or not extending the Selective Service Act in 1971. This amendment would allow draft calls to be reduced to zero within the next year, thereby eliminating the need to conscript men and consequently eliminating the need to extend the draft.

Beyond manpower and economic questions, there are two commonly encountered objections to an all-volunteer armed force. One is that such a force would become a group of professional mercenaries of questionable loyalty, isolated from the mainstream of American life, and pose a possible internal threat to our internal security. Criticizing an individual because he is well paid for doing a job is difficult to understand. We do not criticize doctors, lawyers, or other professionals because they are well paid, nor have we ever criticized our officer corps, which has always been professional, because they are well paid. Why should we, then, criticize a first-term enlistee, the lowest man in the military hierarchy, for receiving an equitable income? Furthermore, to call such a man a mercenary is incorrect. A mercenary is a citizen of one country who is hired by another to fight in its wars. This clearly is not the case in a volunteer armed force, nor was it the case in our more than 170 years' experience with an all-volunteer military. Many people forget that the past 20 years is the only time in our history that we have had peacetime conscription and only three times before was the draft instituted and then for a brief period during war.

There is no possible correlation between the method of recruitment and frequency of coup d'etat. It might well be argued that there is a positive correlation between voluntarism and decreasing militarism, for in the two countries closest to us historically and culturally—Canada and Great Britain—the influence of the military might be said to be decreasing, and both countries have all-volunteer armed forces. As Edward Luttwak states in his book "Coup d'Etat":

> There are three factors common to coups: (1) "severe prolonged economic crisis, with large-scale unemployment or runaway inflation"; (2) "a long unsuccessful war or a major defeat, military or diplomatic"; (3) "chronic instability under a multiparty system."

Control over the military by society depends on the strength of our leadership, and effectiveness of the President and Congress, and the loyalty of the Armed Forces officers and elisted men. If, as the Gates Commission recommended, the power to reinstitute the draft were to rest in the joint resolution of both Houses of Congress, and effective economic and administrative policies were adhered to, in the country in general as well as in the Armed Forces, our military men will not be alienated from the rest of our society, let alone pose a threat to our internal security. Be that as it may, the method of recruitment has little relevance.

The other most commonly encountered objection to an all-voluntary armed force is that it would be comprised primarily of members of minority groups, particularly blacks, or those below the poverty line. In that there are more than two times more whites than blacks classified below the poverty line—17.6 million whites compared to 8.3 million blacks—in our country, those who fear an all-black military have no reason for concern. To argue that increased pay would attract more who are below the poverty line than are now attracted neglects the fact that the monetary incentive to this group already exists in the military. The Gates Commission pointed out in its study that in a mixed force of conscripts and volunteers at a 2.5 million man level, 14.1 percent of the Armed Forces would be comprised of blacks, while in a voluntary force of the same size 14.9 percent would be black. The Army in a mixed armed force of conscripts and volunteers of 2.5 million men would have 16.6 percent blacks, while in an all-volunteer force of the same size blacks would comprise 18.8 percent of the Army. During the late 1960's blacks comprised 9.0 percent to 9.5 percent of the total Armed Forces and 11.7 percent of the Army.

Thus, while the percent of blacks will increase 0.8 percent in a volunteer force as compared with a mixed force, the proportion of blacks will increase at least 4.6 percent over the late 1960's

ratio, irrespective of the method of recruitment. In either case the increase is insignificant. But even if this criticism—that it is unjust to raise salaries to an equitable level, creating a volunteer military, because minority groups and the poverty stricken would comprise the majority of the members of our Armed Forces or bear the primary responsibility of defending our country—is true, it is not a criticism of a volunteer military; it is a criticism of a society which would allow the only means of financial, educational, and occupational improvement for a certain group to be through one institution, in this case, the Armed Forces.

To pass this amendment would not immediately stop inductions, it would not jeopardize the internal security of our country, nor would it threaten our external security by not being able to maintain needed manpower for our armed services. To pass this amendment would raise pay within the military to an equitable level, reduce inductions to zero, and eliminate the necessity of extending the Selective Service Act beyond June 30, 1971. If this amendment does not become law, we will be faced with a difficult alternative in 1971: extending the Selective Service Act for at least 1 more year, with all of its inherent inequities, injustices, and inefficiencies. There is no economic, moral, or social reason why we should have peacetime conscription. To the contrary, it is imperative that we should move now to create an all-volunteer Armed Forces.

I yield to the Senator from Arizona at this point if he wishes to ask a question.

Mr. GOLDWATER. I will wait until the Senator has finished his remarks. I have a statement I shall make.

Mr. STEVENS. Mr. President, will the Senator yield?

Mr. HATFIELD. I am happy to yield to the Senator from Alaska.

Mr. STEVENS. Mr. President, I wish to address a question to the Senator from Oregon.

As a cosponsor of the amendment I was under the impression in the beginning that we were talking about an amendment that would become effective July 1, 1971. As I examine this amendment, it becomes effective on the date of its enactment, with the exception of sections 6, 7, 8, 9, and 10. They become effective on the first day of the next calendar month after the bill is enacted.

I wonder if the Senator would tell me if he has any basic objection to postponing the effective date of this measure. I do have an amendment to this effect which I intend to offer.

Mr. HATFIELD. The only date involved in the amendment has to do with the immediate implementation of the pay scale which has been recommended by the Gates Commission. The idea was that this amendment would immediately implement a pay increase and thereby create one of the most basic necessities for implementing an all-volunteer force. In that connection I do not think we can wait until we reach the end of the present conscription law. I think the first printing of this bill had certain inaccuracies, which were typographical inaccuracies on the part of the Printing Office. The purpose of the bill is to undertake the implementation of an all-volunteer army now through this kind of pay increase program; and then be ready, underway, and already have the foundation laid for the creation of a volunteer army by the time we next reach the expiration date of the present draft law.

The only alternative at this point would be to wait until the expiration of the Selective Service System on June 30, 1971, at which time it would be rather impractical to undertake a new system because we would have to crank up one system and crank out another system. That is the reason for presenting the amendment now. This amendment would not, in itself, end conscription. Conscription could only be ended by an act to end it before the expiration date; or we would have to wait until it ends in 1971. Through this measure we will be waiting for the final expiration date in 1971.

Mr. STEVENS. It would seem to me that the Senator from Oregon has a good point concerning the change in the pay scale. However, as long as conscription is going to continue under the present draft act, it is my feeling that the new pay scale should go into effect at the time that conscription ends; and as I stated, originally I was under the impression that we were talking about an amendment that would go into effect when the present act expires.

I find it difficult to understand why we should put these provisions of the Senator's amendment, which I have cosponsored, into effect on the date of enactment which, if we are successful, would be prior to the expiration of the current draft system.

Again, I would be more than willing to work this out with the Senator or his staff. I do have an amendment which would simply delete the effective date clause and state that the act becomes effective July 1, 1971. That would mean the cost of the volunteer Armed Force will be in the next appropriation bill rather than require special supplemental appropriations and it will be directly related to a volunteer Armed Force.

I do not see how making the amendment effective immediately will be an incentive to the formation of a volunteer Armed Force beginning with the expiration of the current draft system, particularly since some of those who are serving in the armed services now do not do so by choice.

I would again seek the Senator's ideas on the effective date of this proposal which puts into effect upon enactment all the provisions except sections 6 through 10, and those would go into effect, if it were enacted today, September 1.

I would like to know why we cannot postpone it until next year, as originally intended.

Mr. HATFIELD. I think we are talking about two basic principles in this colloquy. We are talking about the concept of a volunteer military, and we are talking about the concept of an equitable or comparable pay.

I feel that we have stated our case and we have no misunderstanding on the concept of a volunteer army. This is the principle the Senator from Alaska and I, as well as other cosponsors of the bill, are committed to.

On the question of equitable pay the military today consists of not just draftees but also enlistees. It is a mixed force. There are over 12,500 men serving in the military today who are on welfare receiving monthly welfare checks because they are below the poverty level.

I think the inequity is there today whether we have a mixed military of conscripts and volunteers or an all-volunteer military. There is still the principle of equitable pay. To me, that is a separate and almost distinct issue although, in the discussion here, I think they are closely interrelated.

We are not going to get an all-volunteer military on poverty-scale pay. We are not going to get the kind of men to stay in the Armed Forces who are already there, nor are we going to get new enlistees, on such a pay base. I do not think it is right for the American public to ask young men, those who volunteer as well as those who are conscripted, not only to serve in uniform but, in a sense, to subsidize their service because of the difference between pay in civilian life and the military pay scale.

So I think it is vital, if we are going to undertake a commitment for an all-volunteer force, to implement a pay scale that will attract people into such a volunteer force. Second, those who are in service at this moment ought to have a decent pay scale, and we should not have in the Armed Forces people who would qualify for welfare and be under the poverty classification because of our miserly attitude toward military pay.

Mr. STEVENS. Mr. President, I thank the Senator from Oregon for his courtesy, and the Senator from Arizona for his.

I must disagree with the effective date in the amendment. I wanted to have this exchange with the principal sponsor of the amendment because I am a cosponsor.

I believe it is time to do what is intended by this amendment, to restructure the Armed Forces, but I do not think we can do it by the first day of the next calendar month. When we have a system that has been in effect for as long as the present draft system has been, which I understand has been continuously in effect for over two decades, I do not think it can be changed by simply increasing the pay by the beginning of next month, so that there will be an inducement for men to join or stay in the Armed Forces.

For instance, there is one provision in the amendments that requires the Secretary of Defense to report back to us in 9 months with recommendations for restructuring the Armed Forces to make recruitment of an all volunteer force more effective. I think we ought to wait for that. I think we ought to, by this amendment, indicate the Senate's intention that there shall be a volunteer armed force, and permit the administration to have the time that will be necessary to put it into effect.

I think the present date in the amendment is too early a date. I do not see how it could be done. As a matter of fact, if

it went into effect, I do not see how we could handle it. The appropriation bill will not be passed until December. Yet this amendment would call for increased pay next month.

Mr. HATFIELD. Mr. President, will the Senator yield?

Mr. STEVENS. I yield.

Mr. HATFIELD. I would say that increasing the pay for the military forces is no more difficult than increasing pay for ourselves. We did not have any great problem in increasing our own salary in the Congress. We did it rather rapidly, and it was implemented with a great deal of ease. In my opinion, there has been an inequity for far too long a period in the pay scales of the military as compared with the pay for civilians, especially in the enlisted rates; and I am talking primarily about the enlisted personnel in the military. I do not see any great problem in having the amendment adopted and having the pay scale implemented immediately.

I point out again that we passed increased pay scales for postal employees and other government employees, and for ourselves especially. Even though I voted against it, I found it went through with relative ease. So I do not think we would find a great deal of difficulty here.

The Gates Commission recommended this procedure. It is not necessarily a personal viewpoint. It has the backing and support of the Gates Commission, which felt it should be undertaken immediately.

But I do not want to lose a cosponsor here. I would like to discuss it in some detail with the Senator from Alaska. If there is an irreconcilable problem, we will have to get at it through the amendment procedure, unless we can reach a better understanding than I have been able to achieve through my explanation on the floor.

Mr. STEVENS. I thank the Senator.

I understand that if our amendment is adopted the impact will be something like $2.5 billion for this fiscal year. What it would be for the next fiscal year we do not know. I want to see the proposal adopted, but we are already into the fiscal year. Where are the $2 billion-plus going to come from to pay for the salary increases?

I would like to see us work this matter out so our good friend, the chairman of the committee who is handling the bill on the floor, will not have the difficulty he would otherwise have with this amendment. I think perhaps we might be able to get him as an ally, in time, on the all-volunteer armed force concept.

MESSAGE FROM THE HOUSE—ENROLLED BILLS SIGNED

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bills:

H.R. 2849. An act for the relief of Anan Eldredge;

H.R. 6265. An act to provide that a headstone or marker be furnished at Government expense for the unmarked grave of any Medal of Honor recipient;

H.R. 8662. An act to authorize command of the USS *Constitution* (IX-21) by retired officers of the U.S. Navy;

H.R. 9052. An act to amend section 716 of title 10, United States Code, to authorize the interservice transfers of officers of the Coast Guard;

H.R. 12959. An act for the relief of Gloria Jara Haase;

H.R. 13195. An act to amend title 10 of the United States Code to provide that U.S. flags may be presented to parents of deceased servicemen;

H.R. 13383. An act for the relief of Mrs. Marcella Coslovich Fabretto;

H.R. 13712. An act for the relief of Vincenzo Pellicano; and

H.R. 15374. An act to amend section 355 of the Revised Statutes, as amended, concerning approval by the Attorney General of the title to lands acquired for or on behalf of the United States, and for other purposes.

ORDER FOR ADJOURNMENT UNTIL 9:30 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 9:30 tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF CERTAIN SENATORS AND FOR CONSIDERATION OF UNFINISHED BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that upon the disposition of the unobjected-to items on a call of the calendar tomorrow if any are cleared on both sides, the able Senator from New Hampshire (Mr. McINTYRE) be recognized for not to exceed 20 minutes; that at the conclusion of his remarks, the able Senator from Ohio (Mr. YOUNG) be recognized for not to exceed 20 minutes; that the able Senator from New York (Mr. JAVITS) then be recognized for not to exceed 15 minutes, to be followed jointly by the Senator from Connecticut (Mr. RIBICOFF) and the Senator from Oklahoma (Mr. HARRIS) for not to exceed 10 minutes between them; and that, upon the conclusion of the aforementioned special orders for recognition, the unfinished business be then laid before the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. GOLDWATER. Mr. President, it is with a great deal of pleasure that I rise to support the amendment of the Senator from Oregon. I am particularly happy that the distinguished Senator from Oregon prepared it and submitted it, and that he allowed me to be a cosponsor.

I might say that I have lived for about the last 7 years with the idea that we can have a volunteer military force in this country. I shall explain my reasons briefly today. Then, as the debate proceeds, I hope to develop further thought on it.

AN ALL-PROFESSIONAL, VOLUNTEER MILITARY SERVICE

Mr. President, the Senate will reveal by its action on this amendment whether it views military service in the Armed Forces of the United States as an honorable and dignified profession, or whether it believes that the staffing needs of the Armed Forces can be met only by a system of human bondage.

Are we, as a nation, ready to turn away from the medieval concept of a conscript army, in which people have to be forced to serve, under penalty of being sentenced to jail if they refuse?

Are we willing to take the practical steps that are crying to be done, from a sense of equity alone, so that military service can be transformed into a rewarding and important profession?

Is military service to be equated to a jail sentence? Or is it to be seen as an honorable profession for which people will be glad to volunteer if they are offered a decent salary with fringe benefits similar to civilian opportunities?

Is a military career to be regarded as a shameful activity? Or will it be recognized that, even now, millions of men and women freely choose to volunteer for service in the Armed Forces out of a devotion to their country and a desire to contribute to the well-being and protection of their nation?

Now, we have offered an amendment that would allow the Senate to take a position on these matters. The amendment would restore military service to a completely voluntary status. It would move our society back to the normal state of affairs which has prevailed throughout our history.

Although the young people of our nation have grown up with the draft, it has not always been so. In fact, the current condition is a most unusual one in our culture.

While few people are aware of it, there never was a compulsory system of military service in the United States until the Civil War. The draft first appeared in America in 1863. After that war, it was dropped and did not show up again until 1917, when it was used and then, of course, dropped after that war. In 1940, the draft came again, but it was allowed to expire in 1947.

One year later Congress passed a draft law and that one is still with us. It stays until the end of June next year, at which time, if it is to be renewed, Congress will have to do it.

Mr. President, I think from this brief review it can be seen that the fact that the draft has continued since 1948 is contrary to the entire past history of the United States. This practice has

had no place in our system of freedom except as a temporary expedient.

For, when the law is used to tell a young man how he shall spend several years of his life, this causes an invasion of the most precious and fundamental of human rights, the right of each citizen to live his own life. And to do this as he may choose. This is why as a conservative I am strongly committed to the voluntary military approach.

Not only do I believe that the draft is wrong, but I also believe it is wrong to assume that free men have to be forced to fight for their country. I am just old fashioned enough to believe that there are still a great many Americans among us who think enough of their freedom that they are willing to fight for it. Furthermore, I think the rest of the Americans are willing to pay those who serve in the military a good and ample wage, with fringe benefits, for shouldering the task.

Mr. President, I would remind Senators that this is not a new cause to me. I might say that I came to the conclusion to support this position during the last 5 years of my military service of 37 years when as a Reserve officer, my mobilization day assignment was Deputy Chief of Staff for Personnel for the Air Force. As I watched the inefficiency of maintaining the draft, I became convinced that we had to institute a different system. This was during the early 1960's.

Since then the picture has steadily improved for the voluntary system until today, when we are standing on the precipice, ready to dismantle the draft and establish a fully voluntary, completely professional army.

Mr. President, I can only repeat what the Gates Commission found: In short, that a voluntary system will work. This was the unanimous finding of a commission that had started out with members having many different views and experiences. When the meetings began, there was about a 50–50 split among the provolunteer members and the antivolunteer members. By the time the Commission had concluded its study, not one person was on the other side. They all said that the voluntary service is feasible.

To get an idea of why the Gates Commission is so convinced that we can achieve a force of all volunteers, you must understand one of the curious facts about the composition of the present Armed Forces. The truth is that our current forces are already made up predominantly of volunteers. This is something that many people do not realize. We have in my State of Arizona, for example, such a large number of volunteers that our draft call in many months has practically been nonexistent.

Mr. President, there are in the military today 1¼ million persons who are serving beyond their first term of service. There can be no question that these people are true volunteers. They could have gotten out if they had wanted.

Next, there are approximately 800,000 additional true volunteers in their first term of service. They are individuals who say that they would have enlisted even if there had been no draft looming over their heads.

This means that we are talking about a military force which right now has on the order of 2 million true volunteers, with over a quarter million new ones each year. Indeed the existing base of volunteers is so large that the Gates Commission found—

> A fully Volunteer Force of 2.5 million men can be achieved by improving pay and conditions of service sufficiently to induce approximately 75,000 additional young men to enlist each year.

So, no one need fear that we will suddenly be required to attract 2.5 million volunteers all at one time in order to maintain a strong military force. All it will take is an additional 75,000 volunteers each year. Surely, we can improve the conditions of military service that much.

What will it cost? Well, it certainly will not bankrupt us. The Gates Commission came up with an extremely conservative estimate of $3.2 billion in the transition years and $2.1 billion once the voluntary force is fully operational. Now, to my mind, and distinguished members of the Gates Commission agree, this is too high. In fact, I might say, Mr. President, that what really got me interested in a voluntary force, outside of the rights that are concerned, was sitting, on periods of active duty with the Air Force, both in the Pentagon and out in the field, and realizing the tremendous waste that the Air Force alone went through each year as we would watch first-term draftees drop out to go home, after having had spent on their education in electronics, engineering, hydraulics, engine care, and so forth, from $85,000 up to the Lord knows what. My business sense told me that if we could keep those men, or a majority of them, in the Air Force, we could probably in the long run make money by it. I am still of that opinion. My instinct tells me that the savings to the Government have not been weighed heavily enough. I am speaking from experience because I studied the application of this proposal during my annual tours of duty with the Air Force in personnel at the Pentagon in the early 1960's. I was astounded at the amount of money that it cost just the Air Force alone each year to retrain a man for a slot that had been vacated by another man. This training in a 4-year term can run as high as $250,000 in the case of enlisted men. In the case of officers, it can be double that, or more.

In fact, Senators may not know it, but in a B–52 first-term pilot we have invested about a million dollars in training.

I admire these men, for they can look across the street and see an airline pilot for almost any domestic airline making almost three times what they are making; and, even realizing that when the 747 pay scale goes in they will be making five and a half times what these young men make, there are still enough of them willing to stay that it makes me believe we still have enough young men with the interests of their country at heart to fill a voluntary army.

The average enlistee or draftee who goes through—let us say training in electronics at Keesler Air Force Base—has over $80,000 invested in him. If he drops out, somebody has to fill that slot, and the estimate I came up with was that it would save the Air Force alone about $1 billion a year if we could have men that we could keep in these slots.

My thinking is borne out by the personal views of Milton Friedman, who has studied this for a long time. In his view, as an economist, the mixed force of part volunteers-part draftees is grossly inefficient. As he points out, in order to man an armed force with part conscripts a larger total force is needed. For example, a man drafted for 2 years spends the first 6 months or so in training. The last 3 months of his service he is being processed for discharge. You are lucky if you get 1 year of service out of the man for the 2 years he is in the military. In addition, there must be people to train him.

The result is that the all-volunteer force needs fewer people than a mixed force. The Gates report found that to maintain a 2.5 million-man force which includes draftees, each year about 440,000 young men must be recruited for the enlisted forces. Under a completely volunteer service, only 325,000 people are needed. In other words, the mixed force wastes 115,000 men a year in order to keep up the same military effectiveness as the all-volunteer force.

Mr. President, another point about the Gates report is that it is honest in arriving at its estimates. For example, contrary to what its critics charge, the Gates Commission tackled head on the problem that the Army faces in filling the hard-to-fill infantry spots. The Commission wisely set its compensation tables at levels high enough to provide the Army with the quantity and quality of volunteers which it requires. The Army was considered separately because the Commission recognized that this was a critical element. As the report indicates:

> The evidence is overwhelming that if compensation is set at levels which satisfy Army requirements, the other services will be able to attract enough qualified volunteers to meet their respective requirements.

So, if anyone says that the Gates Commission has not considered the special problems confronting the Army it is pure hogwash. They have not read the report.

Another misleading question that will be raised by critics is "What happens in case of a national emergency?" Again, this is nothing more than a scare tactic. If anyone thinks that the draft is going to provide emergency forces on the spot, then he does not understand much about war.

Conscription cannot provide emergency forces. It never has, and I see no way, after 37 years of military service that it can. The first recourse will be to the Ready Reserves, including the National Guard. In the words of the Gates report—

> Conscription cannot provide emergency forces: it takes many months of training for civilians to become soldiers.

Thus, it will be the Reserve forces which will provide immediate support to the active forces. Like the active duty forces, the Reserve units will be recruited on a voluntary basis.

The measure we have sponsored will automatically increase the drill pay for

Reserve participation at the same time that it provides pay increases for the active component. In my view, this increase will be sufficient to encourage Reserve enlistments adequate to maintain a voluntary Reserve force which is large enough to support a voluntary active duty force. Furthermore, in the case of an emergency, conscription could be reinstituted by an act of Congress, almost immediately, because our plan provides for the continued registration of all young men in the United States even though the draft itself will be done away with. This standby system will satisfy the long-term needs of the Nation.

This brings us closer to the truth about the proposed amendment. It will not end the draft immediately. It will not leave the country defenseless in time of sudden emergency. It will not bankrupt the budget. It will not injure the national security.

The voluntary military amendment will improve the conditions of military service. It will provide immediately upon its enactment for a 50-percent increase in the value of basic pay for first-term enlistees and 28 percent for first-term officers. The increase for those in their second term is about 9 percent.

In addition, it will provide that the Secretary of Defense shall put into effect, as soon as practical, several other features which will make military life more attractive. For example, proficiency pay should be made available to all persons with special skills. Promotions should be accelerated for high-quality personnel. Military men should acquire vested rights to retirement benefits after 5 years of service, similar to civilian employees. And, the Government should provide an equitable survivor annuity program for military retirees which is on a par with the one that is offered to civilian employees. The senior Senator from California (Mr. MURPHY) and I will offer an amendment shortly that will nail down the survivor feature of the volunteer proposal.

Mr. President, these changes are needed whether or not we move to an all-volunteer military. The hidden tax which is imposed on Americans who are valiantly serving their country should be removed even if we do not end the draft. The idea of regarding military personnel as some kind of feudal slaves who can be expected to labor at half of what the civilian market will pay is unworthy of a modern, civilized nation.

To my mind, any Senator who votes against this amendment will be announcing to the men and women now in the Armed Forces that he believes they are undeserving of getting the improved benefits our amendment will provide. A vote against the proposal is a clear-cut vote to deny to each of the persons now serving in the military their chance to be put on a level of equality with their civilian counterparts.

Not only that, but also by voting against the amendment, Senators will be sabotaging any chance that the draft can be permitted to die next year. If any Senator means more than lipservice when he says he endorses the principle of the voluntary military, then he will vote for this amendment as a way to set the foundation on which a voluntary system can be erected.

Why not give it a chance? Why not put into effect the improvements which we recommend and see whether or not this will attract an adequate number of volunteers so that the forced draft can end?

Mr. President, that has been my position all along. I want to give this a try. If it does not work, all Congress has to do is to reenact the draft.

We all realize that this issue will have to be debated again next year. We will each have to make a fresh decision at that time about whether or not conditions have changed sufficiently so that the draft can be allowed to expire on June 30 of 1971.

Therefore, if a Senator has a preconceived idea that the voluntary system will not work, and he wishes to create a situation in which that prediction will be borne out, then he will vote against the amendment. But if he is willing to keep an open mind on this matter, and if he is willing to give the voluntary proposal a fair test, then he will support the amendment.

What harm will be done? We are not voting to abolish the draft here and now. We are only voting now on whether we will give all military personnel, both conscripts and enlistees, officers and career members, decent and equitable service conditions. The question of finally ending the draft will not come up until next year.

Some Senators may wonder why we do not wait for hearings. Well, we can have hearings on the question of ending the draft next year. But time is running out on the chance to put into effect the benefits that are needed as a precondition to establishing a voluntary service.

After all, our proposal was originally introduced as a bill, as far back as January of 1969. We have been seeking hearings on the proposed legislation ever since. To use the fact now that we have had no hearings as a reason for not acting on the proposal does not seem to me to make much logic. There is no time left for hearings. These improvements in the pay structure have to be put into effect immediately. If hearings are desired, then I suggest that we should adopt this amendment now and plan to hold our committee sessions next year on the question of whether or not these changes are enough to make a completely volunteer system work.

In closing, Mr. President, I know there is some question about where the President stands on this. I have not talked to the President personally about it.

I need not remind my Republican colleague, the sponsor of the amendment, that a voluntary military was not only a part of the platform of 1964 but also of 1968. In fact, I recall that in the first speech I made seeking the office of President, in my hometown of Prescott, Ariz., I spoke on the subject of the voluntary military, and the President has since spoken out in favor of it.

I urge my colleagues to put the volunteer Army to the test. Set the stage so that we can honestly tell whether or not the draft can be allowed to expire next year. If it can, then the action we take today will, in a short time, restore America to the best traditions of a free society.

Mr. HATFIELD. Mr. President, I should like to commend the very outstanding presentation of the Senator from Arizona.

I have had the great privilege of knowing the Senator from Arizona now for over a decade. I have known him on the campaign trail as we campaigned together in 1964. I was proud to be on his team as he sought the Presidency of the United States.

I have seen him in his home State of Arizona and have observed him in the Senate since his return here.

Whether one agrees on all issues with the Senator from Arizona, it must be said that the Senator from Arizona is deeply concerned and committed to the principle of individual freedom in this country. I have never known him to take a stand on or to fight for a cause that did not at least recognize the importance of the individual and his rights within a free society.

I believe that his leadership on this amendment and his presentation today confirm and reiterate that characteristic which all of BARRY GOLDWATER'S friends, even his opponents, recognize in him.

I am proud to stand with him on the same issue and the same platform, shoulder to shoulder, and take this occasion once more to express my deep admiration and respect for him, not because we agree on this particular issue but, over and above all issues, this is the kind of integrity this man represents. I am proud to be a cosponsor with him.

Mr. GOLDWATER. Will the Senator from Oregon yield at that point?

Mr. HATFIELD. I yield.

Mr. GOLDWATER. I should like to thank the Senator from Oregon for his charitable remarks, and would like to point out something that many liberals in this country overlook and, I must say, many conservatives also overlook.

We hear the young people say in America today, "We want to do our thing." That is a great way to express what conservatives have been trying to say for hundreds and thousands of years; namely, "We want to live our lives unoppressed by a central government. We want to choose what we want to do with our lives, except in times of emergency when it becomes obvious that we have to resort to a tactic such as the draft."

That is the clear lesson I learn as I travel across America and visit with our young people in grade schools, high schools, and colleges, and why they will not call themselves conservatives, necessarily, and will not even identify themselves with any particular philosophy.

I believe that what we are finding in America today is not young people in opposition to military service, per se, inasmuch as it might mean serving their country. They are patriotic. They are loyal Americans. I just believe they have become imbued with the one central thought of what began the United States of America: Freedom.

I do not mean freedom from taxes, or freedom from oppression, but the free-

dom to do what one wants to do, as long as, in doing "our thing," it does not hurt someone else.

Mr. President, when I say that, I am stating what I have found in this country. I hope that my liberal friends on the other side of the aisle will pay some heed to this and not try to find in the remarks and activities of our young people some ulterior or obscure motive. To me, it is as plain as the sun coming up above my Arizona desert. These young people are ahead of us. We older people have got so used to oppressive government, so used to the government running our lives, that we sort of think we can help it no longer. But not these young people. I admire them for it.

Again, before I leave the Chamber, I want to thank my good friend from Oregon who had the courage to prepare this amendment and to introduce it.

I look forward, in the days ahead, to the opportunity to help.

Mr. HATFIELD. I thank the Senator from Arizona very much.

Let me point out one aspect of the remarks of the Senator from Arizona. He has eloquently focused upon how fallacious it is to apply labels to political personalities and political issues, that an issue is liberal or conservative, or someone is liberal or conservative.

I need not quote the famous line from the Gilbert and Sullivan operetta "Iolanthe," which indicates that every boy and every girl born into the world was born a little bit liberal or a little bit conservative.

But, it is important to note those who are generally referred to as conservatives, like my good friend from Arizona, and those who are generally referred to as liberals, such as perhaps my position would represent in the political spectrum; but I think basically, in terms of classical labels, we on the so-called liberal side have also prided ourselves that we put human rights before property rights. We like to pound the desk and make speeches about how we on the liberal side are always in the vanguard on any question concerning human rights.

I say that this is the most fundamental of all human rights, that we do not have to be liberal or conservative to recognize it; namely, whether we are going to maintain our medieval system of "tax-in-kind" requiring obligation, force, and coercion, as a basis for giving our lives to the government, in lieu of some other kind of tax. We abandoned that kind of thinking when this country was created. That kind of thinking abounded in Europe. That was the way the monarchies in Europe functioned. They declared that the males had to give that kind of support to their king and country.

I believe that we fall into some rather bad ways when we begin to accept that thinking as a way of life. I am disturbed at times when I find that there are those who say, "well, it is the lesser of two evils," or "it is the least of all evils," that "we must accept it, because there is no better way," or "it might cost us a little more money to do it some other way."

I do not believe that we can accept all that as being valid excuses for inaction.

Our young people have been patient in this country—far more patient than would be required even of someone who has had to live under this kind of inequitable and involuntary servitude, if we want to call it that. I do not believe it is exaggerating to call it involuntary servitude, when many young men are being pushed into a war that their conscience resents yet, because of draft inequities, are required to do so because there is not a broad enough interpretation of a conscientious objector or some other related issue.

I believe it is time that Congress stand up and recognize that one of the deepest issues in this country that divides our people today among the various segments, black or white, young or old, is that we have a system of inherent inequity. Its very title tells us that—"Selective Service." We could call it "discriminatory service" and that would be just about as accurate.

Until we abolish the draft and create the opportunity for our young people to give service to their country on a voluntary basis, we will find America deeply troubled, that increasing the police force alone will not solve it. We are going to find that force, no matter how applied, will not push down or put out the kind of resentment we find today against a compulsory, coercive and medieval system of conscription.

Mr. President, we are talking today, and we have been for several weeks, about the Military Procurement Act to which this amendment will eventually be proposed. I think when we talk about military procurement, we ought to think in terms other than mere weaponry. We are talking about, in a very germane way, the fundamental of our defense system—that is, its personnel.

This is one of the most significant—if not the most significant—amendments that we have considered up to this point. And that is manpower procurement. Let us broaden our view and vision as we talk in the days ahead on the Military Procurement Act and incorporate the concept to realize that we are talking about people as well as instrumentalities and weaponry and airplanes and tanks and aircraft carriers and so on.

Mr. COOK. Mr. President, will the Senator yield?

Mr. HATFIELD. Mr. President, I am happy to yield for a question.

Mr. COOK. Mr. President, let me say this to the Senator from Oregon and to the Senator from Arizona. One of the first bills that I became a cosponsor of when I first came here a year and a half ago was a bill to establish a Volunteer Army. I remember then in discussing it on many occasions that—as the Senator from Oregon mentioned—people would say it somehow or other is going to create a mercenary force. That was so well covered by the Senator from Oregon, who pointed out that the hierarchy of the military establishment is a professional force. These are professionals, as they should be.

I want to say in regard to the Senator from Arizona that one of the things I was able to do, and was delighted to do, was to hold the hearings open on the 18-year-old vote so that the distinguished Senator from Arizona could testify before our Constitutional Amendment Subcommittee. I think that we are talking about all of these things in one little ball of wax, really.

I think we are talking about a voluntary army to satisfy the desires of the young people of this country. I think we are talking about the opportunity for 18-, 19-, and 20-year-olds to cast their ballots in all elections across the country. I have been able to say to many of those from the sophisticated States that I now find myself associated with in the Senate of the United States, "Why did not you long ago do as the Commonwealth of Kentucky did in 1954 when we allowed the young people to cast their votes in all elections, starting in 1954?"

Another thing that we run up against, I would refresh the memory of the Senator from Oregon, is that when we talk about equal rights for women, the first thing someone says, if he wants to be contrary to the principles of the Constitution, is that everyone should be treated equally. The first thing they say is, "Are you willing to be drafted?"

It is not a matter of whether they are willing to be drafted. I think that every person in this country, man or woman, is willing to defend this country when this country needs to be defended.

When the young people of this country say, "Why does this have to continue," I have to say, "I think it is because we have gotten ourselves in a rut and have continued for so many years that we do not know how to stop it."

We started it before. We stopped it before. The Senator and I are on a separate bill that calls for registration in the event of national emergency declared under the Constitution by the President of the United States.

We are going to keep this bank of ability and capability that is so obviously and so absolutely ready to serve this Nation and will always be ready.

I would like to feel that one of the things that will really come out of this session of the Congress, at least from the standpoint of the Senate, is this amendment which will be well debated, and the fact that we—the Senate, and not the House—added the amendment on the extension of the Voting Rights Act of 1964 providing for the 18-, 19-, and 20-year-olds in this Nation voting in all elections, and the fact that we have on the calendar a constitutional amendment providing equal rights under the Constitution for every individual in this country regardless of sex, religion, or whatever the case may be.

I think that we have put all of the things in perspective in the year 1970.

I congratulate the Senator from Oregon and the Senator from Arizona—who has left the floor at the moment—because many of these things, as the Senator and I know—the Senator has been an advocate of for quite some time.

I wish to thank the Senator for allowing me to be a cosponsor of his amendment.

Mr. HATFIELD. I thank the Senator for his commendation.

Mr. STENNIS. Mr. President, will the Senator yield briefly?

Mr. HATFIELD. I yield to the Senator from Mississippi without losing my right to the floor.

Mr. STENNIS. I thank the Senator. I did not know how long the Senator was going to speak. I just want to ask some questions and make some comments also.

Does the Senator really propose in his amendment, should it become law, that after June 30, 1971, we shall no longer have a Selective Service Act? In other words, is this a bill to create a volunteer Army or is it a bill to, in effect, repeal the Selective Service? I think there is a great deal of difference between the two.

Mr. HATFIELD. There is a difference. I would respond to the Senator from Mississippi by stating that this amendment would implement as of now the pay scale for the existing military force of conscripts and volunteers. It would permit the selective service law we are now under to expire.

It does not commit the Senate at this time to repealing the Selective Service Act that is in effect, because it would merely permit it to expire. However, it would immediately implement the necessary ingredients for an all-volunteer military service.

I would add one final thing, that it does require and permit the machinery for a continued registration of the young men in this country. It does not permit the drafting of those young men because if Congress does not act to extend the draft, and the draft is permitted to expire in June 1971, there would be no draft system. There would be no draftees. Therefore the only obligation would be for a young man to appear at an appropriate place and give his name, address, and age.

The reason for continuing the registration system is simply—as referred to a moment ago by the Senator from Kentucky—that if this country should face the necessity of reinstituting the draft, that it be like the census in that we would have an inventory of the eligible young men who might have to be subjected to a new draft system.

That is the only purpose that the new registration system would provide or the only reason that it would exist.

Mr. STENNIS. Mr. President, I thank the Senator. That brings up another question. What would the Senator propose doing about a young man that was drafted 3 months before the Selective Service Act expired? What would be his situation?

Mr. HATFIELD. Any young man that would be drafted under the existing law would be subject to the provisions of the existing law.

Mr. STENNIS. He would have to continue to serve after the transition mentioned by the Senator.

Mr. HATFIELD. That would be the presumption unless specific action is taken later by Congress or some other provision created. But it would be the assumption that any man drafted under the existing law would serve out his obligation under the existing law, which is 2 years.

Mr. STENNIS. We have figures here, which I will not go into now on the Senator's time. They show that it is the Selective Service Act which brings the men in, who are really available to be assigned to Vietnam, or anywhere. This bill makes certain pledges, assurances, guarantees, and double guarantees, for example, as to the Middle East, and taking on additional burdens to those we already have.

We have figures which show the estimation of what the volunteer army concept would draw in getting men to go into one war that is already on. I will not go into that further at this time.

Mr. HATFIELD. May I respond to the Senator's comment at that point?

Mr. STENNIS. Yes. The Senator has the floor.

Mr. HATFIELD. I would like to comment that the matter of producing manpower requirements to meet the national needs, or implementing existing or anticipated foreign policy, is all found within the number of men required under each month's draft call, which, as long as this draft system operates, is very flexible. So this amendment at this time would have nothing to do with that kind of need or meeting unanticipated needs. Under an all-voluntary system you would find a greater capacity to meet unanticipated needs than we have found under the draft system.

We had the draft system at the time of the Berlin airlift or the Korean crisis and we had to call up World War II veterans in order to have qualified personnel to send to those areas.

Mr. STENNIS. That is the purpose of the Reserve. We spend considerable amounts of money each year on the Reserves. We called them up at the time of the Berlin crisis and the Korean crisis. In this war we did not call them up.

Mr. HATFIELD. We would continue under the volunteer system to expend money for the Reserve programs to meet such crisis.

Mr. STENNIS. We get a great number of those men in the Reserves through the Selective Service Act. The Senator should not forget that. If the Selective Service Act were repealed we would have a vastly different practice.

Mr. COOK. Mr. President, will the Senator yield?

Mr. STENNIS. I have waited a long time to ask a few questions, but if the Senator insists on being heard, I yield.

Mr. HATFIELD. I thank the Senator. I yield to the Senator from Kentucky.

Mr. COOK. I would hope that when the distinguished Senator from Mississippi presents his figures of those individuals who are brought in under the draft and those who volunteer, that we would take into consideration a new set of figures based on a new pay scale, because I do not believe we can hold out to the young people of this country an opportunity to volunteer at the present pay scale under the present military system.

I merely want to add that I hope when these figures are presented we understand they reflect the present pay scale under conscription and the Selective Service Act, because whether one is drafted or whether one volunteers, a private makes the same amount of money.

So I do not think we would have the complete picture in a reflection of figures showing that in the month of July the Selective Service took in 16,000 or 18,000 men and only 2,000 or 7,000 may have volunteered, because I think when you keep up with the cost of living and give a man a decent wage to participate in the voluntary system, he is more amenable to join that system than he would be under a reflection of present statistics.

Mr. HATFIELD. I appreciate the comments of the Senator because he puts his finger on the point that is involved here.

Furthermore, I would say to the Senator from Mississippi about the calling of the Reserves, under the Gates Commission recommendation, which this amendment incorporates, the hourly pay for reservists in the first year of duty would rise from $1 to between $2 and $2.50, depending on his grade and length of service.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. HATFIELD. I yield.

Mr. STENNIS. How many would volunteer to go to Vietnam for that $1.50 difference he would make?

Mr. HATFIELD. I did not understand the Senator's question.

Mr. STENNIS. How many would volunteer to go to Vietnam for the difference in pay he would be making? How many would volunteer?

Mr. HATFIELD. I could only say it would be more than is necessary to maintain the present level of services there. This is not based on personal opinion.

Again I refer to the Gates Commission which addresses itself to whether a volunteer military at this moment would provide enough manpower to maintain the Vietnam commitment. On that Gates Commission there was Gen. Alfred M. Gruenther, former Supreme Allied Commander in Europe, and General Norstad, who was also the former Supreme Allied Commander in Europe. Both of those generals, along with former Secretary Thomas Gates, came out with the unanimous viewpoint that we would have sufficient manpower to meet our present Vietnam obligations if we instituted a voluntary military at this time.

I know the Senator probably has the figures but, according to the Pentagon today 2 million volunteers are represented in our armed services.

This was also the case in 1965 before the great influx of the Vietnam draft. So when one considers the fact we have this number of true volunteers at the time of military involvement in Vietnam, I think it is ample evidence we should be able to maintain the requirements to carry out our policy. But it might also be an interesting commentary as to whether in a democratic system, a foreign policy is so out of keeping with the general popular will of the people that we feel we may not be able to implement that foreign policy by a voluntary military. I think it represents a very sad commentary on our approach to a

free society if in maintaining that foreign policy they cannot get the support of the people.

Mr. STENNIS. That is altogether another question. We are already in the war. I think, now, if you really want to stop the war in Vietnam, regardless of everything else, just repeal the Selective Service Act. That will stop the war rather soon, if that is to be the coming desire. It will stop the war, regardless. I think that will bring it to an end in a very short time.

Mr. HATFIELD. Mr. President, will the Senator yield at that point?

Mr. STENNIS. I do not want to impose on the Senator.

Mr. HATFIELD. I am happy to respond to any question the distinguished Senator asks.

Mr. STENNIS. I will ask the Senator this question, and then I will ask no further questions at this time.

The question has been raised by the Senator from Arizona, who has left the Chamber. He said something about the position of the administration on this amendment, and he reminded us the President advocated a voluntary Army, and so forth, under certain circumstances.

Mr. HATFIELD. Mr. President, I yield for a question.

Mr. STENNIS. I would like to make a statement.

I wanted to know just what the administration's position was before we entered into debate on this amendment. In the President's message of April 23, 1970, he made it clear that the authority of the Selective Service Act would have to extend beyond July 1, 1971.

I have a letter here from the Department of Defense which is totally opposed to this amendment. I submitted a question to the White House. I ask the White House on Monday morning. I told them I wanted a definite answer yes or no whether or not the administration was backing this amendment. I received the answer within the last hour or two. I am authorized to say on the floor of the Senate that the administration is opposed to the amendment as an amendment to the pending bill.

There is no doubt about it. The administration is fully opposed to it. Whatever is done about the subject matter, it wants it done in the regular processes of legislation, hearing, a bill, and determination. I want to make that clear and plain. I am certain that is the administration's position and that I have understated it a little rather than overstated it a little.

I bring that up now so we will not have any doubt about it. Here is the President's statement of April 23, 1970, stating that it will be necessary to have a continuation of the Selective Service System.

That is just commonsense, it seems to me, as long as we are in the situation we are.

I thank the Senator for yielding to me. I am going to stay here now until I can get the floor to make some points.

Mr. COOK. Mr. President, will the Senator from Oregon yield?

Mr. HATFIELD. I yield.

Mr. COOK. Mr. President, I want it very clear in the RECORD, if the Senator from Oregon does not mind, that my support of this amendment has not one thing in the world to do with the present operation in Vietnam. I want the Senator from Oregon to know that and I want the Senator from Mississippi to know that. I do not want any question about it at all.

Mr. STENNIS. Mr. President, if I may reply to the Senator, I was not talking to the Senator from Kentucky; I was talking to the Senator from Oregon.

Mr. COOK. I merely want to say it was implied that if we want to bring everybody home and end the war now, by passage of this amendment that can be done. I want it in the RECORD right here and now that that is not the reason why I am cosponsoring the amendment. I am cosponsoring the amendment because I came to the Congress one of the first bills I sponsored was for a volunteer army.

I think there may be some degree of confusion in this debate, and this may be so during the whole tenure of the debate here, that, somehow or other, every amendment is geared to and aligned with a complete and absolute and immediate elimination of all U.S. forces from Southeast Asia.

I want to make it very clear that that is not the reason for my cosponsorship of the amendment.

Mr. HATFIELD. I thank the Senator from Kentucky, because that is the very point I was going to address myself to in response to the Senator from Mississippi.

It was the Senator from Mississippi who brought up the question as to whether or not, under a voluntary system, we could maintain our foreign policy and our foreign commitment in Vietnam. I responded to the Senator from Mississippi, as the record will show, that it was the opinion of the Gates Commission that we could meet that commitment. In order to take it away from a personal focus or personal opinion that might be distorted or misunderstood because of my known position on the war in Vietnam, I wanted it clearly understood that it was a position clearly taken by the Commission which included two former Supreme Allied Commanders in Europe and a former Secretary of Defense, and therefore it was not in response to a position based on personal opinion, but on the valid observation of men who might probably support the Vietnam policy in which we are now engaged.

I want to make it amply clear that my concern for the present mandatory manpower system predates Vietnam by several years.

Just for the record I want to make it clear that from 1949 to 1957 I happened to be serving as a member of the staff on the university campus and, included in my auxiliary duties was that of military adviser to students. In addition, it was my responsibility to fill out form SS–109 each year which had to be submitted to draft boards with respect to various male students at the university. It was at that time that I could gather, by the data and understanding, that it was a highly inequitable system as it related to those students who got deferments for taking one major as against other students who took other majors, which would bring the whole question into a matter of looking at a gray area, as to whether one student should be given a deferment for student qualifications as against another.

So it was on that basis, which predates the Vietnam war, that I took the position that our selective service system was highly inequitable.

I also saw it during the Berlin airlift and the Korean war, when the system failed to meet our needs on the specific basis of selection.

So I want the record clear that my feeling about this question antedated my view on the war in Vietnam, and has nothing to do with my commitment to see the Selective Service System repealed and a volunteer system enacted.

Mr. STENNIS. Mr. President, can the Senator conveniently yield to me for a few minutes' comment at this point? I would appreciate it. I know that the Senator is going to continue his speech.

Mr. HATFIELD. I am happy to yield to the Senator from Mississippi for that purpose, without relinquishing my right to the floor.

Mr. STENNIS. I appreciate the Senator's unfailing courtesy.

Mr. President, I have here a letter that I am sure will be of interest to the Senate and that I think should be in the RECORD, from the Secretary of Defense, Mr. Laird, dated August 14, 1970, addressed to me as chairman of the committee regarding this amendment.

I point out, Mr. President, that as I understand the facts, every statement the President of the United States has ever made on this subject assumed, or he expressly stated, that he expected a continuation of the draft. This amendment would cut that expectation off. He said that it is based upon a transition period, and this amendment does not provide for any transition period. This amendment is at the opposite pole from what the President, as Commander in Chief and as President of the United States, has really recommended.

Mr. Laird said:

The purpose of this letter is to advise you of my deep concern and strong opposition to Amendment No. 765 to H.R. 17123.

The amendment assumes the termination of draft legislation on July 1, 1971. I am convinced that military manpower needs will require the continuation of the draft beyond this date. I point out that the President in his April 23, 1970 message to Congress stated that steps to reduce draft calls to zero, increase the number of volunteers, and to end the draft system should be initiated subject to the overriding considerations of national security. In stating his position, the President provided three safeguards in proposing termination of the draft. First, the draft could not be ended all at once; there must be a phasing out of the system in order to insure maintenance of our defense posture at each step. Second, it would be necessary to extend the induction authority beyond July 1, 1971, and third, as reliance on the draft is decreased, a standby draft mechanism for emergency use should be developed. This amendment does not provide for these essential safeguards.

To terminate the draft, as proposed by this amendment, even before the Congress has

appropriated funds for pay increases and other incentive programs designed to increase the number of volunteers, would seriously impair the Services' ability to meet their military manpower requirements. Funding for such legislation is not provided in the FY 71 budget. A precise estimate of the costs associated with this amendment is not possible because of a lack of detailed information. However, the annual costs in pay rates alone (active and reserve) are estimated to be above $3 billion for a single fiscal year. Full implementation of the amendment would probably exceed $4.0 billion in budget costs.

And that is the lowest estimate I have heard on this matter yet.

The letter continues:

The President is determined to move to an All Volunteer Armed Force as rapidly as national security requirements and budgetary realities permit. To fix the date of July 1, 1971 for completion of the transition to an all volunteer force, however, without insuring that funds are available to apply toward the inducement of volunteers and without knowing the effectiveness of these inducements is, in my mind, to needlessly endanger our national security.

I strongly oppose this amendment and urge your assistance in its defeat. Members of my staff are prepared to provide any further information you or the Committee may desire on this critical subject.

Sincerely,

MELVIN R. LAIRD.

Mr. President, in my humble opinion there is nothing more dangerous that we could do for our national security than violate all the principles that the President of the United States has laid down, as delineated here by the Secretary of Defense. I do not believe it is possible—not possible at all—to in any way nearly maintain our military strength by shifting over under this amendment. I know what a hard time they are having finding money for the 1972 budget, which they are making up now. To just say that they can pick up $4 billion as though it were chicken change is to deny reality.

But the main thing is, this transition period is absolutely necessary. I hope that somewhere down the line we can have a so-called volunteer Army. But it is going to take more than dollars to buy it. It is going to take more than an amendment to get it. It is going to take tolerance, and hard recognition of commonsense like the President has laid down. It is going to take more than just a commission's finding to get a bill passed, in my humble opinion.

We should be getting into that Gates Commission report as soon as we reasonably can, and find out what it means and what its burdens are, rather than just the estimates, and see where we are. That is exactly what I have been looking forward to an opportunity to do. But to come here now, just because it is a fine thing to get done if we can, and ignore the best advice we have—and I think that is from the President and the Secretary of Defense—and say we are going to do it anyway, right now, why, I will not say it is ridiculous, but in my humble opinion it would be the height of irresponsibility for us to undertake to make such a drastic change.

I thank the Senator very much for yielding to me, and I shall return in a few minutes to listen further to his speech.

Mr. HATFIELD. Mr. President, I am grateful to the Senator from Mississippi for his comments on the basis of expressing his views, his commitments, and his convictions. I respect the Senator deeply for this as well as for many other actions that he has taken, even though I may disagree with him.

Mr. President, I think it ought to be pointed out that this cannot be referred to as a dangerous concept that endangers our national security. This is a concept that the President of the United States has endorsed. This is a concept that both major political parties of this country, each in its own platform, have endorsed. It is not a new concept.

This is an American concept. The draft is the alien concept involved here. The draft is the system that is not in keeping with the traditions of America. We have had more than 170 years of a voluntary system to prove its workability and the fact that it produced the manpower to defend this Nation.

Let us also point up one thing further. This is not a "quickie" action. This is not something we are undertaking here in the 11th hour, or without sufficient understanding, study, or consideration. I would like the record to show that this proposal was first introduced in 1967. It was reintroduced in 1969; and at some appropriate time, I intend to go back over the CONGRESSIONAL RECORD and recite again, particularly to remind the Senator from Mississippi about the fact that this matter was brought up on the floor at the time we discussed extension of the Selective Service Act, and at that time we were promised hearings on a volunteer military. We were promised hearings which never took place.

I think we have to realize, too, that this does provide for transition. It should be understood that this does not in itself repeal the draft. This amendment merely implements at this time a pay scale that is long overdue, regardless of one's viewpoint on manpower procurement philosophy; and it sets the stage for an orderly transition between a conscription system and a volunteer system, because this draft will remain in effect until July of next year, 1971. That is almost a year away. We will have an opportunity to see how successful this is in attracting young men on a voluntary basis.

If Congress waits until June of next year to act, I can assure Senators that it will have only one alternative—to extend the draft. I think the Senator from Arizona made it very clear earlier that anybody who gives lipservice to the idea of repealing the draft or getting rid of conscription has to support this amendment in order to set the stage for a reasonable and orderly transition from coercion to volunteerism.

Again, raising the fear that somehow we are going to place this Nation in great danger by adopting a voluntary system, I have to refer back again, because I think it is very important, to note that the President of the United States, Mr. Nixon, along with other Presidents who were his predecessors, saw fit to appoint a special commission to make a thorough study and review of the manpower procurement program.

I feel that here, again, we are talking about procurement; that is what is before us in this Chamber today. Manpower procurement is only one part of it, and this is the study that was referred to as the Gates Commission.

It should be clearly understood that we are discussing an issue which is not only germane to our basic bill but also has substance in support of a Presidential commission.

Let me digress, Mr. President. I am not aware that the President of the United States denounced this Commission's report at any point. I am not aware—if I am unaware, I would like to be made aware—that the President has specifically said that this Commission's report was wrong. He has not endorsed it positively, but he has not endorsed it in a negative way, either, to my knowledge.

The Chairman of the Commission which President Nixon appointed was Thomas Gates, who is chairman of the executive committee of Morgan Guaranty Trust Co., former Secretary of Defense, from New York City.

The following people were the other members of the Commission:

Thomas Curtis, vice president and general counsel, Encyclopaedia Britannica, former Representative from Missouri and ranking Republican on Joint Economic Committee, U.S. Congress, from St. Louis, Mo.

Frederick Dent, president, Mayfair Mills, Spartanburg, S.C.

Milton Friedman, Paul Snowdon Russell, Distinguished Service Professor of Economics, University of Chicago, Chicago, Ill.

Crawford Greenewalt, chairman, finance committee, E. I. duPont de Nemours & Co., from Wilmington, Del.

Alan Greenspan, chairman of the board, Townsend-Greenspan & Co., economic consultants, New York City.

Alfred Gruenther, former Supreme Allied Commander, Europe, from Washington, D.C.

Stephen Herbits, student, Georgetown University Law Center, Washington, D.C.

Theodore Hesburgh, president, University of Notre Dame, Chairman, U.S. Commission on Civil Rights, from South Bend, Ind.

Jerome Holland, president, Hampton Institute, Hampton, Va.

John Kemper, headmaster, Phillips Academy, Andover, Mass.

Jeanne Noble, professor, New York University, vice president, National Council of Negro Women; former member, National Advisory Commission on Selective Service; from New York City.

Lauris Norstad, chairman of the board of Owens-Corning Fiberglas Corp.; former Supreme Allied Commander, Europe; New York City.

W. Allen Wallis, president, University of Rochester, Rochester, N.Y.

Roy Wilkins, executive director, NAACP, New York City.

The Commission's recommendations were unanimous in supporting not only a voluntary military but also unanimous in its clear statement that this was the

hour, this was the time, to institute an all-voluntary service.

So this is not some idea that just came down the pike, that someone grabbed hold of and brought before Congress. This is something in connection with which the President of the United States has assisted in developing data in support of this distinguished Commission.

This is a concept that, as I say, is more in tradition and keeping with our history than the coercive conscription system we have now.

Mr. President, I have read the names of the members of this important Presidential Commission. I feel that at this point in the RECORD it would be very appropriate to include some of the language of that Commission, some of the feeling and thinking that was expressed by their formal report. In that Commission report we hear these words, which I think bring out very eloquently the cause for which this amendment stands today:

> Since the founding of the Republic, a primary task of the Government of the United States has been to provide for the common defense of a society established to secure the blessings of liberty and justice.

I think that those words in the very beginning indicate that this Commission, which talked about procurement, manpower procurement, had committed itself to one of the highest ideals for which this country has ever been known—liberty and justice.

The Commission report continues on this point:

> Without endangering the Nation's security, the means of defense should support the aims of society. The Armed Forces today play an honorable and important part in promoting the Nation's security, as they have since our freedoms were won on the battlefield at Yorktown. A fundamental consideration that has guided this commission is the need to maintain and improve the effectiveness, the dignity, and status of the Armed Forces, so that they may continue to play their proper role.

Mr. President, this is not a question of whether we are discussing merely a conscripted Army or a volunteer Army. This even strikes deeper at the cause of national defense, and that is that we want a military system that is effective, that is the best military system we can develop for the defense of this country and for the money that we, as taxpayers, are investing for that cause.

So we are not talking about purely a philosophical point. Some may say, "Well, everybody owes some time or some service to his country." I have had it asked me many times as I have spoken on this issue around the country, "Don't you feel that every young man and every young woman owes a duty to his country?" Of course, I do.

Mr. President, let us not be so narrow in our vision that we think that duty can only be performed in military uniform. Let us also be a little more careful in the definition of what is our country. I think that too often we of our generation think of "country" in terms of geography: "rocks and rills and temple hills."

I think that if we take the time to listen, take the time to discuss with many people today the great question of what is "my country," they will personalize it by saying, "My country is my fellow man; my country is people."

Therefore, I say that anyone who has a desire—and I hope that all people have such a desire—to serve their fellow man—a schoolteacher, an attendant in a psychiatric ward, a carpenter, a plumber, a doctor, a lawyer, a student—anyone who is pursuing a legitimate action in this country today who is adding to the overall production of goods and contribution of services, in my opinion, is serving his country. He is serving his fellow man. I think for all those who seek to serve their country through a military uniform should be given certain, adequate compensation and recognition for that fine service, just as much as anyone pursuing a legitimate role in civilian life should expect and have a right to get adequate compensation, recognition, and respect for the activities in which they are engaged.

I submit that is not the case today with our military service. As I indicated earlier, when thousands of young men today are on welfare, that certainly cannot create respect for a profession or a service wearing a military uniform.

Why should we require such young men to serve under those conditions when other young men can go ahead and pursue their education, go ahead and escape the service of military life through a classification system, and by pursing such legitimate professions and vocations they can build financial security and establish families, whereas other young men in the same community are forced to serve.

Any system that permits someone to escape military service and others to serve against their will, say, is not in keeping with the philosophy and traditions of a free society. That is what this Commission report is all about. That is what they are talking about here. The Commission, as it says, has not attempted to judge the size of the Armed Forces that the Nation requires. Instead, it has accepted a range of estimates made for planning purposes which anticipates maintaining a total force in the future somewhere between 2 million and 3 million men.

It further says that they unanimously believe the Nation's interests will be better served by an all-volunteer force, supported by an effective standby draft, than by a mixed force of volunteers and conscripts, and that steps should be taken promptly to move in this direction.

Steps should be taken to move promptly in this direction, Mr. President. That is what this amendment is all about. It would be a step toward realization of an all-volunteer force. It does not, in itself, create an all-volunteer force. Those of us who cosponsor the amendment believe that it sets forth the incentives and creates a new prestige and respect that must be part of an incentive system for young men to want to join the Army, to want to enlist in the Armed Forces of their country, to make them want to serve their country in that particular way. Thus, it is a step in that direction.

This Congress is not bound in the matter of repealing the draft or in committing itself at this moment. All it will do, come next June, or come next month, we can have an extension of the Selective Service System for another year, or 2 years—even adopting this amendment.

I am hopeful that the amendment will prove the lack of necessity to have to extend the draft system. I shall not support an extension of the draft system. I did not support it before. But that is not the point. The point is, it is expected, and based upon legitimate evidence—and very fine evidence—we can set forth a program now that will make an extension of the Selective Service Act next July unnecesary, and without diminishing the manpower supplies or requirements to meet any foreign policy we are presently involved in.

I think it should be pointed out, further, that besides the points we are talking about today, a little bit on the philosophical side, and a little bit on the matter of an efficient and economic military, it will save the taxpayers money.

At some point in debate I shall recite into the record certain facts that came to us from the Cordiner report. The Cordiner report was one which was established under the Presidency of Dwight D. Eisenhower.

He, like President Nixon, established a commission to make a study of manpower procurement. The Cordiner report indicated clearly—and I will have the specific facts and figures at an appropriate time—that this country would save money just in the area of military weapons maintenance, that today we have a high cost of maintenance problem, to a great degree due to the lack of proficiency of those handling this kind of instrumentality in weapons. Therefore, under an all-volunteer system, it would reduce the turnover and provide for a greater continuity of personnel and we could, therefore, realize great monetary savings over what is now going into maintaining a maintenance system based upon personnel who lack efficiency in handling the various mechanisms.

Thus, I think we have to look at that and not so much at the immediate budget. The question has been raised about how much it will cost, $3 billion or $4 billion.

I thought it was interesting that Secretary of Defense Laird—I want to read the letter in its total context before I make a response to it—but I do think it is interesting that Secretary of Defense Laird indicated there were no figures at the present time upon which to calculate an accurate figure, and then he goes ahead in the same letter and talks about a $4-billion figure. That, to me, is not quite consistent with the idea that there are no adequate figures upon which to calculate a specific cost. Whether the cost figures are $3 billion, which the Gates Commission talks about—$2 billion or $3 billion, or whether it is $4 billion, I say that the voluntary system will not cost this country 1 penny more than the conscription system.

The only difference is that we will be sending the bill to the taxpayer. That is who should be shouldering the bill today for defense rather than imposing upon the backs of military personnel the responsibility to subsidize their own service.

Thus, I think we have to be equitable and fair in our treatment of this issue. When we talk about $3 billion or $4 billion, we are not talking about payment in one lump sum. It is spread over fiscal year 1971. That is an annual cost.

I reiterate now and will reiterate each time the issue comes up on the floor that it behooves us to look at this in a fair manner. When we found it so easy to raise our own salaries, there were no questions raised about increasing the President's salary by double, or raising the salaries of Representatives here up to $42,500. Oh, we did that with great ease, at a time when many were talking about having to make greater sacrifices. But we wanted to put a 10-percent surtax on the backs of the taxpayers. The taxpayers should make the sacrifice. Let the taxpayer make the sacrifice, they said. It is the same concept as a military man making his sacrifice. We have to realize that they are being taxed, in a sense, with a hidden tax, a patriotic tax. They are paying that today by serving their country and then—as thousands are—having to go on welfare.

The figures we throw around so loosely, somehow that we will find the money for increasing the pay of the military people, should be put in the context of where we are spending our money in general. There was no argument about money for the ABM system. We could find billions of dollars to commit ourselves to the ABM system, a system which has great questionability, but somehow for the private or the seaman first class, we just cannot find the money. We have to keep them in poverty. We have to deny them the kind of increases they should have regardless of whether we want to maintain the draft or not.

Now, Mr. President, let me point out, too, as this report indicates, that the United States has relied throughout its history on a volunteer armed force, except during major wars, and since 1948. A return to an all-volunteer force will strengthen our freedoms, remove an inequity now imposed on the expression of patriotism that has never been lacking among our youth, and promote the efficiency of the Armed Forces and enhance their dignity. It is the system for maintaining standing forces that minimizes government interference with the freedom of the individual to determine his own life in accord with his values.

Here we have again a question of values. I do not ask my colleagues to agree that these young men who have left this country to escape the draft are right in doing so.

I have never counseled a young man to do anything that would be in violation of any law. I have said to many of the young men who have come to see and to talk to me, knowing my views on the draft, when they asked me, "What should we do about being forced in the service to fight in a war in which I do not believe," in every instance, "I cannot make the decision for you. No one can make that decision until he has walked the mile in your shoes." I have said, "I will never say anything to encourage you to violate the law of the land."

I agree with the great Abraham Lincoln who said:

> It is our duty to uphold the law of the land, even the laws with which we do not agree. It is our duty to change the laws which we do not like, but it is not our right to violate the laws with which we disagree.

I expect that the most trying time I ever experienced in my public life was in 1958, when I campaigned with my Democratic opponent in Oregon against the retention of the capital punishment law. I did not believe in it. I abhorred it. However, by that same election in which I was put into office and subsequently to which I took an oath to uphold the laws of my State, the people of my State turned down the referendum on capital punishment, and therefore we retained it as part of our law.

I inherited six people in death row. Soon one came before me with a plea for commutation—and I had to hear that case because in our State one man, the Governor, has control over the life and death of a man sentenced under our judicial system to the gas chamber.

Here I was in a position of being definitely opposed to the law that was sending this man to his death. I was in the position by a stroke of the pen of saving that man's life.

That is not a very comfortable seat to be in.

I looked at the situation. This man's guilt was beyond any question. There had been no mistrial and no new evidence presented. There was no question that there had not been a fair trial.

As I said then, I believe that every man in public office exercising his power must provide his constituency with a base and a measurement upon which his action can be reviewed. It cannot be merely a person's viewpoint, a person's philosophy, or a person's whim.

As I have said, Mr. President, the most difficult moment in my life in public office was spent when I had to say, "No. Let the law stand." The law in that instance required that a man go to the gas chamber.

Fortunately, we were able to repeal the capital punishment law in our State before I had any other such confrontation.

I believe deeply in a society based upon law. But let us remember that more than 60,000 young American men today have left this country, basically to escape the draft.

We can say that they are a bunch of long hairs or a bunch of irreverent kids, or this, that, or the other thing. But this is a resource of this country. Sooner or later we will have to face up to the very difficult question: How we are going to recoup that great resource.

We get concerned in Oregon about cutting trees in our great State because we are very concerned about conservation. We are concerned today about our natural resources and about water and other kinds of pollution.

Let us be more concerned about human resources.

I agree that the young men who have left this country have been chalked off in the minds of many citizens and perhaps in the minds of many of my colleagues. I hope not.

This is a system that is costing us far more than the dollars we see in the budget and in the audit system of our Government. It is costing us our manpower and human resources and an alienation and disenchantment and disillusionment of our youth with the Government.

It is not because our young people do not believe in democracy or in our way of life. It is because they have so much faith in it and do not see it working properly that they are concerned in many instances.

I feel there again that we have a great responsibility to take from the books in an orderly transition the kind of requirement and coercion that is alien to this country. Our forefathers came to this country to escape that kind of coercive government.

I am deeply concerned that we not look upon this as a question of whether we are for or against Vietnam.

We have as cosponsors of this provision people of all viewpoints on the war. We have people cosponsoring the measure who are of all political persuasions, philosophical perspectives, and party orientations. Both major parties have committed themselves to this measure.

Mr. Nixon in his campaign—and I want to make it very clear that I am not committing the President to this amendment, but I merely say, as the President said in his campaign, and he is a man of his word—said that he felt that at the appropriate time we ought to remove the draft as part of our manpower procurement system. He was speaking to the concept—not to this amendment, but to the concept—and in support of an all-volunteer system.

I do not believe it is being premature or being precipitate in asking for this amendment.

Again, let me emphasize that this amendment does not eliminate the draft. The draft would be permitted to expire. And if no action is taken to extend it, it will expire.

If we fail to take action of the kind that is incorporated in this amendment, we will have no alternative but to extend the draft. So this is a step toward the creation of a voluntary military. It does not in itself create one. The draft continues on as it has been enacted by Congress.

Mr. President, the Commission—and this should be noted here in its words—says:

> The commission bases its judgment on long range considerations of what method of recruiting manpower will strengthen our society's foundations. The commission members have reached agreement on total recommendation only as the result of prolonged study and searching debate and in spite of initial division.

I think this is a very important point to note, that many times on an issue of this kind, rather abbreviated discussions are handled on such an issue and many times people will start with one viewpoint. When that matter is debated as to the substance and the history and the administration and the arguments pro and con, they change their viewpoint.

I do not think there is anyone in the Senate who has not had that experience. They have had a preliminary attitude or viewpoint toward something and during the course of debate and discussion and study and involvement, one finds that he has the capacity to change his viewpoint.

I think it is interesting to note that this Commission started out acknowledging that they were on a basis of division. There were those who supported, in a preliminary understanding, a voluntary military. There were those who initially opposed the idea or concept of a voluntary military.

Yet, when this Commission completed its exhaustive study and its findings came out in final form they were unanimous in their position. Obviously some Members had changed their viewpoints. All I ask is that Senators take the time to read the report and that Senators take the time to read the RECORD as to the various viewpoints and expressions that will be made over the next—how many days I do not know. I will restate at this point in the RECORD that we have been willing to reach a time limitation agreement. I have listened to the impassioned pleas of those who say, "Let us clear this matter up, get the bill in final form for passage." I am willing to do that but we cannot at this particular hour give a cursory opinion on some preliminary understanding.

I do not think anyone who has failed to read this report can feel he is qualified to cast a vote in this decision, regardless of his viewpoint or background. This report is contemporary; it is not something of the past. It addresses itself to everything that is generally raised on the question of a voluntary military.

Mr. President, I do not wish to extend my remarks tonight and hold those who have other plans and make it inconvenient for anyone. I merely wanted to indicate by this introductory material and these statements that those of us who are joined together in support of the bill are ready to reach agreement on a time limitation but we are just as deeply committed to the proposition that we are going to discuss and debate this issue at length in order to get the Senate to consider what we feel to be one of the most pressing issues of this day, namely, a coercive system that has driven great wedges and divisions in our society and which has proven uneconomical and inefficient so far as building a strong military system for this country.

I yield the floor.

PERIOD FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business with statements therein limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. METCALF) laid before the Senate the following letters, which were referred as indicated:

REPORTS OF THE COMPTROLLER GENERAL

A letter from the Acting Comptroller General of the United States, transmitting, pursuant to law, a report on a survey of the use of advertised contracting in military construction, Department of Defense, dated August 18, 1970 (with an accompanying report); to the Committee on Government Operations.

A letter from the Acting Comptroller General of the United States, transmitting, pursuant to law, a report on actions taken or planned to improve use of cargo space on aircraft operated under contract with the Department of Defense, dated August 19, 1970 (with an accompanying report); to the Committee on Government Operations.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. BENNETT, from the Committee on Banking and Currency with amendments:

S. 3822. A bill to provide insurance for member accounts in State and federally chartered credit unions and for other purposes (Rept. No. 91-1128).

By Mr. EASTLAND, from the Committee on the Judiciary, without amendment:

H.J. Res. 1194. Joint resolution to authorize the President to designate the period beginning September 20, 1970, and ending September 26, 1970, as "National Machine Tool Week."

SENATE RESOLUTION 451—SUBMISSION OF A RESOLUTION TO AUTHORIZE THE COMMITTEE ON FINANCE TO EXPEND $10,000 IN ADDITION TO THE AMOUNT SPECIFIED IN THE LEGISLATIVE REORGANIZATION ACT OF 1946

Mr. LONG submitted the following resolution (S. Res. 451); which was referred to the Committee on Rules and Administration:

S. RES. 451

Resolved, That the Committee on Finance is hereby authorized to expend from the contingent fund of the Senate, during the Ninety-first Congress, $10,000 in addition to the amount, and for the same purpose, specified in section 134(a) of the Legislative Reorganization Act approved August 2, 1946.

BILLS AND A JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. JORDAN of Idaho (for himself and Mr. CHURCH):

S. 4261. A bill for the relief of Esther Catherine Milner; to the Committee on the Judiciary.

By Mr. BYRD of West Virginia (for himself and Mr. RANDOLPH):

S. 4262. A bill to authorize the U.S. District Court for the Northern District of West Virginia to hold court at Morgantown; to the Committee on the Judiciary.

By Mr. CANNON:

S. 4263. A bill to amend title 38, United States Code, in order to provide automatic cost-of-living increases in certain benefits for veterans and widows, dependents, and dependent parents of certain veterans; to the Committee on Finance.

(The remarks of Mr. CANNON when he introduced the bill appear below under the appropriate heading.)

By Mr. KENNEDY:

S. 4264. A bill for the relief of the State of Massachusetts; to the Committee on the Judiciary.

(The remarks of Mr. KENNEDY when he introduced the bill appear below under the appropriate heading.)

By Mr. HATFIELD:

S. 4265. A bill to amend section 306 of the Consolidated Farmers Home Administration Act to increase the aggregate annual limit on grants for water and waste facilities constructed to serve rural areas and to increase the aggregate annual limit on grants for plans for the development of such facilities; to the Committee on Agriculture and Forestry.

(The remarks of Mr. HATFIELD when he introduced the bill appear below under the appropriate heading.)

By Mr. MOSS (for himself, Mr. BIBLE, Mr. CANNON, Mr. CHURCH, Mr. CRANSTON, Mr. EAGLETON, Mr. FONG, Mr. GRAVEL, Mr. HOLLINGS, Mr. HUGHES, Mr. METCALF, Mr. MONDALE, Mr. MONTOYA, Mr. PELL, Mr. SMITH of Illinois, Mr. THURMOND, Mr. TYDINGS, Mr. WILLIAMS of New Jersey and Mr. YARBOROUGH):

S. 4266. A bill to amend the Federal Aviation Act of 1958 in order to authorize certain reduced-rate transportation to individuals who are sixty-five years of age or older; to the Committee on Commerce.

(The remarks of Mr. Moss when he introduced the bill appear below under the appropriate heading.)

By Mr. ERVIN:

S.J. Res. 231. Joint resolution proposing an amendment to the Constitution of the United States to abolish unfair legal discrimination against women without robbing them of necessary legal protection; to the Committee on the Judiciary.

(The remarks of Mr. ERVIN when he introduced the joint resolution appear earlier in the RECORD under the appropriate heading.)

S. 4263—INTRODUCTION OF A BILL TO PROVIDE AUTOMATIC COST-OF-LIVING INCREASES IN CERTAIN BENEFITS FOR VETERANS AND THEIR DEPENDENTS

Mr. CANNON. Mr. President, I introduce for appropriate reference a bill entitled "a bill to amend title 38, United States Code, in order to provide automatic cost-of-living increases in certain benefits for veterans and widows, dependents, and dependent parents of certain veterans."

The bill proposes to empower the Administrator of the Veterans' Administration to increase veterans' benefits annually by the amount of the cost-of-living index when it has increased by 3 percent for a 3-month period. It would become effective in January 1971, and would have to have had a 3-month consumer index rise prior to September 30 of each year.

It would increase veterans' payments for those who are entitled to compensation benefits. Mr. President, a similar proposal has been made for social security recipients in H.R. 17550, presently being considered by the Senate Finance Committee.

The ruinous effect of inflation on our veterans and senior citizens must be halted. This can best be accomplished by tying a permanent cost-of-living escalator to their compensations.

I recommend the bill be referred to the Senate Finance Committee for appropriate action.

The PRESIDING OFFICER (Mr. GRAVEL). The bill will be received and appropriately referred.

The bill (S. 4263) to amend title 38, United States Code, in order to provide automatic cost-of-living increases in certain benefits for veterans and widows, dependents, and dependent parents of certain veterans, introduced by Mr. CANNON, was received, read twice by its title, and referred to the Committee on Finance.

S. 4264—INTRODUCTION OF A BILL FOR THE RELIEF OF THE STATE OF MASSACHUSETTS

Mr. KENNEDY. Mr. President, in February 1969, the U.S. Army abandoned work on a site in North Andover, Mass., which was to have been part of the discarded Sentinel ABM system. The Army left behind a road leading to nowhere and a landscape scarred by huge craters.

I am today introducing legislation which would require the U.S. Government to provide the State of Massachusetts with sufficient funds to restore the North Andover site and create a park there. This bill is a companion to one introduced in the House last week by Congressman MICHAEL J. HARRINGTON.

In one sense, this bill deals with a purely local issue, of interest only to the citizens of North Andover and neighboring communities. But in another sense, it is part of a much larger issue. As our cities and towns grow larger and larger and larger, no resource is more precious than open land, land which can be used for recreation and for renewed contact with nature. We cannot allow this resource to be destroyed needlessly by the military.

Fortunately the damage done at North Andover can be repaired. That is the purpose of the bill I am now introducing.

I ask permission that the bill be printed in the RECORD immediately following my remarks.

The PRESIDING OFFICER (Mr. GRAVEL). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 4264) for the relief of the State of Massachusetts, introduced by Mr. KENNEDY, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

S. 4264

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay out of any money in the Treasury not otherwise appropriated, to the State of Massachusetts the sum of $685,120.00 in full settlement of all claims against the United States for restoration of land owned by the State of Massachusetts within the Town of North Andover, Massachusetts, described as follows:

TRACT No. 300

A certain parcel of land situated in the Town of North Andover, County of Essex, Commonwealth of Massachusetts, being more particularly bounded and described as follows:

Beginning at a point on the centerline of abandoned Forest Street, also formerly known as Boxford or Dartmouth Road, said point being 1300 feet, more or less, northerly from the centerline intersection of Forest and Liberty Streets; thence running westerly 20 feet, more or less, to a point at the corner of a stone wall; thence running westerly and southwesterly along said wall, by land of owners unknown, 300 feet, more or less, to a corner in the wall; thence running in part along stone walls and by land of owners unknown by the following courses: north 13 degrees 30 minutes west, 280.5 feet, more or less, to a point; north 01 degrees 30 minutes west, 66.0 feet, more or less, to a point; north 73 degrees 30 minutes west, 330.0 feet, more or less, to a point; north 07 degrees 00 minutes east, 270.6 feet, more or less, to a point; north 39 degrees 30 minutes west, 151.8 feet, more or less, to a point; north 85 degrees 30 minutes west, 99.0 feet, more or less, to a point; north 46 degrees 00 minutes west, 60.72 feet, more or less, to a point; north 42 degrees 00 minutes west, 224.40 feet, more or less, to a point; north 41 degrees 00 minutes west, 118.8 feet, more or less, to a point; north 09 degrees 45 minutes west, 151.14 feet, more or less, to a point; south 88 degrees 00 minutes west, 495.0 feet, more or less, to a point; north 46 degrees 30 minutes east, 290.4 feet, more or less, to a point; north 40 degrees 43 minutes west, 49.5 feet, more or less, to a point; north 36 degrees 30 minutes east, 52.8 feet, more or less, to a point; north 59 degrees 30 minutes east, 124.08 feet, more or less, to a point; north 25 degrees 15 minutes east, 77.88 feet, more or less, to a point; north 09 degrees 00 minutes west, 128.04 feet, more or less, to a point; north 21 degrees 00 minutes east, 115.5 feet, more or less, to a point; north 03 degrees 30 minutes west, 181.5 feet, more or less, to a point; south 81 degrees 15 minutes west, 257.4 feet, more or less, crossing the westerly line of the Sharpner's Pond Sentinel Site, to a point; north 35 degrees 45 minutes east, 56.76 feet, more or less, to a point; north 28 degrees 30 minutes west, 198.0 feet, more or less, to a point; north 67 degrees 30 minutes west, 155.10 feet, more or less, to a point; south 78 degrees 45 minutes east, 436.92 feet, more or less, to a point; north 23 degrees 00 minutes west, 184.80 feet, more or less, to a point; north 04 degrees 30 minutes west, 346.50 feet, more or less, to a point; north 60 degrees 30 minutes west, 339.24 feet, more or less, to a point; north 67 degrees 30 minutes east, 320.76 feet, more or less, to a point; north 87 degrees 30 minutes east, 363.0 feet, more or less, to a point; south 76 degrees 30 minutes east, 304.92 feet, more or less, to a point; and north 00 degrees 45 minutes west, 30 feet, more or less, to a point on the northerly line of the Sharpner's Pond Sentinel Site; thence running along said line by other land of the Commonwealth of Massachusetts, south 69 degrees 00 minutes east, 3,185 feet, more or less, to a point on the town line between North Andover and Boxford; thence running along said town line south 23 degrees 43 minutes 12 seconds east, 205 feet, more or less, to a point on the easterly line of Sharpner's Pond Sentinel Site; thence running along said line by other land of the Commonwealth of Massachusetts, south 21 degrees 00 minutes 00 seconds west, 1,265 feet, more or less, to a point; thence running by land of owners unknown south 85 degrees 45 minutes west, 945 feet, more or less, to a point at the southerly end of a stone wall; thence running northerly and northwesterly along said stone wall 580 feet, more or less, to a point; thence running along a ditch, north 30 degrees 00 minutes west, 340.09 feet, more or less, to a point; thence running north 44 degrees 08 minutes west, 112 feet, more or less, to a point; north 78 degrees 54 minutes west, 11.2 feet, more or less, to a point; south 41 degrees 31 minutes west, 53.6 feet, more or less, to a point; and westerly 15 feet, more or less, to a point on the centerline of the aforesaid abandoned Forest Street; thence running in a southerly direction along the centerline of said road, 1,430 feet, more or less, to this point of beginning;

which was occupied and damaged by the United States in connection with preliminary work for a proposed radar site which was not completed due to an abandonment of plans for use of the location for that purpose. No part of the amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

S. 4265—INTRODUCTION OF A BILL RELATING TO ADEQUATE SEWERS IN SMALL TOWNS AND RURAL AREAS

Mr. HATFIELD. Mr. President, I speak today about a problem which, at first might appear to be separate from others. When examined closely, however, it can be seen that it is only one facet of a larger problem.

The problem of adequate sewers in small towns and rural areas is troublesome to me, as I am sure it is to other Senators.

We must recognize that adequate sewers are needed if our small towns are to survive and prosper. Adequate sewer systems are more than an environmental nicety—they are an economic necessity.

Adequate sewage treatment plants have received much attention lately, as environmental protection needs are headline items. While I certainly share this concern, I must once again emphasize that it is not for environmental reasons alone that we must assist our small towns and rural areas.

Without satisfactory sewage treatment plants in these areas, economic growth is stifled and economic decay receives unwitting assistance. Small town officials in Oregon have discussed with me the monumental problems they have in attracting any new construction in areas without reliable sewer systems. Mayors, Chamber of Commerce presidents, economic development officials, and others in Oregon have told me that they are handcuffed in attempting to lure any new enterprises to their areas when no adequate sewer systems exist.

The lack of sewers strangles efforts to introduce new industry, construct new motels, build new homes—anything that would make the area a better place to live. One Oregon small town cannot even build a new park because there is no sewer service for rest rooms needed at the park.

I gave my full support to efforts earlier this year to increase funding for the FHA water and sewer system projects. Following this, I contacted a number of Oregon small town mayors, and several wrote me to advise me of the current status of their efforts to provide adequate sewers and sewage treatment plants.

Mr. President, I ask unanimous consent that at the conclusion of my remarks, several representative letters

from small town Oregon mayors be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HATFIELD. Mr. President, I wish today to point out that what has happened is happening, and will continue to happen in small towns and rural areas that are without adequate water and sewer systems.

This lack of facilities strangles local efforts for economic growth. The effects of this are easy to see: young people migrate to large urban centers, where jobs are more plentiful. This lack of a younger population means that the average age of residents rises. Not only are new payrolls lost when younger people move, but also those who remain are more likely to be on fixed retirement incomes.

The lack of a growing tax base serves as a further shackle, for residents often will reject costly bond issues to help solve these problems at the local level.

The problems of rural areas and small towns, however, are not isolated. A man without a job in the country moves to the city. Every person who leaves a small town and moves to a large city adds to the many urban pressures we have discussed so many times on this floor. He may put another car in a city street, he may live in a sprawling suburb, he may be unable to find work and add to the city's welfare rolls.

We discuss urban problems many times in as isolated a framework as we discuss problems in rural areas. The two are intertwined, as I have tried to point out today in these remarks. This relationship between urban-rural problems should receive more attention.

Is a massive infusion of funding to solve urban problems the only way to attack this problem? I think not, and this is one area where I think dollars spent in rural areas can have a multiple effect.

Is overpopulation the problem that some consider it? I think a better way to phrase that would be: Is population concentration a pressing problem? Of course, to this I would say "Yes."

Small towns are pleasant places to live, raise children, work, and retire. We must encourage people to live in these areas. President Nixon stated, in transmitting his Report on Environmental Quality, that—

> It is essentail that we make rural life itself more attractive, thus encouraging orderly growth in rural areas.

I concur with the President's objectives. We must see that we do not add to urban pressures by avoiding rural problems.

In Oregon, 10 percent of our population lives in areas of under 5,500 population. Seventy-three percent of all rural communities do not have adequate sewage systems. In addition, 118 new community water systems are needed. This need is compounded by the fact that 64 percent of the rural households have annual incomes of less than $7,000.

Mr. President, we must recognize that these problems are not particular to Oregon alone. Rather, they are representative examples of the problems afflicting rural communities throughout the country.

I believe that Congress should provide substantially increased Federal funding to assist small towns and rural areas in providing adequate water and sewer systems. We owe this to the residents of our small towns and rural areas. If we fail to meet this challenge, we will only have to deal with this neglect in different forms in the future. If we solve this problem, adequate water and sewer systems can provide a stimulus to attract people from the cities back to small towns.

As one example of what happens when young people leave an area, and the average age of the population increases, I quote from a letter referred to twice earlier in statements regarding Rogue River, Oreg.:

> Two thirds of the inhabitants of Rogue River are over age 65 and living on fixed incomes. Five hundred thirty-eight social security checks were mailed to zip code 97537 of which Rogue River is the major part; these checks average $71.46.

This is a good example of the results of young people leaving an area and fixed-income, retired peoples' inability to finance sewer projects and break out of this vicious circle.

Under the bill which I introduced, the authorization ceiling on grants under the FHA for planning and development would be doubled, from $115 million to $230 million. This increase, while doubling the present program, represents a modest step toward solving these problems. The money figure is small, when compared to other money amounts—particularly those we are considering under the miiltary procurement bill we currently are debating.

When I looked at the need across the country in rural areas and small towns, I considered a more extensive program with greater funding. I decided that a more modest increase, working within the framework of an established program, represents a better initial step.

I ask unanimous consent that the text of the bill be printed at this point in the RECORD, to be followed by exhibit 1, referred to earlier.

The PRESIDING OFFICER (Mr. GOLDWATER). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 4265) to amend section 306 of the Consolidated Farmers Home Administration Act to increase the aggregate annual limit on grants for water and waste facilities constructed to serve rural areas and to increase the aggregate annual limit on grants for plans for the development of such facilities, introduced by Mr. HATFIELD, was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

S. 4265

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the first sentence of section 306(a)(2) of the Consolidated Farmers Home Administration Act of 1961, as amended (7 U.S.C. 1926 (a)(2)), is amended by striking out "$100,000,000" and inserting in lieu thereof "$200,000,000".

(b) Section 306(a)(6) of such Act (7 U.S.C. 1926 (a)(6)) is amended by striking out "$15,000,000" and inserting in lieu thereof "$30,000,000".

EXHIBIT 1

CHAMBER OF COMMERCE,
Yachats, Oreg., July 22, 1970.

Senator MARK O. HATFIELD,
Senate Office Building,
Washington, D.C.

DEAR SENATOR HATFIELD: I have just recently read your letter directed to Mayor Dave Freeland and your speech made to the senate in support of the 1971 Agriculture Appropriations Act. Your support of our efforts to obtain necessary funds for financing the building of a sanitary sewer system is appreciated by the Chamber and of all citizens in Yachats.

You gave a very comprehensive picture of the overall need of the small cities in Oregon for adequate sewage disposal facilities. In behalf of the Yachats Chamber of Commerce and all citizens I would like to emphasize what an impossible situation we have here in Yachats by not having Federal assistance to build an adequate sewage treatment facility. As you know we are a city of less than 500 population and you can imagine how impossible it would be to raise adequate funds for this project through local taxes. Without Federal funds we are beat.

In addition to the inconvenience to our citizens and the pollution of the area our business community is suffering. Although we are not trying to promote new industry or commercial businesses, there are several commercial businesses that are sorely needed. For instance, we need a Laundry-Mat or self service laundry and none can locate here due to the fact we have no sanitary sewers. In addition to our local people, we have thousands of tourists staying in our motels who are forced to drive eight miles to a neighboring city in order to find laundry facilities. Lack of such facilities is creating a financial problem for our business people as most of them depend on tourist trade for survival.

With such a public demand for solving our environmental problems and with the announced support for such a program by President Nixon and many Senators and Congressmen it is hard for us here in Yachats to understand why adequate funds have not been made available.

We hope that you will continue your efforts in our behalf and I am sure Mayor Dave Freeland will furnish you with any needed details that you may need to use in your efforts to obtain passage of the 1971 Agriculture Act.

Respectfully yours,
MAX GARDNER, *Secretary.*

CITY OF REDMOND,
Deschutes County, Oreg., July 30, 1970.

Sen. MARK O. HATFIELD,
Committee on Interior and Insular Affairs,
Washington, D.C.

DEAR SENATOR HATFIELD: I was greatly pleased to receive your July 16, 1970, letter regarding your whole-hearted support of our rural communities in Oregon regarding water and sewage systems. Your Senate speech was most interesting, and I have referred it to our local newspaper, the Redmond Spokesman, in order that our community may realize what you are doing in our behalf.

I concur with your strong statements and your beliefs that federal funding must be increased in order to provide rural Oregon communities with better water and sanitary sewage facilities. I am writing to you as your closing statement was that you wanted to offer any assistance that you could in these areas.

If you will notice in the estimate of major sewage needs in Oregon that was in your Senate speech regarding each city, Redmond was listed with an estimated total cost of $1,500,000. Monday evening, July 27, I met with my Council and our engineers who have finished a preliminary study under the HUD grant for the sewage system for the community of Redmond. Their estimate for our project would be $7 million in total. Bend, Oregon, 15 miles South of us, has an estimate total of $8,500,000.

Our two cities have the same problem of resting on top of a solid lava rock dome. We have a unique situation unlike any other throughout the whole United States. With a total population of 4100, you can readily see that the city of Redmond is facing an impossible task of bonding itself to pay the difference with the small amounts that would come from FHA and other government grants.

I would appreciate you personally looking into our situation and advising as to any relief that would be possible. If you would so desire, I would be most happy to forward to you a copy of our preliminary study from our engineers, CH2M Company of Corvallis, Oregon. Looking forward to hearing from you as soon as possible.

Sincerely yours,

GEROLD M. BARRETT,
Mayor.

CITY OF WINSTON,
Winston, Oreg., July 22, 1970.

Hon. MARK O. HATFIELD,
U.S. Senator,
Washington, D.C.

DEAR SENATOR HATFIELD: We received your letter of July 16, 1970 in which you explained the Amendment to the Agriculture Appropriations Act that you supported.

The City of Winston, having just last year set up a City Administrator form of government, is now in a position of looking for some financial assistance as to its growth problems.

Last January I wrote to the Department of Housing and Urban Development and received notice that a fieldman would be contacting us soon.

On March 25, 1970 we were called upon by their fieldman who was very courteous and had many suggestions pertaining to our area wide problems. He stated that in a few days their man that took care of detail work and gave instructions towards obtaining a program would be down to see us.

To date we have received no further communication.

The City of Winston, in 1957 bonded and put in our present Sewerage collection and secondary treatment facility that was designed for 3500 people. The bonded indebtedness was $265,000.00, which for 2000 people at that time was a pretty good load. Today we have 3 years to go and this paid off. We are now 2600 people and by the time these next 3 years pass we will be staring at an enlargement of our system in the face.

We are currently budgeting money each year for line expansion but obviously we are not able to keep up.

We need a study to be made showing our immediate and future needs. This takes money and we now understand that the 701 and 2 Programs have been sidelined and there are no funds available for this preliminary study work.

Douglas County has just presented us with their County-wide Comprehensive Water and Sewerage Plan that presents figures up to 2 million that our immediate area may spend before 20 years expire.

We are presently in the process of purchasing land to install an advance treatment lagoon system that will help us towards the solution but we need assistance as all small cities do.

Mr. Senator, if there is anything that you might suggest for us to try we would be most willing.

Thank you for your letter and hoping to hear from you again, soon, I remain,

Respectfully yours,

AL R. HOOTEN,
City Administrator.

THE CITY OF CANBY,
Canby, Oreg., July 23, 1970.

Hon. MARK O. HATFIELD,
United States Senate,
Washington, D.C.

DEAR SENATOR HATFIELD: We are in receipt of your letter of July 16 regarding assistance to small cities. We are most certainly in need of financial assistance, principally in the sewer and water expansion fields, at this time.

The City of Canby owns and operates its own water, sewage, street and light distribution system and has operated and expanded the facilities without outside financial assistance except for a $165,000 bond issue in 1965 to construct the initial treatment and trunk sewer system. The population has increased from 2165 in 1960 to present estimated 3829 and we have served the new residences and businesses with no additional finance except a nominal increase in water rates several years ago.

The light department is some $50,000 in the red and although Bonneville Power Administration, from whom we get our power, have not refused to allow a rate increase, they are certainly reluctant to advise or relent to any program that is not in alliance with their low rate policy.

The City water storage and distribution system has been badly in need of expansion and improvements for some time and we have been trying to sell a $440,000 bond issue for that purpose since 1968 without even a bid being received.

We made some additions to our sewage disposal plant five years ago to meet state standards but the ever increasing population and the tightening of state requirements has made the plant inadequate and the State Environmental Quality personnel placed a ban on any further sewer connections, in May of this year, until we have made extensive improvement to the treatment plant. At that time, extensive engineering surveys were being made in both Clackamas and Marion Counties to determine the logical location for one or more regional treatment facilities, but Canby, lying between the two, was not included in either survey. Meetings were held in the Canby Council Chambers, when representatives of both counties, both engineering firms, CRAG and other interested parties were present, to determine where Canby would best fit into the picture. We were assured by all concerned that Canby would be placed on a high priority list for governmental assistance and that we would have no problems in having our requirements processed with a minimum of delay. Our applications were filed with CRAG by June 1st as prescribed.

A detailed story appeared in the Oregon Journal on July 9, 1970 listing the appropriations that had been approved for Oregon Cities and priority standings for other Cities who had made application for federal assistance. Canby was listed as one of the nine lowest towns priority wise. When our engineer contacted the CRAG personnel about this, they were not aware that this situation existed.

We made application to the Farm Home Administration, on their advice, for financial assistance, either by grant or loans, but were advised later that our requests had been denied because we do not represent enough population.

The City of Canby initiated a program last year for the State to improve a secondary highway in Canby which was in a bad state of repair and on which traffic was increasing rapidly due to a new school and a public swimming pool being opened in that area. Ultimately an agreement was signed between the State Highway Department and the City of Canby that the City would be responsible for curbs, sidewalks and storm sewers and that the State would complete the street improvement project. After preliminary engineering had been completed by both agencies, the State added a requirement that the City not only provide the storm sewer system but must construct a storm drain to the Molalla River which would make an additional $20,000 to $30,000 burden on the City. It is quite obvious that the project has not progressed beyond that point.

The economy of Canby has depended greatly in the past few years on housing construction to meet the increase in population. This of course is being limited at present by the sewer connection ban administrated by the State Environmental Control.

The City of Canby has engaged an engineering firm to design an adequate sewage disposal plant and the money is on hand to pay for that service but no construction funds are available without governmental assistance of some type.

Please give Canby's financial condition your immediate attention and rest assured that any assistance that you see fit to give us that is within your realm of control will be most graciously appreciated.

Very truly yours,

LAWRENCE J. HOUSEN,
Mayor.

CITY OF SHERIDAN,
Sheridan, Oreg., July 22, 1970.

Hon. MARK O. HATFIELD,
U.S. Senate,
Washington, D.C.:

Thanks very much for your letter of July 16th and copy of your Senate speech as recorded in the Congressional record for Wednesday, July 8, 1970.

I also very much appreciate the interest which you have relative to funding of rural communities under 5,000 population for water and sewage systems as our community is presently facing a very critical situation in both of these areas.

You may recall that in 1953, the City of Sheridan installed an overall sewer system with a primary treatment plant in which the city paid 100% of the cost. At that time, the State Sanitary Commission assured our community that this type of treatment would be satisfactory for meeting their requirements in the future and also would take care of our population needs up to 2,500.

As you know, the rules have been changed and now require that the City of Sheridan install a secondary treatment plant in order to bring our discharge up to the 90% requirement of the State, at a further cost of between $200,000 and $400,000 while we still owe $145,000 plus interest on our present bonded indebtedness which was incurred back in 1953.

Sheridan, as you well know, has one of the highest tax rates of any city in the State of Oregon and this, of course, presents a very pressing financial problem for our city.

The disturbing thing is that although there is 30% allowed by Federal Funds for sewer systems, it appears that when one up-dates their present sewer system, such as adding a secondary treatment plant, which we are required to do and especially when they look toward a lagoon type system where it requires purchase of a large tract of land, that the government matching funds are not applicable to many of these expenses, as these items are not eligible. So, in reality, an installation of our's which may cost from $200,000 to $400,000 may end up with little or no matching funds. I believe that up-grading of the present sewer plants are just as important as the installation of the primary plant and should have the same consideration of eligibility of funds from the Federal and State government.

In addition to our sewer problem we also

have problems with our present water system and are in need of developing additional sources of water at our springs and also enlarging some of our transmission pipe line to the city from 6'' to 8'' as well as providing more storage in the city limits. This again will require a large investment and increasing debt servicing for the people of our community and when taking these requirements, along with the regular police, fire, sanitary, library, streets and other needs of the average community, it makes our task look almost hopeless.

These basic needs of people are certainly paramount and to me, have much higher priorities than many of the funds presently being met by our Federal Government. I sincerely hope that your efforts will see that proper relief is afforded to these communities so that the presssing needs of our day to day living can be resolved in an economical, feasible manner.

The City Council and myself will be watching congress to see what is being done to solve these vital problems and appreciate your continued interest in the small rural areas which are the real backbone of America today.

Sincerely yours,

J. A. HEBERT,
Mayor.

CITY OF FALLS CITY,
Falls City, Oreg., July 27, 1970.

Hon. MARK O. HATFIELD,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HATFIELD: Your letter of July 16, 1970, in which you describe the action you are taking to help smaller communities in Oregon with sewer and water problems.

I'm sure you are in a position to realize the sewer problem facing cities as poor as our little town. Falls City is looking forward to the park and recreation plans that are contemplated for this area, and with this development comes the task of preparing for growth in population.

In the last few years Falls City has come a long way in restoring an antiquated water system. This is not finished but complete enough to control our source and good service. However, the plans for a recreation developemnt have been discussed and there is a real demand for property here, and several investors with money to spend wish to build here, but always run into the same problem—no sewer.

I have written several inquiries about sewer study—we would like this part without cost if possible, and the possibility of some kind of grant to help with the cost of installation after a study is completed. To date we haven't had anything too hopeful. I have contacted HUD and Farmers Home Administration. Perhaps you can suggest another avenue.

Any help you can direct in our way will surely be appreciated. We have a planning committee, and hope to make this little town something for Polk County to be proud of, and at the same time it will improve our tax structure.

Very truly yours,

FAY WILSON,
Recorder.

CITY OF ELGIN,
Elgin, Oreg., July 22, 1970.

Hon. MARK O. HATFIELD,
U.S. Senator,
Washington, D.C.

DEAR MR. HATFIELD: We received your letter of July 16, 1970, concerning grants for water and sewer facilities.

The City of Elgin has a population of 1,400. We have an up to date sewer system which was completed five years ago. We have an adequate supply of water consisting of three wells.

The great problem we have is in the distribution lines of our water system in getting ample water to the different areas of the City. Eighty per cent of the mains are of wooden pipe, installed years ago. Many of the lines are too small.

The City had a water system survey completed of our water system two years ago, and this brought out the many problems of the system.

If your office could be of any assistance in acquiring a grant or such for improving our water distribution system it would be greatly appreciated.

Respectfully yours,

RONALD D. SCOUBES,
City Recorder.

S. 4266—INTRODUCTION OF A BILL TO PROVIDE REDUCED FARES FOR SENIOR CITIZENS ON THE AIRLINES

Mr. MOSS. Mr. President, on behalf of myself and Senators BIBLE, CANNON, CHURCH, CRANSTON, EAGLETON, FONG, GRAVEL, HOLLINGS, HUGHES, METCALF, MONDALE, MONTOYA, PELL, SMITH of Illinois, THURMOND, TYDINGS, WILLIAMS of New Jersey, and YARBOROUGH, I introduce, for appropriate reference, a bill to amend the Federal Aviation Act of 1958 in order to authorize reduced-rate transportation on the airlines to individuals 65 years of age or older.

In America we pride ourselves on our concern for our senior citizens. Social security and medicare represent society's efforts to provide for their retirement years. But medicare only covers 45 percent of their medical needs and social security, the only source of income for more than 50 percent of our seniors, continues to be woefully inadequate. Some 5 million out of our 20 million live below the poverty line; thousands try to live on less than $100 a month.

Unfortunately, far too many of our elderly are not only poor economically, but socially and psychologically. Low incomes mean that they must make choices between food or medicine, clothes, transportation, or recreation. This turns many into recluses with little contact or contribution to society. The inevitable result is that millions of our elderly suffer from a kind of a poverty of the spirit.

There is an easy solution to these problems: we need only put the floor of economic decency under these citizens, thus giving our seniors an increased share in American abundance.

The Congress is trying in its piecemeal fashion to take care of the economic needs of our elderly by proposing increases in social security payments. Unfortunately, these increases do little more than make up for the losses that seniors experience as the cost-of-living index skyrockets upward.

So often we hear it said that the Government is mindful of the needs of seniors and that much more would be done except that these are troubled times. We have also heard administration spokesmen tell us that when the Vietnam war is finally ended that we should not look for a cut of the Defense budget and a reallocation of dollars to our domestic needs.

All of this leads to cynicism, but it is not out of cynicism but out of hope that I called last year for a program of rewards and incentives. I believe that the struggle to survive should rest with the youth and that those who have toiled long and hard for the society in youth deserve our thanks and recognition when they retire.

As an example of what I mean, I have called for a program of reduced fares for senior citizens on buses and subways. There are now some 35 major cities that allow their seniors to ride during off peak hours for about a dime. Many theaters have picked up the example and offer tickets at a discount.

It is my hope that the principle will be extended to prescriptions and other products in drugstores and that banks will give thought to providing free services; restaurants too could give discounts outside regular meal hours. Hopefully barber and beauty ships could give special prices on days when business is slow.

All of this we could do voluntarily for there is no deficit in the national resources, there is only a deficit in the national will.

In this spirit I wrote to the presidents of each of the major airlines asking that they consider instituting a program of reduced fares for seniors on the airlines. I pointed out that the standby principle would not be applicable to seniors who could ill afford standing in wait in airline terminals. My suggestion was for a direct discount up to 50 percent and a confirmed reservation for seniors during the middle of the week.

The letters from the airline presidents that I received were very cordial all giving technical reasons why they could not institute reduced fares for seniors on their own. In fact, three airlines have tried to institue such fares only to withdraw upon the suggestion from the Civil Aeronautics Board that such fares might be discriminatory.

Upon learning these facts, I decided to introduce this bill which would give legislative authority for the airlines to institute a program of reduced fares for those over 65 on the airlines.

A few facts, I am sure would be helpful at this point. There are two major categories of airlines at present, trunklines such as United and American which fly cross country and local service carriers such as Allegheny, Mohawk, and Frontier which serve particular parts of the country on short hauls.

Trunk airlines had an average load factor of 50 percent in 1969 meaning that last year the planes of United and TWA were only half full or half empty depending upon how you look at it.

Local service carriers had an average load factor of 43 percent last year. The best performer in this category was Mohawk with a load factor of 47 so that its planes were in effect 53 percent empty. Air West had a load factor of 39 percent—its planes were 61 percent empty in 1969.

An additional fact is that these local service carriers currently receive operating subsidies from the Federal Government. Last year the nine local service carriers received $36 million in subsidies from the Government. Air West for example received $8.7 million or about 13 percent of its total of $74 million in operating revenues from the Government.

Allegheny received $3.2 million in subsidy last year for 2.5 percent of its total of $120 million in operating revenues.

It is my hope that a program of promotional fares for senior citizens would be just the solution for these problems. Senior citizens are precisely the group that can take advantage of those empty seats during the middle of the week. Needless to say increased volume of passengers and more efficient utilization of our resources would be in the interest of all parties concerned.

The increased volume of passengers would be particularly helpful to our local service carriers. The increased revenues that they would take in would make it possible to reduce the $36 million subsidy that the Government paid out last year to underwrite these carriers.

I believe that airlines should provide seats to seniors on a confirmed reservation basis at 50 percent of full fare Monday through Thursday.

Senior citizens feel that they are just as entitled to reduced fares as our teenagers who presently enjoy travel at youth fare and standby rates.

I know that there are a great many of our senior citizens who have waited all their lives to travel and cannot afford it now. There is also the therapeutic effect of travel to consider; whether it is just getting away or to visit with loved ones.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point statistics showing the net income of the subsidized airlines over the last 5 years as well as of load factor computations in addition to several letters written by constituents and others vitally interested in a program of reduced fares for senior citizens on the airlines.

The PRESIDING OFFICER (Mr. GOLDWATER). The bill will be received and appropriately referred; and, without objection, the statistics, computations, and letters will be printed in the RECORD.

The bill (S. 4266) to amend the Federal Aviation Act of 1958 in order to authorize certain reduced-rate transportation to individuals who are 65 years of age or older, introduced by Mr. Moss, for himself and other Senators, was received, read twice by its title and referred to the Committee on Commerce.

The material presented by Mr. Moss is as follows:

SUBSIDIZED AIRLINES—NET INCOME AFTER SPECIAL ITEMS CALENDAR YEARS 1965 THROUGH 1969

[In thousands]

	1965	1966	1967	1968	1969
Local service carriers:					
Air West (Pacific)	$700	$151	−$3,716	−$10,319	−$18,884
Allegheny	1,417	1,248	−516	−2,430	−6,224
Bonanza	843	862	530	(1)	(1)
Central	−187	405	93	(2)	(2)
Frontier	1,313	1,790	−121	−6,811	−12,214

[1] On subsidy, through Dec. 31, 1967.

CLEARFIELD, UTAH,
January 26, 1970.

Hon. FRANK E. MOSS,
Old Senate Office Building,
U.S. Senate,
Washington, D.C.

DEAR SIR: *Those who know* of your arguments for legislation that retired persons be given reduced air rates all hope to see a unanimous approval!

Were I not a member of N.A.R.C.E. I would not have known of it. I doubt that our Deseret News published anything about this action of proposal by *you*! The brief information appearing in the January issue of *Retirement Life* was most pleasant, and being discussed at our chapter meeting Our summation: give us four mid-week half-fare travel days and the planes will not be flying with the seats half empty.

Sincerely and best wishes,

FRED W. BANZ.

BRIGHAM CITY, UTAH,
January 23, 1970.

Hon. FRANK E. MOSS,
Old Senate Office Building,
U.S. Senate,
Washington, D.C.

DEAR MR. MOSS: I read with interest your efforts to secure reduced rates for air travel for elderly persons. I am a retired teacher. My children live in Las Vegas and Concord, California. It would be a distinct advantage to me to have the benefits of your proposal. My wife and I wish you success in your efforts.

Yours sincerely,

W. H. GRIFFITHS.

SALT LAKE CITY, UTAH,
January 31, 1970.

Hon. FRANK E. MOSS,
Old Senate Office Building,
U.S. Senate,
Washington, D.C.

DEAR SIR: We wish to thank you for all the help you've given in legislation for retired persons.

Anything you can do in the future will be greatly appreciated. We urge you to continue your fight to obtain reduced air fares for elderly persons. Thank you.

Sincerely,

LAMMOND AND IRENE MILLS.

LONG ISLAND CITY, N.Y.,
January 20, 1970.

DEAR SENATOR MOSS: Thank you for your fight to get reduced air fares for elderly people. I can see no good reason why retired people can't get preferential rates where they travel during those periods when aircraft travel with empty seats.

Keep up the good work. It's good that someone does more than make speeches about the "Golden Age."

Sincerely,

LEO SUMMER.

READING, PA.,
January 16, 1970.

Hon. FRANK E. MOSS.

DEAR SENATOR: I wish to thank you personally for the interest and effort on your behalf to have the Airlines give reduced fares to the elderly, aging and retirees. Inasmuch as the young are given reduced fares to travel during offpeak periods I can see no really good reason why the senior citizen should not enjoy these same privileges also. Fact of the matter is when all is considered it seems the elderly are in need of these reduced fares even more so because of physical, medical, and other problems which afflicts many of them; additionally because of fixed income and limited financial resources. What part can I play in this effort to effect such a reduction favoring these deserving citizens?

Most sincerely,

PAUL L. CLAUSER.

DENVER, COLO.,
March 3, 1970.

Hon. FRANK E. MOSS.
Old Senate Office Building,
Washington, D.C.

DEAR SENATOR MOSS: I wish to endorse reduced air travel for elderly persons, this is the only way we can visit our loved ones now that most trains are gone. Most of us are not physically able to ride busses with their long lay-overs.

Thank you for your interest in our behalf.

Sincerely,

MARGARET A. BROWN.

RIVERSIDE, CALIF.,
January 30, 1970.

Hon. FRANK E. MOSS,
Old Senate Office Building,
Washington, D.C.

DEAR SIR: As a member of the National Association of Retired Civil Employees (N.A.R.C.E.) I want to express my appreciation for your efforts you made for legislation that would give retired persons reduced air fares.

Due to the age of the average retired person travel by common carrier, rather than personal automobile, is more common. Also, with a fixed income and the steadily growing high cost of living every possible saving is important.

Respectfully,

WILLIAM S. WHEELER.

WICHITA FALLS, TEX.

Hon. FRANK E. MOSS,
Old Senate Office Building,
Washington, D.C.

DEAR SIR: A recent article in Retirement Life stated that you are trying to get the public transportation systems (especially airlines) to give reduced fares to the older citizens of our country.

Wichita Falls no longer has railroad service, so air service is our only way to distant points.

I am retired from Depart. of Defense with visual problems and really appreciate your efforts.

Very truly,

Miss JANET CLAY.

ADDITIONAL COSPONSORS OF BILLS

S. 3528

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from New Hampshire (Mr. MCINTYRE), I ask unanimous consent that, at the next printing, the name of the Senator from South Carolina (Mr. HOLLINGS) be added as a cosponsor to S. 3528, to amend the Small Business Act to encourage the development and utilization of new and improved methods of waste disposal and pollution control; to assist small business concerns to effect conversions required to meet Federal or State pollution control standards; and for other purposes.

The PRESIDING OFFICER (Mr. ALLEN). Without objection, it is so ordered.

S. 4015

Mr. MURPHY. Mr. President, on June 23, I introduced legislation that would fill what is widely regarded as a most serious gap in the benefits available to career military personnel. S. 4015 would institute a system of survivor's benefits available to military retirees, enabling them to provide for the financial security of their survivors after they themselves pass away.

The measure is directed at correcting a blatant disparity that singles out the uniformed serviceman, from among all Federal employees, as ineligible for a survivor annuity plan in which the Federal Government participates. S. 4015, like measures being considered by the House, would institute an annuity program identical to the civil service annuity program.

Seventeen Senators have asked that their names be added as cosponsors of this widow's equity measure.

Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from South Carolina (Mr. THURMOND), the Senator from Alabama (Mr. ALLEN), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Florida (Mr. GURNEY), the Senator from Illinois (Mr. SMITH), the Senator from Oregon (Mr. PACKWOOD), the Senator from New Mexico (Mr. MONTOYA), the Senator from New York (Mr. JAVITS), the Senator from Washington (Mr. JACKSON), the Senator from Arizona (Mr. GOLDWATER), the Senator from New Jersey (Mr. CASE), the Senator from Texas (Mr. TOWER), the Senator from Wyoming (Mr. HANSEN), the Senator from Alaska (Mr. GRAVEL), the Senator from Alaska (Mr. STEVENS), the Senator from Utah (Mr. BENNETT), and the Senator from Montana (Mr. METCALF), be added as cosponsors of S. 4015, which would establish an equitable survivor benefits program for retired military personnel.

The PRESIDING OFFICER (Mr. GOLDWATER). Without objection, it is so ordered.

Mr. MURPHY. Mr. President, I am very happy to ask to have added, as a starter at the last moment, the name of the Senator from Oregon (Mr. HATFIELD).

I also ask unanimous consent to have the names of the Senator from Kansas (Mr. DOLE), and the Senator from Arizona (Mr. FANNIN) as cosponsors.

The PRESIDING OFFICER (Mr. GOLDWATER). Without objection, it is so ordered.

S. 4179

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from West Virginia (Mr. RANDOLPH), I ask unanimous consent that, at the next printing, the names of the Senator from Alaska (Mr. GRAVEL) and the Senator from Washington (Mr. JACKSON) be added as cosponsors of S. 4179, to amend the Public Works Acceleration Act to make its benefits available to certain areas of extra high unemployment, to authorize additional funds for such act, and for other purposes.

The PRESIDING OFFICER (Mr. GOLDWATER). Without objection, it is so ordered.

ADDITIONAL COSPONSORS OF A JOINT RESOLUTION

SENATE JOINT RESOLUTION 225

Mr. GURNEY. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Illinois (Mr. PERCY), the Senator from South Carolina (Mr. THURMOND), the Senator from Arizona (Mr. FANNIN), the Senator from Colorado (Mr. DOMINICK), the Senator from Iowa (Mr. MILLER), the Senator from Vermont (Mr. PROUTY), the Senator from Wisconsin (Mr. PROXMIRE), and the Senator from South Carolina (Mr. HOLLINGS) be added as cosponsors of Senate Joint Resolution 225, authorizing and requesting the President to proclaim October 25–31 Law Officers Appreciation Week.

The PRESIDING OFFICER (Mr. HUGHES). Without objection, it is so ordered.

ADDITIONAL COSPONSORS OF A CONCURRENT RESOLUTION

SENATE CONCURRENT RESOLUTION 80

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Tennessee (Mr. BAKER), the Senator from Indiana (Mr. BAYH), the Senator from Delaware (Mr. BOGGS), the Senator from North Dakota (Mr. BURDICK), the Senator from Missouri (Mr. EAGLETON), the Senator from Arizona (Mr. FANNIN), the Senator from Tennessee (Mr. GORE), the Senator from Florida (Mr. GURNEY), the Senator from Iowa (Mr. HUGHES), the Senator from North Carolina (Mr. JORDAN), the Senator from West Virginia (Mr. RANDOLPH), the Senator from New Hampshire (Mr. MCINTYRE), the Senator from Pennsylvania (Mr. SCOTT) and the Senator from New Jersey (Mr. WILLIAMS) be added as cosponsors of Senate Concurrent Resolution 80, to establish a joint committee to investigate the treatment of prisoners of war in Vietnam.

The PRESIDING OFFICER (Mr. GOLDWATER). Without objection, it is so ordered.

SENATE RESOLUTION 450—SUBMISSION OF A RESOLUTION EXPRESSING THE SENSE OF THE SENATE RELATING TO INTERVENTION IN CZECHOSLOVAKIA IN 1968

SOVIET DAY OF SHAME

Mr. HRUSKA. Mr. President, today I am submitting a resolution which expresses the sense of the Senate with respect to the Soviet Union and those states which participated in the occupation of Czechoslovakia. In this resolution we express our support for the Czechoslovakian people as they commemorate August 21, 1970, as the "Soviet Day of Shame" and as they strive to achieve the withdrawal of Russian troops from Czechoslovakia. The resolution also calls upon the President, acting through the United Nations and other international organizations, to take such additional steps as may be necessary to end as quickly as possible the continuing intervention in Czechoslovakia by the Soviet Union.

Two years ago, following the invasion of Czechoslovakia, I spoke in the Chamber of a test of courage of the Czech and Slovak people.

I stated that:

The first eight months of 1968 produced

one of the greatest tests of courage in this century. January saw the first halting step of a small country toward the goal of freedom. As the months passed, Czechoslovakia moved a little closer to its goal, and each month the Soviet Union became more threatening. The test of courage for the Czechs and Slovaks was whether, in the name of human dignity, they could stand face to face with an overpowering foe. The test of courage for totalitarian Russia was whether it dared allow one small country even a taste of freedom. Czechoslovakia won that test of courage.

On August 21, 1968, the Russians were forced to ruthlessly halt the mellowing of Communist Party rule of Czechoslovakia by use of military might. During the spring of 1968, the entire nation, without violence, united behind new, young leaders, rose in protest against the inhuman Stalinist regime. They began to expose and correct the blunders of the Russian regime.

The Kremlin felt that to allow this satellite freedom of expression might seriously threaten the Soviet system. Therefore, armed forces were rushed in to crush the modest reform of Alexander Dubcek's Communist government. At that time the conduct of the Czechoslovak people exemplified the courage they have shown at many other times in their history. The Czechoslovak peoples showed great courage in 1937 when, after the death of the great leader, Thomas Masaryk, Hitler's storm troopers occupied the land. Also after the war, even though Communist domination stifled Czechoslovak aspiration for a return to democracy, they still demonstrated a courage and quest for freedom that finally arose as a new spirit in the early part of 1968. However, their courageous resistance was suppressed by the roar of Russian tanks speeding into this small country.

The continued Soviet occupation of Czechoslovakia is a crime against the right of a small country to determine its own destiny and aspirations. The invasion was an intervention by forces of reactionary communism to prevent the Czechs and Slovaks from establishing their own social order; one that did not endanger anyone, and sought to contribute to the building of bridges of understanding across the discords of an ideologically divided world while lending aid to better understanding and cooperation among all nations on the basis of true progress and humanity.

The Czechoslovak people, however, are not resigning themselves to these aggressive plans of Moscow. They resisted, and continue to resist and reject Moscow's claim to a right to intervene in the leadership of the state; they deny Soviet Russia the right to determine who should govern their country or represent it in foreign relations. August 21, in Czechoslovakia, is being commemorated as the "Soviet Day of Shame." And those of us here in the United States, who are joining our friends in Czechoslovakia, urge the whole civilized world to support their effort to achieve the withdrawal of Soviet troops from Czechoslovakia.

It is my hope that by voicing strong criticism and outrage against the tyrannies of the Soviet Government imposed upon the people of Czechoslovakia, we can help these courageous people to sustain the weight of tyranny until a day again comes when they will free themselves from the bonds of oppression.

The ACTING PRESIDENT pro tempore (Mr. METCALF). The resolution will be received and appropriately referred.

The resolution (S. Res. 450), which reads as follows, was referred to the Committee on Foreign Relations:

S. RES. 450

Whereas the intervention in Czechoslovakia by the military forces of the Soviet Union, in 1968, contravened the independence of sovereign states and the Wilsonian doctrine of self-determination; and

Whereas such intervention is in violation of the United Nations charter which states that "All Members shall refrain in their international relations from the threat or use of force against the territorial sovereignty or political independence of any states"; and

Whereas such intervention is further evidence of the perpetuation of colonialism as practiced by the Soviet Union; and

Whereas the agreement in Moscow between representatives of Czechoslovakia and the Soviet Union was reached under duress; and

Whereas the continued occupation of Czechoslovakia by the Soviet Union is another crime against the rights of the free people of a small country to determine their own destiny and aspirations; and

Whereas the people of Czechoslovakia are not resigned to the oppressive plans of the Soviet Union, and continue to resist and reject Soviet domination: Now, therefore, be it Resolved by the Senate, That it is the sense of the Senate that, the President should express support for the people of Czechoslovakia (as they commemorate August 21, 1970 as the "Soviet Day of Shame") in their efforts to achieve the withdrawal of the troops of the Soviet Union from Czechoslovakia.

SEC. 2. It is further the sense of the Congress that the President, acting through the United Nations and other international organizations, should take such additional steps as may be necessary to end as quickly as possible the continuing intervention in Czechoslovakia by the Soviet Union.

EXTENSION OF THE AGRICULTURAL TRADE DEVELOPMENT AND ASSISTANCE ACT OF 1954, AS AMENDED—AMENDMENT

AMENDMENT NO. 846

Mr. SMITH of Illinois (for himself and Mr. WILLIAMS of Delaware) submitted an amendment, intended to be proposed by them, jointly, to the bill (H.R. 18546) to establish improved programs for the benefit of producers and consumers of dairy products, wool, wheat, feed grains, cotton, and other commodities, to extend the Agricultural Trade Development and Assistance Act of 1954, as amended, and for other purposes, which was referred to the Committee on Agriculture and Forestry and ordered to be printed.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES—AMENDMENT

AMENDMENT NO. 847

Mr. STEVENS submitted an amendment, intended to be proposed by him, to the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes, which was ordered to lie on the table and to be printed.

AMENDMENT NO. 848

Mr. STEVENS. Mr. President, I ask unanimous consent that I may submit an amendment, intended to be proposed by me, to the amendment intended to be proposed by the Senator from Oregon (Mr. HATFIELD) (No 844) to House bill 17123, and have it printed and lie on the table.

The PRESIDING OFFICER (Mr. COOK). The amendment will be received and printed, and will lie on the table.

AMENDMENT NO. 849

Mr. MURPHY. Mr. President, as the author of the Senate bill establishing a survivor annuity program for military retirees, I am submitting for myself and the Senator from Arizona (Mr. GOLDWATER) an amendment which would place the Senate on record in support of a program that is most needed in formulating a benefit structure that could give rise to a voluntary military.

Our amendment makes it the sense of the Congress that the Nation should establish as soon as possible an equitable survivor annuity program for military retirees comparable to the program provided for civilian Government employees under the civil service retirement system. At present, the uniformed serviceman is the only employee of the Federal Government who, having served his country long and well, retires on a pension, succumbs, and leaves his widow and children without any portion of the pension he earned through reduced pay during active duty.

Justice demands that this situation be promptly corrected.

Moreover, the need of the fine women who in many cases are left destitute by this strange set of circumstances requires that this situation be put right.

Finally a realistic analysis of the benefit structure needed to make a voluntary military achievable demonstrates the need to proceed forthwith to change this situation.

Most Americans, I believe, are well aware that a member of the Armed Forces retired from active duty receives retired pay as long as he lives. However, it is not so widely known that no part of his military retirement income passes automatically to his survivors when he dies. Every other employee of the Government is assured that 55 percent of his retirement pay will pass to his dependents automatically unless he refuses to participate in an annuity program.

Mr. MURPHY. Mr. President, since that time, the Congress has moved to correst this flaw in the system of benefits for military personnel. Chairman L. MENDEL RIVERS has designated a Special

Subcommittee on Survivor Benefits which has concluded 2 weeks of open hearings which reveal, I think, the consequences of past inaction in an area that is quite clearly one of compelling human need.

The subcommittee heard the widow of Rear Adm. Miles L. Browning, Chief of Staff to Admiral Bull Halsey during World War II. Mrs. Browning has received only $74 a month income from a Veterans' Administration pension—the pension available to the widow of any man who has ever served in uniform. Mrs. Browning was reluctant to describe the full extent of the adversity she has encountered.

Yet over and over again, as the subcommittee heard six other widows, the story of hardship and privation was repeated. The question that will not be avoided is this: Can we, in good conscience, perpetuate an inequity of such brutal consequences? I say we cannot and must not. We must not for those who are being widowed while we deliberate over such a proposal—for our inaction compounds their tragedy. We should not if we are to give a voluntary army the fair chance proposed by amendment No. 844.

On June 23, I introduced legislation in the Senate that would establish an equivalent of the civil service survivors annuity program for uniformed servicemen. I ask unanimous consent that my remarks upon the introduction of S. 4015 be printed at this point in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

S. 4015—INTRODUCTION OF A BILL PROVIDING EQUITY FOR WIDOWS OF CAREER SERVICEMEN

Mr. MURPHY. Mr. President, I am introducing a bill which would create a fair and equitable system for providing economic security to the surviving dependents of career members of the uniformed services. This bill would provide the surviving dependents of the retired members of the uniformed services with the benefits that are now provided for the survivors of civilian employees of the Federal Government.

Many Americans would, I believe, be surprised to learn that the widow of a man who has retired from a career of service to his country does not continue to receive a portion of her husband's pension after his death. In order to qualify for the meager benefits provided by the Veterans' Administration, the surviving dependent must be able to meet a needs test—unless the death of the service member was due to a service-connected disability. This widow's pension—ranging from $17 to $74 per month—is available to the dependents of any veteran, whether he served 20 years or 90 days. No special provision is made for the dependents of our career servicemen.

The bill I have introduced would provide that whenever a retired member of the uniformed services dies, his wife and children, or if he is unmarried, a designated person who has an "insurable interest," would be granted an immediate annuity. This annuity for the surviving wife would be 55 percent of the retired pay the former member had received when he was alive, while each child, under 18, or under 23 and attending school, or over 18 and disabled would receive an additional amount depending on the number of children in the family and the amount of the member's retired pay.

The cost of paying this survivor's annuity would be paid for, like the similar annuity for survivors of civilian employees, by reducing the retired pay received by the member while he is alive. This reduction would be made under the same formula used for civilian employees; that is, the retired pay of the member would be reduced by 2½ percent of the first $3,600 and by 10 percent of everything above $3,600. This reduction would be automatic in the case of a person who was married at the time he qualified for retired pay, unless he states in writing that he does not wish to provide a survivor annuity for his wife or that he wishes her survivor's annuity to be based on only a part of his retired pay.

There is much discussion, Mr. President, of proposals to eliminate conscription in favor of "all volunteer" Armed Forces. President Nixon has committed his administration to this goal. As a member of the Armed Services Committee, I have carefully studied the matter and have made known my support for this concept. In the past, I have supported the enactment of every measure voted by the Senate to increase the compensation of men and women in uniform. I will continue to do so. This is because I feel that the excellence of the job they do is, in no small way, responsible for the freedom and prosperity our Nation enjoys. Should they not then share fully in the way of life—they unswervingly defend?

If the "all volunteer" Armed Forces are to become reality we must take the additional steps necessary to attract and retain sufficient numbers of qualified personnel to meet our defense requirements. Our efforts to achieve "comparability" of remuneration for our military with their civilian counterparts are not yet equal to this task. In fact, in the "Study of Military Compensation of 1964," the Defense Department noted:

"The evidence is conclusive that the military fringe benefits trends are running counter to private industry trends, with the net result that the military man is rapidly losing ground to this civilian counterpart in this significant part of the compensation package.

"Reductions in benefits are effectively reductions in pay. The study group is of the opinion that positive measures are necessary to arrest this trend . . ."

The U.S. Veterans Advisory Commission in a report dated March 18, 1968, stated:

"The Government now contributes to survivors' benefits programs for Civil Service employees and to railroad workers. In good conscience and equity, the Commission feels the nation cannot deny such support to members of the Armed Services.

"Therefore, the Commission recommends that a request be made to the Secretary of Defense to initiate and support the establishment of a federally financed survivors' benefits program as an adjunct of the present servicemen's retirement program."

I am sure that every American man wants to assure that his wife will be provided for after his passing; but if he elects a military career he soon learns that although he endures the reduced income that is his contribution to his retirement pay, his wife cannot collect one penny of his pension after his death.

As we make progress toward correcting the imbalance in actual pay between civilian Federal employees and servicemen, so must we also eliminate the manifestly inequitous arrangement in their respective death benefits. Delay in enacting this measure will not only penalize those noble women who have shared the hardships of their husbands' military career; it will undermine our efforts to build the all-volunteer Armed Forces.

The Congress has not been blind to the military man's need to assure that his family is provided for. In 1953, there was enacted a program which allowed military retirees to contribute to a survivor annuity plan. Seventeen years and seven amendments later, the adequacy of this effort is best described by the fact that only 15 percent of those eligible to participate in it do so.

Because the employer—The U.S. Government—does not contribute a cent to this so-called "Retired Serviceman's Family Protection Plan." it is prohibitively expensive for the employee—the serviceman—to do so.

I ask unanimous consent that two figures illustrating cost data of the RSFPP appear at this point in the RECORD. These charts demonstrate that the military retiree pays 2.5 to 5 times as much as the civil service retiree for the same survivor annuity.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

"TABLE I.—COMPARISON OF COSTS OF RETIRED PERSONNEL SURVIVOR ANNUITY PLANS—MILITARY VERSUS CIVIL SERVICE

Grade	Years of service	Age at retirement	Survivors annuity payable (monthly)	Military deductions (options 1 and 4 at ½)	Civil service deduction for the same annuity
Staff sergeant	20	40	$86.42	$12.71	$3.93
Technical sergeant	24	44	120.75	20.94	5.49
Master sergeant	30	50	201.88	43.77	14.21
Do	30	60	195.15	57.24	12.98
Do	30	65	191.46	64.62	12.31
Major	24	46	256.96	48.23	24.22
Lieutenant colonel	26	48	330.65	66.84	37.62
Colonel	30	52	461.42	107.00	61.40
Do	30	60	449.06	131.72	69.15
Do	30	65	440.56	148.71	57.60
Major general	30	54	600.09	148.03	86.61
General	30	56	749.23	196.25	113.76
Do	30	60	738.98	216.75	112.82

"TABLE II.—COMPARATIVE COSTS OF CENTS PER DOLLAR OF COVERAGE

Annual annuity	Dollars cost per year		Cents per dollars of coverage	
	RSFPP	Civil service	RSFPP	Civil service
Man 55, wife 53:				
10,000	3,764	1,548	37.6	15.5
8,000	2,521	1,185	37.6	14.8
6,000	1,890	821	37.6	13.7
4,000	1,260	457	37.6	11.4
2,000	630	94	37.6	4.7
1,000	315	45	37.6	4.5
Man 60, wife 58:				
10,000	3,764	1,548	37.6	15.5
8,000	3,011	1,185	37.6	14.8
6,000	2,258	821	37.6	13.7
4,000	1,505	457	37.6	11.4
2,000	753	94	37.6	4.7
1,000	376	45	37.6	4.5

Mr. MURPHY. Mr. President, in addition to the high cost of the RSFPP program—which falls hardest upon the enlisted man—the

complexity of its provisions offers another reason that servicemen have rejected it by nearly the same overwhelming margin as their fellow Government employees have accepted their annuity program.

The measure I propose today is essentially identical to the program that governs the survivor annuities for the civil service employee. It is simple, and avoids the complexity that hobbles RSFPP. It is comparable in cost to the participant. It is manifestly needed. I believe it would result in a participation rate equal to that of the civilian annuity program—better than 90 percent.

My friend and fellow Californian, our distinguished colleague of the other body, the Honorable CHARLES GUBSER, has introduced H.R. 6226 and leads this effort in the House. I join him and ask my Senate colleagues to join me, in committee, and on the floor, in working for passage of this bill to provide equal and equitable annuities for widows of career servicemen. Clearly, the time is past to put an end to the injustice of a situation in which the widow of one Federal employee is entitled to an annuity as a matter of right, while another is denied, any portion of her husband's retirement pay and must show need for a pittance that could maintain her only at a subsistence level.

The PRESIDING OFFICER (Mr. SPONG). The bill will be received and appropriately referred.

The bill (S. 4015) to amend title 10 of the United States Code to establish an equitable survivors' annuity plan for the uniformed services, introduced by Mr. MURPHY, was received, read twice by its title, and referred to the Committee on Armed Services.

Mr. MURPHY. Mr. President, I have previously cited the "Study of Military Compensation of 1964" which noted that military nonsalary remunerations were running contrary to the proliferation of generous fringe benefits being made available in the private sector. The amendment—No. 765—proposed by Senator HATFIELD recognizes the need for general upgrading in the compensation package of uniformed personnel. It provides specific increases in salary and analysis and recommendations of other inducements to career military service.

As presently written it assigns no priority to the very serious survivor's benefits problem.

Representative CHARLES GUBSER, whose expertise in these matters is recognized by his colleagues on both sides of the Hill, has been an important figure in the efforts to bring this matter to the attention of the Congress. The distinguished Congressman observed, at the opening of the hearings, "I will say that I do not think there is any hope whatsoever of achieving an all-voluntary military service until the time arrives when we can make a career out of the military service in every sense of the word. And certainly one of the first steps that we must take if we are going to make this an attractive career to our young men and our young women is to provide a survivorship benefit program equal to what is given the civil service."

While thoughts of retirement and death are not usually on the minds of young men and women, we older Americans realize the importance that these considerations will assume in later years. We must assure that our military personnel have available a vehicle through which they can participate in assuring the financial security of their spouses in later years. This is why I feel that an adequate and fair survivor annuity program must be a central feature of the expanded benefits program which we hope will attract careerists to the service of our Nation. I urge the adoption of the "widow's equity" amendment to the "voluntary military" amendment.

The PRESIDING OFFICER (Mr. ALLOTT). The amendment will be received and printed, and will lie on the table.

ADDITIONAL COSPONSORS OF AMENDMENTS

AMENDMENT NO. 838 TO H.R. 17123

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from New York (Mr. GOODELL), I ask unanimous consent that, at the next printing, the name of the Senator from Missouri (Mr. EAGLETON) be added as a cosponsor of amendment No. 838 to H.R. 17123, the military procurement authorization bill.

The PRESIDING OFFICER (Mr. ALLEN). Without objection, it is so ordered.

AMENDMENT NO. 844 TO H.R. 17123

Mr. HATFIELD. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Idaho (Mr. JORDAN) be added as a cosponsor of amendment No. 844 to H.R. 17123, the Military Procurement Authorization Act.

The ACTING PRESIDENT pro tempore (Mr. METCALF). Without objection, it is so ordered.

Mr. HATFIELD. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Florida (Mr. GURNEY) and the Senator from Kentucky (Mr. COOK) be added as cosponsors of amendment No. 844 to H.R. 17123, the military procurement authorization bill.

The PRESIDING OFFICER (Mr. GOLDWATER). Without objection, it is so ordered.

NOTICE OF HEARINGS ON SPANISH BASE AGREEMENT

Mr. FULBRIGHT. Mr. President, the Committee on Foreign Relations will hold a public hearing at 11 a.m., August 26 in Room 4221, on the Spanish base agreement with administration witnesses. Prior to the public session, the committee will meet in executive session to discuss with representatives of the administration those parts of the agreement and the background of it they wish to keep secret and the reasons for that secrecy.

The purpose of the hearing is to explore in public the background, purpose, meaning, and implications of the 5-year agreement both for Spain and the United States.

ADDITIONAL STATEMENTS OF SENATORS

THE 50TH ANNIVERSARY OF FEDERAL AVIATION ADMINISTRATION'S FLIGHT SERVICE STATIONS

Mr. CANNON. Mr. President, August 20, 1970, is a significant milestone in our Nation's aviation system. It marks the 50th anniversary of the Federal Aviation Administration's flight service stations. These stations not only play a vital role in today's air transportation system, but throughout a half century of operations they have had a direct hand in the development and advancement of aviation communications, navigation, and flying safety.

Originally known as airmail radio stations, they were the outgrowth of pioneering efforts by the Post Office Department to establish a transcontinental air system from New York to San Francisco.

On August 20, 1920, the Postmaster General authorized the establishment of airmail radio stations along the transcontinental route to provide communication between the landing fields in the system. Of the original 17 stations established, only four have remained in continuous service for their entire 50-year history. They are Salt Lake City, Utah; Rock Springs, Wyo.; Washington, D.C.; and I am proud to say, Elko, Nev.

Not too long ago, I had the pleasure of being in the station at Elko with its present chief, Harold Griffin. There have been many changes since the early days when that flight service station was a one-man operation.

About the only qualification in those days was to be able to send and receive 30 words of code per minute. Most of the men were Navy veterans of World War I, and they quickly learned to improvise to keep on the air.

In any event, it was from these small beginnings that our flight service station system has evolved to a station network covering all 50 States and reaching out to Pago Pago, Wake Island, and Guam in the Pacific, and to Panama and the Caribbean.

As one of 700,000 pilots who use and appreciate their services, I commend and offer tribute to the Federal Aviation Administration's flight service stations for the role they have played in aviation and especially to the dedicated public servants, the 4,600 air traffic controllers who staff the network of 340 flight stations. They have well earned our gratitude.

I ask unanimous consent that the article entitled "First 50 Years of FSS," published in the August 1970 issue of the Pilot, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIRST 50 YEARS OF FSS

(By Don Downie)

"Elko Radio, this is One Four Nine, VFR Reno to Elko, five west. Close us out, and landing advisory please."

"One Four Nine, this is Elko Radio. Flight plan closes at zero seven. Designated Runway 23. Wind light and variable. Altimeter 30.07. No reported traffic."

One Four Nine skims across town on final, touches down on a field that has been an active airport for 50 years, and taxis up to the line. Everything is pretty much routine. The new "low profile" air/ground console at Elko FSS permits the specialists to handle communications and still keep an eye out the window to give factual airport advisories.

Back in 1920, when Elko, Nev., was one of the first key stations on the transcontinental air mail service, things would have been

slightly different. A surplus arc radio telegraph would have sent a message to Salt Lake City, stating briefly, "Smith No. 249 arrived 4:10," and signed by the field manager. In the case of Elko, normally only a refueling stop, it would have been a brief arrival/departure message.

The FAA, which now has 340 Flight Service Stations in 50 states, celebrates its fiftieth year of service this August 20. There's an interesting history behind this service that we take so much for granted today.

When the Post Office Department decided to fly the mail on a transcontinental route, a string of radio stations was begun that August, 50 years ago. The western section included Omaha, North Platte, Cheyenne, Rock Springs, Elko, and Reno, with arrangements made to use the Navy radio station in San Francisco.

Historical experts in the FAA state that only four of the original transcontinental chain of stations have remained "pure communications stations" for their entire 50-year history. The others have been combined with towers at one time or another, been out of service for periods of time, or otherwise had a change of operation. The four "pure" 50-year-old communications stations are Washington, D.C., Rock Springs, Wyo., Salt Lake City, Utah, and Elko, Nev.

The first FSS in Elko was a one-man operation. Most radio operators were ex-U.S. Navy veterans of World War I. The primary qualification for employment was to send and receive 30 words of code per minute.

Elko's first predecessor of the FSS was located in a 20×20 building near the Humboldt River. Local folklore indicated that the building was still standing and currently in use as one of the town's legalized parlor houses. This makes a fine story, but unfortunately it isn't quite true.

Confirmation of the location of Elko's pre-FSS came from Jess Harris, who "used to hang around the station as a kid." Jess freely admits that he aided in the disappearance of a couple of five-gallon cans of alcohol (doped with potassium permanganate to elimate the possibility of human consumption). The alcohol was used to maintain the arc on the old two-kilowatt shipboard-type transmitters.

"We always picked up two cans of alcohol with a truck to drive them out to the station. Sometimes one of them would get lost," Harris grinned shyly in retrospect. "We found that we could take a copper radiator line from a wrecked DH Liberty engine, wrap it with asbestos and safety wire to form a coil, and then heat it with a blowtorch to distill the potassium out of the alcohol. That stuff was really potent. I believe that one Coke bottle full would get the whole town drunk!"

Jess Harris, frequently referred to as "Juice" by the early air mail personnel, is now the county sheriff, as was his father before him. Jess still flies a Cessna 180 and *Super Cub* to chase cattle rustlers. It was Sheriff Harris who discounted the rumored colorful location of the first Elko radio station. However, it was located at the far end of "the street."

The original reason for having transmitter stations located away from the airfield was to keep low-flying aircraft, grouping for the field in bad weather, from hitting the antennas.

The radio operator had to be a jack of many trades, and an expert in improvising, to keep his equipment on the air. The job was seven days a week and frequently before drawn, when the operator would exchange weather information with adjacent stations and relay this to the airfield. When the plane (Elko had one plane each way, each day, to begin with) took off, there was a departure message with the pilot's name, the ship number, and the number and weight of mail pouches. When the evening plane came in, the process was repeated. At division points like Salt Lake City, a daily report was forwarded to Washington, and the operator had to stay on duty until it went out. Starting pay was $1,800—per year.

Many of these early stations were installed and improved by Art Johnson, a near-legendary radio operator who is very much alive in Santa Monica, Calif. He ran his first amateur radio station in 1911 (at age 12), before there were any licenses, and had a call sign of 9AL a year later.

Johnson joined the U.S. Navy prior to World War I and spent nine months at a Navy electrical school. "It was a darned good program," he commented. "We had both theory and maintenance courses so that we could keep our equipment on the air."

Johnson explained that the original Post Office Department concept was to develop both communications and navigation systems for modified twin-engine bombers with radio operators aboard. About May 1920, pilot Wesley L. Smith flew from College Park, Md., to the Philadelphia Navy radio station "without regard to compass or ground indications, using a receiver with a fixed-loop antenna."

When the surplus single-engine DR–4s came into general use, there was room for the pilot and all the mail he could carry—but not for a radio operator. So the idea of both "nav" and "com" was discarded for a time, and the first wireless stations were used strictly for communications, to replace leased telephone wires.

There's a station log at Elko named "The March of the Idiots." Art Johnson reported that Elko was then the least desirable place on the entire transcontinental route. All the new men first went to Elko. One newcomer got off the train in Elko, looked around, and climbed right back aboard for parts unknown.

Present Elko chief is Harold Griffith, who moved here more than two years ago from what must have been an even less desirable post, Bryce Canyon, Ut.

When you fly along this mountainous No. 1 air mail route, it's easy to marvel at the pioneers who built this system from almost nothing. The original "com" building in Salt Lake City was on the fairgrounds, but the first airport structure, completed in 1924, still stands as a lean-to on an old United Air Lines hangar. It was here that much of the early cut-and-fit developmental work took place to put more punch into the surplus equipment.

Art Johnson recalls, "During heavy atmospherics, signals from the arc transmitters sometimes failed to get through. Phil Coupland and I developed a means of raising these two-kilowatt transmitters to five kilowatts by enlarging the power supply, installing larger field coils, and improving both air and water cooling. We used a 17-gallon Liberty radiator, mounted outside the building, to cool the water.

"We also developed a wave-change switch that would operate without shutting down the transmitter.

"We got jolts all the time," commented Johnson gingerly. "They'd burn, but they weren't dangerous. Sometimes the air and alcohol mixture would explode. We could have used a kerosene mixture, but that would have produced carbon around the arc. Those Navy arcs were almost foolproof—clumsy but rugged.

"The next year, Hadley Beedle (in Reno) and I (in Salt Lake City) began experimenting with vacuum tubes operating at short-wave lengths. Hadley developed a convenient transmitter utilizing two quarter-kilowatt tubes and a raw a.c. power supply, while I completed several working models along similar lines. His model had certain advantages, and he installed it in Reno and Sacramento while I built and installed similar units at all stations between Elko and Iowa City.

"All this equipment, including receivers, was built in spare time while we were standing a regular radio operator's watch. We had little or no money for the project and had to improvise in every way we could. Discarded half-inch copper gas lines from Liberty engines were used to form induction coils. Condensers were robbed from Navy spare parts. Discarded half-kilowatt power-line transformers were purchased from the power company for about $2 each and provided high voltage for the tubes.

"Most of our spare parts came from the Navy by the back door. Many of the Navy personnel working on the air mail circuit in San Francisco wanted to come to work for the Post Office Department, so we had little trouble in getting surplus supplies."

No one bothered about patents in those days. Johnson has none.

Johnson considered the Phillips Code (a system of dots and dashes with many abbreviations, set up originally for the railroads and press releases) superior to the International Morse Code, particularly when static interference was in the air. The air mail system was the only organization to use the Phillips Code for regular communications.

"That's where 'CAVU' came from—and many others," Johnson commented. "A good operator knew all the abbreviations and could keep ahead of the guy on the other end, particularly when he took the time to write out 'ceiling and visibility unlimited.' "

Other aviation abbreviations—'RON' (remain over night), 'ETA' (estimated time of arrival), and 'WILCO' (will comply)—were all started by wireless operators of the old Postal Service.

Working almost without a budget, the Post Office Department talked the cities along the line into providing land, a hangar, and runways. At Salt Lake City, for example, the original north-south runway was very soft when wet, and the city dumped its "hard garbage" (tin cans) and stove clinkers on the suface throughout the rainy season.

While you're in Salt Lake City, if you're lucky, you can drive to a rose-covered cottage within sight of the airport and spend an hour invading the privacy of a gentleman with pilot's license No. 99.

At 80 years of age, Henry Boonstra is just as sharp as they come. A pilot for the Signal Corps in World War I, Boonstra went directly from the Army to the Post Office Department, ferrying surplus aircraft to the repair depot in the infield of the Indianapolis Speedway. He made one of the early night flights while returning from the Dempsey-Willard fight in Toledo, O., with Indianapolis Star reporter Mary Bostwick in the front seat. He circled the racetrack until enough cars lined up with their lights for an eventful landing.

Boonstra was also instrumental in the May 1968 delivery of DH–4 "Old 249" to the Smithsonian Institution.

"I flew 249 out of here late in December 1922," he commented. "The weather was bad, but I went east along the Uinta range of mountains that parallels the course into Rock Springs. The carburetor iced up, and I landed on Porcupine Ridge on top of a mountain above the timberline.

"It was about 8 a.m., and the snow was up to my waist. I walked down all that day, that night, and all the next day. I could see a ranch about five miles away, but it took me all day to get there."

As soon as Boonstra reached "civilization," a mule team was sent out to bring back the mail. Later, the Liberty engine was hauled down the hill by a pair of mules, but the airplane remained more-or-less intact. Contrary to the policy of burning aircraft downed in isolated country, "Old 249" sat for 43 years too far out in the backwoods for people to strip it.

When John W. (Bill) Hackbarth (AOPA 212378), air mail mechanic and later pilot from Santa Paula, Calif., decided to rebuild a DH–4 to deliver over the old transcontinental route on the golden anniversary of the start of the air mail service, he chose "Old 249." He discussed the project with

Boonstra and then "trucked down about 600 pounds of junk" to start his rebuilding project.

Even Art Johnson had a hand in rebuilding "Old 249." His home is within an hour's drive of Santa Paula, and Art spent spare time helping with bits and pieces of the old bird. He built the wing struts by hand in his workshop.

Boonstra flew the same route for 15 years in DH–4's, Boeing 40–B–2s and 4s, the Boeing 247, and the 80–H Boeing Trimotor, after the Post Office Department turned the run over to Boeing Air Transport in 1927.

"We were just getting the DC–3's when I quit," he commented quietly. "I considered the Salt Lake-Rock Springs segment to be the roughest run in the country, but that Reno-SFO airway had a tough little segment."

Today the FSS in Salt Lake City is next to the "old terminal" and has a Weather Bureau (Department of Environmental Services Station) adjoining. The one-man operation begun here 50 years ago by Art Johnson now has a staff of 32 and includes remoted stations at Lucin, Bonneville, Ogden, Fairfield, and Price. Delta is manned 12 hours a day and Malad City 16 hours, with remote service out of SLC for the "midnight shift."

The flight from Salt Lake City to Rock Springs, Wyo., looks rugged even today. Lee Warren, deputy director of the nine-state FAA Western Region, cruised Victor 32 with a *Queen Air* and talked of the growth of the FSS. While he's a relative newcomer to the system, when compared with Art Johnson and Henry Boonstra, Warren began puttering around with aircraft radios in St. Louis in 1931.

"At first, I couldn't figure out why anyone would want to put a radio in an airplane," he quipped. "Who could hear the music over the noise of the engines?"

Warren worked for American Airways (later American Airlines) and helped develop an interline agreement among AA, Eastern, TWA, and United that developed into the first formal air traffic control system. He invented the word "center" for the Department of Commerce after aviation activities were transferred from the Post Office Department in 1927.

At that time radio stations, beacon lights, and intermediate landing fields were placed under the Bureau of Lighthouses. There was some talk about placing aircraft inspection and licensing of aircraft and airmen in the Bureau of Steamboat Inspection, "but the pilots wouldn't swallow that," remarked Art Johnson. "Instead, an Aeronautics Branch was created and handled such functions."

The first gas beacon was installed in Elko in 1924. Today's electric beacon stands on the same spot where the original beacon was erected on the hill east of the airport.

So Victor 32, once called "Green 3" and first named "The Transcontinental," was no stranger to Lee Warren and Dale Heister, chief of the Los Angeles FSS and a 28-year veteran of the service. While flying *Queen Air* N149, the pair pointed out that many oldtimers preferred outlying stations to working in the big city, even at the expense of a grade in pay.

Typical of these "back country" FSS chiefs is Cliff W. Wheeler, half Alaskan Indian, and 35-year veteran with the FSS and its predecessors. Wheeler was a little late at his Rock Springs station that morning. He'd just seen his No. 2 son, Gary, off for Vietnam and was expecting No. 1 son, Cliff Jr., back from the Far East that same week.

Wheeler would rather go out and fill gopher or badger holes on runways than fight the freeway. (One of his predecessors at Rock Springs interrupted a broadcast when a rattlesnake crawled up through a knothole in the floor of the original downtown wireless station.)

"The smaller towns have better recreational opportunities," he explained, "but there's no dollar advantage. When you're out in the back country, you have a little less paperwork. It's a satisfying job, and the new electronic aids make it a great deal easier to be helpful than in the old days."

When asked about FSS "saves," the Rock Springs chief was quite for a minute. "We do things like this almost all the time. It's just part of the service. I can remember the pilot of a 'T-craft' at Malad City who was lost in the mountains to the east. We brought him in to the airport just using landmarks; that was before VHF/DF. He was pretty 'shook up' and so scared that he was sick in the air. When he finally rolled to a stop, he literally got out and kissed the ground."

Looking out over the "low profile" installation toward the tabletop runway, Wheeler continued, "We had a case of a pilot who became ill in the air over the Fort Bridger area. His wife called our specialist Max Fullmer (now at Idaho Falls), who is a pilot. He calmed her down and brought her into our traffic pattern here after 45 minutes of talking. Fortunately, her husband revived sufficiently to take over and land."

Even after 35 years on the job, Wheeler is not anxious to retire. "I enjoy what I'm doing and I'm certainly not ready for a rocking chair. It'll be quite a few years before I get to that mandatory retirement age of 70."

It's 12 miles west from "no-name-mesa" to downtown Rock Springs. The neat tabletop airport replaced the original dirt strip located five miles north of town on the lee side of the White Mountains.

"Most of the early pilots considered [the old] Rock Springs the worst early airport in the West," Boonstra had explained earlier. "It almost always had a hazardous crosswind, and the currents off the mountains were terrible."

One of the Rock Springs residents who was "just messing around the wireless station as a kid" is Ray Ajo. His first checks came from the Post Office Department when he was a mechanic's helper. When Boeing Air Transport (later United Air Lines) took over the service, Ray stayed on and helped put 2,000-pound loads (400 pounds over gross) in the two mail pits of the Boeing B–2s.

Ajo spent 28 years in various phases of air mail and retired as manager and supervisor for United Air Lines. All of his duty was spent in Rock Springs.

"When we started, we had $80 per month for working all hours. There were no benefits, but we were so dedicated to the job that no one thought much about those things . . . One of the jobs I had was to change all the beacon lights between here and Salt Lake."

Today the hop from Rock Springs back to Los Angeles is strictly "no sweat." Cruising at 10,500 feet and sipping a little oxygen, you have radar traffic advisories over most of the route. The "system" vectors you through the smog and to a routine touchdown at bustling LAX terminal.

Next time you walk into an FSS for an in-person preflight briefing, you may find the man (or woman) behind the counter of fairly young age. However, in the background is a system that started with almost nothing and has shown a remarkable growth in its first 50 years.

Happy anniversary!

RESTORE BLUE LAKE TO TAOS PUEBLO

Mr. KENNEDY. Mr. President, many bills are pending before Congress dealing with broad general problems of the American Indian. And yet the Indian bill which has been the focus of the most public attention in recent months directly involves only one particular tribe, the Taos Pueblo of New Mexico.

In 1906, the Taos Pueblo suffered a grave injustice when the U.S. Government seized the Pueblo's sacred Blue Lake lands. H.R. 471, which has already passed the House, would right this wrong by removing the sacred lands from the Carson National Forest and provide that, henceforth, the United States would hold these lands as trustee for the Taos Pueblo. The lands would then only be used by the Indians for religious and traditional purposes and would be preserved forever as a wilderness.

Indians everywhere have spoken out in support of the efforts of the Taos Pueblo to regain their ancient religious sanctuary. The Taos Indians' historic struggle to regain ownership of their sacred lands is symbolic of the struggle of all Indians to enjoy the rights of religious and cultural self-determination which are part of the birthright of all Americans. As the Taos delegation told the Indian Affairs Subcommittee last month:

> In this fight we are . . . struggling to preserve the identity of our people as a tribe, to preserve our Indian way of life, and to obtain restitution of land wrongfully taken from us.

In seeking restoration of the lands, the Taos Indians have repeatedly rejected the offer of monetary compensation for the wrong done to them. They do not seek material gain. The Indian Claims Commission indicated that the Taos are the only Indians who have asked the Commission for the return of land in trust rather than a money judgment. They want the Blue Lake lands so as to maintain their religion and culture. The lands, one of the most beautiful wildernesses in this country, are a natural cathedral containing the holy places and altars of the ancient Taos faith, which remains the guiding force of their culture.

A religion that teaches reverence for nature and prohibits interference with the natural condition of the land, as does the Taos religion, is a religion from which we all can draw inspiration. I know of no reason to deny these people the assurance that their religion will be sustained by returning to them the sacred lands they need in order to practice that religion. Simple justice requires that the Taos Indians' modest request be granted.

I would hope the Committee on Interior and Insular Affairs should take favorable action on H.R. 471.

DEFENSE OF U.S. ARMY AGAINST MISREPRESENTATIONS

Mrs. SMITH of Maine. Mr. President, with the transportation and disposal of the dreaded nerve gas by the U.S. Army having been successfully completed without any fatality, injury, exposure, or damage to anyone or any area, I think that it is appropriate not only to give praise where praise is due, but as well, if not more important, to set the record straight in defense of U.S. Army on misrepresentations made against it creating extremely unfair attacks on it and its personnel.

In separating fact and truth from mis-

representation and maligning of the U.S. Army on the administration of its chemical and biological weapons program, I shall center my remarks on the activity of the U.S. Army at its post at Fort Detrick, Md. I made an inspection trip there earlier this year and I asked for specific information during my inspection there and for the supplying of information subsequent to my inspection.

What I found was most revealing and reassuring in refuting the scare and horror claims against this activity. Last year a congressional charge was made that a man, who was identified as being also a lifeguard, died from the plague that he caught while working at Fort Detrick.

What is the truth? The truth is that the man did not die. He did contract pneumonic plague in September 1959 but he was cured and returned to duty in less than 3 weeks after having the plague. He is alive and well today as my executive assistant checked on August 14, 1970, and talked with this man by telephone and found that he was alive, well and living in Boulder, Colo. He is Ralph L. Powell of the Infotronics Corp., former laboratory technician at Fort Detrick.

The congressional charge made over a year ago was not only that this man had died of the plague but that the incident was never reported to the World Health Organization. To the contrary, authorities at Fort Detrick reported the case to the State of Maryland on November 6, 1959, and the State of Maryland is the appropriate channel for report to the World Health Organization. Furthermore, details of this case were published in Annals of Internal Medicine 56(5): 789–800, May 1962, or 7 years before the false congressional charge was made.

The alleged victim was interviewed by a member of the press in November 1969 and the victim had nothing but praise for Fort Detrick and said that, if anything, instead of having a lack of safety precautions, officials at Fort Detrick overemphasized their safety program.

A series of articles on Fort Detrick was written by Richard Lebherz and appeared in the Frederick, Md., Post during the period of November 3 to 17, 1969. I ask unanimous consent that the last of the series of the five articles be placed in the RECORD at the conclusion of my remarks and I call attention to a statement by the writer in that article that—

This is merely one of a hundred examples of completely false information being made by reputable people against the biological research program. So far, there have been very few who will refute this false information, or who will present another side of the coin. Of course, from the Department of Defense comes only silence.

This lack of courage on the part of the Department of Defense to defend its maligned programs and personnel is shocking. It is a sad commentary that an outsider like Mr. Lebherz has to take the initiative to get the truth to the public and try to get fair play for the program and personnel at such activities as Fort Detrick. It is refreshing, however, that in this instance there is the contrast of the news media defending the military rather than maligning it.

Critics, false accusers, and enemies of Fort Detrick to the contrary, Fort Detrick has an enviable safety record. I cite the summary by Dr. A. G. Wedum, Fort Detrick director of industrial health and safety, made as of May 1, 1970.

Not only does Fort Detrick have an enviable safety record but, as well, an outstanding record of contributions made to Science and the Public Welfare. During my visit on April 29, 1970 to Fort Detrick, I requested a summary statement on this matter. In response I received a summary memorandum dated May 5, 1970. I ask unanimous consent that it be placed in the RECORD at this point.

Mr. President, I am sick and tired of the constant maligning campaign of derogation and false accusations against military personnel, establishments, facilities, and programs. The Fort Detrick case is but one example of this pattern.

But I am even more appalled at the failure of the top officials of the Department of Defense to defend dedicated personnel and to vigorously refute the false accusations made. The timidity and the half-heartedness of the Pentagon to defend its people is enough to make our military personnel sick at heart and leave the service at the first opportunity.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY: SAFETY AT FORT DETRICK

MAY 1, 1970.

1. No open-air testing of infectious or toxic biological material is, or ever has been, done at Fort Detrick.

2. No member of the general public has ever been infected as a result of Fort Detrick's experiments.

3. Transportation: There never has been leakage of infectious or toxic biological material in the BW program, during a shipment by Army, Navy, or Air Force, by commercial or military transport. The rough handling test standards, for qualification of packaging for shipment, exceed the requirements for packaging of any other dangerous material; the only closely comparable standards are those for radioactive materials.

4. Laboratory Infections:

a. Since December 1965 there have been no hospitalized laboratory-acquired illnesses; during this time there were 9 minor non-disabling infections.

b. During 1943 to date there have been 422 laboratory-acquired infections at Fort Detrick. Among these, 27% had such mild illness that hospitalization was not required.

c. The 3 deaths (Anthrax 1951, 1958; Bolivian hemorrhagic fever 1964) among the 422 cases represent a mortality rate of 0.71%, which compares favorably with the 4.2% deaths among 3178 cases revealed by a Public Health Service-supported survey (Sulkin-Pike, U. Texas, 1969). Among the 3178 cases are 389 reported by Fort Detrick.

d. The man with pneumonic plague in September 1959 did not die as stated by a member of Congress in a public broadcast 3 May 1969. The case *was* reported 6 November 1959 to the State of Maryland, which is the appropriate channel for report to the World Health Organization.

e. As regards Rocky Mountain Spotted fever in Maryland, Governor Marvin Mandel announced 12 August 1969 that the increased incidence was not related to research at Fort Detrick.

f. Examination of National Safety Council figures for rates of disabling (lost-time) injuries per million civilian man-hours worked shows that the Fort Detrick rates from 1960 to the present time are equal to or better than any all-industry average, are 8 to 14 times better than for all civil service employees, and are 20 to 50 times better than many industry averages.

A. G. WEDUM, M.D.,
Director, Industrial Health and Safety.

CONTRIBUTIONS BY FORT DETRICK TO SCIENCE AND THE PUBLIC WELFARE

MAY 5, 1970.

HON. MARGARET CHASE SMITH,
U.S. Senate,
Washington, D.C.:

As promised during your 29 April 1970 visit here, a summary statement has been prepared that provides for you *selected examples* of Fort Detrick's contributions to science and the public welfare.

Scientific Publications.—Since the end of World War II, when the wartime restrictions on publications were removed, the scientists and engineers of Fort Detrick have published more than 1,450 individual contributions to the scientific literature. These have described the results of research investigations in the biological, chemical, medical and plant sciences; and in the various engineering specialties.

Scientific Symposia.—As one of this nation's largest biological research centers, Fort Detrick has sponsored six scientific symposia in the last decade. Each of these provided a contemporaneous and authoritative assessment of an important scientific topic.

Vaccine Development.—Our research program has developed three vaccines: A pentavalent toxoid for botulism (a form of food poisoning), a cell-free antigen for anthrax (so-called "wool sorters disease"), and a live vaccine for tularemia (also known as "rabbit fever"). Each of these biologicals initially has been extensively studied, and its potency and efficacy proven in experimental animals. Subsequently, they have been administered to man under well-controlled conditions, and found to be clinically acceptable and efficacious. For the latter two of these products (the anthrax antigen and the live tularemia vaccine), their evaluation in man has been accomplished in collaboration with the National Communicable Disease Center, U.S. Public Health Service, and with clinical investigators at the Medical Schools of the Ohio State University and the University of Maryland. Prior to the above-mentioned developments, effective protective agents for these diseases were not generally available.

Investigational Vaccines Program.—Once the Fort Detrick anthrax antigen, pentavalent botulinal toxoid, and live tularemia vaccine were developed, their characteristics became known to professional people in the health sciences, and repeated requests were made to Fort Detrick for supply of these materials to be administered to individuals at risk at universities, research institutes, diagnostic laboratories, and industry. After an initial period, during which Fort Detrick filled these requests if made by qualified physicians, the continuing problem of providing infrequently used immunizing agents that are not available commercially was reviewed with the National Communicable Disease Center's Advisory Committee on Immunization Practices. As a result, the Investigational Vaccines Program was established at the National Communicable Disease Center to provide such biologicals, and Fort Detrick supplied to that program its initial inventory of vaccines. Thus, these three products originally developed because of the defense interest of the Military Services are now available to the public at large.

[From the (Frederick, Md.) Post, Nov. 17, 1969]

FORT DETRICK: A SYMBOL OF CRISIS—NO. 5—COULD BIOLOGICAL WARFARE BE A SCAPEGOAT?

(By Richard Lebherz)

There are some scientists and researchers and even some Army personnel, who believe

that the biological warfare research and development program is being used as a scapegoat by the Department of Defense. Could this be true?

They reason this way: there is currently great public and political pressure being brought to bear on Congress to cut the budget of the Department of Defense for this coming year, in order to alleviate public resentment against that Department arising from the unpopularity of the war in Vietnam. Could it be that the biological warfare program is being used as a convenient sacrificial lamb, to placate those pressures?

In other words—some would suggest—if something has to go, let it be the chemical or biological research programs rather than, let's say, the equally controversial ABM system. After all, there seem to be no religious or political sects protesting against the use of the ABM system, but there are apparently quite a few protesting against CBW.

Out of the 90 billion dollars allotted last year to the Department of Defense by Congress, only about 20 million of it filtered down into the biological warfare research program—less than one-fortieth of one percent of the total defense budget. The assumption might therefore seem to follow that germ warfare is not really considered all that important. Then the next question we clearly must ask ourselves is simply this: is it or isn't it that important to our national defense and the security of the country?

When I was asked to do this series on Fort Detrick, my immediate action was to reject the idea, for several reasons. The principal reason was simply that I was quite aware of the emotional and moral reaction in certain segments of the public whenever the terms "Detrick" or "germ warfare" are mentioned.

I also knew it to be true that having the military post in our midst here in Frederick did offer the community obvious financial rewards, and to criticize it might conceivably jeopardize those rewards. Hadn't Seymour Hersh in his New York Times article of Oct. 18th all but affirmed that the reason for this coming together of the two communities, Detrick and Frederick, was a deliberate effort on the part of the Fort to diminish the resentment that the citizens of Frederick might harbor against biological research and the men who were part of it? This, however, I did not believe to be true when I read the article, nor do I believe it to be true now.

If the people of Frederick have accepted the members of Fort Detrick into their society, and vice-versa, it is principally because they like and enjoy each other as friends and fellow members of the community. If there are friendships in Frederick between Fort Detrick personnel and the rest of us, it is in spite of, and not because of, any resentment that may surround biological research.

I, too, had read Seymour Hersh's book, "Chemical and Biological Warfare, America's Hidden Arsenal." I, too, had heard on TV of the alleged horrors confronting us all in case a biological attack should get out of hand. Yet, I must confess, at the same time I wondered to myself if it were possible that all of these implications and accusations were really true, or if there were not more to the question of whether we should continue with a biological research program. Were there other sides to the question, I wondered, that we didn't know anything about? Would I be able to overcome a natural instinctive reaction against that kind of research in order to look at the problem objectively and dispassionately?

Like general public, I realized that I really knew very little about the whole subject. I had a moral and emotional reaction against it, just as the general public did, but this series, I decided, might give me a first-hand opportunity to assess the situation, and to answer, if possible—not only for myself, but for others as well—some of the confusion about exactly what does go on at Fort Detrick, and what the men were like who worked there.

Now, after having completed this series, I am firmly convinced that the basic problem that exists at Fort Detrick, insofar as presenting to the public important facts about biological warfare is concerned, does not originate within the Fort itself. It is much more involved and complicated than that. In fact, what is happening at Detrick is, I believe, the same major problem that confronts all Americans today, in regard to the role of the Department of Defense in our lives, and the lack of information about that role that is being provided to Americans, so that they can better comprehend and judge the need for this work.

It is always a frightening and dangerous course for a government to lose contact with the people who support it. It is even worse when a government misjudges or thinks the public inadequate to share with it the problems that they are facing. For it is the government's proposed solutions to these problems that the public will not only have to pay for, but whose consequences they will also have to bear in the future.

I believe that this is not only the crisis at Fort Detrick, but it is just as true of our present confused position with regard to the war in Vietnam. It is just as important for a country to understand and support a biological research program as it is to understand and support a war in which they have become engaged. I think both of these areas have never properly or realistically been explained to the American public, and this is why both areas have become symbols of crisis in our time.

For the past several decades, it has been indeed clear that the Department of Defense, together with the CIA and the State Department, have presumably felt that the American public is either insufficiently intelligent or politically knowledgeable to become a part of the decision-making that unquestionably involves the future of the American public and of the nation itself.

Yet this American public has been asked to go on paying taxes, which are increasing more and more each year. But we are apparently not supposed to ask where those funds are going and for what purpose. The American public has been asked to finance wars whose objectives have become less and less understandable to the people who constitute this Nation. Year after year, we send Congressmen and Senators to Washington, sending them on our behalf, in order that they may participate in major decisions that will guide us and our nation into the future. Only, as we come to realize in many cases, they sometimes know even less than we do.

I believe that it is essentially this feeling of isolation that is occurring between the American people and their government in Washington, this ever-widening feeling, that has caused this unconscious resentment to be deflected from the government itself, the silent Department of Defense, the CIA, and the State Department, and has in fact deflected that unconscious, ever-growing resentment in the direction of chemical and biological research programs, as a substitute for other frustrations in the world of today.

I believe this resentment to be out of all proportion to the realities of the situation, and I believe this resentment to be dangerous, because it is purely a moral indignation focusing on the smaller areas and not on the whole. It is a personal, misplaced resentment that has no place in deciding analytically and rationally what policies we should develop and maintain with regard to protecting this nation.

There is really only one valid reason, in my opinion, for America to decide either to continue or to end chemical and biological research and development programs, and that reason should be a realistic one. Can we afford not to continue these programs, in the face of the evidence that exists and confronts us about other nations, whose research exists and continues daily? That surely is the one and only realistic question to be asked, and it ought to be answered honestly, objectively, and factually, not morally or emotionally. It is my hope that this series will contribute in some way toward the answering of that question.

Unfortunately, not only has this resentment been reflected in the public's confusion but there is ample evidence that the Press has also been affected by it as well. There seems to be an automatic reflex reaction by newspapers and magazines, that biological and chemical warfare are the villains of the peace. Incidentially, who makes our tanks, I wonder? Who builds our bombers? Whenever you pick up an article these days about either of these research areas, you can be certain of the usual one-sided viewpoint that appears to be most acceptable these days.

This dangerous attitude has encouraged Congressmen and others to assume that what the press publishes is necessarily correct, that there are no other interpretations to be made, no new information to be offered, no new viewpoint to be rendered for the public's consideration.

Congressman Richard McCarthy (who has literally toured the country in his role of protecting the world against germ warfare), recently recorded a radio show in New York entitled, "From the People," May 3, 1969. The program was produced by United Press International. There were several panelists involved. Here is one of the question asked the Congressman:

"In your investigation, what would you say is the chance of an accident occurring in the U.S. within our research program?"

(Whatever investigation the Congressman has made, it never included an actual visit to Fort Detrick in person, to inform himself from competent sources, We must assume, then, that his remarks are deducted from what he has read about Detrick from secondary reports, stories, briefs, etc. And his deductions are confused.)

His reply: "The accident record is not very good at Fort Detrick. For instance, we have had thousands of infections of people working in all these exotic and deadly diseases, like the plague. One case, where a person who was there at Fort Detrick also was a life guard, and he caught the plague."

(There is absolutely no truth to this statement about thousands of infections being caused by all these exotic and deadly diseases, by the way. The security measures at Fort Detrick are so strict and intricate—and in fact so successful, overall—that many of the scientists and researchers working there complain about measures taken, and how it actually hampers rather than facilitates their work.)

"What happened to him?" asks one of the panelists.

"Well," replies the Congressman, "he caught the plague, which is a very deadly disease, and he ultimately died; and that incident was never reported to the World Health Organization."

Now, this is a Congressman speaking. We assume that men in Congress ought to know what they are talking about, especially if they are going to speak from an authoritative position. People hearing him make a statement like this one about Fort Detrick have no way of knowing that he is very badly misinformed about the life guard that he says caught the plague and died of it.

The lifeguard about whom the Congressman is speaking with such assurity was Ralph L. Powell. It may come as a shock to the Congressman, but Ralph Powell is not dead in the least. He is well, and he lives in Wilmington, Delaware. In fact, I spoke to him on the phone just last week.

True, he did catch the pneumonic plague,

yet having gone through such an experience, he had this to say of Detrick:

"If I had had more than a BS degree, I'd have asked to stay at Detrick as a research chemist. But I didn't have one, and I had to earn money immediately, so I had to look elsewhere for a job."

"Did you ever find that there was a lack of safety precautions at Fort Detrick?" I asked him.

He laughs. "If anything," he replies, "their safety program is a little ridiculous. They over-emphasize it."

"Is it true that your case was never reported to the World Health Organization?"

"Not a word of it. Why, I have newspaper clippings from all over the world about my case. It never was kept a secret. Of course they knew about it."

This is merely one of a hundred examples of completely false information being made by reputable people against the biological research program. So far, there have been very few who will refute this false information, or who will present another side of the coin. Of course, from the Department of Defense comes only silence.

I finally made an appointment with a high official at the Pentagon, in order to tell him what I felt was happening to the morale of the men at Detrick, and to ask that $64,000 question: Why hasn't the Department of Defense ever come to the rescue whenever Detrick is being maligned?

"Well," he says, with a patient smile on his lips, "we don't want to get mixed up in it. It's best just to remain silent."

"Couldn't you simply release the truth?"

"No," he says, "it's best just to remain silent and stay out of it. No one would believe us, anyway."

And there it ended.

There was one other main point that I wanted to clear up with regard to the necessity of having to continue the biological and chemical programs, and that one point could not be answered at Fort Detrick. One of the prime reasons for the continuation of CBW programs, says the Department of Defense, is because other nations are doing the same thing.

Since Japan, West Germany, and the Soviet Union, as well as England, are also carrying on research and development in CBW, I sent out more or less the following letters to the Ambassadors of each of these countries:

"Due to the recent interest in Chemical and Biological Warfare, both on Capitol Hill and in the newspapers, the above newspapers have asked me to do an in-depth series on the subject in relation to Fort Detrick, which is a part of our community.

"Since the Department of Defense uses as a basis for its continuance of this investigation the fact that your country is involved in the same investigations, I wonder if it might be possible either to discuss this with you or have a statement on the subject with regard to what your country's position is in this area. It would seem an advantageous opportunity to clarify your country's position one way or the other."

The Embassy of Japan was the only one to reply.

"The basic position of the Japanese Government on chemical and biological warfare may be summarized as follows:

"1) We should prohibit not only the use of chemical and biological weapons but also their development, production and stockpiling, since the effects on mankind of the possible use of these weapons might extend over a long period of time.

"2) The Japanese Government wishes to exert its utmost efforts to bring about an early and effective elimination of these weapons.

"We are of the view that it seems to be more appropriate to tackle biological and chemical weapons together rather than separately, despite the difficulties in verifying the production of chemical weapons as well as in determining the scope of the chemical agents to be prohibited.

"3) Although the Japanese Government has acceded to both the Hague Declaration of 1899 and the Convention of Land Warfare of 1907, it has not yet ratified the Geneva Protocol of 1925. Since the Geneva Protocol prohibits only the use in a war and of the weapons in question, without touching the production and stockpiling, and since different opinions exist as to the interpretation of its coverage, it is not a fully satisfactory international instrument.

"If, however, we should find ourselves in the unfortunate situation that an agreement to prohibit completely both chemical and biological warfare weapons cannot be concluded in the near future, the Japanese Government would be prepared to consider the ratification of the Geneva Protocol."

I have never received a reply from either the Soviet or West German Embassy.

It has not been my personal intention of taking a position in regard to Fort Detrick and its continuation of biological research, except to try to be as objective as I can be. My conclusions may not be objective in the least. What I have tried to do with this series was to bring to public awareness facts and information that the people might not have been made aware of—like the alarm system, which seems to me to be of the utmost national importance. I wanted to show that men were not being either forced or induced by financial rewards into becoming human volunteers in the Medical Unit. I wanted to point out that when human beings are used in experiments, only the highest ethical standards are utilized. I wanted also to bring out the fact that while we keep hidden factual information about biological warfare from the public, the Soviet Union educates its public to be aware of it, and how to defend themselves against such an attack.

But I think more than all the rest, it seemed to me that the men who work in Detrick each day, who potentially risk their lives in experiments that will have beneficial effects in our lives, that these men, lest we forget, are Americans. They are sincerely convinced that they are fighting, in their own way, to protect our country against a common enemy just as much as any soldier in Vietnam. True, there is no enemy at our shore, as yet, but they hope that if one ever comes, they will have helped this nation prepare for that attack.

Then, finally, I came up with this thought, this summary of what I may have learned out at Detrick:

The manufacture of ammunition, of tanks, of hydrogen bombs, and research and development for chemical and biological defense are not the causes of wars—they are the symptoms of that cause, in order to evaluate the impulse for war in man, you don't banish the symptoms without first discovering the cause, nor will such an effort be successful. It may very well be that the cause is no longer related to the symptoms, and that man is destroying himself and the world he lives in needlessly, due to some primitive, deeply-hidden mechanism he no longer needs to employ. Until man can discover that cause, however, we will continue to live with the symptoms, and perhaps mistakenly read the symptoms as the cause—a mistake man may come to understand one of these days, and thereby end that urge that is as deeply rooted in his soul as is the need to protect.

Therefore, in my view, ending chemical and biological research in the United States would merely be banishing the symptoms. There is obviously only one place for each of us to look for the causes of war, and that is within ourselves.

THE F–4—THE LAST AIR SUPERIORITY FIGHTER ACCEPTED INTO AIR FORCE INVENTORY SINCE 1958

Mr. GOLDWATER. Mr. President, it was in 1958 that the last air superiority fighter was accepted into the Air Force inventory, and that was the F–4. It has performed an admirable and outstanding job for the Tactical Air Command in both air-to-air combat against Migs and in interdiction and ground support.

During this same span of time the Soviets have introduced at least five interceptor types, all capable of higher speeds than the F–4, and all of these models are highly maneuverable posing a real threat to our pilots.

In December 1969, after 5 years of study, the McDonnell Aircraft Co. of St. Louis was awarded a contract to build a new air superiority fighter which we call the F–15. Even though this aircraft is badly needed by our Air Force, the members of Congress for Peace Through Law are proposing to cut $185 million from the budget covering research, development, testing, and engineering. This I call shortsightedness at its worst, but then the whole effort of this group ignores completely the need for an adequate defense of our country. I intend to discuss the F–15 more thoroughly in the coming debates, but I found an article in "Aerospace Safety" that points out some of the advantages in the F–15 and its system's safety. It was written by Maj. Robert M. Greene, Directorate of Aerospace Safety. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE F–15 AND SYSTEM SAFETY

(By Maj. Robert M. Greene)

Last December after more than five years of studies and intense competition, the McDonnell Aircraft Company was awarded the contract to build the F–15 air-superiority fighter for the Air Force. Pratt and Whitney is building a brand new afterburning turbofan to power this twin-engine airplane. This will be the first new fighter aircraft for the USAF since the F–4 and the first USAF fighter designed specifically for air superiority in almost 20 years.

With very few exceptions, Air Force pilots have always been at a disadvantage in thrust-to-weight ratio, turning ability, and some of the other performance factors that are important in a technically unexcelled "air superiority" fighter. In World War II, the *Thunderbolts* and *Lightnings* were technically out performed by some of the lighter, faster enemy aircraft. In Korea the F–86 came close to matching MIG–17 performance but was still on the short end of the stick. In the air war over North Vietnam, our F–4s and F–105s were still outperformed by the MIG–17s and MIG–21s when it came to the classic "turn and grunt" rat race. Nevertheless, from World War II through Korea to Vietnam, the American airman has compiled an impressive record of kills which stands as a tribute to his training, skill, courage and determination. This individual excellence has masked the aircraft performance edge that has generally gone to the enemy.

But the F–15 brings a new era to air superiority. The American pilot will have a greater thrust-to-weight ratio, lower wing loading, better cockpit visibility, and better

armament (including the SRM or "dogfight" missile) than any aircraft possessed or forecast for the "threat" powers through the 1980s.

For the first time, the American fighter pilot can go into combat in a machine that will outturn and outshoot his opponents.

How are we going to build an aircraft like this? It didn't just happen. It has taken years of agonizing effort by some of the best people in the Air Force. These people realized that we could not build an "all things to all people" aircraft and have a true air superiority fighter.

The concept of energy-maneuver-ability has been very diligently applied to this aircraft. Consequently, weight has been kept to an absolute minimum, as has the gadgetry and systems that inevitably try to attach themselves to any system.

Performance is not the only aspect of F–15 development that has been considered. The reliability requirements established for the F–15 are more stringent than in any previous fighter. Avionics, airframe, and armament systems reliability requirements have necessitated a new approach. System/cost effectiveness procedures have been applied to evalulate the functions of the total system, insuring that each function and each component are combined to produce the best weapons system for the dollars expended. In addition, the total cost of the F–15 weapon system has been under continuous scrutiny, so several features which would increase the system's overall effectiveness have been eliminated due to the austere funding environment.

Survivability/vulnerability (S/V) is receiving more emphasis than ever before. Our S/V lessons from the war in Southeast Asia are being applied to the F–15.

Extra attention is being given to the all important maintainability of the F–15.

These are just a few of many specialized disciplines that are being applied to the F–15 and its engines. The final result of all these efforts that are being expended before hardware is produced should be a weapon system that will require fewer redesigns, modifications and retrofits, and less money spent as a result of ECPs than any other fighter aircraft yet built.

Pratt and Whitney is running a similar program on the design of the engine for the F–15. The designation for the engine, under the new system, is "F–100," of all things!

But one of the most remarkable managerial aspects of this program is the long range planning by the SPO to reduce the cost of the program by reducing the accident rate. Each year we waste millions of dollars by bashing aircraft all over the world. Aircraft and lives are lost due to many cause factors, including combat, weather, pilot errors, materiel failure, and a whole host of other miscellaneous reasons, some of which we have little or no control over. But a substantial number of aircraft (not to mention missiles, munitions and other equipment) are lost each year due to what we call *design deficiency*, and this is something we *do* have some control over.

Millions more are spent in the retrofit and modification of aircraft and other systems to eliminate design deficiencies. This is not to imply that aircraft designers are negligent. There are several reasons why safety critical design deficiencies appear in the final design of an aircraft. Some are as a result of the simultaneously increasing complexity and performance of our new aircraft. It becomes more and more difficult for a single individual to have sufficient visibility over the system to foresee all the design safety problems. Designers of individual components or subsystems do not always have the "big picture" as to how their designs integrate into the total system and interface with other designs. This has made it necessary to employ a formalized safety engineering program on our new systems. If the point is not yet made, then consider the fact that we do not have an aircraft flying today which has not undergone a major retrofit modification as a result of an accident or series of accidents!

So with this knowledge in mind, the managers of the F–15 program are requiring McDonnell and Pratt and Whitney to perform several different types of safety analyses on the design of the aircraft and engines. These analyses are directed toward eliminating the features in the design that could eventually cause an accident. This relatively new approach to accident prevention is called "System Safety Engineering." Although we say that it is a new approach, it has actually been applied to nuclear weapons since their beginning. And the record for nuclear weapons is impressive in that there has never been an accidental nuclear detonation.

The first time System Safety was applied to another type of system was with the Minuteman missile, and the reduction in accident rate for the Minuteman over previous missiles has been substantial. System Safety was first applied to an aircraft during the development of the C–5A and then later to the A–7D. As a result of the system safety analyses numerous safety deficiencies were corrected in both aircraft before the hardware was ever flown.

The basic philosophy behind the system safety approach is founded on the assumption that sooner or later parts will fail, maintenance personnel will perform improper installation or repair operations, and pilots will make mistakes in judgment, technique, etc. The system safety engineer asks, "What happens if one of these failures occurs?" The result is a list of hazards which are categorized as to consequence. A hazard that would result in the loss of the system and/or the crew is called a Category IV hazard. Hazards that *could* cause loss of aircraft and/or crew if rapid action is not taken are called Category III. Category III and IV hazards are eliminated by redesign, or warning or protective devices are provided or appropriate procedures are inserted in the flight handbooks.

Another area where more safety emphasis is being placed is in the "lessons learned" category. Data from previous accident experience has been analyzed as has AFM 66-1 maintenance data. Bad design practices which have caused hazards in other aircraft have been identified and steps are being taken to insure that these practices are not repeated in the F–15. In addition, these lessons learned are inserted into the AFSC Design Handbooks for future reference and use.

Here are just a few examples of hazards that already have been designed out of the F–15. Each of these hazards has caused the loss of several aircraft of a particular type and some aircraft types have suffered losses due to all of these hazards.

1. In case of flight control linkage disconnect or battle damage control surface(s) will fail to a nominally neutral position rather than to a full travel position.

2. In case of a jammed stick (tools/FOD in the works) stabilator control is still available through the command augmentation system (CAS) which is actually an electrical (fly-by-wire) connection between the stick grip and the control surface actuator. The aileron has a safety spring cartidge which allows control of one aileron, if the other is jammed.

3. The fuel system requires no management by the pilot except for drop tank selection.

4. Fuel lines are submerged in the fuel tanks, except where absolutely necessary for them to be outside.

5. The primary heat exchanger is as close to the compressor bleed air valve as possible. Air exiting the primary heat exchanger is below the autoignition temperature of aircraft fluids.

6. Most equipment and lines have been removed from the engine bay to reduce the possibility of an engine bay fire.

There are many more examples of hazards that are being closely watched in the design of the F–15, but these few illustrate the fact that more safety is going into the *original* design of an aircraft than we have ever had before.

Another significant requirement to be applied to the development of the F–15 is the construction of a mathematical model of the system. This model is a computerized representation of the F–15 that is used to evaluate the safety impact of changes in the design, to identify safety problem areas and to actually predict F–15 safety performance and accident rates. There are other mathematical models of the F–15, including a reliability model and a performance model. All of these models are put together in the system cost effectiveness model which predicts total system performance.

And speaking of predictions, the F–15 is the first fighter aircraft to have a contractual requirement as to accident rate. The requirement is directed toward the objective of achieving no accidents during the first 5000 hours of flying time starting at first flight. In addition, McDonnell has been given the goal of a maximum cumulative accident rate of eight per 100,000 flight hours at the 200,000 hour time point. This reduced accident rate is better than what could be expected from improved technology alone, and McDonnell is predicting that, with the rigorous application of system safety engineering, the accident rate goal can actually be bettered.

System Safety is something that *will* pay off for the F–15. Our hardware is too expensive for us not to put a full time effort into a safety oriented design. So the young pilots coming up will enjoy a unique mating of two seemingly contradictory characteristics. They will truly be operating the world's best and safest fighter!

THE BIG THICKET: THE PRIMEVAL SHRINE OF TEXAS, A POEM BY CARLYSE BLISS

Mr. YARBOROUGH. Mr. President, the preservation of the wilderness land in southeastern Texas known as the Big Thicket is one of my major legislative concerns this session.

Since 1966, when I first introduced a bill to create a national park, I have urged the Senate to take immediate action on this unique forest wonderland in Texas. Once again, with the support of conservation and wildlife groups from my State and around the Nation, I ask for Senate approval of the bill S. 4, so that this Congress might set aside at least 100,000 acres of land in Texas as a Big Thicket National Park.

An excellent poem, entitled "Primeval Shrine," written by Carlyse Bliss, captures the essence of the beauty of the Big Thicket. The poem has appeared in "A Book of the Year, 1970," published by the Poetry Society of Texas. The "Primeval Shrine" has won the Francis E. Abernathy Award of the Poetry Society of Texas for a poem whose intent is to plead for the saving of the Big Thicket. Furthermore, these verses of Carlyse Bliss are, in part, the introduction to Lois Williams Parker's "Bibliography of the Big Thicket." I ask unanimous consent that the poem be printed in the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

PRIMEVAL SHRINE

(By Carlyse Bliss)

Big Thicket is our state's primeval shrine,
Prismatic colors paint the season's scene in
leafy patterns—picturesque design—
Smooth shades of peas, and pine, and muted
green.
For this is freedom in its simplest form,
Where wild things thrive, partake of what
they have:
A tree is shelter from the sun and storm,
A stream is where all creatures lap and lave.

The chaparrals and baygalls shield the deer,
And close in fawn, bear cubs, and other
young;
The barriers of briers fence out fear,
Blithe hearts hold all songs that birds have
sung.
O leave God's creatures this last place that's
free
From worry, want, and dread of you and
me!

ADDRESS BY SENATOR COOK BEFORE LAW ENFORCEMENT OFFICIALS

Mr. PERCY. Mr. President, on August 12, I had the privilege of hosting a conference for 80 law enforcement officials from the State of Illinois. As part of the conference, my good friend the distinguished junior Senator from Kentucky (Mr. COOK), addressed the gathering and, if you will excuse the expression, he "stole" the show.

One of the reasons he stole the show was that he revealed again his sensitive regard for the enormous pressures being placed today on our policemen. The conferees knew almost from the moment Senator COOK assumed the podium that he had firsthand knowledge of their problems. And their intuitions proved accurate; for some 7 years just prior to being elected to the Senate, Senator COOK served as a county judge, having direct administrative responsibility for a 300-man police force. He knows the demands, he knows the pressures, he knows the sacrifices required, and he knows the enormous personal courage needed to take to the streets day after day.

Another reason why Senator COOK so impressed the conferees was that he demonstrated again both his deep personal desire to find the means by which crime can be brought under control and his commitment to stay within the confines of the Constitution in legislating and administering the law. He conceded early that the points of law may often be unclear as they pertain to specific, on-the-street situations, but urged that it must be every policeman's desire, as it must be every Congressman's desire, to adhere to the law as interpreted and handed down by our courts. Those who are charged with enforcing the law must abide by it, if anyone else is to be expected to.

Mr. President, Senator COOK was invited to address the Illinois Conference on Law Enforcement and Individual Rights because, as his Senate colleague, I have grown to respect and admire his understanding of the problems of crime control and his work in the Senate in this area. I am grateful for the message he brought to the conference. I ask unanimous consent that his remarks be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LAW AND ORDER WITH JUSTICE

(By Senator MARLOW W. COOK)

Recently over 20,000 Kentuckians answered a survey in which they were asked to list the nine major domestic problems. Crime was first. Crime was first because crime affects almost every American.

In 1969, over 600,000 Americans were victims of crimes of violence—including 14,000 murders, over 35,000 reported rapes, nearly 300,000 robberies and over 200,000 assaults. Over four and one-half million Americans were victimized by theft. In the same year crime cost individuals and businesses over $31 billion.

In addition, every American whose local officials have been corrupted by organized crime, every American who pays higher prices because of racketeering and every American whose local taxes are raised for extra police protection is a victim of crime.

Every American woman who dares not walk alone, every American who flees our downtown areas at night and every American who double-locks and chains his door is a victim of crime.

That includes almost everyone.

But, as law enforcement officers, you know that. You know that the rapid increase of crime in our cities and states has deprived our citizens of their basic right to be free from fear. When this freedom is lost, our country is in serious trouble, and Congress must respond. The rampage of crime can be stopped now and I can assure you it is very high on our list of priorities.

President Nixon set the stage for a "War on Crime" in his State of the Union Message this year:

"If there is one area where the word 'war' is appropriate, it is in the fight against crime. We must declare and win the war against criminal elements which increasingly threaten our cities, our homes and our lives."

If we are to win this war which is tearing the fabric of our country, we must have new methods. Congress has and will be considering several bills which should make your job more effective.

Although crimes such as murder and robbery are essentially local problems, the federal government can play a large role in helping state and local agencies to coordinate their efforts. For example, Congress has felt it necessary to respond to the serious threat posed by the abuse of drugs. As law enforcement officers correctly analyzed, drug abuse is a root cause of many personal crimes. The Senate has recently passed an omnibus narcotics bill, the Controlled Dangerous Substances Act, which amends the narcotics laws to provide a new and comprehensive penalty structure. It also increases the scope of the warrant and arrest authority of agents of the Bureau of Narcotics and Dangerous Drugs.

This bill, of course, is just the beginning. Congress continues to be concerned. The use of dangerous drugs has permeated every level and age group in our society. The number of narcotics addicts in the United States is now estimated to be in the hundreds of thousands. I am alarmed that this includes children who are being introduced to the deadly habit in the hallways of our schools. While we must provide stiffer penalties for all pushers, those who ply their wares to innocent children must receive the stiffest possible penalties. I was glad to note that the Dangerous Substances Bill provides additional penalties for those who sell to minors.

As you are well aware, the addict's complete dependence on narcotics drives up the daily cost of his habit and he must commit crimes in order to support it. The alarming increase in street crimes in recent years is due in large part to the narcotics addict. I am firmly convinced that we cannot halt the crime wave until we provide stiffer penalties for the pusher, and better treatment for the addict.

Organized crime has gone hand in hand with drug abuse in permeating every segment of life. Certainly, I think you would agree, this is one area that cannot be tackled by local law enforcement officials alone. Individuals, businesses and communities all across the country are affected—yes, even controlled—by organized crime. The imprisonment of one Mafia leader or the breakup of one loan sharking operation does not bring to a halt the crushing power of the criminal syndicate. It continues to terrorize individual citizens who are too weak to fight the gangsterism of a powerful international organization. But the United States government *cannot* and *must* not be intimidated by the criminal syndicate. The federal government has taken one lesson from the syndicate. They have organized. The Justice Department has organized, state, local and federal agencies to fight the destructive and tragic effect the Mafia has had in America. You, as representatives of local law enforcement agencies must join with Congress and the Justice Department in a concerted effort to eliminate organized crime once and for all.

The Administration and Congress are urgently aware of this problem and have pledged the necessary funds and manpower to attack the Mafia. In his drive against syndicated crime President Nixon has moved to expand the efforts of the Organized Crime and Racketeering Section of the Justice Department which has been woefully understaffed. In addition, new strike forces have been created. This technique brings together a team of federal agents from a variety of agencies under the direction of the Organized Crime Section. The Organized Crime Control Act of 1969, which passed the Senate and is now pending before the House, embodies the President's recommendations on syndicated gambling, the protection of witnesses against organized crime and the regulation of litigation seeking to suppress the infiltration of legitimate organizations by racketeers. The criminal syndicate is probably the most difficult problem our law enforcement officers have to face. But Congress will, I am sure, do its part in authorizing the necessary funds and manpower to get the job done.

As you probably are aware, one key way in which Congress has responded to the needs of local police agencies is the Law Enforcement Assistance Administration. This agency administers block grants to states to finance anti-crime programs. This year Congress appropriated $268 million for L.E.A.A., an increase of $205 million from 1969. According to the Justice Department the bulk of these funds has been spent to hire and train police personnel and acquire new equipment.

These are just a few of the programs Congress has authorized to deal with crime. Authorizing such programs is not always easy because of the careful consideration we must give to the effect they may have on individual rights. While we want to stock our law enforcement arsenal with every legal weapon, we must never authorize any device which infringes on our basic individual liberties. Our freedom of privacy and freedom from governmental invasion simply cannot be abridged. The example which comes most readily to mind is the D.C. Crime Bill which recently was enacted into law over objections of a number of Senators. While the bill contained a valuable and desperately needed overhauling of the court system in the District of Columbia, the no-knock and preventive detention provisions so flagrantly violated Constitutional principles, I could not vote for the bill. I find it ironic that Congress

was willing to take from the people of the District of Columbia a right which we fought the Revolution to secure—the right of privacy in the home. I agree with Senator Ervin, the leading opponent of the bill, who said that that right is a basic liberty worth preserving from encroachment. I remind you in *Ker vs. California,* eight of the sitting Supreme Court justices, agreed that the obligation of an officer of the law to inform the occupants of the house of his presence and purpose constitutes an integral part of the Fourth Amendment. I am aware that we must find ways to prevent valuable evidence from being destroyed. But these means cannot invade the liberties guaranteed by the Constitution.

The D.C. Crime Bill also contained a legislative attempt to deal with the problem of crimes committed by defendants out on bail. The bill enables a judge at his own discretion to jail an individual who may be a danger if released. Like the no-knock provision, I felt preventive detention contravenes the Constitution of the United States. The main objections advanced by opponents are that the right to reasonable bail is abrogated and the guarantee of due process is denied. Gentlemen, you undoubtedly know that these two essential freedoms are assured Americans by the Fifth and Eighth Amendments.

The problems created by crime are great and frightening and in an attempt to solve them, we may on occasion pass laws which are unwise or impractical. But Congress must never consider laws which are unconstitutional. In protecting every American's right to be free from fear, we must also protect his right to be free from governmental invasion of privacy.

I believe Congress has had more success with the conflict between improving crime control and individual rights in its fight against obscenity. As the father of five children, I am deeply troubled by the salacious advertising minors receive in the mail. While I firmly believe the right to free speech includes the right to read what you choose, I do not believe it includes the right to mail unsolicited pornographic materials to our children. I am sure some of you have received calls from justifiably irate parents whose sons or daughters have received this filth. They will be glad to know that Congress is also troubled by this criminal activity and is considering ways to prevent this trash from reaching the mailboxes of our youngsters. The Juvenile Delinquency Subcommittee, of which I am ranking minority member, is considering a bill which would prohibit the use of the mails for the transportation of unsolicited obscene materials to minors. I co-sponsored that and two other bills designed to strengthen the obscenity laws without trampling on individual freedoms. I, for one, do not intend to let these smut peddlers make a profit from the innocence of our children, and I believe there is a way to do this without violating the First Amendment.

I can assure you that Congress is alarmed by the crime wave sweeping our country and recognizes the obstacles that must be overcome to end it. We appreciate the virtually impossible job that faces our understaffed and overworked law enforcement agencies. We are ashamed that you are the subject of much undeserved abuse and humiliation from a minority of our young people. We are concerned that our jails are overcrowded and our court dockets are filled. We worry that many of our citizens are either apathetic or unaware of the widespread operations of the syndicate. But at the same time, we must not allow our zeal in fighting crime to cloud our judgment and destroy our basic liberties.

Ending our crime problem will not be easy. It cannot be done by Congress alone. It cannot be done by the Justice Department alone. It cannot be done by local agencies alone. But, I am convinced that together we can reduce the crime rate. Then, once again America will be a place where freedom from fear is a reality.

ADDITIONAL DEATHS OF CALIFORNIANS IN SOUTHEAST ASIA

Mr. CRANSTON. Mr. President, between Monday, June 29, 1970, and Monday, August 17, 1970, the Pentagon has notified 58 more California families of the death of a loved one in Vietnam and Southeast Asia.

Those killed—

Capt. David W. Ayers, husband of Mrs. Linda M. Ayers, of Santa Susana.

L. Cpl. John F. Barnett, husband of Mrs. John F. Barnett, of Oxnard.

Sp4c. William R. Bonner, son of Mr. and Mrs. Roy D. Yarger, of Sepulveda.

Sp4c. Mark C. Brantley, son of Mr. and Mrs. Loyd F. Brantley of El Monte.

Sgt. Laurence G. Brown, son of Mr. and Mrs. Walter G. Brown, of Fullerton.

Sp4c. Mark J. Bush, son of Mr. and Mrs. Carl A. Bush, of Anaheim.

Sgt. James L. Campbell, son of Mr. and Mrs. James A. Campbell, of Northridge.

Sgt. 1c. Thomas A. Campbell, husband of Mrs. Sylvia A. Campbell, of Seaside.

Sp4c. George A. Capuano, son of Mrs. Ruth C. Capuano, of San Diego.

Gunner's mate guns 2c. William J. Cariveau, son of Mr. and Mrs. James L. Cariveau, of Santa Barbara.

Sp4c. Roger J. Carr, son of Mr. and Mrs. William F. Carr, Sr., of Fullerton.

Sp4c. Carlos Chavez, Jr., husband of Mrs. Dora A. Chavez, of Oxnard.

Pfc. Thomas L. Cusson, son of Mr. Henry J. Cusson, of Essex.

Sp4c. Manuel L. Dick, son of Mr. and Mrs. George Dick, of Coleville.

Pfc. Jerry O. Emerine, son of Mr. and Mrs. Elwood B. Emerine, of Benicia.

Pfc. John A. Garza, son of Mr. and Mrs. Candelario Garza, of Porterville.

Sp. Arthur F. Gleim, Jr., husband of Mrs. Dagmar E. Gleim, of Aptos.

Pfc. Steven T. Griggs, son of Mrs. Johnnie A. Trotter, of Atwater.

Sgt. Mervyn E. Hargraves, husband of Mrs. Kathleen F. Hargraves, of Santa Maria.

Sp4c. Frank S. Hernandez, son of Mr. and Mrs. Christino G. Hernandez, of Fresno.

Sp5c. John J. Hoover, son of Mr. and Mrs. Estle L. Hooper, of Ventura.

Builder 2c Nelson M. Hyler, son of Mr. Robert T. Hyler, of Monterey.

WO 1. Mark T. Jernigan, husband of Mrs. Andrea C. Jernigan, of El Centro.

Pfc. Greg Keller, son of Mr. and Mrs. Garland Keller, of Whittier.

Sp4c. Thomas D. Kloss, son of Mr. and Mrs. William J. Kloss, of Temple City.

Sgt. John A. Martinez, son of Mr. and Mrs. Elifieo Martinez, of San Francisco.

Sp5c. Larry J. Meador, husband of Mrs. Cynthia L. Meador, of Sacramento.

Pfc. Dale P. Meehan, husband of Mrs. Sherry D. Meehan, Edwards AFB.

Pfc. Wieland C. Norris, husband of Mrs. Melodye J. Norris, of Gardena.

Pfc. Jesus C. Nunez, son of Mr. Jesus C. Nunez, of Los Angeles.

Sgt. Richard M. Pearl, husband of Mrs. Felisa B. Pearl, of Sacramento.

Sp4c. Lawrence L. Petersen, son of Mrs. Dorothy A. Moseley, of Eldridge.

Capt. James A. Petrie, son of Mr. and Mrs. Michael J. Petrie, of Carlsbad.

Sgt. Thomas L. Poole, husband of Mrs. Christine L. Poole, of Hawthorne.

Pfc. Melvine L. Pullen, husband of Mrs. Winifred G. Pullen, of Santa Cruz.

Sp4c. Larry W. Rasey, son of Mr. and Mrs. Charles E. Rasey, of Taft.

Sp4c. William D. Rollason, son of Mrs. Janet D. Rollason, of Riverside.

Sgt. Donnie H. Russell, son of Mr. and Mrs. Euell L. Russell, of Tracy.

Pfc. David F. Santa-Cruz, son of Mr. and Mrs. Frank S. Santa-Cruz, of San Jose.

Sgt. William M. Scanlon, son of Mr. and Mrs. Hubert P. Scanlon, of Los Banos.

CWO Anto J. Schoepke, husband of Mrs. Judith A. Schoepke, of Santa Barbara.

Sp4c. William F. Settle, son of Mr. Foy L. Settle, of Richmond.

Pfc. Gareth M. Silver, son of Mr. and Mrs. James M. Silver, of Palo Alto.

1st Lt. Lauren W. Standring, son of Mr. and Mrs. Paul Standring, of Reseda.

Pfc. Curtis E. Stelzer, son of Mrs. Irene D. Stelzer, of Lodi.

Sp4c. Boyd A. Stephens, Jr., son of Mr. and Mrs. Boyd A. Stephens, Sr., of Mendota.

Pfc. Robert Velasquez, son of Mr. and Mrs. John P. Velasquez, of Los Angeles.

Sp4c. Michael P. Vullo, husband of Mrs. Kathleen C. Vullo, of Brea.

Capt. John L. Wadsworth, husband of Mrs. Elizabeth E. Wadsworth, of Claremont.

CWO2 Marvin L. Wagner, husband of Mrs. Barbara E. Wagner, of Sacramento.

Pfc. Robert W. Ward, son of Mrs. Geraldine B. Ward, of Concord.

Pfc. J. V. Watson, son of Mr. and Mrs. Jessie Watson, of Los Angeles.

Pvt. Thomas E. Watson, husband of Mrs. Katherine N. Watson, of Costa Mesa.

Sp4c. David G. Weber, son of Mr. and Mrs. Gerald A. Weber, of Chino.

1st Lt. Wiltse L. Weber, husband of Mrs. Lynda B. Weber, of San Luis Obispo.

Sp4c. Frank A. Webster, husband of Mrs. Alberta A. Webster, of Torrance.

Capt. David R. Weigner, husband of Mrs. Mary A. Weigner, of Santa Maria.

They bring to 4,193 the total number of Californians killed in the war.

APPEAL FOR STUDENT RESPONSIBILITY FROM NATIONAL TEENAGER OF THE YEAR

Mr. GURNEY. Mr. President, last May we witnessed a great expression of public sentiment against our cross-border operations in Cambodia. Much of this protest came from young Americans who at times demonstrated their criticism in an inexcusably irrational manner.

Such hysterical reactions to national policy decisions have prompted many American citizens to be skeptical of our institutions of higher learning and to be rightfully disturbed at the attitudes which appear to be nurtured on college and university campuses.

I would like to suggest that even at such a time of furious protestation, there were thoughtful, responsible students who were making intelligent comments

about the future of the Nation's university system. One of these young people was 18-year-old Ralph A. Penalver, the 1969–70 National Teenager of the Year.

Ralph lives in Miami, Fla.; he came to this country from Cuba in 1961. His selection marked the first time that an immigrant has been chosen as America's top teenager.

As the holder of this year's title, Ralph visited numerous campuses and talked at length with students, administrators, and faculty members. At the height of the dissent over our move in Cambodia, Ralph issued an appeal for an end to violence and a return to reason in academic communities. This perceptive editorial was aired over WTVJ, channel 4, in Miami. I ask unanimous consent that Ralph Penalver's remarks be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN OPINION FROM THE NATION'S NO. 1 TEENAGER

Each year, an outstanding teenager is selected from each state. From those winners a National Teenager of the Year is selected.

The holder of that title this year is a Miamian—18-year-old Ralph Penalver, a graduate of Christopher Columbus High School. He is now a pre-med freshman at the University of Miami. Penalver has been visiting dozens of campuses, speaking, listening and observing.

In view of the current turmoil in the nation's university system, we asked Ralph Penalver to present a guest editorial on the subject:

"Our universities have always been citadels of free expression and diverse ideas.

"During the past days, this freedom has been challenged by an authoritarian and powerful minority who have imposed their political beliefs on the majority seeking an education.

"Apparently, these groups of students have failed to grasp the purpose of a university.

"Debate, rational argument and free expression of all beliefs are the means by which we should find solutions to the problems we are facing. Violence from any source cannot exist in an academic atmosphere.

"We hear voices in the land expressing opposition without alternatives, finding fault but never favor; perceiving gloom on every side and seeking influence without responsibility.

"The time has come for intelligent, unemotional and responsible students to assume positions of leadership on our college campuses. We cannot tolerate a privileged elite destroying our educational system for their radical interests. Our universities, our institutions, are not perfect, but they are far too good to be destroyed and far too good not to be made better."

VISTA NEEDS FEDERAL BOOST

Mr. YARBOROUGH. Mr. President, since 1965 VISTA has sent thousands of young Americans and other concerned citizens into pockets of poverty in this country to root out the great injustices that afflict our poor. And though the program has had certain problems in the past few years, VISTA has brought to many of both the urban and rural poor a degree of the skills and capabilities prerequisite to the end of impoverishing conditions.

But now VISTA is in trouble. The President has failed to appoint a new director to run the program. Further, some 40 percent of the high jobs are either vacant or only temporarily filled. The failure of the White House in this regard to provide leadership and the apparent disinterest of this administration in rejuvenating VISTA's potential in the poverty-ridden communities have left the organization shaky, drifting, and weak.

The war against poverty, by far the Nation's weakest war effort, is not being won. VISTA needs to be bolstered and strengthened, not discouraged and diluted.

If the President of the United States sincerely does not want to be the first President in our history to lose a war to which the Nation has committed itself, I suggest that he take immediate steps not just toward the preservation of such efforts as VISTA, but also toward their intensification and growth.

Mr. President, I ask unanimous consent to have printed in the RECORD Colman McCarthy's article on page A18 of the Washington Post of July 27, 1970, entitled "VISTA and the Collision of Styles."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VISTA AND THE COLLISION OF STYLES

(By Colman McCarthy)

Until a few months ago VISTA (Volunteers in Service to America) was a unified and quietly well-run program. Since 1965, it had sent thousands of young people—as well as many of the middle and older-aged who rejected life on a shelf—into the places and scenes of American poverty. Despite the corruption and sickness of the system, and the way it tempts violence as the only means of change, the VISTAs wanted to work peacefully within it. Unlike many government attempts at compassion, VISTA was based on logic: since we send Peace Corps volunteers to serve the world's poor on the other side of the oceans, why not do likewise for America's poor on the other side of the tracks? Ghettos are in Lima, Ohio, not just Lima, Peru.

For the most part, the VISTA volunteers—paid about $600 a year—did their work well, stayed a year, perhaps two, then left. The returns on their efforts were often small, if not immediately diminishing. But at least the poor knew that someone from the washed and fed world cared—personally and with no speeches.

Lately, VISTA, with some 4600 members, has been a shaky and drifting organization. Under new management since the Republicans took office, the goals and style of VISTA are now the subject of a bitter fight that has no chance of being settled with in-house grace. All in all, disputes where ideologies, suspicions and methods are the issue, and not facts, neither side is all wrong or all right. Predictably, the long-haul losers will be the poor, not that it is ever any other way.

On one side is a large group of volunteers—as many as 500—who are meeting this week under the name of the National VISTA Alliance. Smaller groups have already met in Chicago, North Carolina and elsewhere. Their feelings were summarized by volunteer Richard Roose, Burgaw, N.C., who recently wrote to this newspaper: "It has become increasingly clear that the administration has initiated a deliberate and subtle campaign to render the VISTA program ineffective or altogether nonexistent."

On the other side are OEO director Donald Rumsfeld, acting VISTA director C. R. Lane and the White House where the shots are called. Rumsfeld and Lane, who are approachable, have met with dissenting VISTAs, but usually the meetings turned into arguments, not discussions.

Specifically, the collision of styles within the program mostly involves three recent events, two of which verify the "new directions" called for. First, Rumsfeld has repeatedly said that he and his new team are now stressing non-controversial ways of serving the poor—no more "community organization for the sake of community organization." Instead of these supposed confrontation tactics, volunteers should be recruited for and perform specific service activities. Second, Rumsfeld decided in April to end draft deferments for VISTA. Third, the White House has been unable to find a man to run the program, as well as staff for some 40 per cent high jobs now vacant or temporarily filled.

On the first point—de-emphasizing community organization—both sides have viewpoints that are easily understood. As head of OEO for a year now, Rumsfeld has learned the bitter fact that much of his work is in battling Congress for money. Ironically, he must regularly explain and defend OEO decisions to the same wolf pack of critics in which Rumsfeld himself, as a Republican congressman, once bayed for OEO's hide. He is also pressured by the White House cosmeticians to spruce up OEO and make it presentable to the Republican constituency that likes its social change quiet and tidy.

Beause community organization has been the one way the VISTAs have riled many congressmen—who hear the gripes from the back-home politicians, merchants and voters who accuse the volunteers of "agitating"—Rumsfeld can now state that he is cutting out this part of the program. As Lane said recently, "we are looking for a new type of volunteer who will work within the system and lower the noise level." Rumsfeld knows he loses friends in VISTA with this talk, but he is betting he will gain them in Congress, source of the mother lode.

The volunteers, who deal with lives, not budgets, see it differently. They learn quickly that poverty is invariably political and unless you organize the poor to seize their share of the power, you are just passing out Anacin. You treat the ache but not the sickness. Sargent Shriver, who delighted in the courage of VISTAs when he ran OEO, regularly received complaints from governors and mayors about volunteers. "Great," Shriver would often say, "That's a sure sign the kids are doing their job."

Many examples exist of community organizing that had a high noise level but also a high effectiveness. In Lee County, Ark., Dr. Dan Blumenthal, a VISTA physician, helped organize a cooperative health clinic. Blumenthal believed that medical care should be given to the poor not on the basis of charity—"we treat our Negroes fine down here"—but as a human right. This wild thinking angered much of the local power structure. The resulting noise is the same kind the Nixon administration is apparently now trying to quiet.

Another volunteer, Craig Robinson, beat the system at its own game when he organized a group of coal miners in West Virginia in 1968. He told them they deserved something better than getting the shaft from the coal companies. The organizing begun by Robinson led to the black lung movement of West Virginia, which further helped in the forming of the Coal Mine Health and Safety Act of 1969.

The Arkansas Gazette on June 29 summed up in a perceptive editorial the importance of arousing the poor; too often, they are not aware of their political powers, having all their lives been systematically encouraged to believe that local government buttressed by local capital was looking out for the best interest of everyone . . . VISTA workers in some communities have simply made the local poor aware of

what they are up against and how the democratic process can be put to work for them, just as it has been used by the economic power structure." The Gazette concluded that "some of the most insensitive criticism of VISTA has come from those communities that most need the kind of 'agitation' they contend the VISTA workers bring." On balance, the program, "has served the country well, it still has a great job before it if the poor of the country are to bring themselves nearer to what is often called in administration circles the mainstream of American life."

In ending draft deferments for the volunteers, Rumsfeld was within his rights. He reasoned that deferments "increase the exposure of draft-age men from poor families" and therefore OEO should be against that. Rumsfeld later eased the decree partly allowing those who already had deferments before April to keep them. But henceforth all others would be vulnerable.

Rumsfeld's decision quickly became a symbol to many volunteers that their leader was not looking out for them. "It showed us," said Mike Fox, an organizer of the National VISTA Alliance, "just how letter-of-the-law the men on top can be." As for being a gesture to the lower-class and poor, it is questionable what the Rumsfeld decision means. A thousand or two more eligible draftees will hardly effect the pattern that the poor get drafted first and the affluent last, if at all.

The third reason for volunteer discontent—that VISTA is now in its third year without a director to run the show—means that morale suffers. Other agencies, like the FTC, can go on indefinitely without a leader, but one like VISTA, where the troops are in it for other reasons than job security and money, a popular and charging man out front is essential. But that's the trouble. The administration, say the activists, doesn't want someone popular and charging since he would only become another flame to keep the VISTA pot boiling.

What comes through from the current eruption is the needlessness of it all—as if suddenly there wasn't enough poverty to go around. The administration could easily have kept on the former VISTA director, Padraic Kennedy, who was experienced and fair-minded. But he was a Democrat, so he got the gate. On the draft, Rumsfeld could have avoided taking a stance. Peace Corps volunteers get postponements, why not VISTAs? Moreover, many think the nation should be grateful to young men who want to save America rather than saving Thieu and Ky.

On the final issue—organizing power blocs—Rumsfeld's "new directions" may be right after all, though in a way he did not imagine. Many of the more frustrated volunteers are seeing that VISTA is a waste of time. First, more than a few of the poor are so suspicious of the Nixon administration that anyone working for them, even in VISTA, is also suspect. Second, many volunteers are realizing that you can't effectively organize power in a community in just one year. A lifetime commitment is needed, not a short sabbatical from Scarsdale. In fact, if a volunteer were realistic, he would avoid the idea of community organizing on the simple grounds that he is still too green to take on the local power gang. Better to spend the year toward getting a medical or law degree, or entering politics, or acquiring a similar talent, so that when one does help organize the poor and take on a crooked establishment, his ideals will be backed by hard skills and roots.

There is nervous talk that VISTA has had it. The events of this week, and the reaction of the administration, will tell much. One thing is sure. If the current toning down of VISTA is meant to discourage the political activist from joining up, officials needn't worry. Activists do not join VISTA—they are made by it.

PORTLAND ECONOMIC WOES DESCRIBED BY NEWSMAN

Mr. HATFIELD. Mr. President, the Baltimore Sun recently published articles detailing the effects of the current economic slowdown in middle-sized cities across the country. Portland, Oreg., was one city described in a well-written article by Art Pine.

As I have stated many times before on this floor, our State's economy has been hurt greatly by the administration's economic policies. Mr. Pine puts this in succinct form. He states:

Over the past 12 months, Portland has suffered some wounds from each of the weapons in the administration's economic arsenal—tight money, defense cutbacks, business slowdown—and in the process, it has lost 15,000 of its 467,000 jobs. On the surface, the battering seems brutal.

I certainly concur with Mr. Nixon's goal of ending inflation in the United States. I think this excerpt from the article shows why I disagree with some of the President's particular steps in cooling the economy.

Every Oregonian with whom I speak describes its effects on him, his family, and his job, profession, or business.

Inflation must be halted. I will not repeat what I have stated before concerning the Vietnam war's economic effects, both in absolute dollar terms and in economic terms. Cutting our military budget also would cool the inflationary fires, as I said last week before the ABM vote.

I ask unanimous consent that this fine article by Mr. Art Pine, published on the front page of the Sun, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONLY EXPORTS BOLSTER PORTLAND

(By Art Pine)

PORTLAND, ORE., August 16.—The economic slowdown over the past 14 months has hit this coastal city from all sides except the sea. Its domestic-tied industries—forest products, electronics, and metal-fabricating—all are down. The only figures to go up have been exports—and unemployment.

Since the administration began its cutbacks, the jobless rate here has virtually doubled, reaching a whopping 6.0 per cent last month. Two weeks ago, the Labor Department added Portland to its list of 23 veritable disaster areas. Thousands have been laid off.

Still, as is seemingly the case in most such communities, Portland's economists and business leaders are not yet ready to call it a real recession. "Things aren't good," one analyst here conceded, mulling over the unemployment figures. "But," he added, "they certainly have been worse."

Time was when this foothill-studded city of 378,000 depended almost solely on its lumber industry for economic sustenance. "When housing was up, Portland was up," one economist here recounts. "When construction was in a slump, the economy here hit zero."

OTHER INDUSTRIES NOW

In recent years, the abundance of seaport facilities along Portland's factory-rimmed Willamette river has brought a diversity of other industries into the economy. The problem is, by happenstance, that the thrust of the government-induced slowdown has hit the new ones as well as the old.

Over the past 12 months, Portland has sufferred some wounds from each of the weapons in the administration's economic arsenal—tight money, defense cutbacks, business slowdown—and in the process, it has lost 15,000 of its 467,000 jobs. On the surface, the battering seems brutal.

As early as last summer, the tightening of credit and the sharp boost in interest rates already had knocked the bottom out of the housing market, cutting deeply into Oregon's shaky lumber industry and slowing construction to a rate that eventually would squeeze out 4,000 jobs.

Five months later, the cutback in defense spending had taken the steam out of the city's $40 million shipbuilding and vessel repair industry, all but emptying the huge drydocks at the Swan's Island marine yards—and sending 1,000 workers to hunt for new jobs before the end of last month.

By mid-February, the cut in corporate profits has deprived barge and freight-car manufacturers here of badly needed new contracts, while the slump at the Boeing Company in nearby Seattle squashed a major market for subcontractors and electronics firms. Manufacturing jobs dropped sharply.

Finally, a spate of labor disputes, both in and outside Oregon—combined with a shortage of materials due to delayed deliveries in the wake of the truckers' strike—seriously interrupted production throughout the Portland area. To top it all off, the downstate strawberry crop came in bad.

When the tab eventually was totaled, Portland had suffered heavy employment losses in its once-thriving manufacturing sector, construction had fallen off by 33 per cent, electronics firms were reporting business down as much as one-half, and metal fabricating slowed to a halt.

Worse yet, the series of setbacks had hit some industries so hard that some workers still have not found new jobs. The rate of persons who have used up their entire 26 weeks' unemployment compensation now is double its 1969 levels. Some 700 men a month are cut off without benefits.

To be sure, such a wide-spanning drop in nearly every one of Portland's manufacturing industries is not to be dismissed. The layoffs, when they have hit here, have been especially severe. A welder released from a ship-repair firm is likely to be unable to transfer to boxcar manufacture.

A 31-year-old maintenance electrician, laid off from his $172-a-week job at a marine yard last May, has been unable to find new work despite 3½ months of a day-to-day trying, and has had to eke along on a $55-a-week unemployment check—and relatives' loans—to support his family.

ANOTHER EXAMPLE

Another plant-worker, 63, spent four months looking for a job after he was dropped from a ship-repair firm's payroll when he broke an arm last March. He now works for a steel fabricating plant, but lost $2,300 in the process before he found work.

Still, as in other American cities which seem to be hard-hit by the slowdown, except for those persons who actually have been laid off from jobs, the downturn has meant little more than occasional inconvenience—cutting back on travel plans, putting off buying a house.

Portland's attractive downtown business section still brims with shoppers carrying armfuls of packages that belie any talk of a serious recession. While merchants report buyers are more price-conscious, only the luxury-item stores are off more than 3 or 4 per cent.

And while residential construction admittedly is in a slump, no such thing is true for commercial building. The city is filled with cranes operating feverishly to erect new skyscrapers. Bank deposits are down some 8 per cent, a vice president reports, but another banker says they are not down at all.

NOT ALL IN DOLDRUMS

Further, nowhere near every industry in Portland is in the doldrums. The fast-expanding service companies as maintaining a

moderate growth, and exports—which account for 8 per cent of Portland's economy—are up $60 million so far this year, about a fifth above 1969 levels.

Mrs. John Trout, a thirtyish housewife in Portland's northeast residential section, is pained more than by inflation than by the impact of the slowdown. Her family's decision to postpone buying a new car again this year, she said, was dictated more by interest rates than by any loss of income.

Despite the gloomy economic indicators, Portland's top business-watchers are more optimistic than might be expected about the outlook for the coming year. Certainly, they concede, the unemployment rate may rise a little more, and the economy will stay flat—but only for a few more months.

Rather, they are nearly unanimous in pegging the future of the city's economy to the performance of its old staple, the forest products industry. And, they note hopefully, the housing market—which keeps the lumber-mills humming—already is showing signs of turning up.

THE LOCKHEED C–5A PROGRAM

Mr. TALMADGE. Mr. President, during debate on H.R. 17123, the military procurement authorization bill, several Senators have referred to the Lockheed C–5A program as one of the worst examples of waste in defense spending.

It is unfortunate that the critics of the C–5A program have chosen to ignore a great many essential facts. I believe that an article in the August 17 edition of Barron's weekly has done an excellent job of putting the C–5A program in perspective. It points out the contribution that Lockheed has made and continues to make to our national defense and it also emphasizes the fact that the C–5A program is not the worst example of cost overruns.

Mr. President, I ask unanimous consent that the Barron's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TARGET: LOCKHEED—SENATOR PROXMIRE'S ESCALATED WAR IS INDEFENSIBLE

During the past half-century, Lockheed Aircraft Corp. time and again has made aviation and aerospace history. Back in the 'Twenties, Captain George Wilkins flew over both the North and South Poles in a Lockheed Vega. Wiley Post's world-girdling "Winnie Mae" was a Vega, as was the craft in which Amelia Earhart soloed across the Atlantic. Lindberg flew a Lockheed Sirius over the Bering Sea to Tokyo, while Howard Hughes set his round-the-world record in a Lockheed Super Electra. During World War II, with the help of Rosie the Riveter, the Burbank firm mass-produced 20,000 combat planes, mainly the P–38 fighters that shot the Luftwaffe out of the skies. In Korea, Lockheed's F–80 Shooting Stars did the same to Russian Migs. Lockheed built the U–4 spy plane and the F–104 fighter; since 1952, the latter has been the mainstay of NATO's air defense. Its Agena rocket was the workhorse of the space program throughout the 'Sixties, with 250 successful launches. The Polaris submarine-fired ballistic missile, on which Lockheed completed development work two-and-a-half years ahead of schedule, for a decade has been an essential element in this country's nuclear deterrent. Now it is being phased out by the Lockheed-made Poseidon, which is technically superior to anything in the Soviet arsenal. After Poseidon's first under-water test launch a few weeks ago, a Russian tracking ship nearly crashed into a U.S. destroyer as it raced to pick up some hopefully telltale debris.

Survival of Lockheed as a going concern is clearly vital to the national security.

Main target of the attack is the C–5A Galaxy flying freighter developed by Lockheed for the Air Force, on which the company is accused of huge cost "over-runs." A $200 million item in the $18.9 billion Pentagon weapons procurement bill now before the Senate, which would assure uninterrupted production of the planes through mid-1971, has been labeled a "bail-out" for Lockheed. Senators Proxmire and Schweiker (R., Pa.) are trying to push through an amendment which, in effect, would bar use of the money unless Lockheed goes broke.

Such an outcome, to be sure, would make the Senators heroes in the eyes of all who seek to dismantle U.S. defenses and achieve "peace in our time" through unilateral disarmament. It also would take some of the heat off those responsible for the real scandal in Pentagon procurement—General Dynamics' ill-starred F–111, sometimes known as the Flying Edsel. For the nation as a whole, however, the demise of Lockheed would be a singular tragedy. To begin with, the taxpayer, whose interests Senator Proxmire claims to be protecting, would be dealt a severe blow through delays in production of the C–5A, which happens to be the one weapons system designed to trim the cost of meeting defense commitments. (Once it is deployed, whole divisions can be brought home from Germany or South Korea, at savings estimated at up to $2 billion annually. Yet, since in an emergency the plant could transport them and their equipment back in a matter of hours, it would enable the U.S. to maintain a "remote presence" where needed.) Moreover, since Lockheed is five times the size of the Penn Central (in gross annual revenues), collapse would send shock waves through the business and financial communities. Finally, an organization of unique technological capability, critical to the safety of this country, would be thrown into disarray or lost forever.

What has reduced the once-mighty Lockheed to such a parlous state? "Bad management," avers its Senate critics. The charge can easily be made against any company in difficulties, and Lockheed must shoulder its share of blame. Nevertheless, the company's long record of achievement, from the Vega through the Poseidon—and by no means excluding the C–5A, which flight tests show to be a great success—leads one to look further. No need to go beyond Secretary McNamara's Pentagon, which, among other sins of commission, foisted upon Defense suppliers a new buying system called TPP—total package procurement. Previously, in contracting for a new weapons system, the Pentagon let contracts in two stages: the first provided for development, design, engineering and testing, on a cost-plus basis; the second, covering production, was usually fixed price incentive. Officials held that no contractor called upon to design a new weapons system could possibly know in advance what his costs would be; only the government could carry the risk inherent in a DDET contract. Under TPP, however, the contractor first had to invent the product on a fixed-price basis. The C–5A was the first and most disastrous of the TPP contracts. (Recognizing the absurdity of the system, Secretary of Defense Laird is now in the process of overhauling the Pentagon's procurement stance, in essence, going back to the old system.)

Lockheed's original bid in 1965 for development and construction of 120 planes was $3.4 billion. Under the TPP plan, that was a "target price," subject to revision as warranted by changing conditions. Four years later, when the storm over "cost over-runs" broke, Lockheed was accused of having "bought in" the C–5A contract by bidding too low, assuming it could raise the ante later. If that was the strategy, however, the competition adopted it, too; all three bids on the C–5A were within 3% of each other. While costs undoubtedly spiraled, Lockheed officials deny they were at fault. The real villain of the piece, they say, was inflation, notably virulent in the aerospace industry, where orders for jet transports piled atop defense and NASA business to strain capacity and push up costs. Other elements included DOD insistence on higher performance characteristics than called for in the original specifications, a cutback in total orders, from 120 to 81 planes, which gave Lockheed less room to recoup on the production run; and higher-than-expected development costs.

Despite all the foregoing, cost escalation has been a great deal less than claimed by Lockheed's critics. Assistant Defense Secretary Packard told the Senate Armed Services Committee in May that he now expects the total tab for 81 planes to reach $4.5 billion; Lockheed has offered to deliver as many more as the Pentagon wants at $16 million each. That would bring the price for 120 aircraft to $5.2 billion, or 53% higher than the target set in 1965. By contrast, a Harvard Business School study of 12 major weapons systems showed that the average cost over-run was 220%. More recently a torpedo built under a TPP contract came in at 2,000% above the bid price.

Costly or not, the C–5A, in the words of a test pilot who flew it, is "one hell of an airplane," fully capable of carrying out its "remote presence" mission. The world's largest plane, it can load up with more than 100 tons of military equipment and fly to Europe non-stop at 500 miles per hour. Once there, it can land on a dirt runway only 1,200 feet long, or parachute the whole cargo out of its tail in 15 seconds. Coming in for a landing in zero-zero weather, all the pilot need do is take his hands off the controls and let the craft land itself. It carries a malfunction detection system that monitors 800 other systems in the plane, prints out a warning when anything is about to go wrong, and tells the crew how to fix the trouble. If the necessary spare parts aren't aboard, it sends a message ahead to the nearest parts depot and orders them. It carries its phenomenal cargoes at a cost of 2.5 cents per mile, half the cheapest air cargo rate currently available. Designed to be directly competitive with truck and rail transport, a non-military version, shuttling back and forth on a trans-continental run, could carry as much cargo as two 110-car freight trains.

Lockheed has taken its lumps for the cost over-run, writing off a pre-tax loss of $180 million on the C–5A last year. It claims that under provisions for cost escalation in its contract, the government owes it roughly $600 million. To collect, the company has taken its case to the Armed Services Board of Contract Appeals, where no decision is likely until late next year; then, if further appeal to the courts is called for, the delay could stretch into 1973. Rather than going through that snake dance, Lockheed and the Pentagon have agreed to negotiate a settlement; the procurement bill now before the Senate allocates $200 million as a contingency fund to meet whatever claims are allowed, plus another $344 million for regular payments on the planes as they are turned out. In addition, under the Defense Production Act extension already voted by Congress, the government proposes to grant Lockheed a $100 million V-loan. The heart of the issue, though, is the $200 million contingency fund, which Senator Proxmire labels a "bail-out" and Lockheed insists it must have if production of the badly-needed C-5A is to continue. The Wisconsin lawmaker is trying to amend the procurement bill to allocate the $200 million only if (1) the money is awarded Lockheed by the Board of Contract Appeals, or (2) if Lockheed goes into bankruptcy and a court-appointed trustee says the money is needed. Since there is no chance that the Board could act before year-end, the amend-

ment is a not-too-subtle device to force Lockheed to the wall.

Such a disaster would ripple far and wide. For Lockheed only now is flight testing its new L–1011 jet airbus, to finance the development of which a number of customers, notably TWA and Eastern, have put up about $150 million in advance payments. Moreover, a group of 24 banks has extended a $400 million line of credit, $320 million of which has been taken down. Lockheed concedes that "part" of the latter sum (other sources say about half) has been used to keep the C–5A and other programs rolling. Before shelling out the remaining $80 million of credits for the L–1011, the bankers want to see the color of the government's money. If it is not forthcoming (or if, as Senator Proxmire demands, Lockheed must go into bankruptcy first), the whole L–1011 program might crack up. With it might go creditors and customers alike.

Not long ago, we urged Washington to abandon its plan to save the beleaguered Penn Central, which subsequently plunged into bankruptcy. In that case too, the sum at issue was $200 million. We argued then that the rescue would do more harm than good, weakening the campaign against inflation and rewarding the mismanagement responsible for the Pennsy's plight. Lockheed, however, is a very different matter. The big aerospace firm has been brought to the brink of disaster less by its own mistakes, which of themselves would probably not be fatal, than by those of the Pentagon. The latter, in effect, first compelled its supplier to assume incalculable risks. It then proceeded to escalate a simple contract dispute into a matter of corporate life-and-death. The whole affair, finally, has been exploited unmercifully by legislators all too willing and eager to make political capital at the expense of the national security. The so-called military-industrial complex may have its flaws; if it weren't on the job, however, the U.S. government, including Senators Proxmire et al., would be out of business.

THE RESTORATION OF ACADEMIC AUTHORITY—ESSAY BY DR. ROBERT NISBET

Mr. ALLOTT. Mr. President, while the President's Commission on Campus Unrest—the Scranton Commission—continues its noisy trek around the Nation, the editorial page of the Wall Street Journal continues to serve as a forum for those who are more interested in shedding light than in generating publicity.

Today's edition of the Journal carries a wise and calm essay by Dr. Robert Nisbet, professor of sociology at the University of California, Riverside.

Dr. Nisbet is one of this Nation's most distinguished sociologists. His writing reflects the sobriety and urbanity of De Tocqueville, to whom Dr. Nisbet acknowledges a scholarly debt. His opinions on academic matters have been conditioned by a decade of experience in university administration. His article on "The Restoration of Academic Authority" should be of interest to every Senator.

So that all Senators may profit from it, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE RESTORATION OF ACADEMIC AUTHORITY

(By Robert Nisbet)

All of a sudden the word *authority* has become popular in even liberal circles of the academic world. The prospect of the coming academic year is not a pleasant one at Berkeley, Harvard, Columbia, Michigan and other major universities in the land. Memory is too vivid of the kinds of happenings last spring on these campuses that were direct, calculated responses to Cambodia and Kent State. If each of these events was sufficient reason for a scuttling of the curriculum and jettisoning of courses in the name of "reconstruction" or "reconstitution," there can hardly fail to be other, equally evocative reasons forthcoming from the New Left to justify additional scuttlings and jettisonings around the country. Nothing generates causes of revolt and insurrection like the presence of a permanent cadre of left militants seeking causes.

How do we account for sudden affection in liberal hearts toward academic authority and its resuscitation on the campus? First, the sheer fatigue occasioned by militant causes. There have been too many of them for too long. Each, with its inevitable rally, demonstration or picket line is a form of violence—verbal and emotional if no other—and hence an assault upon the contexts of genuine teaching and scholarship.

Second is the mounting fear among even the most sanguine of faculty that public patience may be running out; patience with the university as an institution in our mass democratic social order. Great societies and periods of history have existed before in human history without universities; they certainly can again. Despite the well-sown myth of the university's indispensability to our technologically advanced society, there are other, existing sources of such knowledge needing only to be developed and multiplied. They will be cheaper and more efficient, being unhampered by the plethora of ranks, privileges and immunities that go with the essentially guild-like quasi-aristocratic, Middle-Ages-sprung university. What the university in America had to offer was not unique manufacture of knowledge, but a unique structure of authority resident in a unique intellectual community. Very little else.

Third is the current state of academic freedom on the campus. Freedom to teach and learn is the principal casualty of events such as those which began at Berkeley in 1964 and reached a high point last spring after Cambodia and Kent State. When authority collapses in an institution, the scene is invaded by a host of petty tyrannies, no single one of them decisive by itself but, taken in the aggregate, capable of fettering inquiry in the classroom and, in the long run, of extinguishing free intellectual life on the campus. Such tyrannies range from direct violence through the semi-violence of building-blockades and picket lines all the way to the doubtless endurable but nonetheless corrosive emotional violence contained in public obscenity, epithet and relentless political pressure.

Add to these tyrannies the incessant rounds of faculty and committee meetings, not to mention conferences with students—whose capacity to be listened to is one of the great natural forces in the universe—and, all too clearly, the life of reason is made insecure at best.

One detects also a rising weariness, even among faculty members, with the kind of explanation of student insurrections that has become standard to the point of staleness when university presidents are consulted by members of Congress, by Presidential commissions and trustees. Viet Nam, black civil rights, the draft, imminent unemployment for some and the revolutionary ferment of modernity have been, by now, overplayed. It is too easy for many of us to recall the depression-grounded, Fascism-obsessed, unemployment-haunted and revolution-prone 1930s. Despite the swirling currents of national and international change, campuses were not then settings of vandalism masquerading as social idealism.

The student-faculty insurrections of the 1960s did not break down academic authority. *It was the prior breakdown of authority that caused the insurrections.* This breakdown had begun in the 1950s, the result of profound economic and social changes that disrupted the academic community and of a steadily rising internal politicization that fragmented traditional authority. In retrospect it is possible to see that even had there been no issues of Vietnam and of civil rights, no "malaise of student soul before technology," insurrections in the 1960s would surely have occurred. Everything we know about insurrectionary and delinquent behavior suggests that "reasons" can always be quickly manufactured. What is alone sociologically crucial, however, is prior extreme *liberalization and democratization of traditional authority.*

So high even at the present moment is the correlation between faculty-student outbursts on a campus and immediately prior—and substantial—increase in what has become dignified as "participatory democracy" that one may successfully predict in terms of this correlation. Over and over one finds that the worst and most prolonged of insurrections occur precisely where grants of governing authority to students and faculty have been greatest.

All of this is becoming clear to the great majority of faculty—the majority that chooses to be in class, to teach from scholarly competence, not revolutionary impulse, and that cherishes the academic community. Hence the rising demand for restoration of authority on the campus. Not only academic freedom but academic life hangs in the balance.

Instant authority is, however, no more possible than instant freedom. It would be very nice if the structure of academic authority, as this was known for so many decades in the American university, could be put together again; overnight; by majority vote of the faculty. But it cannot. That structure of authority was too fragile, too much the product of consensus, and of accepted academic role by all concerned, to be expected to rise now, Phoenix-like out of the ashes of the 1960s.

No other major institution in modern history has existed with the minimum of formal regulation and of contractual detail that one found in the university town until the late 1950s. It was unnecessary to *prescribe* meeting of classes for faculty. Potent though this structure of authority was, it was yet so finely drawn, and so much a part of the very atmosphere, as to be nearly invisible. Thus the essential character of the academic community; thus the special nature of academic freedom.

Such structures of authority, however, have one fatal weakness. Once seriously challenged by a militant minority, or subjected to chipping away by repeated acts of defiance by individuals, they cannot stand very long. They are vulnerable to even the feeblest and most jejune of attacks: Those such as the one mounted by Mario Savio and a few students at Berkeley in 1964. Once such structures are flouted, they are destroyed. Once destroyed they cannot be put together again.

It seems extremely unlikely therefore that present circumstances are likely to produce anything but new forms of *power* on the campus. Power, unlike the king of authority I described just above, is at once more personal, more direct, more detailed and more formal. Although most persons tend to think of *freedom* as the consequence of eroding authority in a culture, this is not the case, for freedom cannot exist save in circumstances of accepted authority. *Power*, not freedom is the invariable response in history to conditions of shattered authority. The history of the modern national state can be written in terms of the declining authori-

ties of other, older, traditional forms of authority in society.

What kinds of power can we expect to see on the campus as the condition of the minimal order required by academic performance in classroom, study, and laboratory? Let us overlook the repressive laws passed last year in 32 states, aimed at faculty-student disorders. We may take these for granted. An academic liberalism unable to distinguish between the authority of a dean or department chairman and the power of the legislature was bound to get ever larger dosages of the latter.

Let us also pass over the relentless increase in size and technical effectiveness of campus police forces. Let us, accepting the legislative and police powers as obvious by now, turn to other manifestations of power that will be vivid during the coming academic year. These are bound to have far more impact, upon the nature of the university in America than can legislature and police which, after all, only seek to maintain civil order, not reorganize the university.

The first and crucial manifestation will be increased participation of boards of trustees, *conservative boards, through effective majorities,* in academic, including curricular affairs on the campus.

One may regret this, as I do, for the history of trustee intervention in academic matters is surely a checkered one. But the lay board *is* sovereign in American colleges and universities, and the pressure of public opinion, of government officials, and, most assuredly, of alumni groups will make such intervention certain.

Such trustee intervention will touch areas heretofore sacred to faculties: Areas of appointment and promotion, of academic admissions, of academic tenure, and most especially, curriculum. For it was, as noted above, the seeming devastation of curriculum on the university campus last spring, in the wake of Cambodia and Kent State, that aroused public and government to a degree of alarm that nothing prior had been able to achieve.

None of these is an area in which trustee judgment is ordinarily very good. Trustees lack the qualifications of experience and of insight that can come only from experience. But trustee intervention will nevertheless take place in rising volume. One may hope that such intervention will quickly translate itself, time and crisis permitting, into more or less institutionalized, reasonably stable, channels. But who can be optimistic in times such as these?

The second major manifestation of power on campuses accustomed to, and now longing for, traditional academic authority will be—already is—*a striking increase in administrative management of all spheres of academic life.* University presidents are becoming stronger. The striking example set by President Hayakawa at San Francisco State a couple of years ago has virtually revolutionized trustee, alumni, and public conception of what a university and college president should be. The search for stronger presidents is, plainly, already on. Individuals of Mr. Hayakawa's combination of academic knowledge, temperamental buoyancy and fortitude are perhaps not common. But they exist—and in university faculties! It will not be necessary to go to industry, military or foundations for such persons, which is always a self-defeating mistake inasmuch as their ignorance of the details—the ever-vital details—of academic society makes them the prey of every academic charlatan on the campus.

But strong presidents cannot exist unless there are strong *presidencies.* Trustees appear to be seeing to that even as I write. One surmises that in many an institution only one instruction will be given a new president: Maintain academic and civil order. If he can do that, all gaucheries and sins in other respects will be overlooked. If he cannot do that, no amount of scientific, scholarly and professional distinction will save him for long.

With strong presidencies there will go strong administrations: Strong provosts, deans and department chairmen. One can trace much of the decline of academic authority in the American university after World War II through the degradation of these administrative positions, especially that of the all-important department chairman.

With strengthened administrations there cannot help but result substantially weakened faculties—I mean *politically* weakened faculties. This may have its advantages, for there are many teachers and scholars who believe faculty political strength is nurturing culture for permanent faculty politics. There is much evidence to support the view that the best of faculty, assessed by scholarly and teaching distinction, stay the farthest from the weird combination of Jacobin democracy and Byzantine bureaucracy that American university faculties have delighted in constructing during recent times. Such individuals elected academic life to teach and do research; not run for office. In academic *politics,* borrowing here from Yeats, the best do indeed lack conviction and the worst are filled with passionate intensity.

These are, I think, the major changes likely during the coming year or two. Among other changes, for good or bad, will almost certainly be abolition of tenure. Tenure came into being at a time when the university teacher was at about the level, in social and economic strength, of the country parson. No one would confuse the prestige, power and affluence of the university professor today with anything in the clergy. And the university is but a small part of the very large intellectual establishment in this country. Nowhere else in the intellectual establishment are mediocrity of mind, laziness and calculated subversion of role reinforced by the mystique of tenure. Tenure in the great universities has been for some time an anachronism. It will, I predict, shortly become a memory. The "reconstitution" and "reconstruction" of curriculum last spring made that inevitable.

There may be still other changes: For example the clearing from academic scene of the jungle of overgrowths in the forms of expensive, distracting bureaus, centers and institutes which have arisen under the university's Faustian assumption of role of Chief of Research Establishment, of Super-Humanitarian, of Patron of All Arts, of Adjunct Government to Washington, of Benign Therapist to identity-searching youth and of Loyal Revolutionary Opposition.

Each role is indeed an attractive one. But taking them together, it is difficult to imagine much teaching and scholarship getting done or an academic community existing. And, who knows, maybe as a consequence of these changes the university can commence the slow ascent once again of academic Olympus, to become once more an intellectual community, built around the learned disciplines and professions, rather than what it now so plainly is: Mere microcosm of society; expensive and unneeded microcosm of society.

TESTIMONY ON AN ALL-VOLUNTEER ARMED FORCE

Mr. HATFIELD. Mr. President, it is unfortunate that the Senate Armed Services Committee hearings on the draft have been postponed. With the issue of voluntarism at hand, I would like to bring to the attention of my colleagues the testimony of several individuals which was prepared for these hearings.

I ask unanimous consent that the testimonies of the following be printed in the RECORD: Mr. Patrick E. Gorman, international secretary-treasurer of the Amalgamated Meat Cutters and Butcher Workmen—AFL–CIO; Mr. John de J. Pemberton, Jr., executive director of the American Civil Liberties Union; Mr. Sanford Gottlieb, executive director of A Citizens' Organization for a Sane World; Most Reverend Antulio Parrilla Bonilla, of Puerto Rico's Committee of Resistance to Compulsory Military Service; and Mr. Thomas Lindley.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF PATRICK E. GORMAN CONCERNING THE DRAFT REPEAL AMENDMENT

My name is Patrick E. Gorman. I am the International Secretary-Treasurer of the Amalgamated Meat Cutters and Butcher Workmen (AFL–CIO). Our Union's headquarters are at 2800 N. Sheridan Road, Chicago, Illinois 60657.

The Amalgamated is a labor union with more than 500,000 members organized in about 700 local unions throughout the United States and Canada. The Amalmagated and its local unions have contracts with thousands of employers in the meat, retail, poultry, egg, canning, leather, fish processing, sugar and fur industries.

UNUSUAL CIRCUMSTANCE—UNUSUAL PROCEDURE

Our Union participates in the legislative process regularly by making its views known before Congressional Committees. Representatives of the Amalgamated Meat Cutters and Butcher Workmen testify perhaps two dozen times each year in hearings on a variety of public issues.

Our testifying by writing a statement specifically for introduction into the *Congressional Record* is admittedly unusual. We regret that this procedure is necessary because hearings on this very important legislation have not been held by the Committee on Armed Services. We had understood that during the 1969 debate on limited amendments in the draft laws, the Committee had publicly assured the Senate that thorough hearings on the conscription laws—their possible repeal or reform—would be held this year. Unfortunately, those hearings have not been called.

DIVISION AMONG AMERICAN PEOPLE

We are making this statement to support Senator Mark O. Hatfield's amendment to the Military Procurement Act to repeal the current draft laws and institute a volunteer army. We take this position because of the deep concern about the extreme division and mutual hostility which currently exists among the American people. We believe the draft furthers this division which is tearing our nation apart. Conversely, we believe, an end to the draft will remove a major point of bitterness and an important cause of hostility among various groups of Americans.

On June 4, the Executive Board of the Amalgamated adopted an important policy statement, which is entitled, "One Nation under God, Indivisible, with Liberty and Justice for All." In it we stated the problem as follows:

"The most tragic and potentially the most dangerous of the many critical problems now facing the United States is the increasing division and mutual hostility among the American people. The nation appears to be losing not only its senses but also its confidence and faith in itself. The people are being fragmented into antagonistic groups which are increasingly willing to resort to or condone violence in competing with each other.

"Competition between groups in American society is certainly not new and it is healthy.

But the new attitude of individuals and groups in carrying out this competition poses extreme national dangers. Discussion, compromise, a belief in common standards and trust in the goodwill of others seems to be increasingly disregarded.

"Instead, some parts of the American people see other parts as absolute enemies with whom no accommodation can be reached. Groups fear for their very existence unless their point of view prevails completely. Each antagonistic faction sees itself outnumbered and misunderstood by all the rest of the nation and it believes it can assert itself only through fighting."

In the policy statement, we recognized the responsibility of the leaders of our Union—as well as all Americans who have any sort of leadership position—to deal with this problem. We outlined a number of steps we are taking to combat the antagonisms in which workers are involved.

CLASS DISCRIMINATION

The draft is one of the many causes for the division among the American people. The unfairness of the draft is causing outrage among young workers and their families. They feel that because they do not have the money to go to college, they must bear most of the burden of serving the nation. And they are right!

The draft currently discriminates against workers. It discriminates against those who are not wealthy enough to go to college or be sent to college. A man who works in a packinghouse, or a supermarket, or a poultry processing plant cannot get a student deferment. Yet, he certainly is performing an important function to society and the nation—as important as the student. And his parents, or wife love him as much as parents or wives love their student-sons or husbands. They are just as eager to avoid their men getting killed.

But among the students, too, the draft has a devastating effect. Many of them see it as forced service in a war they morally and philosophically oppose. And many of these young men are guilt-ridden about their preferred position in the draft. Many of the anti-social actions on college campuses can be traced directly to the frustration and bitterness caused by the draft.

The fact is that the draft is social dynamite.

NO HAND WRINGING

It is senseless to bemoan current views, to harken back to World War II, to deplore an alleged "lack of patriotism." Handwringing and endless argumentation on this theme are useless. We must first coldly recognize conditions and attitudes for what they are *now*. And then, we must use our traditional, democratic ways to change some existing conditions.

The very first recognition must be that the major cause for many of our current internal problems is the Vietnam fighting. We are in a miserable, undeclared war, which we should never have gotten into, which we should get out of immediately and which is sapping our national strength and faith. This war, unlike previous ones, does not have immense public support—to put the matter lightly.

This terrible, endless war makes the draft even more unbearable to a very large part of the nation. It increases the intensity of bad feeling about the draft. It makes the draft an even greater cause for national dissension, anger and frustration. Two major remedies to get the nation back to some sort of harmony and sanity therefore are to end the Vietnam war and to repeal the draft.

VOLUNTEER ARMY AND DEMOCRACY

The alternative to the draft is a volunteer army—an army made up of men who choose to serve in this way. Much has been written both for and against this proposal. Again, we regret that thorough hearings on end-the-draft legislation have not been held. If they had, these arguments could have been more thoroughly aired. And the particular adversary proceedings of the Congressional hearing room could have brought more light to the issue.

Obviously, the most disturbing of the arguments against a volunteer army are those which foretell a dread danger to democracy. An elite officer corps will lead an army of professional soldiers who will be unleavened by the citizen-soldier. That army may be apt to meddle in politics or make a military grab for power in the South American style. So the argument goes.

We are impressed by the studies and the arguments of the Gates Commission on this very subject. This distinguished group, appointed by President Nixon and headed by former Defense Secretary Thomas S. Gates, met the issue head on in two chapters of its report.

The Commission points to the experience of other nations. In England and Canada, which have volunteer armies, no apparent danger of militarism exists. In some of the European and Latin American nations where military takeovers have occurred, the armies are of a combined professional-draft makeup. This is more powerful evidence than the theoretical formulation about the rise of militarism.

The Gates Commission also doubted the democratizing effect of the draftee on the army. Those who have served in the armed forces would probably generally agree. Basic training exists—in large part—to bring the draftee around to the army's way of doing things and not vice versa. It is only in the recent two or three years that any sort of major dissent has occurred within the armed forces. Even in these cases, the dissent comes from a very small minority of the troops and is generally dealt with extremely severely.

The Gates Commission points out that it may be the very inducements of a volunteer army which will end the isolation of the military. Today, being drafted is to go into forced labor. It means not only being taken from where one wants to be, but it often means a severe cut in wages and the loss of various amenities of life. The higher remuneration—both in money terms and the services provided—which will come with a volunteer army will mean that a man may feel happier in serving in the armed forces and may feel much more an actual and integral part of American life.

BASIC FACTORS

But in the long run, the danger of militarism depends on much more basic factors. It depends on how strongly civilians control the armed forces. The traditional American concept of civilian control must be strengthened whether a volunteer army exists or not. Congressional participation in the nation's foreign and military policy decisions must be increased no matter what the outcome of the present or future debates about the makeup of the armed forces will be. And the rising and dread power in both politics and the economy of the military-industrial complex must be decreased regardless of the status of the draft.

Yet, even these factors are not the most elemental ingredient for the preservation of democracy against military takeovers. They are truly the second steps.

The most basic factor is the desire of the American people to make democracy work. It is the wish of the people to be concerned about our nation and its problems. It is the desire of Americans to preserve freedom at home, as well as abroad.

It is the avoidance of overreactions to behavior or actions which may seem outrageous to us. It is the maintenance of common sense to avoid calling a massive government crackdown against a few who may appear obnoxious to the many. Above all, it is—as our Executive Board's statement points out—the need for Americans to treat each other—everyone—with respect, dignity and a willingness to try to see the other person's point of view.

NO SERVITUDE

As a union, we naturally oppose forced labor. In the past, the draft may not have been considered as servitude, but today, it is by a very large number of those affected. This fact—and this fact alone—must give the nation pause and require it to consider the entire question. If no other factors were involved, this situation would require some changes.

But there are many other factors to urge the end to the draft and the substitution of a volunteer army. We choose to pay heed to all of those factors and we support the amendment to the Military Procurement Act sponsored by Senator Hatfield for this purpose.

We strongly urge the Senate to approve this amendment. It is an important and necessary tool to help this beloved nation of ours to come out of its current desperate internal crisis.

STATEMENT OF JOHN DE J. PEMBERTON, JR.: HEARINGS ON THE DRAFT

For half a century, the American Civil Liberties Union has defended, against governmental infringement, the fundamental protections afforded by the Bill of Rights. It has consistently represented those who have asserted the rights of conscience and religious liberty protected by the First Amendment and the right to due process and equal protection of law as guaranteed by the Fifth and Fourteenth Amendments.

Based on our long-time commitment to fundamental civil liberties and upon our special experience, it is our judgment that:

1. Under the present circumstances the Selective Service law as administered is an egregious violation of civil liberties and constitutional guarantees.

2. Peacetime military conscription is not only fundamentally at war with our Nation's constitutional commitment to individual liberty, but the experience of the past 22 years demonstrates that it is rife with inequities which are inherent in the system and demand its elimination.

3. Proposals to replace military conscription with a system of universal compulsory national service would do as great, or even greater, violence to American traditions of individual liberty.

THE BASIC WRONG OF PEACETIME CONSCRIPTION

All that America stands for teaches that conscription is a last resort, to be utilized only when the warrant for its imposition is irresistably convincing. Our ancestors settled this continent in flight from countless denials of liberty abroad, one of the most conspicuous of which was military conscription. Federal military conscription was foreign to our national experience until 1963 and peacetime conscription was never tried by the Federal government prior to the dark days of 1940 when the prospect of our involvement in World War II loomed ominously. Even in 1941, a mere four months before Pearl Harbor, the renewal of that experiment could muster but a one vote margin in the House of Representatives. A freedom loving people should not, and until 1948 did not, impose this servitude upon its own sons.

Compulsory military service is always a severe deprivation of civil liberties. It not only removes young men from their homes, occupations, education, and family for long periods of time, but even more seriously it deprives them of the intrinsic condition of freedom: the direction and control of their lives. Military conscription permits the State to exercise virtually complete dominion over the individual, and compels him to engage in

activities which he may find repugnant and contrary to his individual beliefs. This is why civil libertarians approach conscription as an evil inherently derogatory of freedom which should normally be opposed. Civil libertarians will insist that proponents of conscription always carry the burden of justifying the need for the government to force an individual into military service.

The justification for such invasion of civil liberties must ultimately rest upon what James Madison called "the impulse of self-preservation." We do not think it is inconsistent with a devotion to civil liberties for citizens to be willing to deprive themselves of some liberty in the interests of meeting a graver evil. But such deprivation of liberty through conscription, may only be warranted by the overriding need of national security, in time of war or the imminent danger of war.

In a public statement made on January 30, 1966, the ACLU called attention to this higher tradition in our Nation's historic devotion to liberty. We pointed out the passage of time since World War II, during which period America has lived almost constantly with peacetime conscription. We said then:

"The passage of twenty five years would alone warrant reconsideration of the implications of conscription for individual liberty. The urgency of reconsideration is underscored by the danger that conscription originally viewed as a temporary expedient occasioned by emergency, is becoming institutionalized. It is an accepted part of life: many citizens have grown to maturity almost without knowing a time when it did not exist."

Since then countless presidential commissions, congressional hearings, the mass media, public figures and private voluntary organizations have emphasized the denials of personal liberty inherent in conscription and the particular and systematic abuses which have been spawned under the Selective Service Acts.

The evils have become so apparent that the Executive Branch of the government has expressed its desire to terminate military conscription.[1] The ACLU believes that Congressional responsibility dictates the most searching examination [2] of the justification, if any, for continuing the draft.

We believe that those who would tolerate the continued imposition of conscription on our youth bear a heavy burden of demonstrating to the whole people that it is necessary. To date, no such showing has been made.[3]

The committee should critically and soberly examine whatever justification may be offered for the retention of a Selective Service law which has heretofore been unquestioningly renewed by prior Congresses, stimulating and sustaining the alienation of our youth, and fostering divisiveness within the entire society.

Illustrative of the conflict with democratic principles inherent in conscription are the implications to be drawn from this candid statement by the Selective Service System:

"Delivery of manpower for induction, the process of providing a few thousand men with transportation to a reception center is not much of an administrative or financial challenge. It is in dealing with other millions of registrants that the System is heavily occupied, developing more effective human beings in the national interest." [4]

A free people do not willingly assign to a government agency responsibility for channelling their individual educational, career, marriage and family choices in the manner that agency deems desirable for "developing more effective human beings in the national interest."

To the foregoing, let me add that objection to the present draft is obviously reinforced by our alarm at penetrating violations of civil liberties occasioned by the current military conflict in Southeast Asia, for the continuation of which the draft is now principally employed. Our urging on this Committee a discontinuation of the draft would be incomplete unless you were advised of our reasons for believing that civil liberties interests require termination of the Indochina War. I submit for the Committee's study this policy statement adopted by our Board of Directors on June 2, 1970:

The ACLU is deeply concerned with the continuation and expansion of the war in Southeast Asia. The military involvement of this country for purposes a large part of our society does not share has, among many adverse domestic consequences, had a highly detrimental effect on civil liberties. It has fostered an atmosphere of violence which has resulted in the slaying of college students and black people, violent attacks on and by demonstrators both for and against the war, and a climate of repression in which attempts have been made to stifle criticism of the war.

"A brief checklist illustrates the war's deep depredations on the Bill of Rights, both its specific guarantees and the spirit of human freedom that it represents.

"1. The present draft system, with its severe deprivation of personal liberty and its administrative inequities, still continues.

"2. The right of non-obstructive dissent by service personnel and civilians who oppose the war has been curbed—often by harsh measures.

"3. There still hangs over the heads of young men and women the threat of criminal prosecution for various forms of peaceful expression and symbolic speech, such as flag offenses and draft card burning.

"4. Frustrations have so infuriated and frightened those trapped in the maelstrom that violence rather than dialogue and reasoned debate have become, for many, the accepted technique for resolving social conflict. The shootings at Kent State, Augusta and Jackson are but recent episodes illustrating how violence can escalate.

"5. Academic freedom, the hallmark of a free and democratic society, has been violated by those who erroneously see coercion and destruction as the solution for society's problems. Anger over the war has so incensed student feeling that buildings have been burned, academic files destroyed, persons held hostage and mood of terror unleashed. In turn, governmental repression at academic institutions has grown to dangerous proportions. In such an atmosphere, academic freedom cannot be preserved.

"6. The festering sores of urban neglect have denied equality to millions, particularly non-whites, in jobs, employment, housing and in the administration of justice. These sores have worsened because of the intensified splits in our cities over the prolonged war and the diversion of national attention and resources from the urgent need to deal with them.

"7. Freedom of the press, a vital ingredient of democracy that checks abuses of governmental power has been imperiled by the Administration's subtle and not so subtle suggestions of a government crackdown. It is not unrelated that such attacks have mounted as the mass media have told of the growing dissatisfaction with the war in editorials and news coverage.

"8. There has been an increase in military domination of policy, dissipating the civilian control envisioned by the Constitution and essential to civil liberties.

"These examples underscore the war's responsibility for wide social divisions, tensions which have exacerbated public feelings on both sides, and today's climate of repression which is bound to affect political expression. A retreat from dialogue and peaceful dissent to ever more violent means of advancing one's cause is bound to result. This trend can be reversed if the fundamental cause of public frustrations is removed. Therefore, to preserve civil liberties, which provide the mechanism for peaceful change, the American Civil Liberties Union insists that the war in Southeast Asia must stop. In making this appeal, the Union bases its departure from its previous narrower focus on several grounds. Central to them is the enormity of the civil liberties crises which the war has produced. This action does not represent basic change in the Union's organizational role.

"In addition, the ACLU opposes our nation's continued involvement in this war because it violates the people's sovereignty. Their power, constitutionally delegated to the Congress—namely, the power to declare war has been designated by presidential usurpation.

"The ACLU recognizes that the President has broad constitutional powers in the conduct of foreign affairs. But it believes that basic liberties are violated when the people are deprived of the right, through their elected representatives, to have a formal declaration of approval or disapproval of an undertaking such as this—a massive and protracted armed conflict in a distant and foreign land.

"The ACLU recognizes that even a declaration of war would leave unresolved moral and civil liberties questions inherent in this or any other declared war.

"Because the continuation of the war in Southeast Asia so pervasively jeopardizes the exercise of civil liberties in our country, the ACLU now commits itself to work for an immediate termination of the war and the immediate withdrawal of all U.S. troops from Southeast Asia. To advance this position the ACLU will:

"1. Continue litigational attacks on the draft and seek its legislative defeat in Congress.

"2. Continue its attacks against all forms of governmental inspired repression.

"3. Urge all ACLU members through its 48 affiliates, to communicate with their congressmen asking them to work for an end to the war.

"4. Urge all persons and groups concerned in controversy over the war to eschew violence and coercion while continuing to exercise all their First Amendment rights.

"5. Enter *amicus curie* in the suit being brought in the United States Supreme Court by the Commonwealth of Massachusetts. This suit arises out of a recently enacted Massachusetts statute providing that a citizen of that state cannot be sent abroad to fight in the absence of a congressional declaration of war. The ACLU will also urge other state legislatures to enact similar laws.

"In view of the fact that Congress has not declared war, The American Civil Liberties Union calls upon it to refuse to appropriate money for the war in Southeast Asia and to repeal the draft of young men necessary for its continuance."

II. INHERENT INEQUITIES

The absence of convincing justification, in terms of national self-preservation. in the face of conscription's violence to basic human freedoms and its present relation-

[1] See N.Y. *Times* Friday, April 24, 1970.

[2] The President's Commission on an All Volunteer Armed Forces has concluded that a volunteer method of raising an army is feasible.

[3] Scholarly investigation has raised new doubts that peacetime conscription is even constitutionally authorized. See Friedman, Conscription and the Constitution: The Original Understanding. 67 Mich. L. Rev. 1493 (1969).

[4] Statement of Selective Service System, July 1, 1965.

ship to a divisive and despised war, is reason enough to end the draft. Were it not, however, the host of fundamental inequities which have grown under the present system, should conclude the case for repeal.

Of course, the itemization of many of these inequities suggests that it might be feasible individually to correct each. But their proliferation under the present system teaches us that, like manure in the Oregon stables, two more will replace every one that is corrected. The present law is essentially another renewal of the 1948 Act; if these inequities have not been dealt with successfully in twenty-two years, they hold little promise of yielding to systematic correction today. They underscore the case for repeal.

When discussing the absence of "due process" with relation to Selective Service, it is difficult to know where to begin. The system has inequities built into it at every level. The Administrative Practices and Procedures Subcommittee of the Senate Judiciary Committee has identified numerous inequities, some of which we describe below:

A. Substantive matters

1. The Uneven System of Classification: While the Union recognizes that the original purpose of vesting discretionary power with local boards in determining classifications was to insure that "classification actions" would be made by people familiar with the circumstances of individual cases, vis a vis community needs, this concept, in application, has proved to be fallacious. Substantial percentages of local board members live outside of the jurisdiction of their local boards,[5] thus, totally defeating the "little groups of neighbors" concept, and many more do not understand the criteria for deferments of exemptions under the present law. Expert testimony before other committees has revealed the abuse of discretion committed by many local boards throughout the country.[6] Common concepts of equity require that men similarly situated receive the same opportunity to receive the same deferment. National, uniform criteria for deferments, and the ability to administer them even-handedly across the country, are lacking.

2. Unjustified Deferments and Exemptions: The ACLU is gratified that the President has now eliminated occupational, agricultural and fatherhood deferments. But the Congress has still not granted to the President the authority he has requested also to eliminate college deferments. What clearer example of unequal treatment under law is required to show a system of protesting one class of citizens over others?

While the new lottery selection system is a further attempt at guarding against the pyramiding of deferments resulting in a total exemption from service, that end is largely defeated by the present retention of the II–S deferment. By permanently obtaining any of the deferments remaining in the present classification structure after he has enjoyed a II–S classification, a registrant may frustrate entirely the intent of the special provisos on 32 C.F.R. 1631.7 as amended this year.

We further believe that the exemptions granted to ministers of religions and divinity students are in violation of the establishment clause[7] and should be eliminated. Ministers and divinity students, are, as anyone, eligible to apply for conscientious objector status. Those who do not choose to do so should not be exempted from service required of others.

4. Lack of a Nationally Uniform Draft Call: The regulation of draft calls so as to establish a uniform national level within the lottery system is wanting. One area or locality may reach men for induction with a higher call priority number than that of other men in different sectors of the country. This is seen by those affected as inequity in treatment.

B. Structure of the selective service system

1. The Number of Local Boards: At the present time, the Selective Service System maintains over 4,000 local draft boards throughout the continental United States as well as its territories and possessions. The boards themselves are comprised of over 20,000 unpaid volunteers, who to a large extent have neither the time, inclination or capacity to administer the law. Much of the responsibility falls to the clerks at the board offices. The sheer numbers of people who must agree on the meaning and application of the standards for deferment make uniformity virtually impossible. While the average Selective Service local board has 8,000 registrants, some have as high as 50,000 and of these, many may have moved far from the jurisdiction of their local board.

The Marshall Commission and the Kennedy Committee, have urged that the number of local boards be reduced and that regional offices and directors be established.

2. Military Complexion of the Staff of the Selective Service System: Virtually all of the staff members of National and State Headquarters of Selective Service are members of the military or reserve officers. The Director of Selective Service for the past twenty-nine years has himself, been a general. There is absolutely no justification for placing the Selective Service System under the direction of military personnel.

The military operates traditionally with less regard for the rights of the individual than is expected in civilian life. All registrants are civilians and many will never serve in the military and those who do will serve only for a short time compared to career personnel. Registrants have the right to expect to be treated as civilians by those who understand civilian concepts of equity and fair play.

C. Due process for registrants

1. Registrants are not permitted to appear before boards with counsel.

The Supreme Court will be hearing argument next term on whether or not a registrant may be constitutionally denied the right of counsel before his local draft board.[8] See 32 C.F.R. 1624.1. Irrespective of the outcome of this case, the ACLU believes that the denial of the right to counsel is unconscionable. The Selective Service System is the only administrative body, governed by the Code of Federal Regulations which expressly prohibits representation by counsel. The age of many registrants and their varying degrees of maturity make departure from this basic element of due process unsupportable.

It seems unjustifiable that we afford a greater degree of due process to a taxpayer contesting his income-tax liability—even to the nation's inkeepers in the renewal of their licenses,[9] to welfare recipients[10] and to applicants for admission to the bar[11] than we do to Selective Service registrants.

2. Registrants are denied any statement of the reasons why their claims for deferment have been rejected.

The Selective Service System is specifically exempted from the provisions of the Administrative Procedure Act. Were it under the requirements of that statute, registrants would be afforded a number of safeguards (other than the right to counsel) which we believe are crucial to due process.

The absence of written findings by local boards denies several elements of procedural fairness. First, it handicaps a registrant in perfecting an intelligent appeal. Because no written findings exist, it is difficult to imagine that a registrant is being afforded true due process on appeal.

Second, the lack of written findings handicaps Appeal Boards in determining the basis for a local board's decision.

Third, the lack of written findings frustrates judicial review. Numerous appellate cases require remands to the districts courts for special hearings on why a board made a certain decision in a particular case.

In 1954 the Supreme Court stated in the *Gonzales* case[12] that, "The right to a hearing means the right to a full and meaningful hearing."

Concurrently in *Simmons*, the companion case to *Gonzales* it held, "The right to file a statement (before an appeal board) . . . includes the right to file a meaningful statement, one based on all the facts in the file and made with awareness of the arguments to be countered."

While the former National Director, whose continuing influence on Selective Service System policy is still felt, was highly concerned with the possibility of board hearings becoming quasi-judicial proceedngs, he also stated that every registrant is to be "deemed available until proven deferable."[13] Since such a burden of proof is borne by him, it is unfair that a registrant be denied the opportunity to build the record necessary to carry it.[14]

3. Registrants should be permitted to appear before Appeal Boards.

Since the sincerity of the registrant often becomes a factor in the issue of classification, especially in cases involving claims of conscientious objection, and since the appeal to an appeal board is a de novo review, a registrant should have the right to appear before an appeal board.

Again the argument that has been profferred in opposition to these recommendations is that they would spur attempts to turn the proceedings into legal forums. These allegations, however, should not be used as a basis for justifying a limitation on a registrant's right to due process.

4. Registrants are not permitted to transfer their registrations to a new local board upon the shifting of their permanent residence.

No provision within the Selective Service regulations exists which permit a registrant to transfer his local board solely because he has permanently moved far from the jurisdiction of his local board with which he originally registered. The prejudice caused to registrants by this factor is immediately apparent. A registrant far distant from his local board will incur hardship, both in time and cost, both in consulting his file and especially when desiring to take advantage of his right to a personal appearance.

5. A quorum of the local board is not re-

[14] Many of the reasons which point up the inequity of this lack also compel us to mention the absence of transcripts of board appearances. Without them it is impossible to determine whether the boards findings are supported by the record.

quired to attend the registrant's personal appearance.

While Selective Service regulations mandate that a decision on the issue of classification be made by vote of at least a quorum of a registrant's local board or an appropriate panel thereof, the regulations do not require that a quorum of the local board, or an appropriate panel thereof be present at a registrant's personal appearance:

"Under present regulations only one board member is required to attend a registrant's personal appearance. This means that a registrant cannot be certain that a quorum of the board fully understands his petition. The lack of a quorum is particularly unfair when the registrant's sincerity is at issue as in conscientious objector cases."

D. Conscientious objectors

1. Universal Pacifists: Some of the most niggardly practices of the Selective Service System have centered on the treatment of the conscientious objector. Decisions of the Supreme Court have required the System to treat equally with the conventional religious pacifist, the unconventional religious agnostic and the non-religious pacifist. But the System has shown a remarkable resistance to the standards of equitable treatment which these cases have enunciated; for instance, the form for applying for exemption as a conscientious objector (Form 150) was not modified to take account of the *Seeger* decision for more than three years.

Provision for recognition of conscientious objectors has characterized all of our experience with conscription, both wartime and peacetime. It serves a high purpose in any social order, especially a democratic one. Law and order rest ultimately upon the readiness of individuals to know and act upon conscientiously held conceptions of right and wrong. A society which systematically compels individuals to violate conscience in a matter so central to it as the taking of human life, engages in the destruction of the very foundation of its order. Doing so by compelling military service is a particularly senseless toying with moral foundations, for a conscientious objector in uniform is necessarily a poor risk as a soldier. For these two reasons—respect for individual conscience and want of social advantage in overriding it—proper provision for the conscientious objector is essential to a sound system of conscription. For these same reasons the System's ofttimes grudging administration of the exemption is both an inequity to the individuals adversely affected and a subversion of the best in our social order.

2. Objectors to a Particular War: All of the same reasons apply to support the recognition of the conscientious objector to the particular war that objector faces. The differences between the "selective objector" and the universal pacifist are unessential to the policy of exemption. Both adhere to a moral command believed superior to that of the state. Both prefer society's ostracism and punishment to violation of that moral command. Neither can be inducted without violation of his conscience; putting either into uniform offers the Service a poor risk as a soldier. The only difference between them is an academic one; they have different beliefs about a war neither of them presently faces—a *hypothetical* future "just" war that may never occur, certainly not while either is of draft age.

That academic, hypothetical difference in their respective systems of beliefs is a difference that ought not to make a difference. It has no bearing on the violence which induction and military service will do to the conscience of either. It has no bearing on the advantage, or lack of it, which the Nation will gain from such induction. The conscientious objector to the war in which that individual presently faces service should be exempt, whether or not he is a universal pacifist.

The right to obey a moral law is reflected in the First Amendment guarantee of religious liberty, and is, we believe, implicit in our entire constitutional framework and origins. The "free exercise of religion" clause reflects the fact that obedience to conscience and morality that made this Nation a haven for freedom-loving men everywhere. The history of our national origins is largely a history of religious dissenters and conscientious objectors, like Puritans, Quakers, Roger Williams and others. Numerous provisions of the Constitution are directly designed to protect dissenting consciences in various aspects of civic life. The fact that selective conscientious objection is selective does not make it any the less conscientious. As one federal Judge has noted, "selective conscientious objection might reflect a more discriminating study of the problem, a more sensitive conscience and a deeper spiritual understanding." *United States* v. *Sisson*, 297F. 2d 902, 908 (D. Mass. 1969).

Indeed, by far the greater number and larger boards of all religions recognize the right of conscientious abstention from some wars but not others. The Catholic doctrine of the Just War is well known, and is deeply rooted in St. Augustine and St. Thomas Aquinas.[15] Various Protestant groups have asserted the right of selective opposition to unjust wars.[16] Jehovah's Witnesses believe in theocratic wars and in self defense of their bretheren and their church.[17] Even Quaker doctrine seems to approve of the use of force to maintain world peace.[18] The fact is that almost every pacifist believes in the use of force for self defense and for police purposes.[19]

As Chief Justice Hughes said in *United States* v. *MacIntosh*: [20]

"There is nothing new in such an attitude. Among the most eminent statesmen here and abroad have been those who condemned action of their country in entering into wars they thought to be unjust. Arguments for the renunciation of war presuppose a preponderant public sentiment against wars of aggression."

The ACLU believes that non-recognition of selective objection is out of harmony with both the First Amendment and the legislative intent of Sec. 6(j) of the Act.

III. UNIVERSAL NATIONAL SERVICE

Various proposals for compulsory National Service appeal to some as a substitute for military service. They would in reality import all of the evils of the draft into a much broader intrusion upon the lives of individuals. All of them necessarily encompass involuntary servitude.

Our objections to such proposals are numerous. In constitutional terms, the authority for military conscription stems from the Congressional responsibility to "provide for the common defense." The requirement of coerced *non-military* service certainly cannot be justified under this power, and it therefore would be prohibited by the Thirteenth Amendment. In broader civil liberties terms, such an enlargement of the system of military conscription is a totally unwarranted extension of the reach of government. The burden of justifying *military* conscription rests heavily on the government, such conscription inevitably works a severe deprivation of civil liberties; except when warranted by the overriding need of national security, it is a grievous departure from this nation's most cherished traditions of personal freedom. Proposals for marshalling every young person for non-military as well as military service threaten to introduce into this Nation regimentation of a type heretofore principally associated with totalitarian states.

The principal claim for national service as an alternative to the present system of conscription is that it would eliminate the inequity involved in that system's uneven and often discriminatory disposition of burdens and sacrifices. But national service would not significantly reduce these inequities, for the hard decisions as to who will be inducted into military service would remain. Even were that not true, the gain would never warrant the wholesale loss of liberty it would entail.

Where the present system, through the student deferment, gives an effective preference to young men whose families can afford to send them to college, national service would, in all likelihood, continue such class distinction but in a different manner, by offering as alternatives to military service such activities as the Peace Corps, whose high standards of eligibility would necessarily continue to make it much more accessible to college graduates than to their less well-educated contemporaries. It would not really be possible, even if it were desirable, to make civilian service comparable, in sacrifice and risk, to military service in combat.

Even if the burdens and risks could somehow be equalized, however, we do not think the elimination of the present system's inequities would justify extending still further its central fault; that is, the loss of liberty necessarily entailed by compulsion. If some persons in a society must surrender their liberty and risk their life and limb, because of an urgent need that cannot otherwise be met (a point which, we repeat, has not yet been established), their sacrifice will hardly be redeemed by attempting to impose on others equal sacrifices for which there is no equal need. Next to life perhaps, and certainly more than property, liberty is a precious commodity. Its loss by a few is not mitigated by taking it from many.

Much has been said about the socially desirable ends that could be achieved by national service: The needed service that could be provided, domestically and abroad, in education, welfare, conservation, and similar fields; and about the benefits that would accrue to the young people involved, in terms of both remedial education programs and the beneficial experience of selfless service. We agree that these ends are desirable, but we see no reason why they cannot be achieved by a system resting on free choice and economic inducement, like every other socially important service save the military. If, as we believe, compulsion cannot be justified as a way of curing the defects of the military conscription system, its only justification can be an economic one: compulsory service is, of course, cheaper than voluntary service. We do not think this Nation is in such economic straits that it cannot pay competitive wages to those it asks to undertake its important work.

We believe that it is no solution to the unfairness and inequity of the present military draft system to devise a program which will multiply that unfairness and extend the element of compulsion to all young citizens. If it is absolutely necessary that young men be compelled to render military service (and again we emphasize that the burden of proof of that proposition has not been met), the evil should be confined to the circumstance that occasions it—inadequate military manpower. It will only compound

servitude and inequity to broaden the very compusion that is at the heart of what is wrong with the draft.

SANE Background Statement on Compulsory National Service

(By Sanford Gottlieb)

A Gallup poll of July 5, 1970, testing public opinion on the desirability of drafting young male Americans into a period of compulsory national service of a military or civilian nature, revealed that 71% of the American public favors such a program. While recognizing that such a plan may encourage initial idealistic reactions SANE is appalled that legislators and citizens alike have failed to understand the inherent dangers of such a system.

In an attempt to detail these dangers within the framework of a consistent policy base, SANE reiterates its long-standing policies on the draft and compulsory national service.

In 1966, in a policy statement supporting voluntary military service, SANE stated:

"SANE is also opposed to universal military training or any variant thereof which makes compulsory demands on the nation's youth. While lauding and supporting assistance programs such as the Peace Corps as representing the best in American neighborly and humane traditions, we believe the value of these programs would be vitiated by their becoming another aspect of compulsory service."

In elaboration, SANE stated, in testimony before the Senate Armed Services Committee in April, 1967:

"National Service would not end the inequities of the draft, but would compound them. Under Universal National Service all young men and women above a specified age would be drafted, and within the manpower requirements of the Department of Defense, non-military alternatives would be permitted to conscripts. In some versions, non-military service would be a voluntary alternative above the needs of the Department of Defense. A system of deferments would still exist, selection for actual military duty would proceed very much on the same basis as at the present, with its accompaniment of economic, class and educational differentiations. Nor is there any way at all of equating non-military service in activities which do not involve violence, killing and loss of life or limb.

"Purely on the basis of practicality, Universal National Service is a nightmare. It entails finding useful work for approximately one million men a year, and close to two million women per year. Assuming a three-year term for men and two years for women, a pool of around 7 million people would be available for national service. There would be no jobs available and no money with which to pay them. Universal National Service would be a gigantic latter-day WPA with all its social ills and abuses.

"The success of the Peace Corps and similar activities rests fundamentally on the individual motivation and volition leading to the desire to perform unselfish services for the good of others. There is no possibility that a system of conscription would be responsive to this motivation. It would, in fact, be destroyed by a system of coercion.

"Universal National Service would bring into being a wholly unparalleled system of state control far beyond the questionable provisions for conscription for military service, with serious and probably dangerous implications for democracy and civil liberties.

"Interpenetrating American society at home, and providing a governmentally-controlled instrument abroad, Universal National Service would constitute an instrument for advancing partisan political or narrowly conceived foreign policy goals—apt to present an irresistable temptation to any government. At home it would warp national life out of its sheer magnitude, requiring performance of social services at costs far below the open labor market. Abroad, by its lack of motivation and availability to influence, it would undo and reverse the constructive impact of voluntary and non-governmental agencies."

While these statements deal with the basic inequities and anti-democratic nature of compulsory national service in general, in 1970 we are faced with specific legislation, the National Service Act of 1970 (H.R. 18025) which would: (1) require universal male registration at 17 (females having been benignly neglected); (2) selective service counselling during the next year, and (3) choice at the age of 18 of (a) military service, (b) state civilian service, and (c) a chance in a military draft lottery.

Based on our view of the principle of voluntarism, we list below SANE's major objections to implementation of this Act.

(1) The Act would create the National Service Agency headed by a director appointed by the President. The Director would have sweeping powers over the lives of young Americans, with little effective control by Congress.

(2) The *National Service Director* would be *solely responsible* for determining whether a civilian service occupation "is of substantial social benefit to the community, Nation, or foreign nations . . ." This decision-making power, lodged in one official would have excessive influence over individuals, educational institutions, specific communities and economic groups.

(3) The terms of military service through the lottery is designated as two years, while the length of civilian service may be increased, *at the discretion of the National Service Director, up to a period of four years.* This provision, along with increased pay incentive and GI Bill for military service, while civilian workers receive "subsistence" salaries, would appear to reinforce the concept that civilian service is a penalty.

(4) The National Service Agency would pay civilian employees a subsistence salary set by the Agency. The private employer pays the prevailing wage to the Agency for that job. The private employer and the civilian employee thus join in a scheme which help subsidize the state.

(5) Four-year educational deferments for those enlisting in the armed forces, *granted at the discretion of the Director, would discriminate against young men who are already employed as well as those who choose civilian service.* The Director also has the responsibility to determine "that a program of education or training proposed to be undertaken by the registrant would enhance his potential contribution to the mission of the Armed Forces. . ."

(6) The Act would discriminate against young men who, if unable to find a job among the positions accredited by the Agency, would be placed in a Civilian Service Corps to work on federally-subsidized work projects. It is obvious that the majority of those unqualified for regular civilian service (where there is at least some choice of area of service) would be from the nation's undereducated and underprivileged.

(7) Individuals who found themselves in good conscience and with honorable precedent unable to participate in a system of national service would be required, as under the present system, to prove their case through hearings and appeals. The onus of proof is on the objector rather than on the Agency.

(8) If it is judged that there are not enough men in the military manpower pool, this legislation would permit the inclusion in the lottery of those who have completed their civilian service. Thus, some men could be subject successively to civilian *and* military service.

Puerto Rico's Committee of Resistance to Compulsory Military Service; Position Against the Imposition of any Kind of Military Service to Puerto Rico

Puerto Rico's Committee of Resistance to Compulsory Military Service wishes to let the people of the United States know its position on the Draft Law which is currently being discussed in the Congress of the United States. We submit the following statement:

The people of Puerto Rico became a colony of the United States as a result of Spain's defeat in the Spanish-American War. Before U.S. domination, Puerto Rico had an autonomous government. It was replaced by a United States military government. Two years later, in 1900, the United States formed a civil government on the island, totally dependent to the executive, legislative and judicial powers in Washington. In 1917, the Congress of the United States approved the Jones Act which made reforms on the island's colonial regime and imposed U.S. citizenship to Puerto Ricans. Since then, all Puerto Rican males have been totally under the jurisdiction of the American Military, notwithstanding Public Law 600 of the Congress of the United States which in 1952 gave way to the creation of the "Commonwealth of Puerto Rico", a more hypocritical form of direct colonialism.

Puerto Rico is a Latin American country formed by more than four centuries of history. The Puerto Rican nation, with its geographic, demographic, economic, cultural and psychological unity, has struggled for independence for more than a century, first against Spain and now against the United States. Our people's resistance to the United States' domination finds now its principal expression in the struggle against compulsory military service and the presence of militarism in our country.

Puerto Rico is a colony of the United States. When the Congress of the United States approved Public Law 600, it categorically stated:

"The enforcement of the Federal Relations Act with Puerto Rico and the exercise of the federal authority in Puerto Rico under its dispositions are not reduced in any way by the Constitution of Puerto Rico and cannot be affected by future amendments to that Constitution, nor by any law of Puerto Rico that is in conflict with the Federal Relations Act with Puerto Rico or with the dispositions of the Constitution of Puerto Rico, as it is expressed in Public Law 600 or with the Constitution of the United States, or with the laws of the United States that are not locally inapplicable, and should be void and should have no effect."

According to the Federal Relations Act with Puerto Rico, all the laws of the United States "have the same effect and validity in Puerto Rico as in the United States," with the sole exceptions of those "locally inapplicable."

The life of the people of Puerto Rico is regulated by the United States government. According to the U.S. Constitution, it is a prerrogative of the Congress of the United States to decide the destiny of all territories acquired by sale or conquest. And Puerto Rico was acquired by conquest.

The Congress of the United States has exclusive jurisdiction over Puerto Rico's foreign relations and trade, nationality and citizenship, emigration and immigration, armed forces, military draft, customs, transportation, monetary system, mail, radio and television, patents, quarantine laws and justice.

The Congress of the United States imposes the military draft on Puerto Rican youth and makes it participate in all wars waged by the United States, be they declared or not.

To safeguard the application of federal laws in Puerto Rico, like the compulsory military service law, the United States government maintains in our country a Federal District Court whose judges and officials are

designated by the President of the United States and where proceedings are carried out exclusively in English.

The United States has turned our island into a gigantic military base. More than 13% of our national territory is occupied by Army, Navy and Air Force bases. The United States Armed Forces have thus become one of the main monopolizers of Puerto Rican land. More than two and a half million Puerto Ricans live on our island of 3,435 square miles, of which such an enormous portion has been curtailed.

At Roosevelt Roads base, on the Southeastern shores of Puerto Rico, is the seat of the Caribbean and Antilles Command of the United States Navy. Rocket and atomic submarine facilities are found there, as well as installations for aircraft carriers equipped with thermonuclear warheads. A few miles offshore from the base, we find the Puerto Rican islands of Vieques and Culebra. In Vieques, the United States Navy controls more than 75% of the land. That monopoly has forced a big portion of the island's population to leave their homeland.

Culebra, the smaller of the two islands, completes the triangle of aggression against the people of Puerto Rico. Against the will of Culebra's municipal government and its population, the U.S. Navy continues using a section of the island as a target range. That use endangers the very existence of the population of Culebra and has already caused many casualties. The people of Puerto Rico has overwhelmingly opposed the Navy's domination of Culebra, to the point that the Culebra Affair has become "cause celebre" for the United States Congress and for U.S. and world public opinion.

United States military domination of Puerto Rico is total. It is not only our land, our coasts, our principal roads, our ports and our weather stations which are controlled by the United States military apparatus. Even more important is the direct control of United States Armed Forces over the Puerto Rican population, upon which compulsory military service has been imposed.

Puerto Ricans have no voting representative in the United States Congress nor participate in the election of the President of that nation. Neither do we want it. Our people, which form a nation different from the United States, wants to command its own destiny freely, independently and with sovereignty. What we want is to deprive Congress from any jurisdiction over our nation so that our people may govern itself. It is that United States Congress in which Puerto Rico is not and does not want to be represented, that passes the laws, military and otherwise, that affect the people of Puerto Rico.

The people of Puerto Rico have never participated neither in the passing or the implementation of United States military laws. Not even in the bureaucratic apparatus which administers the military laws have the Puerto Rican people any direct participation.

In the past, faced with the alternative of long prison sentences if they violated the compulsory military service law, a great many Puerto Rican youths were forced to bow to the draft. Puerto Rican soldiers drafted by the United States Armed Forces had to fight in World War II and in the Korean War, as well as now in the colonial war of aggression waged by the United States against the people of Viet Nam. Within the Armed Forces of the United States, Puerto Ricans are subject to all kinds of political, racial and national discrimination: Puerto Rico is forced to supply more soldiers than any state of the Union. The rate of Puerto Ricans drafted in relation to the island's population, is fourfold in comparison with Americans.

Popular resistance to compulsory military service appeared in Puerto Rico during World War II. Many Puerto Ricans, following the preachings of the Nationalist Party of Puerto Rico led by the Apostle of Independence don Pedro Albizu Campos, faced long jail sentences in federal prisons for opposing the draft. Also during the Korean War many Puerto Ricans preferred imprisonment to induction.

But massive national opposition to the draft began in 1965 with the escalation of the U.S. military aggression to Viet Nam. Since then, thousands of Puerto Rican youths have refused induction in the United States Armed Forces, thus defying the U.S. military power.

More than 100 Puerto Rican youths have faced judicial arraignments in the United States Federal District Court in Puerto Rico for having refused induction orders from the United States Armed Forces. Only three of them have been brought to trial; and only one has been convicted. Edwin Feliciano Grafals was sentenced to one year in prison by federal judge Hiram Cancio for refusing induction. The sentence was later reduced to one hour in prison and appealed to the Boston Circuit Court of Appeals. These facts show how deep is the Puerto Rican sentiment against the compulsory military service.

In November 1969 and May 1970, two massive anti compulsory military service demonstrations were held in San Juan. Both of them, one over 40,000 strong, were organized by Puerto Rican organizations as the Pro Independence Movement, the Puerto Rican Independence Party, the Labor Christian Youth and the Committee of Resistance to Compulsory Military Service. They were two of the biggest popular demonstrations ever staged in our country.

Puerto Rican youth has expressed its antidraft sentiment by other means. Selective Service Registration cards have been sent to the National Liberation Front of South Viet Nam. Many youths have not only refused induction, but have also refused registration in the Selective Service System. Resistance to compulsory military service has also been expressed in a consistent revolutionary struggle against the ROTC program and facilities at the University of Puerto Rico; the ROTC building at Rio Piedras Campus has been burned twice by the students. Also, clandestine revolutionary groups have placed numerous fire-bombs in Selective Service offices throughout the island, thus expressing armed revolutionary opposition to the United States military apparatus in Puerto Rico.

Puerto Rico's Committee of Resistance to Compulsory Military Service is a patriotic organization composed by members of different political, social, labor, religious and youth groups. It is a united front of the Puerto Rican people against the most violent colonial imposition on Puerto Rico: compulsory military service. Our Committee guides the struggle against compulsory military service towards the following objectives: (1) The developing of the Committee as an instrument of unity among all Puerto Rican patriotic organizations; (2) Developing the struggle against compulsory military service as the crucial element in the struggle for the independence of Puerto Rico; and (3) Creating a conscience for active resistance against the Compulsory Military Service Law among the Puerto Rican youth. As a part of this effort the Committee has appealed directly to the young for resistance to the imposition of that law.

The leaders of the Committee, Dr. Héctor Dávila Alonso, Chairman, and Dr. José Milton Soltero, National Director of Activities, have stated that the struggle of the Committee is "a campaign of civil disobedience made in endorsement of the resistance (of the draft) for political reasons", because "the colonial situation (of Puerto Rico) renders the United States incapable of taking legal action against a people which stands up to demand its rights of sovereignty and its political liberty."

Puerto Rico's Committee of Resistance to Compulsory Military Service declares that the Congress of the United States has no moral authority whatsoever to maintain a colonial regime in Puerto Rico and to continue legislating over the life of the Puerto Rican people. The Committee thus demands once more that the Congress of the United States abolish the Compulsory Military Service law for Puerto Ricans, that Puerto Rico be excluded from the jurisdiction of the military laws of the United States and that it formally and solemnly recognize Puerto Rico's national independence.

The Committee of Resistance to Compulsory Military Service appeals to all democratic forces of the people of the United States for endorsement to the struggle of the Puerto Rican people against Compulsory Military Service in the Armed Forces of the United States and for Puerto Rico's independence.

Notwithstanding the obstacles we may find on our way, we will develop ever more strongly our struggle for liberation. The bigger the opposition we find on our way, the larger the liberation force that will be developed until we achieve the goal of independence for Puerto Rico.

Position Favoring a Voluntary Military

(By Thomas Lindsley)

Statement of Testimony

This testmony is the result of discussions, assemblies, and the current time of crisis on the campuses of several Midwestern colleges. It is a statement that calls for an understanding of youth and for the opportunity to have the voice of draft age youth, that is, those most affected by its inequities, given significant hearing and proportionate weight in any consideration of the present peacetime draft system. Though I realize that this testimony is drawn from only a small portion of the nation's draft age men, we believe that the statements of this testimony give voice to a vast majority of that age group. This statement is a reasoned analysis from the eyes of draft age youth, also a rationalization of the increasing dissatisfaction and contempt among youth for the draft, its inefficiency, and its accepted position in a free society. No attempt at reason, however, can be disjointed from the disillusion regarding the draft that youth have experienced in the past few years. This brief statement hopes to capsulize some of the urgency of the issue.

It is time for a new military manpower policy. We must go beyond rhetoric. Action must be taken to end the draft as soon as possible. Now, more than ever, we are in a position to replace the draft with a completely volunteer armed force as a step practical and necessary for national defense.

Under the specific endorsement of representative organizations, Mr. Gerard B. Noonan, Registrar of Loras College and Draft Board Chairman of the Dubuque County Draft Board, and I have purposely decided to submit testimony together for the voluntary military as a far more honorable, desirable, and successful way of supplying manpower for defense than the apparently self-defeating principle of conscription. Our joint testimony gives evidence that there is an understanding of generations in the far-reaching problems of conscription. Testimony like ours for a voluntary service is the sound, logical, and inevitable result of the inadequacies and incompatibilities of the draft process. Since we were not able to submit testimony orally to the Senate Committees, we are submitting it here in part by written form. Because of the importance of this issue and its impact on the lives of most Americans, I believe it is crucial to hear the voice of that age group most affected.

We are attempting to replace disillusion with something positive. For a man to be conscripted and held involuntarily and paid a substandard wage for his service, this comes very close, in the minds of many young people, to an institutionalized force of "slave labor" which we have fought in every major war to eliminate and declare is not a part of our democratic process. It has taken a toll. As the Gates Commission Report states: "However necessary conscription may have been in World War II, it has revealed many disadvantages in the past generation. It has been a costly, inequitable, and divisive procedure for recruiting men for the armed forces. It has imposed heavy burdens on a small minority of young men . . ." It perhaps served the purpose of its time when initially the draft was designed as a necessity to meet the threat of a national emergency that called for the mobilization of a massive land army, but it is not the type of system to be considered lightly. The legitimacy in any society should be under constant scrutiny and its presence a challenge to a democratic people.

The draft has proved to this group, especially in the last year, to be neither a successful nor honorable institution, because of the wide variety of adverse effects produced by the existence of a system of forced conscription in a free society. The Gates Commission Report noted from its findings that: "It has weakened the political fabric of our society and impaired the delicate web of shared values that alone enable a free society to exist." The presence of the draft is increasingly impractical and antagonistic in the eyes of those faced with the needless disruption of their lives when there is a more practical, legitimate alternative to meet the manpower needs—that of the all-volunteer armed force. The maintenance of such a draft against the alternatives produces the only logical and honest result, that of criticism and resistance on the part of youth.

As students continue to gain an identity or self-consciousness as a group, it becomes clearer to them that there is unnecessary abuse, extreme injustice, and misunderstanding which is being played on them specifically. They feel more a part of society as they overcome educational disadvantages thereby escaping the syndrome of ignorance and begin to assume responsibility only to find serious inconsistencies and demands of the draft with no alternatives, no compromise, no trust. In regard to this, the Gates Commission observed: "Compelling service through a draft undermines respect for government by forcing an individual to serve when and in the manner the government decides, regardless of his own values and talents." Even now, this confrontation is open and tangible, though not necessarily spectacular; but, as was brought out in one group discussion, "its symptoms, general dissatisfaction, widespread malaise, and contempt for those in power, are difficult to put down, since their meaning is never unequivocal." And as the very respected Historian Hannah Arendt has said: "Contempt is one of the most potent springs of revolution."

I suggest that ignoring the presence of contempt which is obvious among draft age youth and the larger part of civilian society by retaining the draft system will produce a dangerous environment for our society. By turning values away from the integrity of man to political expediency, as the draft system seems to have facilitated in recent years, we can expect men to lose sight of their meaning, their liberty, their loyalty. When values are based on something as arbitrary and manipulated as government interests, then there is created, from an atmosphere of abuse and deception, that unique environment for revolution.

The people of my own geography in the Mid-West are increasingly united in their belief that replacement of the draft with a volunteer military is now both realistic and necessary. Their endorsement of this testimony declares that. And having lived in a community sharing the same age, pressures, ideals and frustrations, they believe that a continuation of the draft will produce a domestic crisis with a very serious threat to our national security.

Even among the veterans organizations on campus there is a unanimous concern about the draft, and its antagonistic effect on the patriotism of youth. They have spoken of the obvious injustice of the deferment system which provides a refuge to a large arbitrarily defined group, who are smart or rich enough to find their way under its roof, while a draftable few are left to face forced service. They have also discussed the need not only of restoring respectability to the defensive services, but also of a need of efficient personnel. Both, they concluded, could be accomplished by an end to the draft system as it presently functions. Some of the organizations involved in this testimony, have expressed the view that the status quo could be changed constructively and the society improved peacefully, by responsible and responsive government. There exists a hope that Congress, the last calm voice of the people, will resolve the issue of the draft, but it has reached that point in the minds of many that if it is not settled in Congress, and that voice not heard, then a voice should rise from the streets, which has proved before to be a less desirable yet effective means of significant change.

Any reform of the administrative or operational structure of the system cannot remove the stigma of involuntary servitude which seems the essence of military conscription, especially in peace time. A voluntary military would eliminate the inequities of the selective service system and end the injustice of forcing some to serve while allowing the majority to escape. And with its reduced turnover, it would provide a more efficient and effective military. Success in lifting conscription from the lives of American youth would also mean an important release of energy and optimism throughout the whole society.

We believe the draft exists now because of restricted leadership and vision. Because of the long toleration of the draft through the cold war, leaders have begun to function with an increasingly narrow vision of liberty, and such an acceptance by society is "weakening our moral and democratic fiber." The suppression of individual rights remains suppression, the evil remains evil, the perceiver merely becomes less sharp in his perception. It has been said that if it did not already exist, such a system would be impossible to invent today. Such an arbitrary, manipulated use of a certain segment of society would cause such indignation that it would never be born now. There is no other segment of society that would tolerate such a system of forced service; this in itself reveals something of the contempt for the present draft system on the part of the majority. Yet it is imposed upon youth with all its injustice and malfunction. This suggests to some, the inability of those in power to look for responsible alternatives. Is there a reason we should not be expected to sense some hopelessness in the face of such institutions we are called upon to "honor"?

Since we are almost politically impotent, we have less control over our social lives and feel we are denied an understanding. There exists with this the frustration of trying to live our freedoms in a free society. We are denied the right to *choose* to serve our country, which in the minds of youth, is vastly more important than to any other age group. No other system in society demands such absolute obedience of an individual, or such an involuntary forfeiture of individual liberties. Individual liberty has been called the "ultimate right in a democracy, it is not a concession that can be withdrawn or that must be paid for by military service."

We have rationalized the presence of a system that abrogates a man's rights as an unfortunate but dire necessity. Now the Gates Commission Report provides that necessary assurance, the absence of which was used before as an excuse to retain the draft, that sufficient numbers can be brought into military service on a completely volunteer basis. And if Congress has any intention of trying to eliminate forced conscription, now is the best, yet most crucial time, at least to try it. Now, there is little reason, except force of habit, to maintain the draft. We think it is hyprocrisy to a free society and something we cannot tolerate.

THE DEFEAT OF AMERICA

This is the first generation to have to grow up under the constant presence of systematic forced service. We are denied the opportunity to choose to serve our country, and, as a result, we are not only denied responsibility by a seemingly distrustful society but also take little pride in the forced "service" and eventually identify this compulsion with the systems and institutions of government. Compulsion of this kind in any history, including American, has never inspired patriotism.

To the founding fathers, "foundation of freedom" meant the foundation in practice of participatory democracy; this was to be the great experiment of America. Instead, we have turned to the contradiction of the "silent majority" as the epitome of the democratic process. No wonder youth feels that democracy is failing. As we interpret it facing the draft, it is. We are encouraged to remain silent, we are frustrated in attempts to *do* anything. Voluntary participation therefore, is a nonentity for us on the national scene. Apparently the individual is expected to accept this personal insignificance, dissolve himself in a higher power, and then feel proud in participating in the strength and glory of this higher power. But this is the destruction of freedom. It is a forfeit of self-realization. It declares null and void most queries into the nature of man's progress. It is a contradiction of the philosophy that brought America to be. It is an evasion of life.

The courage it took our country's founders to turn from history in the sense of making a new beginning is the courage of men of great purpose. It is a great purpose we call for now. We need to understand again the meanings that were attached to the words of our "self-evident" truths, our principles of government, our philosophy of life.

A NEED FOR REPEAL

We conclude that the present Selective Service System retains that basic injustice of requiring some to serve and others not to serve; especially student deferments where financial adequacy or other such arbitrary measurements are used to put the burden on others. Aside from the deferment system itself, the draft creates enormous uncertainty and anxiety for millions which is unnecessary, and it is inefficient from the military point of view, since it fails to recruit men with a stable commitment to service. This is seen consistently by those in the military. General Leroy Anderson has said: "Certainly a better standard of performance will be achieved by a much smaller number of properly paid professional military personnel supported by civilian employees where feasible." His professional observations led him to favor the total repeal of the draft: "The draft is a terrible injustice, not simply a poorly conceived system in need of repair. Let us end it and restore the voluntary spirit to the military." The first steps should include the elimination of the hidden "tax-in-kind" imposed upon first term service men and their substandard pay raise to reasonable levels. The rest of the

nation's population should pay its share of the common defense by assuming the expense paid by first term men. The Gates Commission put this tax, which is in the form of a loss of income, at a figure of $3,600 annually per man, amounting to $2 billion per year. As Senator Mark Hatfield stated: "The young men we force into the military subsidize their own service." The voluntary army would relieve this extremely disproportionate burden on those giving service, and as James C. Miller, III, asserts in his book WHY THE DRAFT?, it would force taxpayers "to recognize the true cost of military activity. If they would be unwilling to pay this cost, it must be because the benefits from such activity are less than what it costs." But that decision should be made by the population of taxpayers as a matter of common defense.

The draft is becoming obsolete in this age of technology. The advance of spohisticated weaponry is making the importance of the foot soldier less and less great. The volunteer system will provide far more competence for the technicians of the modern army. Tremendous losses due to a high turnover and redundant training will be eliminated. Whether the draft is spoken of in terms of national security, expense, military efficency, or in relation to the institutions of a free society, it is in every case far less preferable than a voluntary military. We can now make the transition from this obsolete system of conscription to a voluntary institution.

We recommend with the Gates Commission that: "A return to an all-volunteer force would strengthen our freedoms, remove an inequity now imposed on the expression of the patriotism that has never been lacking in our youth, promote the efficiency of the armed forces, and enhance their dignity." The draft is systematically destroying our hope for such a generation of men of good will which society now desperately needs and which youth wish to be. It may be that without abolishing the draft it will be impossible for them to achieve their high ideals within our system. It is invaluable for youth today to be granted full exercise of their right to be free from the restrictions of arbitrary force. For the Congress to replace the draft with a volunteer system would be a major step toward restoring optimism and trust in a disillusioned youth. We urge an end to the draft now.

RECENT PRESIDENTIAL ANNOUNCEMENT OF COMMISSION ON STATISTICS

Mr. TALMADGE. Mr. President, it has escaped public notice, but for those interested in the performance of our Federal statistical system, last Wednesday, August 12, was a notable date. On that day the President announced the appointment of a distinguished Commission of 14 individuals to undertake the most complete review of the Federal statistical system in at least 20 years. I particularly welcome this action by the President because the Subcommittee on Economic Statistics of the Joint Economic Committee of which I am chairman, has for many years has been investigating various specific aspects of this system which generates the information and statistical data used by this Congress, by the executive agencies, the regulatory commissions and by private business and the universities to understand our economy and our society. We are well aware of the need for a useful review of this system. This seems a place where a Presidential commission could be useful. We wish it well and offer our cooperation. We look forward with great interest to its conclusions and recommendations and promise the Commission an early hearing upon completion of its work.

The President has wisely chosen one of America's most eminent scholars thoroughly familiar with these problems in the person of W. Allen Wallis, president of the University of Rochester, to be the Chairman of the Commission. The Vice Chairman is the equally distinguished professor of statistics at Harvard University, Frederick Mosteller, the former president of the American Statistical Association. I ask unanimous consent that the White House announcement of the appointment of the Commission and the full membership be printed in the RECORD.

There being no objection, the announcement was ordered to be printed in the RECORD, as follows:

WHITE HOUSE ANNOUNCEMENT

The President today announced the appointment of a Commission of 14 distinguished Americans to undertake a thorough study of the Federal Statistical System in order to maximize this service to the American people and to the Government. W. Allen Wallis, President of the University of Rochester, will be Chairman of the Commission, and Frederick Mosteller, Professor of Statistics, Harvard University, will be Vice Chairman. Daniel B. Rathbun, Director, Naval Warfare Analysis Group of the Center for Naval Analyses, will serve as Executive Director of the Commission staff.

The Commission will conduct a comprehensive review of the Federal statistics program. The last appraisal of the Federal statistical program under the first Hoover Commission occurred more than twenty years ago. Since that time, sixty million persons have been added to the nation's population and our economy has more than doubled in size; the complexity of society here and abroad has increased enormously; and data processing technology has been revolutionized.

In response to these developments and because of major advances in the social and physical sciences, there has been vigorous growth in the demand for more prompt, more accurate, more comprehensive, and more detailed statistics. To deal with these issues, answers to three basic questions are needed: (1) What are our present and future needs for information about the functioning of our economy and society? (2) How can we minimize the burden on respondents and insure that privacy and confidentiality are protected? (3) How can we organize Federal activities for the most effective production and utilization of statistics?

The examination of these fundamental issues and the recommendations thereto will be of great assistance to the public, the Congress, and the Executive Branch. The review will take into account the interests of those who supply and use statistical information, as well as those who are aware of the heightened place of statistics in our society. The Commission will seek the views of the Congress and of individuals and representatives of groups with interests in specialized fields. The President has directed that the Commission present its recommendations by June 30, 1971.

The Commission includes recognized experts in the field of economic and social statistics as well as individuals from business, labor, and the law. The members of the Commission are:

CHAIRMAN

W. Allen Wallis, Chancellor, University of Rochester, Rochester, New York.

VICE CHAIRMAN

Dr. Frederick Mosteller, Professor of Statistics, Department of Statistics, Harvard University, Cambridge, Massachusetts.

OTHER MEMBERS

Frank D. Stella, 19180 Gainsborough Road, Detroit, Michigan.

Dr. Ansley J. Coale, Office of Population Research, Princeton University, Princeton, New Jersey.

Dr. Paul M. Densen, Director, Center for Community Health and Medical Care, Harvard University, Boston, Massachusetts.

Dr. Solomon Fabricant, Member of Research Staff, National Bureau of Economic Research, Inc., 261 Madison Avenue, New York, New York.

Robert D. Fisher, 523 West 6th Street, Los Angeles, California.

Dr. W. Braddock Hickman, President, Federal Reserve Bank of Cleveland, Cleveland, Ohio.

Professor William H. Kruskal, Department of Statistics, University of Chicago, Chicago, Illinois.

Professor Stanley Lebergott, Department of Economics, Weselyan University, Middletown, Connecticut.

Richard M. Scammon, Director, Elections Research Center, Governmental Affairs Institute, Washington, D.C.

William H. Shaw, Assistant to the Treasurer, E. I. duPont de Nemours and Company, Inc., Wilmington, Delaware.

James A. Suffridge, 4000, 25th Place, N., Arlington, Virginia.

Dr. John W. Tukey, Department of Statistics, Princeton University, Princeton, New Jersey.

EXECUTIVE DIRECTOR

Daniel B. Rathbun, Director, Naval Warfare Analysis Group, Center for Naval Analyses, Arlington, Virginia.

YAF SYMPOSIUM ON THE VOLUNTARY MILITARY

Mr. GOLDWATER. Mr. President, last Wednesday the Young Americans for Freedom sponsored a symposium on the voluntary military. This group is the Nation's largest conservative youth political organization and I am very much pleased that they have decided to back the volunteer army concept. Their enthusiastic participation in this effort speaks well for today's generation of young Americans, which, as I have often said, is the best that I have seen come along.

There was an interesting exchange of thoughts at the meeting, and I believe a great many new arguments were developed in support of the voluntary military that the general public, and perhaps some Members of Congress as well, have not had an opportunity to study. I know that I heard several new points explored, and I would like to try some of these out once the debate opens on our voluntary military amendment.

In order that the record of the YAF symposium can be available for consideration and use during the forthcoming Senate discussions about the volunteer army, I ask unanimous consent that the transcript of the August 12 YAF meeting be printed in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

TRANSCRIPT OF THE SYMPOSIUM ON THE VOLUNTARY MILITARY

Mr. DAVID ANCOCK (YAF Coordinator). As all of you know, on July 7, Senator Hatfield

introduced in the Senate, as an amendment to the military appropriations bill, legislation which would establish a voluntary-military force, effective July 1, 1971. The scheduled vote of the voluntary-military vote is planned for about August 19 and the purpose of this symposium today is to present a conservative viewpoint of the voluntary military for those Congressmen who wish to send representatives. Young Americans for Freedom is sponsoring this. We have sent out our voluntary-military packets to all the Congressional offices, we have sent out personal letters by Professor Milton Friedman and Frank Mier endorsing the concept of a voluntary military. Young Americans for Freedom is very honored today to inaugurate the symposium. We have a top-notch line-up of speakers; Randall Teague, our Executive Director of Young Americans for Freedom; Doctor Milton Friedman, Professor of Economics at the University of Chicago; Dean William Meckling, Director of Research for the Gates Commission Report, and Dean of the School of Business at the University of Rochester; General Thomas Lane; and at 11:00 Senator Barry Goldwater will be here.

As I said this bill was introduced on July 7; since then we have approximately 15 co-sponsors of the Voluntary-Military Amendment ranging from liberal to conservative. It is not a partisan effort in any sense of the word. I would like to introduce Randall Cornell Teague, Executive Director of the Young Americans for Freedom, who will speak on "The Student and the Draft", and what young Americans for Freedom is doing about the Voluntary-Military.

Mr. RANDALL TEAGUE. I would like to welcome you all here this morning. YAF has been engaged for the past four or five years in active program in support of the voluntary military. What makes the YAF position very different from that of many other youth organizations is that YAF is known quite openly as a conservative youth organization. YAF has supported the policies of eventual victory over communism is Southeast Asia. We have supported the President's position on Cambodia. In general over the past 10 years we have supported a strong national defense and a policy of responsible anti-communism. I think that most of the other youth organizations that are in strong support of the proposals for a voluntary military system probably do not all so share those other positions.

We do support the voluntary military because we do believe the draft to be a denial to an individual's right to live his life as he chooses. We support the voluntary military because we believe that governments are instituted among men to protect the right to live, not to destroy. We support the voluntary military because we believe the draft has been basic to every authoritarian regime, whether it be feudal, communist or fascist, and because we believe it to be largely incompatible with a free society.

YAF supports the enactment of the amendment to provide for a voluntary military. This amendment is now pending before the Senate. We believe the legislative enactment of the substance of the Gates Commission report to be overdue. Our only reservation about the amendment now pending before the Senate is in our opinion its failure to adequately provide the President with stand-by authority to reinstitute the draft in times of national emergency or war. YAF's official policy position in support of the voluntary military has always been predicated upon the assumption that the system would first be instituted during a time of peace. While we are not now in such a period, YAF felt it was not inconsistent with our long-standing position to support the amendment now, inasmuch as we appear to at least be moving towards peace in Southeast Asia. We do think, however, that some safeguard, in the interest of national security and the balancing of priorities as to national security, might be provided for in the amendment.

Our program here today is designed to provide members of the United States Senate and their staffs and representatives of the press with information about voluntary military from different perspectives. We have the presentation by Mr. Friedman on the economic aspects; Mr. Meckling on the administrative aspects; Gen. Lane, a former major-general in the United States Army, discussing why the voluntary military system is a preferable system; and political perspectives on the amendment and on the system itself by Senator Goldwater.

Dr. Milton Friedman, (Professor of Economics, University of Chicago). I have been connected with a great many controversial issues for quite a long time and the issue of the voluntary military has one characteristic that I have never observed in any other issue: that is, I have yet to see anybody who went carefully into the subject of the voluntary military, whatever his initial position, who has not increased his support for it. I have yet to see a single person who undertook to examine the evidence who moved, for example, from support for a voluntary military to support for the draft, not a single person. I have observed many people of various backgrounds and interests move the other way, and I think that speaks something for the evidence. I was particularly impressed with this in the connection with our Commission, the Gates Commission, of which I was honored to be a member. That Commission had people on it from a very wide range of backgrounds—some military people, some business people, academic people, and others. I would say at the outset when we met at our first meeting probably there was about a 50/50 split between pro-volunteer military and anti-volunteer military. By the time we completed our deliberations and after extensive examination of the evidence we had a completely unanimous report. There was not a single person on the other side. This was not an isolated experience; I saw exactly the same thing happen at Draft Conference held in Chicago four or five years ago. I have seen it happen over and over again. The one thing I would really urge on anybody interested in this subject is to look at the facts, look at the evidence, because on the basis of my past experience, there is only one way you can move.

Now let me discuss the particular topic I was assigned, the economics of the volunteer military is to distinguish between the real cost to the country, the real economic cost of different methods of manning the armed fores in different ways on the one hand, and the budgetary impact of manning the army and armed forces in different ways on the other. To look at the real cost of the country, you want, for a moment, to pull away the veil of money which tends to conceal to some extent what's really going on. What are the real factors? It is the number of people who are involved in various activities, what they do with their time and with their efforts, and the amount of resources used trying to reach a certain degree of military effectiveness—and people can differ widely about that—but whatever degree of military effetiveness being sought, whatever degree of preparedness, the question arises: what is th most efficient way to reach preparedness from the point of view of the economic resources it absorbs.

Now one of the oldest findings from history is that slave labor is inefficient labor: forced labor is not efficient labor. You get far better service, far better and more efficient use of resources if people are voluntarily engaging in an activity. And that is no different for the military than it is for anything else.

In the first place, in order to man an armed force of a given size with a mixed force of conscripts and volunteers a larger total number of people is needed. Why? A man drafted for two years spends the first six months or so in training. The last three months of his service he is being processed for discharge. You are lucky if you get one year service out of the man for two years that he is in the armed services. In addition there must be people on hand to train him, to move him about from one place to another, to process those papers for discharge and the like. The result is that, of a given total number of people in the armed forces, the number of people in an effective position is decidedly smaller in a mixed force of volunteers and conscripts than in a force of all volunteers. Now this shows up dramatically in the kind of figures the Gates Report produced and that Bill Meckling will talk about later.

To maintain a middle range mixed force of volunteers and conscripts, each year about 440,000 young men must be recruited for the enlisted forces leaving aside the officers corps. Under a completely volunteer army the number of people needed is 325,000. So each year there is an additional 115,000 people or so who have to be put through the mill of going into the service and coming out of the service. So clearly, just from the point of view of the military operation itself, a conscript force involves the use of more man-hours and thus waste resources for the same military effectiveness. But that is only part of the story. In addition to the waste of people in the excessive turnover in the military itself, there is the waste of people in the civilian side because of the activities young men and other people engage in as a result of the draft. As we said in our report there are not only draft-included volunteers in the armed forces, there are draft-induced ministers, there are draft-induced graduate students, there are draft-induced deportees.

Young men all over understandably, because of the existence of the draft, engage in activities they would not otherwise engage in. Employers are hesitant to recruit people for particular jobs because they may be subject to the draft and employers lose them. Consequently, you have inefficient use of the young men. You have the disturbance and the cost imposed on the college campuses. I think there is little doubt that a major source of the disruption on the campuses has been the draft. It has brought to colleges and universities hundreds of thousands of young men who would not otherwise be there. Their major interest has not been in education and as a result they have denied places on the campuses to others who would have a stronger interest in education, and they have changed the character and the tone of the discussion. And moreover, because they felt guilty about being there while their friends were escaping they have tended to retreat to an irrational approach to great important issues. The issues of what our foreign policy should be is an extremely important issue, but it ought not to be considered in the kind of irrational, emotional tones that have dominated campus discussion, and I am sure a large part of that is indirectly a reflection of the existence of the draft.

So in terms of the real cost of the society, a volunteer military is a more efficient way of providing a given degree of effectiveness. It requires fewer people in the armed forces on the one hand, and it does less disturbance and harm to the rest of the society on the other. Now we turn from the real cost side to the budgetary cost. If you look at the problem of achieving a voluntary army, there is only one simple problem and that is, we are currently underpaying drastically people who are in the first term of service. A young man who is drafted in his first term of service receives on the average something like 60% of the income which he can earn in civilian life. I think it is an enormous tribute to the patriotism of our young people that so many people already volunteer under

those circumstances; no one is going to volunteer and enter the armed services for pay alone. But it certainly is true that bad pay can discourage a man from entering that might not otherwise enter. That is the fundamental problem.

The fundamental function of the draft is not to get men for the armed forces, make no mistake about that. The reason we have conscription is to reduce the tax load on tax payers in general, and instead impose a tax on the young people who serve. And nobody will put it that way. But if you look at it objectively, that is the essence of the situation. A young man who would be willing to serve in the armed forces for $5,000 a year who receives in the armed forces $2,500 a year is paying a tax of $2500. However, it is a tax in kind. Its a kind of forced levy that we thought went out with the Middle Ages, the elimination of which was one of the great steps forward in the freedom of human beings from bondage. But that is what it is: a forced levy, forced service on people. A tax in kind. Our books are not kept well, our governmental books do not show as a receipt the tax in kind from the people who are serving compulsorily. Our governmental books do not show as an expenditure the true cost of manning the forces. If we were to adopt this procedure in general, we could reduce the book expenditures of the federal government very drastically. If you simply drafted all people who are used in government construction or all of the civil servants who fill the buildings in Washington—if you required each and every one of them to serve at half his present pay, under penalty of being sentenced to jail if he didn't, recorded government expenditures would go down drastically. But I think no one would say that was a real saving. Well, that is the situation. Under present circumstances we are financing the armed forces in considerable part by a tax in kind on the young men who are required to serve and on those people who are induced to volunteer in order to avoid the draft. The essence of a shift to a volunteer armed force is a substitution of tax for a tax in kind. It does not, in fact, involve an increase in total government expenditures properly measured. It involves a reduction in total government expenditures properly measured. It involves a *reduction* in total government expenditures properly measured. But it does involve shifting from a tax in kind, shifting from requiring services through a forced levy, to a buying it on the market. And as a result, the *recorded* bookkeeping expenditures of the government will run higher. The estimates we made in the Gates Commission Report, and that Bill Meckling will perhaps develop further is anyone is interested were that the actual budgetary expense of shifting to a voluntary army force would be roughly of the order of something like 2½ billion dollars a year for a stable force mid range force of the side that is considered. And I may say, that that force is roughly that kind of force that is being contemplated, now that we are moving out of the Vietnam situation.

Now I have no doubt that from an immediate governmental point of view—from the point of view offered in the government—the need to spend 2½ billion dollars more. Out of pocket expenses that do have to be raised in cash taxes raises a problem, a political problem. You know there is the saying "an old tax is a good tax" in the sense that people get accustomed to it and any new tax is difficult tax. But it so happens that I think this political difficulty in the present instance a mixed one and much less serious in general and that is because the draft tax is so unpopular. It is hard to think of any other tax that we have that is not labeled a tax and has produced such a degree of taxpayer resistance. Maybe there are other taxes that are evaded to a greater extent. It is very hard to believe that there are.

It is hard to think of any other tax that costs so much to collect. In our report of the Gates Commission Report we made an estimate of the cost imposed on the rest of the community in order to get the dollar services collected in the tax in kind, it costs the country a dollar and a half to collect it. That is, a dollar and a half represented a rough estimate of the cost imposed on other people to evade the tax—the cost imposed on the people who went into one exempt occupation or activity or other for the purpose of evading the tax. So, in this case I think you have a situation where simultaneously a very bad tax can be repealed; in effect 2½ billion dollars more must be collected in dollar taxes in order to finance the budgetary outlay for this purpose. What you have is a shift of tax burden from the backs of the young men to the public at large.

Now, one other, most governmental expenditures that you consider are exhaustive expenditures; they involve using additional resources. If, for example, there is an extra $500 million dollars voted to subsidize the SST, that will involve hiring engineers, using materials, in other ways reducing a volume of real resources available for other purposes. That is not true in this case. If in fact the Congress votes to have a volunteer military and this involves an additional dollar expenditure of 2½ billion dollars a year, that will be accompanied by a reduction in the amount of resources, manpower, and etc. that you absorb from the civilian economy. Because it is a rearrangement of the tax burden and not a net addition, this case, unlike the SST, will make more men available to the civilian economy, and more material available because this will produce far more efficient use of the military. I have tried to stick so far as I could to the economics of it. I hope it will stimulate you to ask questions because it is much better to answer. Let me only close by saying that I think the basic issue involved in the voluntary army goes much beyond the economics of it, and I would not myself, although I am a professional economist, be so concerned with the issue if all it involved were the economic resources.

What is fundamentally involved is the fundamental principals and beliefs of this country and of this nation. We are a free people. Then we should individually, as a free people, have control of our lives. It is fundamentally incompatible for a society of free men to have a system under which people are compelled to render specific services at penalty incarceration and of imprisonment when it is perfectly feasible, perfectly possible to hire those services on the open market by getting voluntary arrangements that will serve that purpose. Thank you.

SPEECH BY SENATOR HATFIELD

I'd like to extend to you a word of greeting, as you undertake this conference on the draft. A subject which has been dear to my heart for many years. There is really little that I could add to this as far as the rationale for developing the volunteer military than what has already been offered by the brilliant discourse of Dr. Friedman. I can only indicate that since the years that I filled out hundreds of SS forms 109 for the male students on the University campus where I was serving as dean, I was made much aware of the inequity of the so-called student deferment part of the SS program.

Variations occurred there within the different majors. Yet, as to grade averages, no consideration was given to whether you were a physics major or a music appreciation major. Also, it made little difference whether you came from a High School that had great demands upon academic achievement or little demand. And so from those days back in the 50's on through, I have been, as I say deeply involved in the inequities that were so apparent in the Selective Service System.

In fact, I think the very title itself indicates the discriminatory character of the system. I want to say this morning that there has been very few people who influenced me more than Dr. Friedman's very outstanding participation in this discourse for these many years, because when I came to the Senate in 1967 I introduced the first bill for the repeal of the Selective Service program. And then followed that with another bill in 1969 but now we have behind us and undergirding our efforts the Gates Commission Report which was unanimous, as you know, and which will be given in greater detail I suppose as you go throughout the day by the gentlemen present.

With the Gates Commission report in, we introduced a new bill to incorporate as much of the exact language as we could and to translate the Report's recommendations into legislative language. I say it was unanimous and this included not only the civillian members but General Gruenther and General Norstad as well. I think sometimes we find ourselves in this basic argument today or debate within the echelons of politics as sort of the old conundrum we hear so often about the military-industrial complex that it is the military versus the civilian. Well, this, of course, is a very superficial observation if one makes that because we find that really some of the greatest support for a voluntary military comes from within the military organization, and military leadership.

Navy Magazine talked about personnel turbulence upon occasion which they indicated was the single most important problem they faced as a military organization, because of the high rate of turnover they found was part of their problem. I would say today that the prestige of the military is greatly called into question and I think it is unfairly attacked from many quarters. I decry those who use the military as the scapegoat for many of their differences about political issues or political policies. I think one of the things we can do most significantly of all is to restore the military as the rightful arm of the defense of this nation. And to establish it on a voluntary basis. I think by removing one of the most important of all the targets of attack, mainly the draft, we could do the most to reestablish the rightful prestige the military should have in our country. I reject totally those who fear the military eliteism which a so-called professional mercenary army, they like to phrase it, would bring about. I reject that not upon an opinion only but upon the history of this country, upon the Constitution, and the way this Constitution guarantees our civilian control.

Now we have the problem of the ROTC today which I think is often brought into focus, which I feel again is one of the most important parts of our military training program. The same people who fight ROTC are contradicting themselves when they say we want less militarism in this country. While the more we have of civilian involvement in civilian exchange and civilian environment, the greater we will find the military integrated into our total society. I have absolutely no fear. After all, we do have the records of our history of this county to point to as the reasons why we need not fear the military in this country.

I think that we have to face up to the reality that the draft will expire in June 1971. We are going to be pushed up against the wall if we do not have any alternative program to present to the Congress and to adopt by the Congress before we face that deadline. If we do nothing in the Congress at this point we will find ourselves in with the only proposition presented to us and that is to extend the draft for another period of time. So, I say that this is the time, this is the moment when we as a Congress should be undertaking an action which will pro-

vide us with other than an up against the wall situation of extending the draft for another two years.

I think your conference and the understanding and the knowledge that you will gain from this conference by your distinguished panel members will be very important to our efforts on the Congressional side. Senator Goldwater is the main cosponsor of my amendment and together we will wage this battle as we have waged battles together on previous occasions and the thing that I think is most interesting about this particular situation is it transcends all political philosophies, all political labels. We have one common cause here and that is for the basic freedom of this country that we all believe in, and for an efficient military organization, which as Professor Friedman has indicated already, cannot be efficient or effective under the present system of conscription.

I would close my comments to you this morning by merely saying that I am most pleased to be able to be here this morning, to welcome your efforts and to ask for your support. We need your help. We will take this as an amendment procedure, directly to the floor of the Senate. Finally, I think when young people have involved themselves within the processes of Government, as you have, you can intelligently and peaceably go about making your voices heard. It will be very effective in influencing and creating interest on the part of those in the so-called establishment, and I commend you therefore on establishing the means of communication and expressing your opinions and moving those opinions into action. I am grateful to have a chance to be here this morning and thank you very much for your invitation.

SPEECH BY DEAN WILLIAM MECKLING

(NOTE.—Mr. Meckling is director of research for the Gates Commission Report, Dean of the School of Business at the University of Rochester.)

Milton has suggested that I might correct David in regard to that last statement about my influence on the Commission report, and make it clear it was the facts that were responsible and not me that was responsible for the outcome. I had an interesting experience which I thought I would relate to you on the way down this morning on the plane that I think merits some attention. I was reviewing our Commission report on the way down and one of the stewardesses noticed I was looking at it and asked me what I was doing reading that book and I said I had some effect on what was written in those pages, and I have some interest in that. She was quite interested and said she and the other stewardesses the night before had discussed the new Women's rights amendment and had suddenly discovered, or then felt they discovered that perhaps they'd be subject to the draft if the women's rights amendment really was enacted and they were quite concerned. So that I got attention all the way down from Rochester from the stewardesses this morning in an unusual way on an unusual subject. Now that is the first case in the time we spent working with the Commission that I found young women really vitally interested in the draft issue in a direct sense, that is, they thought they might be affected by this.

I'd like to start from where Milton left off talking about the real reasons for objections to the use of conscription and it is basically a question of human freedom I think and not a question of economics. But much of the discussion that goes on about the draft involves questions which are essentially questions of fact and much of the Commission's staff effort in any rate went into trying to cover as much as we could about the fact with respect to the use of conscription. One of the major objections that occurred then and occurs now really revolves about the feasibility of a voluntary force.

Many people say that an all volunteer force is not feasible. In one regard that statement confuses the issue because I think it is quite clear to most people that if you ask whether at $50,000 a year for first-term servicemen we couldn't have a volunteer force, almost all would agree that we could. This clarifies that the real issue is one of what we are going to have to pay—that is we must decide what the pay levels are going to have to be in order to achieve an all-volunteer force. That is one of the things that the Commission spent a great deal of time on and a lot of people have raised questions on our estimates. I want to go back to that later, but I will say now that we made a honest effort to get the best kind of estimates we could about what it would take in terms of pay level to solve the transition problem.

The feasibility question breaks down when you address it into two parts. One is I think a more extreme form of statement and that is that it is not feasible in the long run. Most people do not hold that position. They will say that the all volunteer force is a good idea and that is what we should have in the long run, but we can not have it now. So the issue becomes one of transition. And in fact, the staff of the Commission addressed itself not to just the long run problem but to the transition problem as well. I personally believe and am convinced that the pay scales we suggested in the report would enable us to have an all-volunteer force.

Even in the short run, we can safely allow the present draft to expire next year. The Commission members were concerned about precisely the problem that Mr. Teague mentioned, that is to say, that the President would find himself in a position where the draft would legally be abolished, and he might have no alternatives in terms of preserving the defense of the Nation. Therefore, the Commission's recommendations were directed to the question of the transition period, as well as the long run stable situation.

The Commission recommended the pay increase to be effective July 1, of this year precisely because they wanted a year of experience before the draft expires. In this way the President and the Congress in a sense would not be put in a box in the spring of next year when the law expires and we will not otherwise have the information in terms of some experience with the new pay scales and improved conditions of service in the military to prove that a all volunteer force is possible.

Let me get on to some of the data, about the feasibility issue, because I think when most people talk about feasibility they have—I think this is made perhaps most obvious and explicit because of what Professor Friedman mentioned earlier—that when people begin to look at the facts on this question they always tend to move in the direction of being more favorably disposed to an all volunteer force. On the feasibility issue, one of the main facts, I think that is ignored and generally is not understood, is people making total objections about how difficult it would be to have a volunteer force when they do not realize how many volunteers are in the military today. There are in the military today 1¼ million people beyond the first term of service and there can be no question that those people are true volunteers. That is, they are there because they choose to be there, they are not there because they are forced to be there. So a million and a quarter people in the military today are volunteers.

In addition to that, however, there are many volunteers in the first term of service. It is true that not all those volunteers are true volunteers because some fraction of those people are induced to volunteer in order to get terms of service by volunteering which they prefer to what they could have by being drafted; that is to say, many of them prefer say three years in the Air Force as a technician, to two years in the ground forces in the Army, which is what is more likely what they will find happen to them if they wait to be drafted. So they elect to enlist in order to avoid the draft. This way they have preference in terms of the service.

Nevertheless, we on two occasions had the military conduct surveys to look at the question of how many of those people who volunteer are true volunteers. I might say it is not just those who volunteer, it is also the inductees. We have done a survey with the first-term servicemen to discover how many first-term servicemen would have enlisted in the absence of the draft. In its estimates of the number of true volunteers, the Commission used those studies.

There were two ways we could have gone about this. One was on the basis of these surveys; the other was directly from data on enlistment and how enlistments varied as a function of how many people were being drafted. Over time the number of draftees in a given year change. As draft pressure goes up this would have the effect of inducing more volunteers. The numbers we used in our study were the most conservative estimates of true volunteers. That led to a number on the order of 800,000 more true volunteers in the first term of service in 1967 and a similar number really in 1965 before we were involved in Vietnam. So the Commission's estimates were about 2¼ million or 2 million in terms of the number of true volunteers that exist today and existed in 1965.

When you are talking about armed forces of the size of 2 to 2½ million you are really not talking about many more volunteers than we have now. And the problem there is essentially the problem that Professor Friedman had mentioned; that is we have to get the pay increased enough to encourage additional volunteers in that first-term to fill out this difference and that is not a very large number even if we go to the largest force conceivable, which is 2½ million. In that connection, I should add that since the Commission study it has become clearer and clearer that the size of the force that will in fact exist as a permanent peacetime force is likely to be on the smaller side of the estimates we used and not on the larger side. That will make it even easier to achieve the all volunteer force.

Similarly, in the transition period the announcement has already been made that draft calls for the rest of this year will be reduced to 10,000 a month. If that level of draft calls is continued for the next year you are talking about drafting 125,000 in a year. There will be over 2 million who turn 19 next year, so you are talking about drafting 1 in 10 males. The situation also gets worse as time goes on. The number of 19 year olds will be close to 2½ million by 1980. By that time if we continued the draft we will be probably drafting something on the order of one out of 15 or 20 males. So the discriminating form of tax that Milton talked about will become more discriminatory over time as the male population in this age category increases.

Another important fact that I think people are not aware is that a military of a size of 2½ million in 1975 will be the same size as the one and a half million manned force in 1950, relative to the population of males who are eligible for military service.

I might add one other thing: The number of volunteers that are now in the military has an important implication for the allegation that Senator Hatfield mentioned about a mercenary force. The fact is that the mixed force we now have is largely mercenary, to mean by mercenary that the people are there voluntarily. The present force, especially the officer corps, are virtually entirely mercenary. No one would really claim I think that somehow it is immoral that the majority of our officers and non-commissioned officers are there on a volunteer basis.

I'd be glad to answer any other question you have in respect to the Commissions report. The Commission staff is publishing very shortly—I hope by the middle of August—a thick volume of about 1200 or 1300 pages of backup studies, which led to many of the figures in the Report itself. The papers were done by various people around the country. The Report will be included in that backup study.

SPEECH OF MAJ. GEN. THOMAS LANE, RETIRED

I, in a sense, have been called off the bench to substitute for General Alfred Gruenther who was a member of the Gates Commission. He was unable to be here for personal reasons. So I come to you not as a supporter of the Gates Commission, not as a supporter of the Hatfield Amendment, not as a supporter of the YAF position on a Volunteer Army. I'm a retired Army officer, presently occupied as a newspaper columnist, writing on Public Affairs, so I come to give you my own personal views on the Volunteer Army. I do come before you as a supporter of the Volunteer Army. I've had some personal experience with the draft. From 1957 to 1960 I commanded Fort Leonard Wood, Missouri, which is one of the big training centers receiving draftees from the North Central part of our country. More than that, I'm old enough to have served in the volunteer army which we had before World War II. So I've had experience both with the draft and with the volunteer army.

While I was at Fort Leonard Wood I saw the inequities of the draft, which Professor Friedman and others have noted. At that time, the Army Field forces at Fort Monroe were studying personnel problems in the military services, including the draft, and I forwarded the study to the Board of Officers with my recommendation for ending the draft or at least changing it very drastically. At that time, the military had set very high standards for the qualification of men to serve in the military. We were screening out the poorer specimens from the bottom. This gave us good material with which to work. We had intelligent young Americans who could learn what they had to learn in the military service, and this made the training problem much easier and in a sense less expensive.

This was a beneficial aspect of the draft which it seemed to me induced into the military services a certain complacency with its continuation. But I also saw the other aspects of the draft. The effect of the draft when you are taking only a small part of the eligible age population is to build up a popular escape mentality. People start figuring out how they can avoid the draft, the ways in which they can escape military service. It seems to me that this ultimately was building a poor mentality among the youth in the country. What we had done was to take a draft system designed for a general mobilization in World War II and to apply it in peacetime when we were taking a very small part of the eligible age population.

Therefore the law operated so that the young man who accepted this military obligation and went into service, in a sense, had the penalty of losing two years of his civilian life (if you regard military service as a penalty), and the man who evaded that obligation in some way or other, escaped the draft. So the law operated to reward the people who avoided public obligation and service. In other words, it rewarded what you might say would be a selfishness and avoidance of public service, and it penalized those who accepted these obligations. I thought this had a very bad effect on our whole population, and I thought we should put an end to it. But at that time, as I say, the way the system was working, it was very hard to change it.

Another aspect of the draft, part of the holdover, was that while we were taking a small part of the population, and could get out of those coming of age each year enough to man the military forces, we continued the World War II requirement of eligibility up until the age of twenty-six. I saw young men who simply hadn't been called when they were younger, who then were called to active duty when they had families, when they were established in their work and in their business, and at the least opportune time. I saw no necessity at all for the operation of a draft in that manner in time of peace. These were the factors which, I say, affected the decision, and it seemed to me the military made a very bad decision in continuing the draft in peace time. I tried to persuade them to change it, but had no effect.

The role of the draft as I see it is to provide an equitable distribution of the goods of war in time of a general mobilization. Without some such mechanism it is very difficult to mobilize a total population in time of general war, to have everybody go to his best slot, to make best use of the people you have. But I see the draft as having no place in our society in time of peace. I see no excuse for it at all.

Now when you talk about a draft you have to talk about force requirements—Dean Meckling has mentioned some of these—the problem of manning military services. The question of whether we need a draft at all is very intimately related to the kind of national policies we have and the way in which we use our military power. I have felt throughout these years since the end of World War II, that there has never been any need for a draft at all, that it is only the bad military policies which we have followed which have required the kind of manpower mobilization which we have actually had.

If you take the situation in Vietnam, and Southeast Asia, you have some 20 million North Vietnamese who were lost to the Communists in 1954. You have among the Thais, the Laotians, the Cambodians, and the South Vietnamese 60 million people who want to be free. It seems to me obvious that those 60 million can beat the 20 million if the U.S. will simply support them. The real history of the war in Vietnam is that we have failed to support the people in South Vietnam and Southeast Asia who wanted to be free and have intervened ourselves in mistaken notions about how to preserve peace; we have caused the war in Vietnam. I see no excuse for ever having any commitment of men to Vietnam. If our power had been used properly there would never have been a war in Vietnam.

Now a similar situation exists in Europe. The protection of Free Europe has been achieved by the U.S. nuclear deterrent. There has never been any danger since the end of World War II that Russia would invade and conquer Western Europe, not while our military deterrent was committed to the defense of Western Europe. We lost Czechoslovakia in 1948. Thereafter the countries of Western Europe formed in the Brussells pact, a self defense organization. We then joined up in NATO and committed our power to the defense of Europe. Now the building of NATO forces which followed was in large measure window dressing. It did a lot to introduce dollars, but from the military point of view it was absolutely unnecessary to protect Europe. Our allies in Western Europe already had, under the Brussells Pact, ample military power to protect themselves. With the American deterrant Europe was secure.

So I have felt in the intervening years there has never been any need for the 5 divisions which we sent to Europe in 1950. Those divisions were authorized by the Congress to be sent there only temporarily, to be replaced as fast as possible by divisions of four European Allies. By 1958 the need for those divisions even on that basis had lapsed. They could have easily been returned but then we were embroiled with the politics of Europe and no politician in Europe, of course, would like to increase his military appropriations and divert funds from social purposes when he can get the United States to provide the troops instead. And so we have played along with the politicians of Europe and allowed our men to stay in Europe.

Well, what I'm coming to, on this question of force requirements is that when you add it all up there's no need for the manpower we have in Europe and no need for the manpower the United States has in Vietnam, and that if we use our power properly we can reduce our forces and get well within the limits set by the Gate Commission. The effect of our overcommitment of manpower and the waste of our substance in this kind of war of attrition which we fought in Korea, and which we have fought again in Vietnam, is to undermine our confidence and national confidence in the U.S.A. We have the spectacle now of Senators saying, "Well you can't win this war."

But how ridiculous it is to say the United States can't win this war. We never had a President who wanted to win the war in Vietnam. They've all said they didn't want to win the war. Of course we can win the war when we have the will to do it. And we have Senators now who are saying that, well, we can't afford to protect the free world. We have to withdraw from our outposts. Of course we can protect the free world. The free world has two thirds of the world's people, it has five sixths of the world's industry, and to say that the free world can't protect itself is utterly ridiculous. But there is a question of how you do it, and we've been doing it the wrong way.

Now if we're going to change and reduce our force requirements as they should be reduced, you then enter upon a question of timing. I say there's no need for this manpower we have in Southeast Asia and in Europe today. It could be brought back, but it takes time to do these things. In Southeast Asia, what we should do is go into Laos and knock the North Vietnamese out of Laos. That will secure the western border of South Vietnam, put an end to the attacks on that country and you'll have peace. In Europe we have to give the countries there whom we have been protecting a chance to build their own military forces to replace our forces which are being withdrawn, and this may take a little time. So there's a question whether we can do all this within the next year, or whether, perhaps, we should delay the time for the establishment of the volunteer army beyond the first of July, perhaps until the first of January, 1972.

As to the bill itself, a lot of details have been taken, as Senator Hatfield said, from the Gates Commission. It would seem to me better simply to make in the bill a statement of policy for the volunteer army and put an end to the draft. Then we should call on the Defense Department to propose the amendments to law, which are required to restore the volunteer army. One point about the draft which I think is important is this: we have had a lot of discussion about the division of powers. How far may the President go in the use of the military forces which we have mobilized in time of peace, in defending the interests of this country around the world without committing us to war?

There's been great concern about the buildup in Vietnam. It seems to me the draft can be a very useful instrument in this respect. I would think the draft . . . the provision for the stand-by draft should be this: the draft may be invoked by the President only in time of war declared by Congress. The President, in time of peace should be limited to the volunteer force which he has and can maintain. In time of war, when he needs a greater mobilization, he must go to the Congress for a declaration of war in order to invoke the draft. I think in this regard the draft would be helpful in drawing that line between the Presidential authority and the Congressional authority.

One other aspect of this that should be

considered in a volunteer army is the question of family allowances. As had been pointed out, the problem of getting volunteers for an army is not unrelated to the economic situation in the country. One of the bad aspects of the draft, I think, is that in continuing the war-time provision whereby everyone taken into service was given family allowances, regardless of his age, we have in these years, tended, I think, to promote child marriages. Young people who felt they were in love while the young fellow was going off into service would get married so the wife would get some income.

The British, I think, at the time that I was at Fort Leonard Wood, had a different provision. They had a draft law. They said that anyone who was drafted did not get family allowances until he reached the age of 23. A man was presumed not to be married up to the age 23, and if he got married before that time and was then drafted, he got no family allowances while he was in the British Army. In the volunteer army before WWII we had no family allowances except for what we call the top three grades of the seven enlisted grades. So that a young man had to come into the army and had to work his way up through the lower four grades to the third grade from the top before he could draw family allowance. I think it's important that in time of a mobilization under a draft that you have family allowances for everyone who is called a servant. In peacetime armies that is not required. I would think it would be very important not to have any such provision.

What we want in a peacetime army are young men who are looking for adventure and want to go out and see the world and learn a trade, find out what's going on in the world, and who are going to come back and get married after they've had their military service. The only provision for family allowances in a career army should be for those who are committed as career men and are going to spend their lives in the military service. This normally will be those in the upper grades. Well, that's the general picture of the draft from the military viewpoint as I see it. My only counsel at this point would be to do it.

SPEECH BY SENATOR BARRY GOLDWATER

Mr. Chairman and distinguished guests, I'm here today to tell you that the voluntary military proposal will definitely be brought to a vote in the Senate in this session. And what's more I think it has an excellent chance of passing. Now it may not stay in the bill as it comes from conference with the House. But the advantage of having one House act on it is that when it comes up again we know the position of the upper House and that helps a great deal.

This plan now has at least fifteen votes that we can count on. We have that many Senators who are sponsors of the bill. We added Senator Proxmire just a little while ago. And I know several more that have taken the position for it, but they've not taken it publicly.

I want to make it clear that we are serious about this effort. It is not something that we're trying to do to placate or trick the young people of this country. It is being done because we feel it is in the best traditions of our country. And it's a normal way of life under our system of government. In fact, up to the time of the Civil War there had never been a compulsory system of military service, in the United States. I might add that Napolean was the rascal who dreamed this all up in the last of his wars. He conscripted everything in France, including horses and women.

The involuntary draft first appeared in this nation in 1863. After that it was dropped and didn't show up again until 1917, when it was used and then, of course, it was dropped after the war. In 1940, the draft came again; it was allowed to expire in 1947. But one year later the Congress passed a draft law and that one is still with us. It stays until the end of June next year, at which time if it is to be renewed, the Congress will have to do it.

I think in the brief history you can see that the fact that the draft has continued since 1948 is contrary to the entire past history of the United States. This practice has no place in our system of freedom except as a temporary expedient.

Now when the law is used to tell a young man how he shall spend several years of his life, this causes an invasion of the most precious and fundamental of human rights, the right of each citizen to live his own life, or as you young people say today, "To do your thing." And to do this as you may choose. This is why as a conservative I am so strongly and emotionally committed to the voluntary military approach.

Not only do I believe that the draft is wrong, but I also believe it is ignorant to assume that free men have to be forced to fight for their country. I'm just old fashioned enough to believe that there are still a great many Americans among us who think enough of their freedom that they are willing to fight for it. Furthermore, I think the rest of the Americans are willing to pay those who serve in the military a good and ample wage, with fringe benefits, for shouldering the task.

I would remind you this morning that this is not a new cause to me. I might say that I came to the conclusion to support this position during the last five years of my military service of 37 years as a Reserve Officer, durting which my Mobilization Day assignment was Deputy Chief of Staff for Personnel for the Air Force. As I watched the inefficiency of maintaining the draft I became convinced that we had to institute a different system. In acting on this belief I helped to draft the Republican National platform in '64, which pledged to end the draft altogether and as soon as possible. Also, I remember the very first speech of that "cliff-hanging" campaign I was engaged in during 1964, when I strongly endorsed the Voluntary system.

Since then we have heard a lot of talk about the plan, but all too often its been discussed in only an academic way. Now in 1970 the picture has changed. The opportunity for dismantling the draft is a real one. Now, all of you here I believe have heard of the findings of the Gates Commission—that is the Commission that was organized under the direction of the President to reach some conclusions on this issue. Their conclusion—to put it briefly—is that a Voluntary system will work.

In fact, it is not all that drastic a change in the system that we have right now. The truth is that our current military forces are made up predominantly of Volunteers. This is something that many people don't realize. We have in my State of Arizona for example such a large number of Volunteers that our draft call in many months has practically been non-existent.

According to the Gates Commission the great majority of servicemen are either individuals who have reenlisted after their original obligation had ended, or first-term enlistees who say they would have enlisted even had there been no threat of the draft looming over their heads. The existing base of volunteers is so large that the Gates Commission found, and I quote, "A fully Volunteer Force of 2.5 million men can be achieved by improving pay and conditions of service sufficiently to induce approximately 75,000 additional young men to enlist each year." Now let me repeat, all it would take to put a fully Volunteer Military force into operation is an additional 75,000 volunteers each year. And I feel this can be achieved.

I disagree somewhat with the report's cost estimates, which say it would cost $3.2 billion in the first few years and would drop to $2.1 billion, once a voluntary force began operating on a continuing basis. This is too high. Really the reason I was originally deeply interested in this proposal was as a result of my annual tours of duty with the Air Force in Personnel at the Pentagon. I was astounded at the amount of money that it cost just the Air Force alone each year to retrain a man for a slot that had been vacated by another man. This training in a four year term can run as high as $250,000 in the case of enlisted men. In the case of officers it can be double that amount.

In fact, you may not know it but in a B-52 first-term pilot we have invested about a million dollars in training. The average enlistee or draftee that goes through, let's say training in electronics at Kiesler Air Force Base, has over $80,000 invested in him. Now if he dropped out somebody has to fill that slot and the estimate that I came up with, just looking at the figures that I have available, was that it would save the Air Force alone about 1 billion dollars a year if we could have men that we could keep.

We have to note that the Commission study doesn't fudge at arriving at its estimates. Contrary to what some critics have said the Commission took full account of the problem which the Army had in staffing itself in competition with the other services. The Commission wisely set its compensation tables at levels high enough to provide the army with the quantity and quality of volunteers required by by it. The Commission noted "The evidence is overwhelming that if compensation is set at levels which satisfy army requirements, the other services will be able to attract enough qualified volunteers to meet their respective requirements."

Now another misleading question that you will hear raised by critics is "What happens in case of a national emergency?" Of course, the answer is that the first recourse will be to the Ready Reserves, including the National Guard. I have to say in a rather critical way that both of these sources of manpower have not been completely used in the Vietnam situation. Some Air National Guard groups have served in Vietnam, and some Reserve Air Lift Forces have helped, but there are literally hundreds of thousands of people who could have been used, who wanted to be used, but were not called up.

In the event of a national emergency, of course, we can always go back to the draft system. It takes just an act of Congress to set it in motion. But conscription cannot provide emergency forces, it never has, and I see no way, after 37 years of Reserve service that it can. We can have a sufficient existing Reserve to meet any National Emergency. Thus it will be the Reserve forces which will provide immediate support to the active forces. Like the active duty forces the reserve forces will be recruited on a voluntary basis.

The legislation which we have sponsored will automatically increase the drill pay for Reserve participation, at the same time that it provides pay increases for the active component. In my view, this increase will be sufficient to encourage reserve enlistments adequate to maintain a voluntary reserve force which is large enough to support a voluntary active duty force. Furthermore, our proposal takes the common sense approach of providing for a stand-by draft, in the case of an emergency. Conscription could be reinstituted by an act of Congress, almost immediately, because our plan provides for the continued registration of all young men in the United States even though the draft itself will be done away with.

In closing, I want to repeat that the Voluntary Military Proposal is sensible and morally justified. Next week the members of the Senate will have the opportunity to stand up and be counted on this issue. I believe it will be successful. This is a cause whose time has arrived, and for those of you who are staff members of either Senators or Congressmen, I think it would be very helpful if you, after listening to these remarks to-

day, and having studied it, would counsel with them. Not too many people, unfortunately, in the Senate understand the draft or how it works—or even why we have it. While many of them have gone through the experience of being drafted, once they are here they forget about it, and depend on the Armed Services Committee. Unfortunately in the Armed Services Committee we don't have real high excitement about even having hearings on this Bill. That is why we are going to try the amendment route and if we fail then we will, by a high vote, at least have built the momentum for bringing up the plan in Committee.

QUESTION AND ANSWER PERIOD

Question. *Jerry Baukl, Associated Press:* I'd like to ask one question—I haven't heard answered or asked. How are you going to fill the hard to fill spots, like infantry people. I haven't heard that answered in all the material—I have read just about everything on the subject and I've never heard it answered.

Senator GOLDWATER: I'm not sure that these answers will be satisfactory to the question, but I think they will be. First of all, the requirements of the Army of the 1980's will be, I'd say, half of what they have been. We know this because of the success of electronic devices we are using to detect the enemy, which takes usually about 75% of the ground force, with 25% used for destruction. Then we have heavy airlift capability, which can put many men and much equipment anyplace in the world with great speed. We will increase pay, although we will have other problems than just the infantryman, or the ground pounder. We have the problem of doctors, we have the problem of lawyers, we have a very serious problem in the retention of atomic submarine crews who don't like being away from their families. We're already trying to correct those areas, making it possible for the family to be nearer to the man who is doing the fighting, or who is overseas someplace. We know that this is going to be a problem. It's always harder to get a man to volunteer for the infantry or the Marines than for the Navy or the Air Force.

I've always felt that there are enough people in this country who want to be soldiers, sailors and airmen, even though you can well argue there are other ways of life that are more attractive. I always think of the man who becomes a minister, the man who becomes a farmer, or a policeman, or a politician, as a man who gives up his life work to do something because of devotion and not because he's going to make money at it. I think this will apply here.

Professor FRIEDMAN. May we add something to that? I was just going to suggest that this is a problem that of course concerns us very much in the Gates Commission. If you will look at the Commission report you will see that as Senator Goldwater mentioned, the pay increases were judged primarily in terms of their effectiveness in recruiting men for the Army, as opposed to the other armed forces. If you look at the tables in Chapter 5 of the Report, you will see that the armed forces are considered separately in each case—the army is considered separately from the Department of Defense because we recognized that that was a critical element. As the report indicates it is our judgment that if you were able to get the recruits for the Army then you will have no trouble whatsoever with the other services, you'd probably have a surplus.

If you look also at situation table 5–1 which I think is in some ways the most interesting, for the army alone, it's also worth noting that 65% of the enlisted personnel in the Army are now true volunteers. So even in the Army, as opposed to the Armed Forces as a whole, the number is—well, I'm sorry, I was looking at June 30, 1965. On June 30, 1967 it's a little lower than that, it's 46%, whereas it's 60% for the Armed Forces as a whole. But the point I'm trying to make is that you do have a considerable number of people volunteering now. We have suggested pay scales which would represent the largest increase for precisely the kind of group of people you are talking about. The study suggests that would provide an additional number.

In addition, as Senator Goldwater is suggesting, with the higher pay for the armed forces there will be a strong incentive for the armed forces to be more efficient in the use of the ordinary foot soldier. So, I think that the problem you are raising is a very real one but not the most serious problem. I really think the most serious problem of all is the one Senator Goldwater just mentioned of the physicians—that's more serious than the infantry.

Dean WILLIAM MECKLING. In fact, the problem really isn't with infantry people in the army, it's with technical people. If you talk with people in the army you will find that their concern is not over the traditional infantry people but over getting technical people in the army. Secondly, one of the Commission's provisions was the recommendation to establish a new hostile fire pay, which is a substantial increase over what now exists—$200 a month. Also I think will help in respect to the infantry's itself.

JERRY BAULK. Isn't getting technical people more difficult than keeping them?

Dean WILLIAM MECKLING. It is now, but it won't be under this plan. It'll never be a hundred per cent.

Professor FRIEDMAN. But you see, on the keeping of them, the re-enlistment rate of draftees is very low. The re-enlistment rate of volunteers is very high. So that these are not really different problems. It's having terms which will induce technical people to volunteer, which will also enable you to keep them. And if you have to depend on the draft to get your technical people then you're not going to keep them, then you have the problem that Senator Goldwater is talking about—retraining.

Maj. Gen. THOMAS LANE. I would make just one brief comment. We shouldn't think of the infantry, in the old terms of the fellow walking along with a rifle. The modern infantry, particularly in a peacetime force which should be an elite force, will be a highly trained force. Your infantrymen are going to require considerable skill with modern weaponry. We tend for historical reasons to regard the infantry as something very different from the present infantry. QUESTION: LOWELL PONTE, "HUMAN EVENTS": Two questions, I apologize that they're not better related. One, in terms of controlling pay within the military, and setting it in those regards, I wonder particularly how General Lane and perhaps Senator Goldwater would respond to ideas of unionizing the military, as has been done off and on in some aspects of the West German Military, and what effect this would have on pay if men could collectively bargain to improve their pay?

Secondly, peripheral to that, a book just released this month by Rutgers press, includes several very distinguished military officers talking about lightning war, as a new alternative to the kind of situation we have found in Vietnam. A very fast-hitting war, the sort Robert Heinland talked about in his 1959 book. I wonder if this kind of war suggests what we need a high degree of professionalization among soldiers, even in the infantrymen—something that would preclude a draft force.

Senator GOLDWATER. I start off with this thesis, I don't think any person who works for the Government in any respect should ever be allowed to strike. I think they can collectively seek better living conditions and so forth, but I'd hate to think of any big segment of Government service striking. We saw it in the Postal service, and it disrupted this nation for two or three days, and a week of it could bring this nation to its knees. If the Army had the right to strike, or the Navy or the Air Force, I think this would be very very dangerous.

As to the lightning war, this is the aim of every war. First of all, no President in his right mind, wants to go to war; no Congress wants to go to War. War is an instrument of national policy that's used only after we've exhausted the possibilities of economic warfare, of political warfare, of propaganda warfare. And then the choice is a very tough one. But, if we have the forces necessary, and the enemy knows we have the forces necessary, and if the enemy knows we will use these forces as they should be used, the chances of not going to war are greatly improved. I might say, as I've said publicly, I've said it during my campaign, the war in Vietnam need never have started had we used the threats of our great air power, Navy, and Air Force, and had convinced the Vietnamese Government that we would not hesitate to drop conventional bombs—not atomic or nuclear bombs. This is the way Britain kept a pretty good peace in this world for nearly 200 years. Not that there were no wars, we've had 14,000 wars in 7,000 years, at two a year that's a pretty good average.

We've fought this war in Vietnam wrong. I hope to God we never get into one like it again, but if we do I hope we decide to win it the day we decide to go into it. Then you have the lightning war. This has dragged and dragged and dragged because Secretary McNamara and President Johnson, neither one of whom understood much about war, came up with this idea of limited war. There's no such thing! When you get into an argument you don't limit yourself, you use every faculty you have to get the argument over in your behalf.

Maj. General THOMAS LANE. I would agree with the remarks of Senator Goldwater on both of these questions. We organize military forces to protect this country. The purpose of organization must be to provide the most efficient force for the protection of the country. We don't organize it to provide employment to men or to provide occupations for anybody. I would say unionization had no place in a military force, and I would agree with Senator Goldwater, I think it has no place in a government organization. It's getting a place in government organizations only because government has taken on functions which are not its proper functions. As to the lightning war again I would agree, this is the right way to fight a war. The classic example in modern time is the six day war of Israel. If you're going to use military force that's the way to use it. Achieve your objective with a minimum expenditure of your fire power and force. And don't waste your forces in your fighting. Another classic example is the Soviet occupation of Czechoslovakia without any opposition. They didn't have any war of attrition in Czechoslovakia. If you're going to use your military force, there's a right way to use it, and we've been using ours the wrong way.

Question. Steve King, Senator Gurney's office: I wonder if Dr. Friedman or Senator Goldwater could amplify on the costs and savings of the transition to an all-volunteer army.

Professor FRIEDMAN. I'm not sure that I understand precisely your question because the savings have to be considered under two headings: Savings to the country and budgetary savings in dollars as they enter into the government budget. The savings to the country are, one, that you have fewer people spending their days and their nights in military service defending the country. Fewer man hours devoted to that because the manhours are used more efficiently, and fewer of them are spent and wasted in training. Saving number two to the country is that you have fewer manhours spent in trying to figure out ways to avoid the draft and get out

of military service. And that probably swamps the first saving. It's probably the major amount. Three, you have a smaller misuse of people, in private employment, because employers do not have to consider whether the people they hire will subsequently be drafted when they employ them. Therefore they can hire the people who are best suited for their jobs and who they get on the best mutually-agreeable terms. I think those are the three overwhelmingly important direct economic savings.

There are indirect economic savings, and in many ways these are more important. These include the draft's effect on the whole temper of the country, on the tone in which social economic and political problems are considered, from the removal of the enormously-divisive force of a draft which sets one part of the country against the other, which has done more to undermine the common shared values that we hold than anything else you can name. Now those are the savings from the real point of view, from the country's point of view.

Now you come to the side of the budget. The net figure—I happen to agree instinctively with Senator Goldwater's judgment, I really believe, even in terms of budgetary expense, when you finally shake everything out, it's going to be cheaper to the country. That's my own personal intuitive feeling. What the Commission did, however, was to lean over backward in trying to assure that it made the highest likely estimate (not the highest possible estimate, you can be absolutely absurd, as the McNamara group was when they came out with the 17 billion dollar estimate. This would have enabled you to add $10,000 a year to the pay of every single armed forces person, whatever year he was, which is absolutely absurd). The Commission said it was not going to take into account anything but what was pretty clear and pretty definite.

They added in the plus side the budgetary expense of the higher pay they proposed. They subtracted out as savings only very minimum amounts involving the fact that there were fewer people in training status and therefore they subtracted out their pay, the pay of the people doing the training and the people in training. They made a minimum allowance for possible civilianization, and in effect they made very little further allowance for a more effective use of the military manpower. So, I think you can take the Commission's estimates as an upper limit to the actual dollar budgetary cost of a voluntary force. As I say, my own judgment is that there are very large additional savings that would be forthcoming in the form of a more efficient use of manpower and less wasted manpower.

Question: Lowell Ponte, Human Events: Just a peripheral question. Mr. Friedman has mentioned the increased use of civilian manpower related to the military, and I wonder if he would anticipate civilians who would come in and be doing jobs now being done by military people, if they would have the capability of unionizing and bargaining collectively? Or whether they would be under more or less military type regulations.

Professor FRIEDMAN. You know, we're all of us very much affected by personal experiences. I remember my sense of shock at the absurdity of conscription. It was greatly heightened in the course of Commissions hearings when we had a session down at the Pentagon. The Pentagon provided cars to drive us back to our hotels, and the driver of my car turned out to be a man who had been conscripted into the military, spending his whole conscription service as a chauffeur in Washington. Now I think that's absolutely disgraceful, to use the power of conscription to force a man to be a chauffeur in Washington. You surely can hire chauffeurs in Washington, why was he being used as a chauffeur? Because this was a weekend, and a conscripted military man does not have to be paid time and a half, while the civilian employees used as chauffeurs would have to be paid time and a half. So from the point of view of the military calculations they were quite right. They were instructed to keep their budgets as low as possible. And it was cheaper in terms of the dollar expense on the books to have that conscripted man drive me to the hotel than it was to have a hired chauffeur. Of course what would have been cheaper yet would have been to hire a cab—to get the government out of the business of providing cars for people to go back and forth and use the private market.

But in any case, going to your question, I think that there are enormous opportunities in this way for having civilians used. In many many different jobs and activities. Now the next thing you asked was what about unionization. I think there is a problem of unionization. You are going to have civilian employees, and I don't really see that this raises any different problem in the kind of jobs we are now talking about for the military than it does for any other part of government. It doesn't seem to me a special problem. In fact, maybe it would increase the effectiveness of the country if the bookkeepers in the Pentagon went on strike. I can well believe that is the case.

I think the Senator and I are in complete agreement that this is a problem common to all government and has nothing special about it. Now I also agree with the statement that General Lane made. The reason we get into this problem is because government is doing things it ought not to be doing. We ought to have private postal services and then the postal employees would be striking against private employers.

I agree with Senator Goldwater what with respect to the essential functions of government there isn't room for strike and unionization. But when government engages in peripheral functions. If the government is going to put up a plant to manufacture a product then I don't see any reason why the employees of the Post Office should not be on the same basis as the employees of other enterprises.

Senator GOLDWATER. I might just add that a good example of what you're talking about has been done by the Air Force. In practically all bases in this country—I refer to Luke Air Force Base because it's near my home—all of the line maintenance on the F–100s and the F–104s and soon F–4s is done by contract with Lockheed, which brings civilians in. This releases a good enlisted man for other services. We've actually saved a lot of money by this. Now that man certainly has a union—and the Air Force has to bargain with these unions—but we can live without these workers if we have to. During ordinary times, this has turned out to be a great money-saver for the Air Force. But they have the right as anyone has in private employment to strike. With respect to public employment, even teachers . . . I think it's regrettable that any person goes into service at any level of government with the idea that their union can force the government to do something that the government really has no right to do because it is the people that the government represents.

Question. Chris Ong, Congressman Adair's office: What kind of personnel relationships would a Voluntary Army entail? And would a volunteer be able to differentiate between two and four year terms, or would he take a job in the armed services, as in industry?

Professor FRIEDMAN. If you look at the Gates Commission it proposes that the terms be made for enlisted men as they now are essentially for officers. This is also the impact of the amendment that has been offered. What this means is that typically speaking the individual who enlists would enlist for a minimum initial term, and the length of that initial term would be determined by the Armed Forces, in accordance with the amount of training that the man is going to receive. You don't want to let a man whom you are going to retrain as a pilot enlist for two years because you are throwing away the training. And so, the Armed Forces would have the right to specify minimum terms of enlistment, corresponding to the amount of training they were going to get. Beyond that, the individuals would be free to accept or not accept these terms.

We recommended that the Armed Forces try to make available a maximum of choice to potential enlistees about the branch of service, about the form of activity, and beyond that the initial obligated term of service. People would be on a contractual employment basis the way officers are in that an officer can at any time, unless he has made special arrangements about training, ask to be released. However, there are provisions that at a time of national emergency or war, this can be abrogated.

There are a number of other special escape clauses to allow for the obvious examples where it might be difficult. If a person has enlisted, lets say in the Navy, and he is on the shore duty, he can't quit simply because he has been assigned to sea duty. If you look at the amendment you will see that that is spelled out. The essential feature of it is to make the enlisted man's situation essentially similar to the present situation for officers.

I'm surprised that nobody here has raised the issue that I always get thrown at me, the problem of mercenaries. Bill Meckling touched on that a moment, but I really do think that that is an extraordinary misconception. I always answer that by saying that I'm a mercenary professor. You people are mercenary legislative assistants, Senator Goldwater, if he'll pardon me saying so, is a mercenary Senator. I am treated by a mercenary physician, and so on down the line if by that all you mean is that people are paid. Of course people are paid, and should be paid.

If by mercenary you mean what has sometimes been used, a foreigner who hires himself out with a gun—a gunslinger—over 60% of the people in the Armed Forces today who are volunteers are not mercenaries in that sense. The volunteers under the new arrangements are not mercenaries, they are professional people who are doing a job for their country.

I answer this also in a different way, saying when somebody says that we have a mercenary army, I say, "Well, would you really rather have a slave army?" If you are going to use the mercenary in this perjorative sense to describe the man who volunteers for service, then the appropriate counterpart of that is to use the term slave for the man who is compelled by force to particpate in the service. I think the U.S. cannot exist if it has to resort to either slaves in the one sense or to mercenaries in the other.

If this nation is going to exist it must be because service in the Armed Forces is an honorable and dignified career, contributing to the well being and the protection of our nation.

And let me say one more thing, I feel more strongly than I ever did before, that in many ways the chief reason why we must get rid of the draft is because it is undermining that concept of armed services. I think that the military has been enormously short sighted in not recognizing that the continuation of an effective military force in this country is impossible if we continue with conscription. Because conscription is destroying the image of the military. It is making military service appear to be equivalent to a term in the jail. It is demeaning the whole concept of military service.

Not all of the military people by any means, are short sighted but those military people who say well we can't do this because the extra money that will be required for voluntary pay is going to come out of military appropriations, and we badly need those military appropriation they are being short-

sighted. Congress and the country is not going to vote military appropriations to an army that is widely regarded as a shameful activity. You are not going to get it. If this country is going to maintain its military forces, if Congress is going to be willing to vote funds for an effectve military, its going to be because military service is regarded as a dignified, noble, patriotic, important activity. It will not be so regarded unless you restore to it a completely voluntary status.

May I say one more thing, I think entirely aside from all these other considerations, if you look forward, conscription is becoming unenforceable. We are getting into the situation with conscriptions that we were in with prohibition. When you are getting rates of refusal to be inducted on people who have been called for induction of 25% as you are in some parts of California, as I understand it; when you are getting the amount of legal manipulation to avoid it (there is no young man in this country today who can afford it, or who knows where to go, who cannot get legal and medical counsel that will enable him to avoid being conscripted. Now that is a little exaggeration, perhaps, but it is not much of an exaggeration) then you are getting conscription into the position where only the most ignorant and least knowledgeable people are ever going to be conscripted. When you are getting it into the position where a large fraction of the people who are called are not going to go, it is becoming an unenforcible part of our lives.

You are far better off to face up to that in advance, get rid of it, restore a voluntary army, restore dignity and prestige to the military, try to reform our military so it has a more effective recruiting procedure. Senator Hatfield made this point when he said that he was not one of those who was arguing for this as a way of undercutting our military strength; on the contrary, an absolutely essential prerequisite for the maintenance of an effective military force in my opinion is that we get rid of conscription.

DAVE ATCOCK. I understand that David Callard is here. He was the Deputy Executive Director of the Gates Commission Report.

DAVID CALLARD. I think the subject has been covered very well and I think you all have been an attentive audience. I think that the primary thing I could add—I think it's been said before so I won't dwell on it—is just that the many arguments that an all-volunteer force is undesirable assume that it radically changes the military. The figures that Dr. Meckling has quoted underline the fact that this isn't true, that we're talking about a difference that might involve at the most of several hundred thousand individuals. Our best estimates are that the same kind of people who have joined the military in the past are in it today. All the arguments that contend the all-volunteer force is a danger to the country, that it is going to be bad for the military, bad for the civilian society, assume a drastic change that just doesn't exist.

Anyone who examines the evidence—going back to Dr. Friedman's original point—really can't put together a convincing argument for the draft on that score. The arguments made, and I was just reading today an article by Peter Barnes in the New Republic, that an all-volunteer force will shake the foundations of society, are arguments put together by people who really haven't looked at the evidence at all and I think that is the thing that is shocking and very disappointing. Hopefully, the bill—the amendment—now that Senator Goldwater and Senator Hatfield have offered it will dramatize this fact and do away with a lot of the fog of really unfounded arguments that surround the issue of the all-volunteer force.

DAVE ATCOCK. In conclusion, let me extend Young Americans for Freedom's thanks to you all for attending and especially to our distinguished panel today. We also wish to thank the National Council to Repeal the Draft and their National Director Tom Reeves for their assistance in this important conference. We hope that you will return to your Congressman's office and give him the information that you have picked up today.

THE ENERGY CRISIS AND FAULTY TAX POLICY

Mr. GORE. Mr. President, suddenly and without warning, to hear some tell it, the United States is now faced with an energy, a fuels, crisis. We are, indeed, faced with a disturbingly dangerous crisis in our supplies of fuels for the generation of electricity, and without ample and reasonably priced electrical energy our whole national economy will be endangered.

Coal stocks for many powerplants are now "below normal operating levels," according to the Federal Power Commission. Some TVA powerplants are down to a few days' supply of coal, a work stoppage or a transportation tieup would cut power supply drastically and quickly.

Natural gas has been in short supply for months, and is now, again to quote the Federal Power Commission, "critically short."

Residual oil stocks are low, and rigid import quotas, only this week receiving the approval of President Nixon, keep them low.

There have been many delays in getting nuclear powerplants into operation. Even more important in the long run, the Nixon administration is denying funds for the development of new concepts of cleaner and more efficient nuclear reactors, and is resisting, also, the modernization of the nuclear fuel plants, a prefatory action to its plan to sell such plants.

With all this scarcity of fuel, much of it, I am convinced, artificially induced, prices of fuels are advancing pell-mell. Coal prices are going up at a rate of 56 percent per year; fuel oil is going up 48 percent per year. These administered price increases, together with other elements of cost, including the cost of borrowing money, one of the largest of all cost elements, will push up prices consumers must pay for electricity. Consumers may have to fork over another billion dollars each year for electricity. This will be another big increase in the cost of living.

And, what may be even more serious than cost problems, many plants, particularly small plants already operating marginally, may be forced to close, throwing more workers out of jobs.

This fuels shortage has become apparent with some degree of suddenness to the general public. But Government sources have known for a long time what was happening. Perhaps I may be pardoned in an election year to recall the several speeches I have made on the subject, beginning in 1966.

Administration authorities have known, but have refused to take needed action. The only action taken has been in the wrong direction, to keep the rigid import quotas on for foreign oil, thus making a bad situation worse. A revealing article, written by Mr. Bernard Nossiter, appeared in today's Washington Post. I ask that it be printed at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. GORE. Mr. President, various apologists for the Nixon administration, and for big business, have advanced a number of excuses for the current crunch. Among these are measures to preserve the environment and the coal mine safety bill. These are flimsy excuses. The real causes will be found elsewhere.

The truth of the matter is that the country is now faced with a quasi-monopoly of fossile fuels. The oil companies have gobbled up enough coal production to give them a corner on the market. The administration is helping out with its import quota on foreign oil and with tax policy. Moreover, the administration is even trying to "sell" our nuclear fuel processing plants to private investors, most likely a corporate cartel. Who else could buy, finance, and operate a multi-billion-dollar undertaking?

I must in all modesty repeat what I said in an address to the Senate on August 11, 1966. On that date I protested a tax ruling by the Internal Revenue Service which enabled X company, one of our largest oil companies, to swallow up Y company, one of our largest coal producers, with tax free money. During the course of my remarks, I stated:

> I can foresee a situation, not far off, when we will no longer have an independent coal industry. We may well have all major energy sources—petroleum, coal, uranium—under the control of a very few powerful corporations.

I take no credit for being a seer. That conclusion was clearly discernible on the basis of human nature operating in an atmosphere of ambitious corporate greed and grab that I have seen develop though I have fought it. The connivance of the Federal Government in this raid against the consumer, which I repeatedly fought in the Johnson administration, has become even more blatant in the Nixon administration.

The Government has been a party to this disgraceful filching to which consumers have been subjected. And, while I would lay much of the blame at the back door of the White House, the Congress, itself, cannot escape bearing its share of culpability. For Congress makes the tax laws, and it is the tax laws that form a good solid base for this empire building in the energy and fuels business.

Is it not ironical in the extreme that the consumer qua taxpayer is forced by his own Government to pay much of the cost of putting together these very conglomerate corporations which now demand their pound of flesh?

Tax advantages granted to combinations of economic power are not the sole motivation for the spate of corporate mergers, acquisitions, and takeovers that, in the past few years, have resulted in the concentration of our energy resources in the hands of a very few corporate giants. But these tax advantages are frequently of critical significance in effecting corporate combinations. Nor are the evils of corporate concentration limited to the energy field—for the consumer feels the adverse impact of the lack of free competition and the operation of an

open market mechanism in every area where the merger mania has hit.

But as the growing concentration of energy sources centers the power in a few hands to increase energy rates that must be paid by the American consumer, one is also forced to ask whether this consumer should be required, through special tax preferences, to subsidize the creation of these corporate octopuses whose tentacles are reaching into the budget of every household in the Nation.

I have taken time carefully to review those aspects of the tax laws that encourage this concentration of economic power because of the very great economic and social importance of developments. I will suggest specific remedies to eliminate the tax subsidies that are helping to promote monopoly and which are conducive to the development of corporate conglomerates that are exempt from the strictures of a free market system.

The greatest single tax incentive now to combinations of corporate giants is the privilege of combining one or more businesses through the tax-free exchange of corporate stock and/or assets. The growth of the corporate merger movement in the past few years has been startling. According to the Chairman of the Securities and Exchange Commission, the number of merger announcements in 1968 was over three times that in 1963. Over 90 percent of these mergers were classified by the SEC as conglomerate mergers; that is, mergers of two corporations in different fields of economic activity. For example, in the energy field, one of the largest combinations occurred in the tax-free acquisition of A company, a major coal-producing corporation, by B company, an oil and gas corporation.

The tax-free reorganization provisions of the Internal Revenue Code were originally enacted to permit tax-free changes in corporate structure that did not significantly change the economic status of the shareholders. However, this original purpose has long since disappeared as the tax-free privilege has been utilized to effect corporate combinations of profound and far-reaching economic significance, not only to the shareholders of the companies involved, but also to the entire consuming public and to our system of free economy.

To restore the tax-free reorganization provisions to their original purpose, and to put an end to the tax inducement for the ever-increasing concentration of economic power in fewer and fewer hands, the privilege of tax-free combinations, if permitted at all, should be limited to corporations in which the resulting corporate structure has combined assets of less than $50 million. This provision would enable smaller and dynamic companies to combine where considerations of efficiency and customer service dictate its desirability. On the other hand, it would inhibit those combinations that are motivated by a desire for economic concentration and power which, in the long run, can only serve to harm the interests of the American consumer.

The second major tax inducement to corporate combinations is the deduction allowed for "interest" paid on certain corporate securities used in corporate acquisitions. These securities, although nominally debt instruments, are in fact highly speculative equity investments in the acquiring corporation. From the standpoint of the acquiring company, a deduction for Federal income tax purposes is obtained for the interest paid on these securities. If these instruments—usually convertible debentures—were treated as stock, then payments made by the acquiring corporation would be nondeductible dividends rather than deductible interest. Quite a difference. Many of the large conglomerates today were formed by using just this technique. And, as the history of L–T–V, to give but one example, illustrates, the effects on investors and the public alike can be serious.

In the Tax Reform Act of 1969, Congress attempted to place a limitation on this debt-equity switch by denying the interest deduction in the case of debt obligations used to finance corporate acquisitions. I doubt if the action we finally took is sufficiently effective. It should be tightened still further. The provision may be circumscribed and I think it is safe to predict that the giant corporations, with their hosts of tax advisers, will be able to avoid these provisions with ease.

It should be said that Congress, with but little help from the administration, made an earnest attempt at tax reform. We accomplished much, but the job is only half done.

The heart of the conglomerate movement lies in the permissibility of questionable accounting practices. And, the present interest deduction rules subsidize these accounting manipulations. To remedy the present situation and effectively to close the loopholes still remaining after the 1969 Tax Reform Act, I propose the following changes with respect to the interest deduction rules in the case of corporate acquisitions: In a corporate acquisition where the combination is accounted, for book accounting purposes, as a "pooling of interest," the interest deduction would be denied for any debt issued or incurred with respect to the acquisition. In addition, even though the acquisition is treated as a "purchase," for book accounting purposes, the interest deduction for any debt issued or incurred with respect to the acquisition would be allowed only if any good will acquired is amortized, for book purposes, over a period not in excess of 10 years. Such a provision of law, would, I believe, put an effective end to the unwarranted tax subsidy of conglomerate acquisitions, which are especially noxious in the energy field.

I should note with some personal satisfaction that Congress did act in 1969 to put an end to a third tax loophole that contributed to the growing concentration of the energy resources of our Nation into the hands of a powerful few. This was the so-called ABC transaction which I had fought for years, and which was used in the natural resources industries to effect highly favorable, tax-subsidized corporate combinations. In such ways as this, I have represented the people of my State and my country. Politically, such actions are unrewarding because the general public pays but little attention to them while the special interests are infuriated.

In the most notable acquisition by an ABC transaction, XY company, an oil corporation, acquired the assets of YZ company, the largest single coal producer in the United States. I fought to repeal the ABC provisions at the time of that transaction, but, unfortunately, I was unable to overcome the opposition until the deal was sealed, the damage done. Congress did not act in time and we now have one of the largest oil companies and the largest coal producer under a single corporate umbrella—a marriage whose dowry was supplied by the American taxpayer. This merger was a bellwether in the development of the present monopolistic condition in the energy field.

Special tax provisions still contained in the Internal Revenue Code for natural resources are also contributing to the energy concentration problem. For example, in the case of coal, two special preferences are provided. One is the percentage depletion allowance for coal, and the second provides capital gains treatment to the recipient of payments on coal royalties. I have opposed both, but the combined influence of the administration and of the vested interests was impossible for me to overcome. In the field of tax reform, I have made many lonely fights—sometimes winning, sometimes losing, but always looking to the public interest. Now the special interests are having their turn to fight me.

These special provisions of percentage depletion and capital gains treatment of royalties were originally intended to act as incentives for coal exploration and development, and as aids to small producers. However, they are now used simply as subsidies to huge corporate enterprises, acting as a cushion on the profits of corporate atlases.

For example, the capital gains treatment is now being manipulated by major coal companies to their own advantage. Large coal companies establish corporate subsidiaries to which they transfer their coal holdings in exchange for royalties. The parent corporation then pays capital gains on the receipt of these royalties, instead of treating the income as ordinary income subject to depletion as would have been the case had the parent retained the full property in its own hands.

To end this tax abuse, I recommend that the capital gains treatment for coal and iron ore royalties be repealed.

In addition, the percentage depletion allowance for coal and other energy resources is surely not needed in the case of large corporate enterprises, if justified at all. This subsidy is being utilized to create an artificial profit margin which, in the case of the large coal companies, means that the open market mechanism is not operating freely to reflect the market's evaluation of prices that should be set by supply and demand forces. I, therefore, recommend that the depletion allowance for all natural resources be eliminated over a 5-year period for all taxpayers who derive more than $2 million annually in income from the sale of natural resources. Though the very

principle is questionable, to say the very least, this will permit the tax benefit to be retained by those small companies who are actively competing in our free market system. It will encourage exploration and development by these companies. On the other hand, it will remove the unjustified tax subsidy from the larger corporations whose anticompetitive conduct is being subsidized at the present time by the very consumer whose interests are being harmed most.

The Wall Street Journal of July 13 reports that coal exports are increasing at alarming levels to the detriment of U.S. coal users. Coal exports jumped 12 percent in 1969 alone. Estimates for 1970 indicate that these exports will rise by another 10 percent. This situation is seriously worsening our own domestic coal supply problem as foreign buyers are absorbing not only immediately available supplies, but are also signing long-term contracts for output that is badly needed by domestic electric utilities and steel mills. Indeed, the Wall Street Journal reports, one Japanese company has agreed to finance the construction of a 30-million ton coal mine in the United States.

In view of the dangerous situation being created by these exports, it was astonishing to find the Treasury proposing, and the House Ways and Means Committee adopting, a tax measure that is going to worsen this situation. I refer to the so-called DISC proposal advanced by the Nixon administration. Under this proposal a U.S. company can set up a domestic international sales corporation and defer—perhaps permanently—the profits on the export income derived by that subsidiary corporation.

Let me explain just how this tax bonanza would work to the detriment of the energy resources of the United States. A U.S. corporation can create a DISC subsidiary through which it can run one-half of the profits on its coal exports—normally conducted through its coal-producing subsidiary. These profits would then be distributed by the DISC to the parent corporation. One would think that a tax would then be due to the U.S. Government on these profits. But, if the parent corporation has excess foreign tax credits, as is often the case, and if it elects the overall limitation for foreign tax credit purposes, these profits would then be exempted from tax by virtue of utilization of the excess foreign tax credit. This result would follow because the DISC distribution is converted, under the Treasury proposal, into foreign source income as to which the foreign tax credit is available, even though the coal was mined within the United States and sold completely within the United States.

Thus, under this current administration proposal, it is the American consumer who both suffers and subsidizes. He will have to pay higher electrical rates because the electric utilities have to pay higher prices for ever scarcer coal and higher interest rates for artificially tight money. The Nixon administration, let the people understand, is proposing further to subsidize the scarcity through tax incentives to export coal to Japan and Germany. This is an outrageous situation and I will fight it.

Mr. President, I submit that this review of our tax laws amply illustrates the role that tax preferences have played and are playing in our energy crisis. I am pleased that Congress accepted some of my suggestions. I hope that Congress will take the further steps I have suggested to insure that these tax inducements to energy concentration and higher energy rates are eliminated.

We must have competitive energy sources if free enterprise is to survive in this permeating aspect of our economy.

EXHIBIT 1

OIL QUOTA DECISION WAS TAKEN WITHOUT ANY FORMAL DISCUSSION

(By Bernard D. Nossiter)

The Nixon administration decided to retain a multi-billion dollar program protecting oil prices without any formal discussions or working papers by the responsible officials involved.

This was acknowledged at a press conference yesterday by George A. Lincoln, who chairs President Nixon's Oil Policy Committee and directs the Office of Emergency Preparedness.

The program the administration is keeping has been estimated by the Senate Antitrust and Monopoly Subcommittee to raise domestic oil prices paid by consumers by $7 billion a year. A presidential task force put the figure at $5 billion annually.

Lincoln's name was signed to the letter released by the White House on Monday. It announced that no further consideration would be given to relaxing the quota system that curbs imports of low-priced foreign oil.

In response to reporters' questions, Lincoln said that his fellow Oil Policy Committee members only discussed the issue "now and then, casually" and "my staff didn't prepare written papers on this."

Lincoln also disclosed that Peter Flanigan, a White House aide, sits in regularly on the committee's meetings and was present at the crucial "principals only" session last Thursday when the Lincoln letter was adopted. Lincoln, however, denied reports that Flanigan had dictated the letter's essence. Lincoln acknowledged that he had discussed it in advance with White House figures whom he declined to name.

The decision, which was welcomed by oil companies, was denounced yesterday by two leading Democrats, Sens. Edmund S. Muskie (Maine) and Edward M. Kennedy (Mass.).

Muskie charged that the ruling "suggests blatant and cynical favoritism for a special interest group—the domestic oil industry."

He contended that the very reasons cited in the Lincoln letter, increased demand and decreased supply of oil, argue for scrapping and not retaining the restrictive system.

Kennedy said he was "deeply shocked and disappointed" by Mr. Nixon's decision. He recalled that the President's own Cabinet Task Force last February urged ending the quotas and lowering oil prices by imposing tariffs.

"The Task Force report," he said, "based on almost a year of detailed study, is simply cast aside without explanation or analysis."

Kennedy announced that his Subcommittee on Administrative Practice and Procedure would hold hearings on the decision "at the earliest opportunity."

At issue is a system adopted in the second Eisenhower administration to prop oil prices by fixing limits on imports of cheaper foreign oil in the name of national security. The Nixon Task Force urged a system of tariff with no fixed ceiling on the amount brought in from abroad.

Mr. Nixon took no action on his Task Force report and said a decision should await congressional hearings and consultations with other nations. He created the Oil Policy Committee with a mandate only to examine the management of the quota arrangements, not the tariff-versus-quota issue.

According to government officials, the new committee's first 14 meetings were limited to this task. Last Thursday, however, Lincoln called a meeting that excluded staff members.

There, he presented the three-page letter that urged ending any consideration of the tariff device. It was this letter that won the White House endorsement.

Attending the Thursday meeting, according to Lincoln, were himself and Flanigan; Attorney General John N. Mitchell; Commerce Secretary Maurice Stans; Treasury Secretary David M. Kennedy; Paul McCracken, chairman of the Council of Economic Advisers; Philip Tresize, assistant secretary of state for economic affairs; Barry Shillito, assistant secretary of defense for procurement; Hollis M. Dole, assistant secretary of interior and an Army major, James Ruth, who ran a slide projection machine.

Lincoln said that the Committee embraced his letter "unanimously" although four of its eight members, including Lincoln, had urged the move to tariffs six months ago.

Lincoln told reporters "I don't want to be too specific" about why he changed his mind.

Trade figures explained that from a public relations standpoint now is the ideal time to renounce tariffs because the prices of some imported oils are temporarily at a peak since the Middle East crisis has driven up rates. Thus the administration could argue, and Lincoln did, that a tariff system today would not mean lower prices to consumers for some Middle East oil.

COMMEMORATION OF DR. ARTHUR E. HERTZLER

Mr. PEARSON. Mr. President, a few days ago I had the privilege of attending ceremonies in Halstead, Kans., commemorating the 100th anniversary of the birth of Arthur E. Hertzler, the horse and buggy doctor. The record of this outstanding Kansan is well worth bringing to the attention of the U.S. Senate. Dr. Arthur Hertzler's service stands as a shining example of uncompromising dedication for the benefit of all mankind. The warmth of this man is well illustrated by a statement of his near his retirement:

> I regard as the chief reward for a long hard experience in the practice of medicine the opportunity it has given me to see so many children developing in an endless variety of environments.

Slightly more than a year after his graduation from the Northwestern University Medical School, Dr. Hertzler made his first trip to Halstead, Kans. On May 1, 1895, Halstead was devastated by a great tornado. The town had no physician, so the young Hertzler journeyed from Moundridge, Kans., a few miles away, to Halstead to these people's aid. He liked the community and decided to establish his country practice there following additional work at Southwestern College in Winfield, Kans., and Illinois Wesleyan University at Bloomington, Ill. Hertzler quickly established himself as a willing and able practitioner with all the warmth, concern, and physical stamina required in those days of long-distance travel by horse and buggy to see patients.

His ability was such, however, that although he preferred private practice to teaching, he soon was persuaded to ac-

cept a teaching position at the University of Kansas Medical School where he taught histology and pathology from 1902–07 and then surgery from 1907–44. Dr. Hertzler's warmth and concern was transferred to countless students of medicine during these years. As one former student has put it:

Dr. Hertzler was known to medical students as Pa; to his student nurses as Grandpa; and to his medical-surgical staff he was "The Chief." Dr. Hertzler was a teacher who believed in showing instead of telling how it was done. To do this he lectured only at times but to make up for not talking, he invited students between their third and fourth year of medical school to come to his hospital in Halstead to observe him at his work for two-week periods during the summer. All looked forward to attending these summer sessions.

Although teaching in medical school in Kansas City—about a 4-hour drive from Halstead by today's high-speed cars—Dr. Hertzler continued to oversee the hospital he had built in Halstead as well as return to see his patients. A reader of the Halstead Independent in 1911 would have seen the following advertisement:

Drs. Hertzler & Wutke, General Practice and Surgery, Dr. Hertzler will be in Halstead every Sunday and Monday and oftener if needed. Kansas City address: 402 Argyle Bldg.

Through most of his years in Kansas City, Dr. Hertzler would spend 5 days a week there, going to Halstead 2 days a week, "and oftener if needed." Such was the dedication to his fellow man's problems of this Kansas "horse and buggy doctor."

The memory of this remarkable man has remained, not only for his establishing of the Halstead Hospital, but also for the nationally renowned Hertzler Clinic for medical research. In 1948, following Hertzler's death on September 12, 1946, his colleagues honored him by chartering the Hertzler Research Foundation to carry on his work in medical research and to maintain the medical library he had established.

Mr. President, I can think of no more fitting conclusion to my remarks than the words about Hertzler in the Journal of the Kansas Medical Society in October 1962:

Hertzler's life was his greatest tribute. Emerging from a hard and troubled youth, he brought to rural Kansas medical care which rivaled that to be found anywhere. Widely known for his medical genius, he achieved world renown for his simple philosophy and warm humor. Restless and impatient, blunt and often tactless, outspoken and competitive, he symbolized a vanishing race of self-sufficient country physicians. His spirit still lingers in those who knew him, and the work which he started is carried on in his clinic today.

Mr. President, I commend the self-sacrificing record of Dr. Arthur E. Hertzler to the Senate. It is one of which we can all be proud and in which we can find inspiration.

NONPRAISE FOR AN UNDEFEATED SOFTBALL TEAM

Mr. HART. Mr. President, as the President of the United States did on announcing his veto of the education appropriations bill last January 26, I wish to share with Senators one of the most difficult decisions I have made since I became a U.S. Senator.

I have on my desk a speech praising my office softball team.

Now let us clearly understand the issues. The issue is not whether some of us like softball and others are against it.

There is no game which I consider more important to the health and welfare of my office staff than softball.

So, why, in an election year, particularly, would a Senator hesitate for one moment to give a speech praising such a politically popular activity as this?

For this reason, a Senator has an obligation to consider all the ramifications of a speech with this principle in mind: What is best for all the members of the team?

The team has one game remaining after which those members who are interns will be leaving Washington to return home.

At election time, it is tempting to place in the RECORD a speech praising them for their efforts, and then to send reprints to the parents of each.

However, I think this is wrong, for placing such a speech in the RECORD the day before the final game could jinx the team and cost it an undefeated season.

Therefore, my decision not to give the speech praising them for the six straight victories over the staffs of Senators LONG, MONDALE, DOMINICK, MCCARTHY, BROOKE, and TOWER is painful but necessary if we are to give them every chance of winning tomorrow night.

However, I would like to thank the interns for the envelopes stuffed, letters folded, errands run, newspapers clipped, records kept, research accomplished, sound suggestions made, and difficult questions asked between ball games.

MONOPOLIES SUPPORT MONOPOLIES IN SAN FRANCISCO

Mr. METCALF. Mr. President, last month a bill to exempt newspapers from the antitrust laws was signed into law by the President, whose administration has certainly on more than one occasion criticized media concentration. This new law further strengthening the news conglomerates makes the survival of the small, independent newspapers even more tenuous.

One such independent, the San Francisco Bay Guardian, a monthly, continues to struggle against the price-fixing unity of that city's two major dailies. The Guardian has pioneered many controversial areas untouched by the larger papers. And its courageous and excellent reporting has not gone unnoticed. During the past decade, the San Francisco Press Club has on two occasions awarded the Guardian its "Pulitzer of the West" Award—in 1964 and 1967. The Guardian has also won four out of the San Francisco Press Club's nine awards in the "nondaily" category during the past 3 years, including first place in the 1969 competition.

In view of this fine record, I was greatly surprised to learn from Bruce B. Brugmann, publisher of the Guardian, that his paper has been excluded from the Press Club's competition this year.

I believe this exclusion is explained, however, by the sad fact that the chairman of the Press Club's Awards Committee is none other than a public relations man from the Pacific Gas & Electric Co.

One of the courageous campaigns waged during the past 2 years by the Guardian has been against that company's monopolistic and political strength in San Francisco and northern California. The Guardian has documented P.G. & E.'s direct violations of the law—see articles in the CONGRESSIONAL RECORD, volume 115, part 7, pages 8692–8696. The Guardian has critized the company's love-in with the major San Francisco dailies, and finally, it has recently advocated municipal ownership of P.G. & E.'s local electric distribution system. One of the Guardian's editors, Peter Petrakis, recently suggested to the Public Utilities Commission a feasibility study on the acquisition of the system. This study is now underway.

Perhaps this was the last straw for P.G. & E. Its tolerance for "freedom of the press" has reached the breaking point. So through the Press Club the company is "punishing" this small, independent newspaper which it believes poses such a threat to its monopoly.

Mr. President, I am dismayed that P.G. & E. would choose this arena for its punitive and petty actions against the Guardian. I am appalled, however, that the San Francisco Press Club would allow its fine and respected halls to be used for such obvious derogation of the "freedom of the press" on which rests its tradition if not its very existence.

I ask unanimous consent that Mr. Brugmann's July 27 letter to the directors of the San Francisco Press Club, be printed in the RECORD. I also ask unanimous consent to have printed in the RECORD the Bay Guardian's June 8 release of Peter Petrakis' testimony before the San Francisco's Board of Supervisors, with its analysis of city acquisition of the electric system; and finally the recent comments of our Washington friend, Nicholas von Hoffman, who refers to the Bay Guardian as "the best and most reliable periodical in the city—San Francisco."

There being no objection, the items were ordered to be printed in the RECORD, as follows:

THE SAN FRANCISCO BAY GUARDIAN,
San Francisco, Calif., July 27, 1970.

DIRECTORS,
San Francisco Press Club,
San Francisco, Calif.

GENTLEMEN: I am writing you as a two-time winner in your "Pulitzer of the West" newspaper awards competition (1964, 1967) and as editor and publisher of a newspaper, The San Francisco Bay Guardian, that has won four of the nine awards in your "nondaily" category in the past three years. This includes first place in last year's competition.

I now find, to my surprise, that I am the recipient of the club's latest award: "Banned by the San Francisco Press Club." Let me explain.

The Guardian had been tipped off that, despite the fact we won the contest last year, an attempt would made to exclude our newspaper from this year's competition. We called the club several times through June and early July to ask when the entry blanks would be sent to us. (The past three years, we got them in normal course in the mail.)

In early July, the club secretary told us Larry McDonnell (PG&E pr man, chairman of the awards committee) and his committee were sending them out that Thursday.

We never got them. The secretary told me the committee had decided the category this year would be open to "weeklies only." The Guardian (a monthly) was out. I pressed her for details and an explanation, but she said the entry forms were being mailed out this year by PG&E and she didn't have much information. She referred me to McDonnell at PG&E.

I called McDonnell at PG&E. Yes, he said, the Guardian was out this year, but it was not the intent of his committee to exclude the Guardian. Instead, it was to initiate a category for weeklies only, to encourage them to enter and to get back to the original spirit of the press club contest.

How do you encourage weeklies (which have been in all recent contests, but still didn't contribute many entries) by excluding the Guardian (which had contributed more entries than any other non-daily in the past three years?) How do you justify banning last year's winner? Why is the only non-weekly to submit entries the past three years suddenly picked out, without explanation, without the courtesy of notification, and made the only newspaper ever blackballed in the history of the competition? Isn't this censorship to exclude The Guardian, one of the few Bay Area newspapers devoted to investigative reporting and solid journalistic crusades in the Pulitzer tradition? (Note Guardian enclosures.)

I pressed these obvious questions, but McDonnell refused to give any details beyond his "we want to encourage the weeklies" stand. He became incensed when I asked if the Guardian blackball had anything to do with the Guardian's two year campaign against PG&E and its illegal power monopoly in San Francisco that keeps cheap public power out of San Francisco in defiance of federal law, the U.S. Supreme Court and the city charter. (Note PG&E enclosures.)

McDonnell said his committee's decision had not been aimed at the Guardian and that the Guardian had not come up in the discussion. He denied vehemently that he or PG&E had anything to do with "the Guardian blackball," as I put it, and he threatened to hang up when I asked if it had anything to do with our PG&E campaign.

He refused to say how the ban originated, who originated it, or even who brought it before the committee in its first and only meeting on June 10. He even refused, until I pressed hard, to identify the other members of his committee.

The group that banned The Guardian, I found, was made up almost exclusively of advertising and public relations men—most of them representing companies the Guardian had criticized in its reportage. The committee: Chairman: McDonnell (PG&E), Robert Rezak (PT&T), Carl Albracht (Westinghouse), Paul Cane (Bechtel), Gordon Grannis (Crown Zellerbach), J. Campbell Watson (Editor & Publisher), Carl Spencer (General Electric), Charles St. Peter (Frank Albert-Guenther Law Adv. Agency), Robert Richelson (Carl Byoir Adv. Agency.)

I polled the committee by phone and found, contrary to McDonnell's explanation, that several committee members recall that: (1) PG&E's McDonnell brought up the rules change that axed the Guardian; (2) No other newspaper was mentioned by anyone; (3) The Guardian was mentioned several times during the session by name (4) The Guardian was mentioned, as CZ's Grannis put it, "as not being a weekly newspaper" and therefore not qualifying for this year's contest.

I brought up these points to each committee member and nobody rebutted them. If the member didn't agree with these recollections of his committee colleagues, he said he couldn't remember or he simply refused to answer questions (Watson, Richelson.) Rezak was quite specific. "He (McDonnell) threw it (the rules change) out on the table. There was some feeling that the Guardian wasn't an established newspaper . . . the Guardian couldn't qualify as a weekly newspaper."

Did you realize, I asked, that the Guardian was being purposedly excluded by McDonnell's proposal? Rezak: "You didn't have to hit me with a bat." He added: "If they wanted to change the rules, they could have heard from your paper."

Rezak said that, as a PT&T pr man, he read The Guardian regularly and that he, too, didn't like some of the stories and editorials, particularly those critical of PT&T. But "this wasn't the time or the place" to do something about them, he said.

Gentlemen: this is the point: the 1970 Pulitzer of the West newspaper awards contest is not the time or the place to begin censoring copy, banning newspapers or bringing the contest quietly into line with the PG&E Progress or, for that matter, a committee representing Westinghouse, GE, PG&E, PT&T, Crown Zellerbach, Bechtel or clients of local ad agencies. As GE's Spencer told me, "Nobody should be excluded from the contest."

Please do not misunderstand me. I do not ask you to reinstate the Guardian in this year's contest. Neither I nor the Guardian will enter the Contest again until we can be shown that our professional work will not be at the mercy of PG&E or any other committee dominated almost exclusively by public relations and advertising men.

Sincerely yours,

BRUCE B. BRUGMANN,
Editor and Publisher.

[From the San Francisco (Calif.) Guardian, June 8, 1970]

TESTIMONY OF PETER L. PETRAKIS, UTILITIES EDITOR OF THE SAN FRANCISCO BAY GUARDIAN, BEFORE THE BOARD OF SUPERVISORS OF SAN FRANCISCO, ON THE PROPOSED INCREASE IN MUNICIPAL RAILWAY FARES

I urge this Board to delay the increase in Municipal Railway fares until the Public Utilities Commission completes its feasibility study on the acquisition of the San Francisco electric distribution system of the Pacific Gas and Electric Company.

On April 14, the day the PUC passed the fare increase resolution now before you, it also passed, unanimously, a resolution proposed by the San Francisco Bay Guardian, authorizing a study on the feasibility of the city buying out PG&E, so that the city's Hetch Hetchy power can be delivered to its residents over a publicly-owned distribution system, with $30 million or more in annual profits going to the people rather than to the Company.

If the feasibility study shows that the city could profit by going into the retail electric power business, it might then become possible for the profits now going to PG&E to be used by the city to subsidize the Muni—and lower, not raise the fares.

This Board should not raise the transportation cost of working people, many of them hard-pressed minorities, without first exploring alternative ways of subsidizing public transportation.

The old gimmick of subsidizing the Muni with property taxes is no longer tenable. The taxpayers are already backed up against the wall. At the same time, raising the fares to finance improvements is self-defeating. It will discourage use of the Muni at a time when we are trying to persuade people to leave their cars at home and cut down congestion and eliminate air pollution. And it will work a hardship on those who depend on the Muni most.

Public transportation systems are inherently unprofitable. The number of such systems that have gone out of business in modern times proves that. Nevertheless, they are absolutely essential. Therefore, they must be subsidized. The question is how to subsidize them.

Our Public Utilities Commission manages two businesses: The Muni and the Hetch Hetchy Water and Power Project. The Hetch Hetchy Project is inherently profitable because it generates electricity, one of the most lucrative products that exist. Just ask PG&E. Seventeen cents out of every dollar the Company makes is pure profit, according to the Federal Power Commission.

If the feasibility study recommends buying out PG&E, we should do it with revenue bonds so as to not raise taxes, and get the maximum profits from Hetch Hetchy power by selling it to ourselves, and use part of those profits to subsidize the Muni.

We have been in the electricity business for nearly 50 years, but we have never done what both our City Charter and the Raker Act require—bring our power to San Francisco and distribute it to our own citizens over a publicly-owned distribution system.

Since 1913, when the Raker Act granted us Hetch Hetchy valley in Yosemite National Park, we have invested nearly $300 million in hydroelectric facilities, but all, as it turns out, for the benefit of everyone but our own citizens.

For 15 years, between 1925 and 1940, we openly sold the power to PG&E, which then turned around and sold it back to us at an exorbitant profit. When the U.S. Supreme Court declared that was in violation of the Raker Act, we still refused to buy out PG&E, even though our own City Charter Utility Policy reads: "It is the declared purpose and intention of the people of the city and county, when public interest and necessity demand, that public utilities shall be gradually acquired and ultimately owned by the city and county . . ."

Instead of fulfilling the mandates of the Raker Act and the City Charter, we proceeded to dissipate the electricity in unprofitable markets on the fringes of the PG&E empire, meanwhile letting PG&E take the high profits that rightfully belong to the people of San Francisco.

We are currently settling for a measly $3.8 million a year in Hetch Hetchy profits, on a capital investment of nearly $300 million—when all around us spreads an electrical distribution system, which, if we owned it, would net us at least $30 million a year.

Where does our power go? Forty percent of the 2 billion kilowatt-hour annual production we wholesale to the Turlock and Modesto Irrigation Districts, both of which had the good sense to go into the electric retailing business years ago. *These districts take that 40% and make more money retailing it to their residents than San Francisco makes out of the entire Hetch Hetchy output.* That clearly shows the superior profitability of retailing, as compared to wholesaling electricity.

The Districts use the profits from selling our electricity to subsidize the free distribution of irrigation water to their farmers and to finance improvements and additions. Still, their rates are 24% lower than San Francisco PG&E rates.

Another 40% of our electricity goes to a group of relatively unprofitable out-of-town industrial plants, which were "assigned" to the city by PG&E in order to keep us from pressuring for a publicly-owned distribution system in San Francisco, through which we could sell our own power to our own residents. These companies employ no San Franciscans and they pay no San Francisco taxes. They merely provide another "dumping ground" for San Francisco's electricity, and an accommodation to the PG&E monopoly.

The rest of our power goes to municipal facilities in San Francisco, and we pay PG&E nearly $2 million a year to bring that power 35 miles from the end of our transmission line at Newark.

This city can no longer afford the luxury of having a privately-owned monopoly, controlled mainly by large eastern brokerage firms and insurance companies, raking off high profits that rightfully belong to us. We have a huge electrical generating facility that many cities would love to have, but whose earning potential is being frittered away in unprofitable markets, out of deference to PG&E. And meanwhile, the Board of Supervisors contemplates payroll taxes, higher property taxes, increased water rates—and now, increased Muni fares.

It is a general practice in business for the management to use the earnings from the more profitable commodities to cover the losses from other commodities that are less profitable. That is the situation San Francisco is in. The management of our public businesses, the PUC, "sells" two products—public transportation, and electricity. The first product is unprofitable, but it must be "stocked." The second product, electricity, is the potential money-maker that could support the first—if we would but use it properly. That means we should buy out PG&E.

The performance of public power cities in this area strongly suggests that the feasibility study now underway will result in that recommendation. Palo Alto is one example of a highly successful public power city. Its municipal power rates are 15% lower than the PG&E rates in surrounding cities. It has one of the lowest tax rates in California—one-fourth that of the comparable city of Berkeley—because it uses the earnings from its retail power sales to provide a tax subsidy to the general fund. It also pays an "in lieu of tax" payment to the general fund. This is the amount of tax a private company would pay if it owned the Palo Alto system. And still there is enough money to systematically put existing power lines underground.

The stakes are so high on the PUC's acquisition feasibility study that the city should resolve to get along a while longer without a muni fare increase, pending the recommendations that emerge from the study. If we had bought out PG&E in the beginning, our public transportation system would not be the mess it is today, and our streets would not be so fouled and congested by the automobile. We can afford to wait a while until we can find out if sound, business-like arrangements are possible that could make a Muni fare increase unnecessary, and perhaps even cause the fares to be lowered, through partial or total subsidy from electrical revenues earned in a publicly-owned distribution system.

WHERE HAS SAN FRANCISCO'S POWER GONE? (EVERYWHERE BUT TO SAN FRANCISCANS)

6 YEARS OF HETCH HETCHY PRODUCTION: 1963–68 [1]

	Kilowatt-hours	Percent of total Hetch Hetchy output
1. San Francisco houses, business, and industries	(2)	0
2. San Francisco municipal accounts (wheeled from Newark to San Francisco on P.G. & E. lines, at an annual charge to San Francisco of $2,000,000):		
International Airport	636,000,000	
Municipal railway	378,000,000	
Municipal street lighting	264,000,000	
Water Department pumps	156,000,000	
All other municipal	605,000,000	
Subtotal	2,039,000,000	22
3. Irrigation District accounts:		
Turlock irrigation district	1,040,000,000	
Modesto irrigation district	2,670,000,000	
Subtotal	3,710,000,000	40
4. Industrial accounts:		
Dow Chemical Co. (Pittsburg)	1,399,000,000	
Kaiser Gypsum & Cement Co. (Santa Cruz)	939,000,000	
Hercules, Inc. (Pinole)	656,000,000	
Shell Chemical Co. (Pittsburg)	168,000,000	
California Ammonia Co. (Lathrop)	120,000,000	
Kaiser Aluminum & Chemical Co. (Santa Cruz)	111,000,000	
Norris Industries (Riverbank)	88,000,000	
Air Products & Chemicals Co. (Lathrop)	21,000,000	
Miscellaneous customers (Fresno, etc.)	28,000,000	
Subtotal	3,526,000,000	38
Total Hetch Hetchy power delivered	9,275,000,000	100

COMPARING HETCH HETCHY PROFITS

San Francisco generates 2 billion kilowatt-hours of power a year at Hetch Hetchy, sells it to SF municipal services, out-of-town chemical plants and the Turlock and Modesto Irrigation Districts. But not to San Franciscans.

[In millions]

San Francisco's 1967–68 power earnings:
Gross ---------- $12.8
Net ---------- 4.0

The Irrigation Districts retail 1 billion kilowatt-hours of electricity (most of it from San Francisco) to their residents.

[In millions]

Irrigation Districts' 1967–68 power earnings:
Gross ---------- $13.6
Net ---------- 5.4

Conclusion: The Turlock and Modesto Irrigation Districts make $1.4 million more a year than San Francisco on half the amount of power. The point: The Districts do it by retailing the cheap public power which San Francisco sells wholesale to them. This is the same public power which San Francisco refuses to sell to its own citizens.

[From the Washington (D.C.) Post, July 13, 1970]

NEWSPAPER MONOPOLIES

(By Nicholas von Hoffman)

Last Wednesday, the day the House of Representatives voted to exempt the newspaper industry from the antitrust laws, you could see Secretary of Defense Melvin Laird out on the floor throwing handshakes and athlete's hugs at his old congressional buddies. It may have been a social call he was paying, or he may have been lobbying for a spare aircraft carrier, but whatever the reason for his presence this busy man had found time to talk to congressmen.

Spiro T. ("Ted") Agnew was not present, was not shaking legislative hands, was not lobbying against this bill which furthers the media concentration that our esteemed Vice President would have people think he objects to. The bill will make it legal for 44 newspapers in 22 cities to rig prices, divide markets and pool profits in the grand tradition of John D. Rockefeller the first. It will also permit any and all other newspapers to apply to the Justice Department for permission to do the same in the future.

The 44 newspapers which receive immediate permission to ignore the law that others must obey have been granted this privilege on the grounds that without it they will fail. The precedent is set; if business is bad, ask Congress to exempt you from free enterprise competition so you can enter into an agreement with your erstwhile commercial rivals to screw the consumer.

If the precedent holds you won't have to be going into bankruptcy, you'll only have to poor mouth and make it seem that you are. That's what these newspaper scalawags have done: made a loud noise about how poor they and their industry are.

Newspapers are not going out of business. There were, according to the testimony on this bill, 1,749 newspapers in America at the close of World War II. Twenty years later there were 1,754. During that time daily newspaper sales have grown by more than 10 million. And the advertising revenues? Up more than 400 per cent in the last generation so that last year they went over the $5 billion mark. New dailies are being started quite regularly, 33 in the past three years. This is not a moribund industry deserving special favors.

The case for the 44 newspapers which wanted this law because they've been operating with price fixing agreements is even shakier. Three of the beneficiaries of this legislative gratuity are The Birmingham Post-Herald, the Pittsburgh Press and the Evansville Press, owned by the Scripps-Howard organization which also owns 15 other newspapers, United Press International, United Features Syndicate, the Newspaper Enterprise Association (NEA), the World Almanac, five television stations and heavy investments in cable TV.

Another outfit that will directly profit from this law is the Newhouse newspaper chain which, according to testimony before the Senate's Antitrust Subcommittee, owns or has a heavy interest in at least eight newspapers and seven television stations. It's sometimes hard to be sure; the skein of corporate control can be so complex. In any event, Newhouse also has seven cable television companies, as well as Vogue, Mademoiselle, House & Garden, Glamour and Bride's magazines.

Other winners under this law are Hearst's many enterprises and John Knight's communication chain which reported first quarter revenues of over $60 million. If these are deserving candidates for exemption from the antimonopoly laws then what about dear, little DuPont and frail, fading General Electric?

Witnesses before the House committee which reported this monstrosity out onto the floor demonstrated that these collusive agreements cost us consumers not only in dollars but in lower quality product. After the San Francisco Examiner and Chronicle got together to fix prices, advertising costs in the Chronicle nearly doubled. Beyond that, the newspapers were able to offer two-for-the-price-of-one advertising deals that drove a new, competitive daily out of town.

Although the bill's purpose is to save financially dying newspapers and promote news and editorial diversity, the truth is the Chronicle had $7 million in the bank when it signed its agreement with its competitor. Moreover, the quality of local news coverage in both papers has become so bad that the best and most reliable periodical in the city is The Bay Guardian, a monthly put out by one man and a bunch of volunteer helpers.

The greatest shame here isn't Agnew's or Congress's but the newspapers'. In their rectitude, they denounce everybody else's circumvention of the give and take of the free market. By forcing this piece of tacky legislation through, they've shown they're just as scurvy as the special interests they love to denounce.

There are some noble, ironic exceptions to this, the most conspicuous being The New York Times which, unlike the Vice President, has spoken out against this new development in media concentration. (The Washington Post also editorialized against the Act.) Even the Justice Department, which doesn't do much right, fought it. But many newspapers have backed it or been silent. That will put them in a strange position when the printers' unions demand they be paid for the work machines do better and faster. If the publishers can violate the principles of free enterprise and live by legalized monopoly, why shouldn't the unions be just as economically irrational?

The papers will not only regret what they've done at the labor bargaining table but also in their dealings with the government. How free are they going to be when they are beholden to these same politicians for their abnormal profits? What they have done to themselves is far worse and far more worrisome than anything Agnew can do to them. Now they must live under the threat that this privilege may be taken away from them.

Perhaps the people in the newspaper industry can take some comfort in the fact that this vote showed that for a dying business they have awesome power. Members of the House of Representatives fought each other for a chance to vote for this bill, which was against both liberal and conservative principles.

WOMEN'S GROUPS SHOULD LEND SUPPORT TO HUMAN RIGHTS CONVENTION ON EQUAL RIGHTS FOR WOMEN

Mr. PROXMIRE. Mr. President, 1970 marks the 17th year since the United Nations Convention on Women's Rights was opened for signature. It is unbelievable—but it is a fact—that the United States is not one of the nations which has ratified the U.N. Convention on the Political Rights of Women. It is unbelievable because the convention deals with fundamental rights already guaranteed by the Federal Constitution, because it is not in conflict with State laws, and because it is a part of the accepted standards to which the United States is supposedly already committed. Senate inaction on this treaty creates a highly embarrassing and incongruous situation for this country.

Senate ratification would demonstrate to the world that we are concerned with this vital issue. It would reinforce our present national policies and laws, and extend our influence in this area both in the national area and in the international sphere.

But the convention remains tabled, although the chairman of the Committee on Foreign Relations has stated that it could be taken off the table whenever the committee so decided.

Thus it is up to organizations like the National Federation of Business and Professional Women's Clubs, Inc., and others to demand that the matter of the convention be reopened.

The overwhelming vote in favor of the equal rights amendment in the House of Representatives was largely a result of the active participation by such groups as the Federation of Business and Professional Women, the American Federation of Teachers, AFL–CIO, Federally Employed Women, B'nai B'rith Women, the YWCA, the United Automobile Workers, the NAACP, and many, many other groups. While the atmosphere is ripe, I would hope that these women's groups would lend their support and work toward the ratification of this all-important human rights convention that would be another step in the important work of guaranteeing the equal status that women deserve in our society.

CUT IN FUNDS FOR FLAMING GORGE NATIONAL RECREATION AREA, UTAH AND WYOMING

Mr. MOSS. Mr. President, we all recognize that these are trying fiscal times for the Federal Government. Our economy is badly dislocated, and our budget is strained by the demands of the war in Southeast Asia. We agree that we must make every effort to curb domestic spending.

But in some instances the slashes which have been made in funds are so deep that they are false economy and it will take years and eventually much greater expenditures to overcome the harm that we are doing.

An example is the deep cuts which have been made in the funds for fiscal 1971 for the Flaming Gorge National Recreation Area in Utah and Wyoming.

The Ogden Standard Examiner recently published an editorial which tells the painful story of what was done, and foretells the story of what will probably happen in the future because of our shortsightedness. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEDERAL ECONOMY AX CUTS FUNDS FOR FLAMING GORGE DEVELOPMENT

The ax of federal economy has fallen sharply on the collective necks of Utah and Wyoming at a place where it hurts, painfully—the development of the Flaming Gorge National Recreation Area.

During fiscal 1970, that ended June 30, Congress appropriated sufficient money to the U.S. Forest Service that $1,005,000 could be allocated to Flaming Gorge for new construction, sanitation, upkeep and maintenance.

Because of the increasing use of the National Recreation Area by the recreational-minded public of Utah, Wyoming and virtually every other state in the union, Flaming Gorge supporters asked for more money for fiscal 1971.

Sen. Frank E. Moss, D-Utah, in a statement to a Senate Finance Subcommittee as it considered appropriations for the Department of Interior and related agencies, put the request in specific terms. The Forest Service is a branch of the Department of Agriculture, but many of its appropriations do come through Interior, incidentally.

The Republican administration's proposed budget for fiscal 1971 called for $1,084,000 for the Flaming Gorge National Recreation Area.

"An additional $2,622,000 could be used to good advantage," the Utah Democrat told the committee, breaking the request down to show that about half of this additional amount would be used to finance already-overdue upgrading of water and sanitation systems.

Sen. Moss told his colleagues that they should recall when the recreation area, which initially was a joint enterprise of the Parks and Forest Services, was placed entirely under Forest Service jurisdiction just a few years ago.

"He knows what an attractive area has been created by this man-made lake," the senator said, referring to the subcommittee chairman, Sen. Alan Bible, D-Nev. "It has become a great recreation mecca for the people from Northern Utah, southern Idaho and western Wyoming, as well as for tourists from all over the country. The limited facilities which have been built are already overcrowded on any good summer day."

He read into the hearing's record evidence of support of the expanded appropriation, including a Feb. 22 Standard-Examiner editorial that pointed out the pressing need for better water and sanitation facilities, as well as campsites, to avoid a potential pollution hazard.

But the appeal was in vain.

The proposed budget was chopped drastically by the economy-minded Congress.

When the appropriation measure cleared both houses a few weeks ago it was so limited that the Forest Service was able to allocate only $600,000 for sanitation, upkeep and maintenance at Flaming Gorge National Recreation area in the new fiscal year. This also includes day-to-day operational costs.

This compares with $730,000 in the previous year.

For construction work, the 1971 appropriation is virtually a bust, as far as Flaming Gorge is concerned. Only $42,000 is available in the fiscal period now under way for what are technically termed water resource development related activities. Of this $10,000 will go for planning, $32,000 for highest priority new work.

In fiscal 1970 Flaming Gorge received $275,000 for water resource development related activities.

So instead of a Republican budget of $1,084,000 or Sen. Moss' requested total of $3,706,000, Flaming Gorge must get by from now until next June 30 on a total of $642,000. That's $363,000 less than the previous year.

Ouch!

We recognize that the federal government must practice economy.

But, we insist, such drastic reductions are false economy—even in these trying fiscal times.

When the federal government contracted, in effect, with the people of Utah, Wyoming and the rest of the country to develop Flaming Gorge as a National Recreation Area there was an implicit promise of progress.

With these cuts progress is impossible.

The Forest Service will be hard pressed to stay even—on maintenance and basic operation—on this bare-bones funding program. Only the dedicated service of the foresters will keep Flaming Gorge from slipping backwards under the pressure of mounting usage.

More than a million visitor days were recorded in the Ashley National Forest in 1969, mostly at Flaming Gorge. The 1970 records are, of course, still being made. We're confident, from reports we receive from this popular area, that the 1970 figure will far surpass that of 1969.

We also know there's going to be a sewage problem, both in campsites ashore and on the lake, where there are no facilities for the sanitary dumping of boat toilets, unless visitors cooperate better than they usually do. Since Flaming Gorge is on the headwaters of the Green-Colorado rivers system, this pollution could cause trouble all the way south to Lakes Powell and Mead and on to Arizona, California and Mexico.

In this economy move the Congress has not saved money. It has merely postponed an inevitable, necessary expenditure that will cost more to do in the future than it could be done for now. And Flaming Gorge visitors suffer in the meantime. Fishing's already below par.

ADVERTISING AND ECOLOGY

Mr. METCALF. Mr. President, the Friends of the Earth (FOE) and other conservation organizations have begun proceedings to apply the results of the fairness doctrine case against cigarette advertisers to misleading advertising by polluting industries.

This is commendable and long overdue. The need for applying this doctrine to other industries is well told by Jerry Mander, president of Freeman, Mander & Goss Advertising in San Francisco, in the enclosed June 1970 issue of Scanlan's magazine.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIX MONTHS AND NEARLY A BILLION DOLLARS LATER, ADVERTISING OWNS ECOLOGY

(By Jerry Mander)

A few months ago, my partner and I were treated to a meeting with an experienced advertising man, about to open a new agency. His idea was to run a full-page newspaper ad (which he has since done) announcing that right from the first day, his office was going to devote 20 per cent of its total time to "good" causes. He was going to raise money to fund this agency on that basis, and would I like to invest in this wonderful thing?

I asked him how he decided that 20 per cent was exactly the right amount of time to give to saving the world, instead of, say, 16 percent or 28 per cent. I don't think he got what I was driving at because he didn't leave, so I let it drop, but the point was that he was using "do-gooderism" as a gimmick to raise money for an otherwise normal advertising agency and that whatever he did, do-goodwise, was bound to be phony.

It shouldn't have surprised me, really, because advertising people in general have an inordinate fascination with "image." They assume that by *seeming* a certain way, the world will come flocking around, tearing at their clothes. My late partner, Howard Gossage, used to say he preferred the word 'identity" to "image"—the former having to do with the way one *really* is—which made him a lonely man in the advertising business.

Well, at one time, the difference may not have been all that important except for the psychic good health of advertising people and those few whose idea of fun is to spend their day reading collections of ads. But the way I perceive it right now, at this point in history, the difference may be more like life and death.

INDUSTRY SAVES ENVIRONMENT

With the sudden, immense outpouring of words from business and industry during the last six months concerning all the wonderful things they are doing to solve the pollution problem—most of these words being expressed in ads—it's worth having a look at what's being said; of course, when seen close up, it's all image and no identity.

Most of industry still sees pollution and environment questions as more of a public relations and advertising problem—in other words, an image problem—than as anything fundamentally related to the way they are doing business. Shell Oil Company, for example, recently ran a four-ad series showing: 1) how they saved the lives of a lot of fish by *not* polluting things as much as they had been; 2) how they are feeding starving millions by producing more and better pesticides (which on the other hand are killing the fish they just saved); 3) how they overcame a lovely little Connecticut town's fears that their new gas station would prove a blight because it would replace a number of lovely trees, by showing the townspeople that the station would itself be a lovely gas station, and 4) how they were against littering.

I'm sure that the president of that company feels that this position makes him a conservationist, because until recently it was unusual for an oil company even to mention pollution or ugliness. Now that there's public goodwill in conservation, now that it's a hot topic, it's "good business to think of the environmental *implications* of industrial action," as a major chemical company executive recently suggested.

Another example: a recent copy of the New York Times carried a Pan American Airways ad which announced "the latest breakthrough" in relieving airport congestion. I was ready to be told they had reduced their total number of flights, or scrapped the Boeing 747, or cancelled their SST orders. But it turned out that what they had done was to build a second terminal at Kennedy Airport in New York, so they could handle up to twice as many passengers with less congestion—inside. Getting the planes onto the ground without bumping each other is another matter, and getting passengers into New York City from the airport was somebody else's problem.

And we've all seen more than our share of power company ads. Usually they bring us one—or more—of four urgent messages: 1) use more electricity; 2) the folks at your neighborhood power company are working like crazy developing new and creative means for winning the War on Pollution. (A recent headline from Pacific Gas & Electric: "We Put A Smile On Mother Nature's Face."); 3) we need more power plants to fill our growing power needs, atomic ones; they're as safe as chocolate ice cream; 4) they need a rate increase to finance the research.

I had thought I had already reached the pinnacle of my own shame and disgust concerning utility advertising—what are they doing advertising at all if they are a *public* utility—when by chance I came across an old congressional record and found a speech by Senator Lee Metcalf which somehow has gone unnoticed by the press and by conservationists.

Senator Metcalf pointed out that during 1969, public utilities spent nearly $300 million on advertising, *more than eight times* what they spend on research, all the while proclaiming *in the ads* their feats of anti-pollution research. Metcalf also noted that about a fourth of all the power companies in this country actually did no research at all, yet they spent millions in advertising to *talk* about research and to sell us all on using more electrical power at the same time as they tell us there's a power shortage. If advertising dollars are going to be spent by utilities, one would think—considering this so-called power shortage which makes the introduction of nuclear plants "inevitable," in the words of Newsweek—that the ads would be appeals to use *less* power.

It's also worth noting that like other utility industries, power companies work on a cost plus basis. That is, they add up all their costs and then they can charge you and me, say, 7.5 per cent of the total and that's their profit. Advertising is included among the allowable costs and so you see they actually make more money by running more ads and artificially building up their costs.

THE JOYS OF NUCLEAR POWER

Westinghouse Corporation has *really* jumped onto the ecological bandwagon. As one of the major suppliers of the technology needed to build nuclear power plants, Westinghouse has been running four-color ads everywhere, extolling the anti-polluting virtues of atomic power. The picture shows a beautiful girl sunbathing upon a lake which has one of those dome-shaped neo-modernistic nuclear plants in view. "Nuclear power plants are good neighbors," says the ad, "reliable, low-cost . . . neat, clean, safe."

And in a corporate brochure called "The Infinite Energy," we read about the pollution problems of conventional power systems and the marvelous advance that nuclear power represents. As for fears of radiation hazard, those are overstated, says Westinghouse. Even the sun, after all, produces radiation! "Sunshine is a gold blanket of radiation," reports the brochure. "The sun is actually a giant nuclear furnace operating much like a nuclear power reactor that is used to generate electricity. Overexposure to some of these rays is dangerous, just as overexposure to the sun's rays can be dangerous."

Simply ignored are the extreme dangers of "nuclear excursion"—of which there have already been several fortunately minor instances. A "nuclear excursion" is a leak in a reactor which could potentially cause the radiation effects equal to an atomic explosion, without any of the visual appeal. All buildings and inanimate objects within range would remain; only people and other living things would be done in.

The likelihood of such a disaster is great enough that Dr. David Lilienthal—a former director of the AEC—when asked his opinion of a proposed nuclear power plant in Queens said, "I wouldn't live in Queens if there was going to be a nuclear power plant there." And Dr. Edward Teller—no trainee in nuclear physics, and no bird watcher either—has said "A single major mishap in a nuclear reactor could cause extreme damage, not because of the explosive force but because of the radioactive contamination. . . . So far we have been extremely lucky. . . . But with the spread of industrialization, with the greater number of simians monkeying around with things that they do not completely understand, sooner or later a fool will prove greater than the proof even in a foolproof system."

Westinghouse doesn't include *that* point of view while telling us of its concern with the environment. Nor does it, or any power company, while extolling the virtues of nuclear power, mention the radiation danger involved in the disposal of radioactive wastes. Nor do they mention that nuclear power plants produce another spectacular kind of pollution which is, if anything, *more* dangerous to the natural system than radiation, and that is thermal pollution: the water will be heated to the point where the ecological cycle will be disrupted, some species of fish or other living organisms will be killed, and whatever depends upon them for sustenance may not survive and so on up the line.

So much for Westinghouse's "non-polluting" power system.

"PLANT A LAWN IN A DEEP FREEZE"

Atlantic Richfield diverts us from their destructive Alaska Pipeline project by telling us that they are planning to seed the tundra areas done in by the pipeline. The fact is, they are going to *try* to plant grass, but no botanist outside the company thinks it's likely to work. And anyway, is planting grass a suitable solution for the terrible disturbances which the pipeline will cause to a very fragile wilderness?

Potlatch Corporation, a lumber company whose slogan is "the forests where innovations grow," has taken to running ads with pictures of trees and birds and rivers to show us that, as lumbermen, they have an intimate feel for the natural order. So while they are cutting down the innovations, we ought not to worry; they know what they are doing.

Coca-Cola ads tell us that it does offer "deposit and return" bottles but, on behalf of its customers who "demand" the no-deposit-no-return version of the bottle, they are continuing to put out that kind too. But just don't litter, they say, and everything will be all right.

Advertising is destroying the word "ecology" and perhaps all understanding of the concept. A few weeks ago, PG&E ran a head-

line advocating "a balance between ecology and energy." But ecology is not a thing that is balanced against anything else. The word describes a science of the interrelatedness of *everything*. Energy is a detail which only Man has decided to make a fuss over. That is what must be remembered, and it is getting increasingly hard to do so with this immense outpouring of diversionary, false and deadening information.

A BILLION DOLLARS OF REASSURANCE

I am prepared to make the case that the $300 million in advertising spent by power companies (which, by the way, is about a third of the entire federal anti-pollution budget in Mr. Nixon's budget message), combined with the millions spent by oil companies, chemical companies, auto companies, industrial associations, the newly burgeoning antipollution industries, and so on—nearly a billion dollars, I would guess—is actually producing a net *loss* in this so-called War on Pollution. It's called cooptation in other circles, and I believe that it's operative here, perhaps not deliberately, but nevertheless.

All of the government rhetoric, magnified by industrial assurances, has the effect of destroying the power of the ecology message. People's eyes are already beginning to glaze at the sight of still more jargon about saving the world. It's awfully hard to out-shout roughly a billion dollars of advertising money. Especially when you consider that last year's total offsetting advertising expenditures by for-real conservation organizations were only roughly $200,000—or two-hundredths of one per cent of the industry output.

The net effect of all this media spending and the government's cultivated image of activity is to encourage a society already dazzled by technology to be further assured that technology is solving the problem—people want so much to be assured—and so it's back to the television set. Perhaps even worse than the fact that the ads are misleading—even lying in many instances—is the fact that they divert the reader from a more basic understanding of what's really going on: that technological society is beginning to reach its limits, economic expansionism is going to end, and endless consumption is going to end, and we're all of us going to begin adopting some of the techniques of peoples who live on islands, say, and for whom a finite system such as island Earth, is a given.

If we don't develop that understanding of the limits of things, of the islandness of Earth, of the fact that we are wildlife, too, then all the anti-pollution messages and money will be useless. Suppose our technology does manage to develop a pollution-free car engine? Will *that* make it acceptable to cover the landscape with highways and automobiles?

ADVERTISING A DYING INDUSTRY

A short while ago I made some of these remarks to the San Francisco Association of Industrial Advertisers. I even went so far as to tell them that I personally believe advertising is a dying industry. Tied as it is to an expanding economy and given that we live in a finite system, on an island in space, advertising is doomed, eventually, at least in the form we now know it. If you don't need to sell more of a thing, then you probably don't need advertising.

If advertising has any future at all after, say, the next ten years, it will probably be more in the area of propagandizing for issues of one sort or another, basically issues which help expand the individual rather than the economy; or perhaps we'll have advertising of products that are related to issues—such as for a company which really has found a way to harness the sun's energy as a clean power fuel; or, it will be purely informational in nature: "We have eight old Fords here today."

I had expected, frankly, to be attacked by this industrial group—for having attacked them and for the nonsense about a no-growth economic system which didn't include advertising the annual style change. Instead, the response, after the first few minutes, was giggling, chattering under the breath and staring at the ceiling. Nobody was the slightest bit upset. Nobody *was listening*.

It was a very depressing evening. I eventually went out and got drunk with a Wall Street Journal reporter interested in the implications of the no-growth system. He had seen the no-response and remarked that for the first time, he really believed the world *was* coming to an end.

Business and advertising and public relations have gotten so adroit at imitating honesty that many of us have gotten out of the habit of just leveling, taking the good with the bad and hoping that since the basic intentions are good, things will work out. We can't avoid trying to steer the world back in our own direction. So the truly gratuitous act rarely takes place. Yet I believe a San Francisco dressmaker, Alvin Duskin, could be elected mayor of San Francisco with a little bit of effort, and it's only because he gratuitously committed himself publicly on a subject of concern—not turning over Alcatraz to H. L. Hunt—and at the end, he didn't try to sell anyone dresses, or finish up his stand with some catchy slogan like, "Always Interested in Beauty, Whether on Ladies' Dresses or in Your Bay."

But that kind of gratuitous behavior is very rare indeed. It is, in fact, discouraged as being unjustified by profits, whereas ads which self-serve while seeming to be taking up controversial questions in the public interest, are given extreme praise for their image of involvement.

For example, the most prestigious of all advertising awards are those given annually by Saturday Review "for distinguished advertising in the public interest." But what *they* call "public interest" is not exactly what you'd call public interest. Here is the way Saturday Review defined the way to think about the award-winning ads:

"Although corporate advertising does not have as its primary objective the direct sale of specific products to the consumer, it certainly does create and maintain a favorable selling climate among customers and prospects. It skillfully cultivates the image of quality. . . . Insofar as a corporation communicates a feeling of company responsibility, good neighborliness, and an awareness of public service, the sort of campaigns submitted in SR's 1970 competition must pay off not only in community relationships where the company operates but among its citizen customers."

It should therefore not be very surprising that this year, out of 40 awards, 16 (40 per cent) went to power companies, oil companies, chemical companies and mining and extracting companies, all of whom have a lot of "good neighborliness" needs to get across. Only three awards went to what you could call "do-good" institutions, if you are prepared to think of the American Institute of Architects, Blue Shield, and the Advertising Council as "do-good" institutions which are something beyond sophisticated lobbies. (Howard Gossage once said of the Advertising Council that it was willing to advocate causes, "but only those that would be thought of as controversial by people who are for cancer or against safe driving.")

As for Saturday Review's "18-Year Honor Roll" of award winners, it shows 20 winners, 11 of which are companies engaged in extracting—Weyerhaeuser, Shell Oil, etc.—and three of which are chemical companies in need of communicating "a feeling of company responsibility, good neighborliness and an awareness of public service."

HUMAN CHAUVINISM

Whereas corporate "institutional" advertising used to show pictures of labor and capital shaking hands, now it's "business and ecologists working together to control the environment," as a bank ad recently put it. Technology will take care of everything. Man's ingenuity will win out. Even the Ford Foundation says so.

I recently approached Ford about a project which had the possibility of countering the glut of industrial eco-advertising: an advertising foundation, funded by Ford and managed by a coalition of militant though "respectable" conservation groups. The ad foundation would be manned by the literally hundreds of ad men who have made known (to me, and also publicly) their interest in working solely on this subject—even at half salary. They would create ads which reveal the half-truths and omissions in industry ads; fight on specific issues as they come along; and undertake to educate the public as to truly basic, not cosmetic, solutions to the environmental crisis. They would take up such questions as life-styles, consumption patterns, the need for a no-growth economy in a finite system, the requirement that technological innovation ought to be scrutinized from the point of view that it is guilty until proven innocent, not vice versa.

It didn't take long for this Ford man, a certain Mr. Felling, to dismiss the project as hopelessly naive and to go on describing Ford's work in teaching young children how to "better manage the environment." The meeting broke up when I told him that that sort of education—"managing the environment"—would do far more harm than good. We are already *managing* the environment, and that's why we are in the mess we are in; it is a further example, borrowing from Women's Lib, of what let's call *Human* Chauvinism.

It hardly matters whether one believes that we were given dominion over other living things or we just took it, but in any event our excuse is that we've got the brains and can use machines, giving us some kind of de facto royalty status. As a result, however, we have removed ourselves from the processes that formed all the other living things; we forget that the fabric is all connected and we are just a thread of it.

Every ad that espouses a new technological intrusion into natural systems, even as a solution to pollution, encourages us to forget that fooling with one stitch alters the whole fabric.

CONTROLS ON ADVERTISING

We already see many signs that what began with cigarette advertising is likely to become the model for all advertising within industries which drastically affect the environment. Cigarette advertising, after all, is demonstrably less of a menace to society's survival than the advertising of pesticides or detergents or lumber or power.

Friends of the Earth, in concert with other conservation groups, has begun proceedings to apply the results of the Fairness Doctrine case against cigarette advertising to advertising of polluting industries. If they succeed, as I believe they eventually will, all radio and television stations will be required to provide a conservation organization with time in which they may present a counter message to an ad. If an automobile company runs a one-minute spot advertising its new model, Friends of the Earth could indicate what the implications of the annual style change are. Or they could talk about the pollution from cars, or the raw materials that go into building them, or the problem of disposing of them. And the roads needed to run them on. When a Standard Oil ad for its F-310 appears, calling it "the most long-awaited gasoline development in history," they will be able to put it in perspective by showing that the gas represents only a five per cent pollution improvement, leaving 95 per cent, and that the ad is filled with deliberately misleading information. (See Eco-pornography Portfolio.)

So far, I'm afraid, that sort of government

interference strikes me as the only way to mitigate the effects of the millions of ad dollars which are being spent to tell just one side of the story. The only other alternative is for ad people to get on the firing line and influence what kind of message is going down. It might be that a new period of laying it on the line would then ensue and we'd all be better off.

Advertising people are, by and large, intelligent; it's a question of commitment. I hope that more and more find themselves in the position of Mr. James Webb Young, who retired himself from the business one day to work for some worthy foundation. When asked why he did, it he said, "One morning I woke up and I didn't give a damn whether they sold more Quaker Oats than I sold Cream of Wheat."

THE SDS AT KENT STATE

Mr. HANSEN. Mr. President, when the President's Commission on Campus Unrest begins its investigation into the tragedy at Kent State, I would suggest that required reading for all members of the Commission should be the 1969 Annual Report of the House Committee on Internal Security. I refer particularly to chapter 4, pages 43 through 52, which is titled "SDS Activities at Kent State University, Kent, Ohio."

This section is a report on hearings held by the committee on June 24 and 25, 1969. Among those who testified at these hearings were Dr. Robert I. White, president of the university; Dr. Robert Matson, vice president for student affairs; Margaret A. Murvay, a student who attended SDS functions as a reporter for the campus radio station; Lt. Jack R. Crawford of the university police department; and Chester A. Williams, university director of safety and public services.

Testimony showed that SDS emerged as an organizational force on the Kent State campus in the spring of 1968 when a group which had been operating under the name of the Kent Committee To End the War in Vietnam decided it would become more well known under the name of SDS. This local chapter quickly became affiliated with the Ohio regional SDS, located in Cleveland, and the national headquarters of this organization. Key appearances during the fall of 1968 were made on the campus by Mark Rudd, chairman of the SDS chapter at Columbia University, who spoke on the campus on October 24 and returned November 5 to lead a rally and march protesting the national elections.

Witnesses testified that while the SDS produced some minor disruptions on the campus, a major effort was put into organizing a spring offensive, to begin on March 30, 1969, whose avowed purpose was to "smash the military in the schools." To implement this offensive, the SDS published an "Organizers' Manual for the Spring Offensive." The following section of this manual was introduced into testimony before the committee:

> During the course of the struggle, it will probably be necessary and helpful to carry out a series of escalating "mini" actions to help build consciousness and dramatize the issue. Beginning with guerrilla theater actions in dorms we can escalate to disrupting classes, street marches, quick assaults on buildings, etc., before moving to the major confrontation of the struggle.

The manual also spelled out the objective of such actions. SDS did not seek reforms but creation of a so-called revolutionary class consciousness among students which would enable them to identify with struggles in Vietnam and Cuba while struggling against capitalism and imperialism at home. SDS members were expected to hold themselves ready "to move, to desanctify, to confront, to escalate, and ultimately to defeat the system we live under."

Testimony showed that the university made good faith efforts to negotiate with the SDS but that the demonstrators refused to moderate their demands. The spring offensive was carried out in three major confrontations and a series of lesser disruptions during April and May. The militant tactics of the SDS were outlined in several speeches during these demonstrations.

The Kent Stater, the campus newspaper, quoted one SDS activist who spoke at a rally on May 6:

> They used guns at Cornell and they got what they wanted—it will come to that here.

Again, on May 22, another SDS member told a rally in front of the Student Union:

> We'll start blowing up buildings, we'll start buying guns, we'll do anything to bring this—(obscenity for school)—down.

Despite the militant tactics of the SDS, the report says that university officials took quick and effective counteraction during each of the demonstrations, aided by the Ohio State Police. This action prevented the SDS from shutting down the university. Another SDS pamphlet circulated after April 16, which was titled "The War Is On at Kent State," acknowledges that:

> The repression has clearly hurt us: over sixty of our people have been banned from the campus, at least eleven face heavy charges, with total bail exceeding $120,000.

While the testimony before the Internal Security Committee only covered the period until June 1969, I would strongly suggest that Governor Scranton and other members of the President's Commission on Campus Unrest review this testimony because the hearings clearly proved three facts: First, there has been an extremely active SDS chapter at Kent State with strong ties to the national organization; second, the chapter has been dedicated to "defeat the system"; and third, members of that chapter were advocating the use of any means, including guns and explosives, to achieve their objectives.

Any investigation which purports to examine the underlying causes for the tragic violence at Kent State University cannot, in good conscience, ignore this evidence.

Certainly, in the case of Kent State it will not be enough for the Commission merely to blame the rioting and the subsequent shootings on the President's decision to invade Cambodian sanctuaries.

Neither will it be enough to say that the cure is to attempt to control mobs, led by dedicated militants and anarchists with unarmed national guardsmen.

I am confident the Commission will find it useful and enlightening to read the report.

ARMS LIMITATION AND THE SOVIET UNION

Mr. MOSS. Mr. President, we spent a great deal of time in the Chamber last week debating whether ABM expansion would help or hinder U.S. interests in the SALT talks and in other dealings with the Soviet Union. The Salt Lake Tribune recently labeled the arguments of those who were sure that the Russians would be willing to come to terms on arms limitation if they see the United States is determined to go ahead with an antimissile network as a "Multibillion Dollar Bluff" and asked the very pertinent question as to how those who supported the system, while still doubting its value, are going to feel if the Soviet Union calls that bluff.

I ask unanimous consent that the very well written Salt Lake Tribune editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MULTIBILLION DOLLAR BLUFF

One of the original arguments for constructing the Safeguard antiballistic missile system was that it would be a valuable bargaining pawn in any negotiations with the Russians to slow or call off the arms race.

Now that such talks are under way with Russia, the old argument has gained added weight, enough at least to sway a couple of critical Senate votes and enable the administration to beat back an attempt to curb enlargement of the Safeguard system from two to four bases. Two senators, Thomas J. McIntyre, D–N.H., and James B. Pearson, R–Kan., who voted against ABM deployment last year said they voted in favor Wednesday because of their new belief in the importance of Safeguard expansion as a prime bargaining chip.

The idea is that the Russians will be more willing to come to terms on arms limitations if they can see that the United States is determined to go ahead and up the ante by building an anti-missile network if the arms limitation talks fail. Without ABM expansion, the argument goes, the other side would have less incentive to reach agreement.

At this stage it's a difficult argument for anti-ABM forces to counter. But it is a transparent bluff and if the Russians call it we may see some of the poker faced senators who voted to expand ABM Wednesday changing their minds when they are asked to vote additional billions of dollars to complete a system of missile defenses that has yet to be proven effective.

Up to that time when the proposed network of Safeguard bases passes the point of no return it may do no great harm for the Senate to provide bargaining muscle the administration says it needs. After all, if agreement on arms limitation is reached soon, the ABM bases, still in the preliminary stages of planning and construction, can be cancelled. But at some point in the next few years the bargaining power argument will face its moment of truth. If it proves to have been in error, if it fails to elicit concessions from the Russians, then Safeguard must stand or fall on its credibility as an effective defense against an actual missile attack. By then the two bases already authorized and the two more now being debated in the Senate will have consumed several billion dollars.

If the bargaining bluff succeeds and actually contributes to arms limitation accord then the money may have been well spent. If

it falls and the bargaining muscle argument is no longer relevant the Senate will at last have to face the basic question it has avoided up to now: Can the U.S. afford to spend billions on a missile defense system that may not work and could be outdated before it is even completed? When that question is finally faced squarely we think the present narrow administration ABM "victories" will be reversed.

THE REPUBLICAN TREATMENT OF SENATOR GORE

Mr. GORE. Mr. President, my friends in the Republican Party are, at least in some notable respects, overly generous to me. Indeed, of late, they almost invariably give to me preferred treatment. For this, I must express perceiving appreciation.

True, the seniority I have attained in the U.S. Senate is an extremely valuable asset to the people of Tennessee, and it entitles me, by protocol and rules of the Senate, to certain recognition and rights. I have never particularly insisted upon them nor paraded them as assets, and I do not think I deserve all the deference and attention they accord to me. They not only accord me all the requirements of protocol, but in their generous concern for me and the people of Tennessee, whom I represent, they really are now going beyond the call of duty.

I am repeatedly singled out for preferential treatment by the highest and mightiest of the high and mighty within the Republican ranks. Only yesterday there was much ado about a political powwow at the White House where, my confidential sources reveal, I was the No. 1 subject of attention.

If this were a new experience, I would feel flattered, but since it is repeated so often, I am beginning to become a little wary. It begins to look like some of my distinguished and topmost Republican friends are about to become carpetbaggers bearing gifts. On the knees of my grandfather, I came to dislike carpetbaggers, and as a boy, loving to read history on lonely nights on the farm, I read from Euripides on the Trojan War, who said:

I fear the Greeks, even when bringing gifts.

Among surviving symbols of the Civil War in the South, none is more meaningful than the carpetbagger. Tennesseans know what a carpetbagger is, and they do not like carpetbaggers. No one needs to tell us what the term means.

An eminent historian has described carpetbaggers as "unscrupulous adventurers who came down from the North with the view of improving their fortunes." They brought little with them, their total worldly worth—small as it was—thrown into one tattered, greasy carpetbag.

The carpetbaggers came like locusts. They came by boat, by train, on foot. They had nothing to contribute, for their intrinsic worth was small.

But those old-style carpetbaggers had a plan—a Southern strategy, if you will. That strategy was threefold:

First. Seize political power, purging existing leadership.

Second. Take over the tangible economic assets—land, transportation facilities, banks, and commercial establishments.

Third. Exploit mercilessly the cheap labor they found in such abundance, and keep it cheap and hungry.

They became the merchants and the moneychangers. They ran up interest rates to keep the workingman from reclaiming a part of the native wealth which was rightfully his. They sweated and broke the backs of whites and blacks. They depressed the prices of everything the South could sell and ran up prices on what we had to buy.

In sum, they sought, and they carried out, the basest kind of economic exploitation, bleeding our people in the process with discriminatory freight rates, high interest rates, and other economic discriminations. We did not really begin to recover from this economic exploitation until the days of Franklin D. Roosevelt.

So, Mr. President, it is perhaps understandable that the people of Tennessee are customarily independent and jealous of their own rights and prerogatives.

The distinguished Vice President has specifically singled me out for special attention on at least four occasions. He even became so generous upon one occasion as to promise to come to Tennessee and to speak in the Tennessee senatorial campaign. The first such individual attention directed to me by the distinguished Vice President was contained in an exclusive interview with the Nashville Banner, in which I was the first Democratic Senator to be listed as a target of Mr. Agnew's attention in 1970.

As a further measure of personal consideration, Vice President AGNEW, even though somewhat displeased with my action as a Senator from Tennessee, assured Mr. Roger Mudd during a CBS television program that he did not wish to "single" me "out for retribution." Not at all. "No, not for retribution; we had him earmarked long before this," he said.

So you see, Mr. President, I have come to expect, if not to rely upon, this preferential treatment by the Vice President.

But this is not all. Even President Nixon has taken unprecedented action directed at me individually and personally. For instance, my opponent in the campaign for the Senate this year was selected at a conference with President Nixon in the White House many months ago. This had the beneficial effect, however, of relieving members of the Republican Party in Tennessee from making a choice; that choice having already been made by the Washington bigwigs.

Then President Nixon broke a precedent by taking only members of his own party on a taxpayers' plane on his visit to Knoxville earlier this year, where he publicly embraced my opponent before the assembled throng and television cameras. Please understand, Mr. President, that even if I had been invited to ride the taxpayers' plane to my home State, I would not have expected an embrace.

It was unprecedented, at least, to exclude me in this manner.

I was invited, I would like to add, to the White House a few days ago, along with other members of the Committee on Finance, when President Nixon signed into law the unemployment compensation bill, in which I have long been interested. The only thing unusual was that when the invitation came by telephone from the White House, I was also advised that the President "is now signing the bill." The traffic was a little heavy in Washington that day, so I decided that maybe the bill might be law before I could get there. I am sure, however, that was purely an accident, as we were assured by the call from the White House that it was not in any way intended as a personal slight.

The most recent incident in which I am given preferred treatment is in the official publication of the Republican National Committee, dated August 10, 1970. It says that in one particular regard—

Tennessee's Senator Albert Gore belongs at the top.

Now, I must admit that the words just quoted constitute only a part of the first sentence in an article which gives me top billing.

It is true that the people of Tennessee have held me "at the top" during a constructive and fruitful term in the U.S. Senate. Then, again in the primary elections for U.S. Senator in Tennessee on August 6, I was again "at the top" with the people of Tennessee. Though I did not receive as many votes as I would have liked, I did win with a total vote that was almost 40,000 more than the combined total of all three candidates for the Republican nomination to the Senate. So, assuming that I can retain the support of those who voted for me in the primary, not an unimaginable event, and assuming that my Republican opponent retains all of his support and obtains the support of all those who supported his opponents, then the support of any major part of the vote that supported my own distinguished opponents in the Democratic primary would place me "at the top" again on November 3.

But, Mr. President, far be it from me to take further license with an official publication of the Republican National Committee without quoting the entire first sentence of this notable article. It is as follows:

In making up any list of Congressional big spenders Tennessee's Senator Albert Gore belongs at the top.

For the first time, Mr. President, I must demand a recount. The Republicans are pretty slick bookkeepers, but they must have shortchanged me somewhere along the line. They call me the "big spender of the week" because in 18 years, they say, I have advocated the expenditure of $225 billion. Now something is wrong. President Nixon has already advocated spending almost that much so far this year. I surely must have done better than that.

I have been in the Senate for 18 years. During this time the budgets proposed by our Presidents, including Presidents Eisenhower and Nixon, have totaled $2 trillion. I have voted, I must admit, for every defense appropriation bill, for every farm money bill, for every social security bill, and for every veterans bill during all this time. The total of all these budgets is more than 10 times the amount with which I am being charged in this official indictment. In addition, I have supported the building of the Tennessee Valley Authority, which many Republicans

have opposed. I have supported atomic energy weapons programs, civilian nuclear power programs to try to save us from blackouts, and I kept the Nixon administration from giving away the atomic powerplants. Yes, too, I was coauthor of the Interstate Highway bill, which President Eisenhower signed into law, and I pushed the first medicare bill through the Senate over Republican opposition.

So, Mr. President, I demand a recount. I am simply not willing to admit that President Nixon has advocated nearly as much in 1 year as I have been able to think of and support in 18 years.

There is, I must admit, a difference. This official publication has charged me with supporting antipoverty programs, housing programs, programs to improve education, and veterans benefits and Appalachia, all of which President Nixon has vetoed. To this I plead guilty. I only wish this official publication might have had the decency to add that I have voted to reduce President Nixon's two budgets by many billions of dollars, that I opposed the soft loan giveaways to Latin America when our own communities were being denied funds for needed public facilities, that I have voted to impose limits on subsidy to the big corporation farmers, that I have supported a reordering of our priorities to give more attention to the needs of our people.

I firmly believe in careful, purposeful, but prudent spending for needed programs—education, health-care, housing, nurture of the young and care of the old in dignity and self-respect. These, let me acknowledge, stand high on my list. That is the reason why I voted to override Presidential vetoes of the Hill-Burton Hospital Act and of the Education Appropriation bill.

Perhaps these are some of the reasons, too, that I am "singled out" as target No. 1 in 1970.

CONCLUSION OF MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, if there be no further morning business, I ask unanimous consent that the period for the transaction of routine morning business be closed.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, what is the pending question before the Senate?

The PRESIDING OFFICER (Mr. ALLEN). The pending question is the committee amendment in the nature of a substitute as amended to H.R. 17123.

Mr. BYRD of West Virginia. I thank the able Presiding Officer.

Mr. President, I understand a Senator wishes to come to the Chamber. Therefore, I observe the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR HATFIELD TOMORROW

Mr. GRIFFIN. Mr. President, I ask unanimous consent that tomorrow when the Senate proceeds to further consideration of the Hatfield amendment——

The PRESIDING OFFICER. The Hatfield amendment has not been offered as yet. Does the Senator refer to the unfinished business?

Mr. KENNEDY. Mr. President, I ask unanimous consent that at the conclusion of the call of the Calendar of unobjected-to items, the distinguished Senator from Oregon (Mr. HATFIELD) be recognized.

The PRESIDING OFFICER. Is there objection?

Mr. BYRD of West Virginia. Mr. President, I observe that there are several special orders for the recognition of Senators following disposition of the call of the Calendar; and there is already unanimous consent to lay before the Senate the unfinished business following all such special orders for recognition.

If the able Senator from Oregon wishes to be recognized at that point there would be no difficulty.

Mr. KENNEDY. Mr. President, I ask unanimous consent that after the distinguished Senator from Oklahoma (Mr. HARRIS) concludes his statement tomorrow that the distinguished Senator from Oregon (Mr. HATFIELD) be recognized.

Mr. BYRD of West Virginia. Mr. President, reserving the right to object——

The PRESIDING OFFICER. The last Senator who has time alloted to him is the Senator from Connecticut (Mr. RIBICOFF).

Mr. KENNEDY. Mr. President, as I understand the situation, it is joint time between the Senator from Connecticut (Mr. RIBICOFF) and the Senator from Oklahoma (Mr. HARRIS). Is that correct?

The PRESIDING OFFICER. After the Senator from Oklahoma (Mr. HARRIS) and the Senator from Connecticut (Mr. RIBICOFF) have had their allotted time, is it then that the Senator from Oregon wishes to be recognized?

Mr. BYRD of West Virginia. Mr. President, reserving the right to object, would the distinguished Senator from Massachusetts revise his request to read that the able Senator from Oregon (Mr. HATFIELD) be recognized immediately upon the laying before the Senate of the unfinished business?

Mr. KENNEDY. Mr. President, if my unanimous-consent request did not include that request, I amend it to so include it.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered, and the Senator from Oregon will be recognized as soon as the unfinished business has been laid before the Senate.

ADJOURNMENT TO 9:30 A.M.

Mr. KENNEDY. Mr. President, if there be no further business to come before the Senate, I move that the Senate stand in adjournment, in accordance with the previous order.

The motion was agreed to; and (at 6 o'clock and 31 minutes p.m.) the Senate adjourned until tomorrow, Thursday, August 20, 1970, at 9:30 a.m.

NOMINATIONS

Executive nominations recevied by the Senate August 19, 1970:

FOUR CORNERS REGIONAL COMMISSION

Stanley Womer, of Arizona, to be Federal Cochairman of the Four Corners Regional Commission, vice L. Ralph Mecham.

IN THE ARMY

Gen. James Karrick Woolnough, xxx-xx-xx... xxx-... Army of the United States (major general, U.S. Army), to be placed on the retired list in the grade of general under the provisions of title 10, United States Code, section 3962.

The following-named officers for promotion in the Regular Army of the United States, under the provisions of title 10, United States Code, sections 3284 and 3305:

To be colonel

Abrams, Lester W., xxx-xx-xxxx
Ackerson, Frederic, xxx-xx-xxxx
Adair, Don W., xxx-xx-xxxx
Adinaro, Joseph T., xxx-xx-xxxx
Agnor, Thomas J., Jr., xxx-xx-xxxx
Aguilar, Arthur xxx-xx-xxxx
Allen, Charles W., Jr., xxx-xx-xxxx
Allen, Robert W., xxx-xx-xxxx
Andersen, Gilbert K., xxx-xx-xxxx
Anderson, Ferd E., Jr., xxx-xx-xxxx
Arbuckle, Robert C., xxx-xx-xxxx
Asmus, Grover W., xxx-xx-xxxx
Babbitt, Bruce C., xxx-xx-xxxx
Badger, Frederick C., xxx-xx-xxxx
Barber, Roscoe A., Jr., xxx-xx-xxxx
Barker, Charles W., xxx-xx-xxxx
Barlow, Kendrick B., xxx-xx-xxxx
Barrett, John C., Jr., xxx-xx-xxxx
Basham, Edwin W., xxx-xx-xxxx
Bassler, Robert E., Jr., xxx-xx-xxxx
Beasley, Rex W., Jr., xxx-xx-xxxx
Becker, Jack G., xxx-xx-xxxx
Beckner, Richard G., xxx-xx-xxxx
Benedict, Calvert P., xxx-xx-xxxx
Bentz, Harold F., Jr., xxx-xx-xxxx
Berge, Einar, xxx-xx-xxxx
Berger, Roy H., xxx-xx-xxxx
Berridge, William J., xxx-xx-xxxx
Berry, Robert H., xxx-xx-xxxx
Bess, Victor E., xxx-xx-xxxx
Bigler, William R., xxx-xx-xxxx
Black, Charles S., xxx-xx-xxxx
Blazey, Frank E., xxx-xx-xxxx
Bledsoe, Thomas D., Jr., xxx-xx-xxxx
Bletz, Donald F., xxx-xx-xxxx
Blyth, Rodney A., xxx-xx-xxxx
Boake, Curwin, Jr., xxx-xx-xxxx
Bolz, Henry H., Jr., xxx-xx-xxxx
Bond, James E., xxx-xx-xxxx
Book, Clair L., xxx-xx-xxxx
Booth, Shephard A., xxx-xx-xxxx
Boundinot, Truman E., xxx-xx-xxxx
Bowers, Frame J., Jr., xxx-xx-xxxx
Bowie, Kyle W., xxx-xx-xxxx
Boyd, Benjamin F., xxx-xx-xxxx
Boyd, Russell R., xxx-xx-xxxx
Bresnahan, Richard xxx-xx-xxxx
Bridenbaugh, Donald xxx-xx-xxxx
Bronson, Don H., xxx-xx-xxxx
Brown, David D., xxx-xx-xxxx
Brown, Levi A., xxx-xx-xxxx
Brown, Lloyd A., xxx-xx-xxxx
Bryant David T., xxx-xx-xxxx
Bryant, Oren W., xxx-xx-xxxx

EXTENSIONS OF REMARKS

"THE FAMILY"—SERMON BY REV. MALCOLM MATHESON, D.D.

HON. EDWARD J. GURNEY

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 19, 1970

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD a thought-provoking and eloquent sermon delivered recently by Rev. Malcolm Matheson, D.D., of the First Congregationalist Church of Winter Park, Fla. Dr. Matheson's words deserve wide circulation.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

"THE FAMILY"

(By Rev. Malcolm Matheson, D.D.)

MAY 10, 1970.

"I am come that you may have life and have it more abundantly." John 10:10.

Dr. Georgia Harkness reminds us that the study of primitive origins, the family is universally found to be the basic unit of society. This is not always a father, mother, child, monogamous family in the modern sense; but with the family varying in size from the small unit to the clan. Yet everywhere the family is that social structure within which economic, political and cultural patterns have come into being and are perpetuated. Every family in today's society is the inheritor of many centuries of social change within which morals, manners and mores have been developed. So much is inherited that parent and child are at once compelled and threatened by being sustained. Man, like other animals, is a biological creature subject to natural necessity, but with some freedom to choose and fashion his life.

The home is the natural and best medium for maturation and growth. From Plato's Republic down to the present, some have considered institutions better suited to rear children scientifically. After the Revolution, Russia tried institutions but later realized that there is no substitute for the natural home. The primacy of the family is firmly sustained by Jesus in the Gospels. Family ties were highly regarded by the Jews. Probably the miracle of the survival of the Jews for 20 homeless centuries may be attributed to the solidarity of the Jewish family. Jesus came into the Jewish male-centered world with the dictum that men, women and children must be treated equally as persons.

In the new society that is emerging in the last quarter of the 20th century, the family is very different from what we may call the traditional family. Dr. Gibson Winters of Chicago writes that the new family is more of a launching pad than a foundation. Personal and moral stability are now the main contributions to be made to the child's future, rather than loyalty to the family. Achievement of value is most necessary.

Family life must cherish the human values of care and attention. The fundamental meaning of life must be acted out in the family relationship. This must be meaningful, person to person encounter and respect for each member. Democracy begins in the home if it is to begin at all in the person. Here we must learn to "give and take" criticism and approval. Good family living, day by day, develops a healthy respect for the rights and privileges of others. No topic of conversation should be taboo; but all phases of human behavior freely discussed—sex, politics, manners, etc.

Again see the picture of the launching pad. We have moved from rural to urban society. The family must prepare the child to leave the home for school, for work and for marriage, with all that this implies. The family must help prepare the young woman to share responsibility in the family, in our country and in the world. This responsibility also entails the political and spiritual realms and the institutions, as they are, or as they should be refashioned.

We ought to be pleased that our public school teachers, for the most part, are interested in teaching values to our young people at all levels. A survey was made several years ago to determine how much time was spent on formal religious education. It found that Jewish young people received 335 hours a year of Religious Education—Roman Catholics 200, and Protestants only about 30 hours.

One of the finest family articles to come to my attention is in the Saturday Review, April 25, 1970, written by Dr. Herbert Otto. He states as all discerning persons know that never in the history of Western civilization has the institution of marriage been under such close scrutiny as today. The cultural and theological heritage of monogamy is questioned at all levels of our society from teen-agers up—by those in schools, in professions and in industry. The American family is entering an unprecedented era of change and transition, with massive reappraisal. This is true, however, of all our social institutions, including the Christian Church. This is brought about by honestly facing the real situation as it is now! One divorce in every four marriages—one-third of all first-born babies from 1964 to 1966 were conceived out of wedlock. From 40% to 60% of all marriages at any given time are without marital counseling. Some sociologists refer to this period as the "divorce culture." Most Americans have a divorce experience either in the immediate family or among their relatives or friends.

I agree with Dr. Otto that we will continue family life in some way close to the structures we now have. However we ought not to be frozen into the moulds of family life or of Church life of the past. Sex roles and parental roles must be accepted as changing in our society. No longer can parents insist that they know better than the child, in a given situation, or that "a child should be seen and not heard." No longer is a wife the tool of her husband and children. New modes of family togetherness must emerge. A wife, mother and child—all must be recognized as being persons, with personality potential. In this time of rapid social evolution, we must encourage new forms of social and family innovation; platforms for genuine caring, loving and adventuring. Growth will ensue. Many possibilities exist without hurting or destroying the other person or persons. The wife and mother of any age must grow and develop mentally and spiritually, as well as socially. But always remember that in any person or institution, growth always involves change and emergence of the new. This is painful, but joyous and fulfilling.

Growth adds a new zest for living. The lack of this makes an unhappy home and family. We ought not to have as many unhappy homes. Too often this kind of home produces more unhappy homes. Marriage and family are the structures that best mature the personal core of human relationships. This is their main task, according to Dr. Winter. We certainly agree with him. We need to keep reminding ourselves of this every day. Character development, growth and action determine, in a large measure, the course of society.

The family must take the initiative together in reaching for new dimensions of love and spiritually. The challenge of family living is to help each member achieve the maximum of love, physically and emotionally. Jesus said, "I am come that you may have life and have it abundantly." Happy Mother's Day!

THE 1971 BUDGET SCOREKEEPING REPORT—AS OF AUGUST 13

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. MAHON. Mr. Speaker, the latest periodic "budget scorekeeping" report No. 9 prepared by the staff of the Joint Committee on Reduction of Federal Expenditures will be distributed to Members on August 17. This report reflects the cumulative actions of the Congress on the President's budget requests through August 13.

SCOPE OF THE REPORT

This report is factual and entirely objective. It is based upon the best information the committee staff has been able to obtain from various sources.

The report brings together into a single package all facets of the Federal budget as acted upon by the Congress: First, the appropriation bills; second, mandatory spending authorizations in basic legislation other than appropriation bills, such as pay increases or pensions or welfare increases for which spending proceeds as soon as authorized and prior to the actual appropriation of funds; and, third, spending authorizations which are in effect appropriations within themselves, such as a social security increase or an authorization to spend from public debt receipts, or contract authority in basic legislation.

The report also gives the status of legislative proposals that in effect serve to reduce budget spending such as postal rate increases—the so-called negative expenditure legislative proposals.

The report gives the status of various revenue proposals which directly affect the budget deficit.

The report gives the status and estimated cost of all pieces of legislation either proposed by the administration or acted upon by a committee of the Congress; these are not counted as directly affecting the budget unless they provide for mandatory spending or a so-called backdoor appropriation, but they are nevertheless tabulated because they serve as an indication of the future cost of such legislation.

PURPOSE OF THE REPORT

The purpose of this report is to show how the actions or the inactions of the

Congress on these many and varied pieces of the total legislative package affect the President's budget as originally submitted and as revised by him. It reports on congressional actions affecting the budget beginning with the actions of each committee as a bill is reported. It reflects—in separate columns—the actions of the House, the Senate, and final enactments by the Congress.

HIGHLIGHTS OF THE REPORT

The "scorekeeping" report is largely statistical and somewhat technical in nature and therefore not easily read. It is especially for this reason that I am inserting in the RECORD certain factual highlights from the introductory section of the latest report:

INTRODUCTION OF STAFF REPORT OF THE STATUS OF THE 1971 FISCAL YEAR FEDERAL BUDGET

HIGHLIGHTS AND CURRENT STATUS OF THE 1971 BUDGET

Presidential revisions in the budget

A. New budget authority for fiscal 1971 in the February 2 budget submission was estimated to be $218,030,495,000. By budget amendments, legislative proposals and reestimates (May 19, 1970), the President has increased the estimates for new budget authority for 1971 by $2,691,932,000 to a new total of $220,722,427,000.

B. Budget outlays for fiscal 1971 in the February 2 budget submission were estimated to total $200,771,129,000. By budget amendments, legislative proposals and reestimates (May 19, 1970), the President has increased the estimated budget outlays for fiscal 1971 by $4,571,871,000 to a new total of $205,343,000,000.

C. Budget receipts for fiscal 1971 in the February budget submission were estimated to total $202,103,000,000, including $1,522,000,000 for increased taxes proposed to the Congress. By additional revenue proposals for estate and gift taxes ($1,500,000,000) and leaded gasoline tax ($1,600,000,000) offset by some adjustments downward in his May 19, 1970 reestimates, the President has increased fiscal 1971 estimated receipts by a net of $2,006,000,000 to a new total of $204,109,000,000.

Congressional changes in the budget

A. Budget authority for fiscal 1971:

1. *House* actions to August 13, 1970 on all spending bills—appropriations and legislative—have *increased* the President's requests for fiscal 1971 budget authority by $7,504,735,000.

2. *Senate* actions to August 13, 1970 on all spending bills—appropriations and legislative—have *increased* the President's budget authority requests for fiscal 1971 by $3,109,958,000.

3. *Enactments* of spending bills—appropriations and legislative—to August 13, 1970 have *added* $2,759,172,000 to the President's budget authority requests for fiscal 1971.

B. Budget outlays for fiscal 1971:

1. *House* actions to August 13, 1970 on all spending bills—appropriations and legislative—have *added* a net of $3,222,083,000 to the President's total estimated outlays for fiscal 1971.

2. *Senate* actions to August 13, 1970 on all spending bills—appropriations and legislative—have *added* a net of $2,456,779,000 to the President's total estimated outlays for fiscal 1971.

3. *Enactments* of spending bills—appropriations and legislative—to August 13, 1970 have *added* $1,776,361,000 to the President's total estimated outlays for fiscal 1971.

C. Budget receipts requested by the President for fiscal 1971 requiring Congressional actions total $4,622,000,000:

1. *House* actions to August 13 on revenue proposals total $708,000,000 (including a net of $173,000,000 not requested for fiscal 1971 by the President) leaving a balance of $4,087,000,000 additional revenue increases required to meet the President's revised fiscal 1971 budget requests.

2. *Senate* actions to August 13 on revenue proposals total $757,000,000 (including $439,000,000 not requested for fiscal 1971 by the President) leaving a balance of $4,304,000,000 additional revenue increases required to meet the President's revised fiscal 1971 budget requests.

3. *Enactments* of revenue proposals to August 13 total $516,000,000, leaving a balance of $4,106,000,000 additional revenue increases required to meet the President's revised fiscal 1971 budget requests.

THE PROJECTED BUDGET DEFICIT FOR 1971

The small unified budget deficit for fiscal 1971 of about $1.3 billion projected by the President in his May 19, 1970, statement on the fiscal 1971 budget rests on a number of uncertainties.

The deficit projection reflected about $4.6 billion increase in taxes to be voted by the Congress.

It reflected a sizable estimate for legislative proposals to reduce budget spending.

It counted on only a token increase in spending being voted by the Congress above the budget.

Without these items for increased revenues and negative spending proposals the unified budget deficit projection for fiscal 1971 would otherwise total nearly $10 billion.

Any estimate or determination of what the Congress, by its cumulative actions to date, has done to the projected budget deficit for fiscal 1971 must be very tentative and preliminary in nature since the work of the Congress is far from completed. But in briefest summary as of August 13, congressional impact on the projected deficit appears to be about as follows:

The House, by its actions to August 13, on both spending and revenue measures, has increased the projected deficit for fiscal 1971 by a net of about $3.2 billion.

The Senate, by its actions to August 13, on both spending and revenue measures, has increased the projected deficit for fiscal 1971 by a net of $2.2 billion.

There are a number of major differences between the Senate actions and the House actions affecting the projected deficit. For example, the House has added about $226 million in outlays by its actions on 12 appropriation bills together with some carryover for fiscal 1970 actions. The Senate has added about $1,114 million in outlays for its actions on seven appropriation bills together with the carryover from fiscal 1970 actions. The House has added about $3 billion in outlays for actions on various legislative items including a $1.5 billion increase in social security benefits on which the Senate has not acted. The Senate has added about $1.3 billion in outlays for actions on various legislative proposals.

Enactments to August 13 of both spending and revenue measures have added a net of about $1.6 billion to the projected deficit for fiscal 1971.

SUPPORTING TABLE NO. 1

Mr. Speaker, I am inserting one of the tables from the latest report—supporting table No. 1, perhaps the key table in the report. This table shows, bill by bill, what Congress is doing to change both the budget authority and the budget outlay—expenditure—sides of the President's budget. It shows these actions in terms of increases or decreases from the budget estimates.

By referring to the various subtotal lines on the table, the cumulative change from the budget estimates can be readily determined.

This table is in several parts.

APPROPRIATION BILLS

The first part of the table shows the effects of actions taken—to August 13—at this session on appropriation bills.

The report indicates that the net effect of House actions in appropriation bills to August 13 have resulted in decreasing 1971 appropriation requests for budget authority by about $746 million, and increasing estimated outlays over the President's budget estimates by about $226 million, excluding the vetoed Independent Offices-HUD appropriations bill. Outlays show an increase, because the outlay figure includes the effect in fiscal 1971 of the Labor-HEW-OEO appropriation bill for fiscal 1970 passed at this session—the budget for fiscal 1971 submitted in February did not reflect final congressional action on this appropriation bill, but did reflect final congressional action on all other appropriation bills for fiscal 1970, except, of course, the second general supplemental bill.

BACKDOOR BUDGET AUTHORITY

The second part of this table shows changes in the budget made in the form of new budget authority through the so-called backdoor appropriations process. To August 13, the House has voted or reported $6,893 million in budget authority over the President's budget requests. These items will have little or no effect on outlays, for fiscal 1971; therefore, no change is shown for outlays.

LEGISLATIVE BILLS MANDATING SPENDING

The third part of this table reflects estimates for budget increases or decreases which result from congressional action on legislation containing mandatory spending authorizations such as pay or pension increases for which spending does not wait until an appropriation is made as is the case for most legislation authorizing new or expanded programs.

The net effect of House actions to August 13 for such legislative items is an increase in 1971 budget authority of $418 million and an increase in 1971 budget outlays of about $2,062 million. This does not reflect enacted Federal or postal pay increases which were proposed by the President as increases to his own February budget and therefore not accounted for as congressional increases in the budget. But it does reflect the cost of the retroactive postal pay increase for 2½ months in fiscal 1970 which will be paid in fiscal 1971.

LEGISLATIVE BILLS RE PROPOSALS TO REDUCE

The fourth part of this table reflects the apparent changes in the budget resulting from actions taken to date on legislative proposals to reduce budget authority and outlays. Only items on which partial action has been taken are

counted for scorekeeping purposes at this time. For the House, the effect of these actions to August 13 is an increase in the 1971 budget authority of $939 million and an increase in 1971 budget outlays of $934 million. These estimates assume a 6-month delay in the effective date of a postal rate increase.

A similar tabulation, giving the details of congressional actions affecting fiscal 1970 estimates, is included at the bottom of this table:

SUPPORTING TABLE NO. 1.—EFFECT OF CONGRESSIONAL ACTIONS DURING THE CURRENT SESSION ON INDIVIDUAL BILLS AFFECTING BUDGET AUTHORITY AND OUTLAYS (EXPENDITURES)
(AS OF AUGUST 13, 1970)
[In thousands of dollars]

Items acted upon	Congressional actions on budget authority (changes from the budget)			Congressional actions on budget outlays (changes from the budget)		
	House	Senate	Enacted	House	Senate	Enacted

PROCEEDINGS BEFORE THE AD HOC INVESTIGATING COMMITTEE OF BLACK ILLINOIS STATE LEGISLATORS—III

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. MIKVA. Mr. Speaker, I herewith place in the RECORD the third part of hearings before an ad hoc investigating committee of the Illinois State Legislature.

The document referred to follows:

Mr. CLEMENTS. Yes.

Rep. WASHINGTON. You were on the scene the day that Rev. Jesse Jackson was escorted to the Labor Department Hearing at the Custom House?

Rev. CLEMENTS. Yes.

Rep. WASHINGTON. He has bodyguards assigned to him, is that correct?

Rev. CLEMENTS. That is correct, by the Federal Government.

Rep. WASHINGTON. How many?

Rev. CLEMENTS. Two. Two that I know of.

Rep. WASHINGTON. In light of your experiences there that day, and this is obvious public knowledge of what happened on the prior day, do you consider that sufficient bodyguards to get Rev. Jackson into the hearing?

Rev. CLEMENTS. Absolutely not.

Chairman NEWHOUSE. Thank you, Father.

(Witness excused.)

Chairman NEWHOUSE. We have two more witnesses, Mr. Donald Duster, and Mr. Gardner Stern, Jr., who are Co-Chairmen of the Chicago Forum.

Would you prefer to appear together?

Mr. DUSTER. Together.

(Witnesses sworn.)

Donald Duster and Gardner Stern, Jr. having been first duly sworn, were examined and testified as follows:

Chairman NEWHOUSE. Gentlemen, I appreciate your coming over to answer our invitation to aid us in our deliberations here today.

You are Co-Chairmen of the Chicago Forum. I wonder if you would care to tell us a little bit about your Forum, and what efforts have been made in terms of community police relations.

Mr. DUSTER. Thank you for inviting us to appear.

The Chicago Forum is an integrated group, composed of about 60 business and professional men, who have been meeting for the past two years to exchange ideas. And we appear to express ourselves on matters pertaining to urban conditions.

To attain this purpose, we hold monthly meetings, and we invite people to appear before our group and share in the current topics with us. One such meeting took place on February 18, 1969.

The subject matter that evening was Police and Community Relations, and we invited James Riordan, Commander of the 1st District of the Chicago Police Department, Kermit Coleman, Director of the Ghetto Projects, and legal coordinator for the American Civil Liberties Union, and John Webster, Professor of Criminology, University of Illinois, Circle Campus, and Renault Robinson, President of the Afro-American Patrolmen's League, to address our group that evening.

Following that discussion, the Forum decided the Police Department was not listening to the plea of the Afro-American Patrolmen's League, to be heard at the highest level in the department, and this resulted from conversations and direct testimony, almost a verbal confrontation between members of our panel, Commander Riordan, and Renault Robinson.

I want to give you this in chronological order, because the way the Forum became directly involved, this was February, 1969, when most people in the Chicago area had no real knowledge that the problem of the Afro-American Patrolmen's League was getting into.

The Chicago Forum took the position, since we are business oriented, we would like to have administrative problems handled in a business-like fashion. Therefore we wrote a letter to Commander Riordan, dated March 7th, where we thanked him for appearing in our panel, told him about the concern about the obvious disparity between the Patrolmen's League and Riordan's responsibility to the Department's position, even though Riordan at that time was expressing his own view and not that of the department.

And Riordan also indicated that he felt certain if all possible changes in rules and regulations would be followed by the League, he would probably receive a hearing.

Chairman NEWHOUSE. What was the attitude toward the League?

Mr. DUSTER. My impression of his attitude toward the League, was that he felt that it did not serve a useful purpose in coming into existence. The need did not exist.

Chairman NEWHOUSE. Now, the second question.

By implication, your last statement seemed to me, was something that the Afro-American Patrolmen's League had failed to do.

Did he make it clear that what they had failed to do, to prevent them from getting a hearing?

Mr. DUSTER. He said some discussions, suggestions during the Panel discussions.

Renault Robinson said he has done all the things and taken all the steps that Commander Riordan has suggested be done.

After the panel discussion, a few of us talked to Commander Riordan and it was our impression that he felt more could be done to exhaust the remedies within the Department. So we invited the commander to be the guest of the Forum at an Executive session of the Forum, to find out the steps, what the Afro-American Patrolmen's League could do to reach their objectives, to meet with Superintendent Conlisk.

We did meet with Commander Riordan, and we discussed what might be done. And it was Riordan's feelings that since he was not directly involved in human relations, in the Police Department, that the Forum should contact the expert in that area, who was Deputy Chief Sam Nolan.

Chairman NEWHOUSE. The expert in what area?

Mr. DUSTER. Human relations.

Chairman NEWHOUSE. I don't mean to keep cutting you off, Mr. Duster.

Mr. DUSTER. That is perfectly all right.

Chairman NEWHOUSE. That was your February 1969 meeting?

Mr. DUSTER. No. The February, 1969 meeting was a discussion panel, or panel discussion.

After that meeting, we did meet with Commander Riordan. And that was April 30th, we met with Commander Riordan.

Chairman NEWHOUSE. Two months later?

Mr. DUSTER. Two months later. We had one meeting which was postponed.

We also met with Renault Robinson and members of our executive committee met with Renault Robinson, and told him that we had met with Commander Riordan, and Commander Riordan suggested that there was some suggestions that further steps could be taken.

And the response of the Patrolmen's League, was that the Forum could do that if we'd like, but they thought that the results would be negative. They had tried as far as they knew, all the channels inside the Police Department, and the channels they thought would be effective, and they had met with resistance.

We asked, that is the Chicago Forum, in our meeting with the Patrolmen's League, asked the League to send us literature about their program, and why they wanted to meet with Conlisk; that the Forum as such did not want to become directly involved.

Our purpose was to try to bring the meeting between Conlisk and the Patrolmen's League together, and not take a stand on the situation as the Patrolmen's League spokesmen. We did this, and we have a copy of their letter to the Chicago Forum.

On June 6th, the Chicago Forum sent a letter to Superintendent Conlish, telling him of our meeting of the panel discussion, of our meeting with Commander Riordan, of our meeting with the Patrolmen's League, and of our purpose and asking him to meet with the President of the Afro-American Patrolmen's League.

Chairman NEWHOUSE. I notice that you have a one-page letter.

Is that a copy?

Mr. DUSTER. That is a copy.

Chairman NEWHOUSE. Would you care to read that letter for the record, please.

Mr. DUSTER. Yes.

It is addressed to Mr. James Conlisk, Superintendent, Chicago Police Department, 1121 South State Street, Chicago, Illinois 60605:

"Dear Mr. Conlisk:

"We, the Chicago Forum, are writing to propose for your consideration one concrete step toward the resolution of the critical problem of police-community relations. The Chicago Forum is an integrated group composed of 60 business and professional men, who have been meeting for the past two years to exchange ideas and, where and when appropriate, to express ourselves on matters pertaining to urban conditions.

"During the past two years we have invited experts, government officials, and community representatives to discuss with us topics including, employment, housing, education and economic development, with particular respect to the way these problem areas are being confronted in Chicago.

"With reference to Police-community relations, last winter we were addressed by a panel consisting of John Webster, Professor of Criminology, University of Illinois, Circle Campus, Kermit Coleman, the Community Legal Coordinator for the American Civil Liberties Union, Commander James Riordan,

and Renault Robinson, President of the Afro-American Patrolmen's League.

"Subsequent to the panel discussion, the Executive Committee of the Chicago Forum had luncheon meetings with Messrs. Riordan and Robinson, respectively, resulting in a greater familiarity with Police programs to promote communications with minority communities and with the A.A.P.L.'s interest in advancing the concerns of the members of minority communities.

"Based on the perspective of police-community relations, and as concerned citizens rather than as advocates of any cause, we would endorse and urge the initiation of an informal dialogue between you, as the highest representative of the Chicago Police Department, and the leadership of the AAPL.

"We take this position because we feel such a dialogue might achieve the following purposes:

"(1) It would tend to establish an atmosphere of mutual goodwill and understanding between the two groups at the highest levels and dispel possible suspicions based on lack of information.

"(2) It might lead to a relationship which would help to minimize the potential for violence this summer.

"(3) It could contribute to the positive evolution of police-community relations. (Indeed, we are advised you welcome the formation of the A.A.P.L. as potentially constructive.)

"We trust that our suggestions are helpful, for we recognize your concern both for public safety and for individual rights. To determine your reaction to our proposal we will call upon you in the next few weeks.

"If there is any way in which our organization or its individual members can be of any assistance, please do not hesitate to call upon us."

And it is signed by the then Co-Chairmen, Weathers Y. Sykes, and Robert D. Kestnbaum.

Chairman NEWHOUSE. For the record, could you tell us who are the Board members of the Forum?

Mr. DUSTER. We have no Board members. We just have a membership list.

The affairs are administered by an Executive Committee. We have a membership list; yes, sir.

Chairman NEWHOUSE. Who are the chief officers?

Mr. DUSTER. We have co-chairmen, Gardner Stern, Jr. on my left, and myself, Donald Duster.

Chairman NEWHOUSE. Go ahead.

Mr. DUSTER. Our response—or a response was received, and dated June 10, 1969.

Chairman NEWHOUSE. Would you please read it.

Mr. DUSTER. Yes.

"Gentlemen:

"Thank you for your letter of June 6, relative to your concern about the problem of police-community relations.

"As you know, the Chicago Police Department shares this concern and has manifested that concern by the institution of many innovative procedures and organizational restructurings. We have in our Department a separate division having as its main responsibility the establishment of the closest of ties with every member of the community. This division, the Community Services Division, is headed by Deputy Chief Samuel Nolan, a man whose vast range of experience and abilities makes him admirably suited to the task.

"In your communication you indicate that your Executive Committee has met with District Commander James Riordan and Renault Robinson, president of the Afro-American Patrolmen's League. You further indicate that these meetings have provided a familiarity with police programs in the area of community relations. May I suggest the possibility that Deputy Chief Nolan might be in the best possible position to explain the efforts of the Department in this area, since it is his main responsibility and he has represented me in meetings with Mr. Robinson on other occasions.

"At the present time, Deputy Chief Nolan is involved in a conference in the Washington, D.C. area, sponsored by the Attorney General of the United States, in matters relating to this nation-wide problem. He will, however, return to the city on June 16 at which time I shall request that he contact you to arrange to discuss this vital problem."

Signed, James B. Conlisk, Jr., Superintendent of Police.

Chairman NEWHOUSE. May I ask if you found that letter either satisfactory or responsive to your request?

Mr. DUSTER. Found it satisfactory in a business-like manner. We are business oriented, and it is frequently in practice to have all subordinates completely informed before the Executive officers take anything under advisement.

We did contact Deputy Chief Nolan. We did have lunch with Deputy Chief Nolan.

At our luncheon meeting, Deputy Chief Nolan agreed that a meeting between Conlisk and the Patrolmen's League would be beneficial and agreed to go to Superintendent Conlisk and ask that a meeting be arranged.

Sen. CHEW. Has it been arranged?

Mr. DUSTER. No.

Sen. CHEW. Have you heard from Deputy Chief Nolan on that?

Mr. DUSTER. We did hear from Mr. Nolan on the afternoon of our luncheon meeting, which was July the 3rd.

Deputy Chief Nolan called me and said that he had talked to Superintendent Conlisk, that a meeting would take place, and we had one understanding that the Patrolmen's League would submit an item of agenda, and items to be discussed, and that was not done prior to this meeting.

Sen. CHEW. Did the Patrolmen's League submit these agenda?

Mr. DUSTER. They submitted the following—they submitted it following this discussion from Deputy Chief Nolan that they meet.

Sen. CHEW. And what has been done subsequent to this?

Mr. DUSTER. There has been no official response from Superintendent Conlisk regarding the request made by the Patrolmen's League for a meeting.

Sen. CHEW. This is subsequent to Sam Nolan setting up the meeting apparently?

Mr. DUSTER. This was a condition that Nolan agreed to present to Conlisk for a meeting.

In other words, Nolan felt that the Superintendent would probably meet with the Patrolmen's League, if the Patrolmen's League detailed exactly what they wanted to talk about and not very broad, general terms in bringing about better relations with the community.

Sen. CHEW. Nothing has related since this?

Mr. DUSTER. We did ask the Patrolmen's League why they wanted to meet with the Superintendent and asked that a meeting take place.

If I may go on, when Deputy Chief Nolan talked to and said that Conlisk's response had been negative, that Conlisk's response was that the Patrolmen's League would have to go through channels, and Conlisk said that the patrolmen would know what that meant, or they could submit their proposal to the Patrolmen's representative, Officer Robinson.

Sen. CHEW. The Patrolmen's Representative, representative in the Police Department?

Mr. DUSTER. Yes.

Sen. CHEW. In other words, it was clear to you that Superintendent Conlisk had no intention of meeting with the Patrolmen's League?

Mr. DUSTER. That is correct.

Chairman NEWHOUSE. Anything further, Mr. Duster?

Mr. DUSTER. Only that the Patrolmen's League followed our suggestion, that they detail and outline their program for a meeting with Conlisk, and sent it to him by registered mail.

They did in the letter of July 16th, which is a three-page letter, which I will be glad to leave with you.

I have not talked to Deputy Chief Nolan to ask him what the response to the letter of the Patrolmen's League has been.

Chairman NEWHOUSE. Based on this correspondence, have you been able to draw any conclusions?

Mr. DUSTER. Yes. That there is no intention on the part of Superintendent Conlisk to meet with the President of the Afro-American Patrolmen's League.

Rep. COLLINS. What is the date of the Afro-American Patrolmen's League's letter to Superintendent Conlisk?

Mr. DUSTER. July 16th.

Chairman NEWHOUSE. Could you speculate as to the reasons why Superintendent Conlisk wouldn't meet with the Patrolmen's League?

Mr. DUSTER. Our belief is that the program, as we know it in the Forum, the Patrolmen's League challenges a number of existing practices of the Chicago Police Department.

Chairman NEWHOUSE. Do you think he would refuse to meet with the leaders of other organizations, like the Confederation of Police, or the Fraternal Order of Police?

Mr. DUSTER. I believe he will refuse to meet with organizations that have power to change the present policies of the Police Department.

Chairman NEWHOUSE. You mentioned that there were some changes that the Afro-American Patrolmen's League was going to offer to the Police Department that might take into account some system changes.

Mr. DUSTER. Yes.

Chairman NEWHOUSE. Are you speaking now of the negotiations of the protection of the black community?

Are you speaking of the patrolmen offering a completely different image, not upon oppression?

Mr. DUSTER. Yes. Those are provided terms.

If I may refer to the letter, because I am not a member of the Patrolmen's League and I don't want to misrepresent them.

And I quote:

"We must correct the injustices that the minority group members suffer because of improper or illegal police service or action. Contrary to public opinion, the League has found that the problem that affects police relations with the Black community is not caused by the individual policeman who acts improperly or misuses his authority by personal design. Rather, it is the improperly constituted structure that allows the individual policeman the relatively unrestricted personal discretion to act while under the color of law and, in many cases, within the legal limits of the law in a fashion that reflects prejudicial treatment."

Chairman NEWHOUSE. Is that all?

Sen. CHEW. Would you say that these——

Mr. DUSTER. If I may, there is one general statement I think will capsulize it.

"We of the League would like to join with you in a joint effort to exchange ideas and discuss ways in which we, as an organization representing black people, and you representing the Police Department can work together to make the Police Department improve its service in the black community and gain the respect of the black citizens. This, of course, is not an easy task. Many changes in police procedures, both on the street and in the station, stronger internal discipline, new procedures for handling citizen complaints, a reorganization of the Police-Community Relations Division, better trained

supervisors, and an increase in Negro personnel are only a few of the measures deeply affecting police work that need modification and/or change."

Chairman NEWHOUSE. Anything further?

I'm sorry. Senator Chew.

Sen. CHEW. In other words, it is your conclusion that the Superintendent of the Chicago Police Department has in fact ignored the things that were listed in the letter as not being existing, and is that what would be about your summation?

Mr. DUSTER. I know he has ignored responding to the letter.

Chairman NEWHOUSE. Gentlemen, you have been very patient. You have sat with us for quite a while.

Mr. Stern, you haven't even had a chance to get to the microphone.

Would you introduce yourself, and would you spell out the names of some of the Executive Committee for us?

Mr. STERN. My name is Gardner H. Stern, Jr., and as Mr. Duster indicated, I am a Co-Chairman of the Chicago Forum and among the members of the current Executive Committee are the two of us, Mr. Gordon Hegwood, Mr. John Montgomery, Mr. Peter Husting, Mr. Gerald Hines.

We have a new Executive Committee, and Mr. Phillip Ginsberg. And all of these gentlemen are either executives in their own busines, or in the City, or in one case or another with the University of Chicago Law School.

Chairman NEWHOUSE. Any further questions?

Sen. CHEW. Yes. I want to ask him one question if I may.

What has been done toward weeding out the bigoted white police officers that operate unlawfully in the black community?

Mr. STERN. That, Senator, isn't really our role as an organization. And we have not really addressed ourselves to that very definite problem, but that is not our primary function as an organization.

Sen. CHEW. Well, insofar as you are Chicago's relations from the conversational end of it, have you thought about this? This is the real crux of the whole problem of the Chicago Police Department.

Mr. STERN. Very definitely. As a result of our panel last February, during which time we first became exposed as an organization to the point of view of the AAPL, as a result of that panel, we recognize that the AAPL had a valid position.

And as a result of our efforts to meet with Superintendent Conlisk, we might bring together the two points of view and might result in some improvement in community relationships, which would include the handling of bigoted white policemen.

Sen. CHEW. I have had the opportunity to study some police departments throughout the country, and I find that the Community Relations Department of the Chicago Police Department is more or less a myth.

Have you had any concern on it?

Mr. DUSTER. May I respond to that.

When we met with Deputy Chief Nolan, there—this is not hearsay—he told me that he recommended to Superintendent Conlisk, that Conlisk meet with the Patrolmen's League, and responded—the response be for the Patrolmen to go through channels or through the Patrolmen's representative.

Here we have a Deputy Chief who has been told, "I am not taking your advice, but send to me a patrolman, Officer O'Brien. If he feels—if he tells me, I might do it."

I believe you are right. We do have a myth so far as any postiive power in that fashion is concerned.

Sen. CHEW. I feel that the Director of Community Relations is a shill for going into the office, his power is limited to nothing, and he is an excellent police officer, and should be placed in a position where he could use his talents.

But still he is like white companies putting a black man at the front door in tokenism, and I think this is what has happened.

I would like to see your organization, for instance, take a deep interest in the kind of personnel that the Department has, that are roaming in the black communities and not only are they abusing the citizens physically, but they seem to have a habit of taking a lot of money out of the community from people in business.

And since you are structured on a business basis, this definitely should be looked into. I know of many people that have come to my office and have complained about police harassing people in business, especially taverns, liquor stores, and how they set up arrests in various taverns where the people have not found the way to funnel the money into the headquarters.

And things of that nature, I think your organization could be very vital. As you know, I have called for the removal of the Task Force, because they are all—almost operating in the black communities, and they saturate and harass the citizens. I have called for the bigoted white policeman to be reassigned and brought up on the style and educational culture of black people.

I have called on the Mayor and asked for the support of the Superintendent of Police, and the response I have got has been nothing from either gentleman, and if your organization in these kinds of hearings can center yourself on these things, it would be helpful.

Mr. DUSTER. If I may respond, I think you are absolutely right with our involvement with the Patrolmen's League. It cannot be done, however, without the changes and your suggestions cannot be brought about by a group like the Chicago Forum.

The restructuring of the Chicago Police Department will take stern pressure, which we in our small way will try to bring about, if we can bring into this relationship other organizations that do have the power to bring about change.

Then I think we will have fulfilled a very vital function. But from our knowledge of the workings of the Chicago Police Department, we are trying to hit an elephant with a baseball bat.

Rep. WASHINGTON. I have one question of Mr. Stern.

We are here because Officer Renault Robinson alleges he has been harassed by the Chicago Police Department because of his involvement in the Afro-American Patrolmen's League.

If that is true, as a fact-finding committee, obviously I would like to know why. Perhaps the conclusion or the answer to my question is involved with Mr. Duster's response as to why Superintendent Conlisk would not cooperate with the Afro-American Patrolmen's League; to-wit, his answer was this:

The Afro-American Patrolmen's League posing a challenge to the Chicago Police Department in the area of reform, which the structure is not willing to concede to.

It would therefore follow that they would be opposed to the prime mover of that organization, Officer Renault Robinson, because he represents a challenge to remove the hierarchy from the Police Department.

Would you agree with that statement?

Mr. STERN. Yes, I would, completely.

Chairman NEWHOUSE. Gentlemen, thank you.

(Witnesses excused.)

Chairman NEWHOUSE. This Committee Hearing is now adjourned to a date one week from today, Friday, at the same place, at 10:00 o'clock a.m., at which time we expect to present witnesses who will be leaders of community organizations, attorneys who are working attorneys in the criminal practice who have some knowledge about police practices.

We are going to again issue an invitation to Superintendent Conlisk to appear. We hope he will do so.

Thank you, very much, for your patience.

(Whereupon the hearing in the above-entitled matter was adjourned, to reconvene at 10:00 o'clock a.m. (Friday, October 17, 1969, at the same place.)

AFRO-AMERICAN PATROLMEN'S LEAGUE OF CHICAGO,
July 16, 1969.

Mr. JAMES B. CONLISK, Jr.,
Superintendent, Chicago Police Department, Chicago, Ill.

Subject: Conference between the representatives of the League and the Superintendent of Police.

DEAR MR. CONLISK: The Afro-American Patrolmen's League, as you know, is an organization of black policemen who formed in order to seek solutions to the growing "problems" between the "police department and the Black community." Being professional policemen and also Black citizens and members of the Black community, we are primarily qualified to know the causes of conflict between the police institution and Black people.

There is no doubt in our minds that the police department is a necessary function of government. We also feel that no public institution now in existence is without flaw. Moreover there is no institution within the government that has a greater domestic responsibility than the police department.

By any objective standards the Chicago Police Department ranks high among police departments, not only in this country but also in the world. We of the League know that the problems facing the police department a decade ago were much different in complexity that they are today. No one will deny the fact that the police function has come under alone scrutiny from all areas of this society, including the federal government.

Today the League would like to join with you in a joint effort to exchange ideas and discuss ways in which we as an organization representing black people and you representing the police department can come together to make the police department improve its service and the Black community and gain the respect of the Black citizens. This of course, is not an easy task. Many changes in police procedures, both on the street and in the station, stronger internal discipline, new procedures for handling criteria complaints, a reorganization of the Police-Community Relations Division, better trained supervisors, and an increase in Negro personnel are only a few of the measures deeply affecting police work that need modification and/or change.

The impetus for change must rest with the police department because they are appointed public servants with the sworn duty to serve and protect all citizens in a fair and impartial manner and to the best of their ability.

We must correct the injustices that the minority group members suffer because of improper or illegal police service or action. Contrary to public opinion, the League has found that the problem that affects police relations with the Black community is not caused by the individual policeman who acts improperly or misuses his authority by personal design. Rather, it is the improperly constituted structure that allows the individual policeman the relatively unrestricted personal discretion to act while under the color of law and, in many cases, within the legal limits of the law in a fashion that reflects prejudicial treatment.

The League has worked in the Black community with many different community groups and organizations. In some cases we did not condone the stated purposes of some of the organizations. However, the general consensus of opinion from all the different

community groups and youth organizations is that unless the legitimate grievances relating to the police are confronted by the police administration, the avoidance of loss of life and damage to property will be impossible.

The League feels that you are a prudent man and that you realize your responsibility to the police officers under your command and the citizens of the city of Chicago. We believe you will use all of your influence to improve police service in this city, and avoid conflict and loss of life between policemen and minority groups. We further feel that your ability to carry out your duty is hindered by lack of certain information and objective facts concerning the police department and its relationship to minority groups. Being the top administrator of this department is a difficult position. You must rely on information received from secondary sources in order to make the decisions made by top level subordinates who sometimes are themselves ill-advised is a built-in problem of management.

Race, national origin, religion, age, employment, education and residency are only a few of the major differences that affect police work. Policemen know what steps to take when the law is violated. However, general crime and social violence or civil disorder are different problems and must be handled in different ways. Criminals and minority protestors both violate the law, but there is a distinct difference between the two and the police department must reflect the difference.

The bulk of police work today is involving social and domestic problems. In order for the police to be effective in handling these situations, a knowledge of the culture, habits and customs of the people is a necessary tool that today's policeman must have at his command. It goes without saying that to ignore the differences in people when performing the police function will tend to create unnecessary hostilities on the part of the people which are in turn met by superior force on the part of the policeman. This is an example of an unnecessary problem and its unnecessary escalation because of improper police actions.

The purpose of our meeting will not be a discussion of improved employment conditions for our membership or the usual demands of the organized labor representation provided by other police organizations. Ours is a desire to improve the structures through which the police department deals with the solution of social and domestic problems in minority areas—principally in black minority areas. It is a matter of urgent concern because we believe that our suggestions will not only improve the image of the entire police force and further the cause of justice but, further, we believe it will save the city from the eventual cataclysm which has so often been predicted.

The plan to deal directly with you is based on our conviction that you are aware of the degree of escalation of hatred against police and would like to employ an alternative to massive escalation of weaponry and retaliation. Our participation in the social struggles of Blacks has given us a new image which enables us to give a credible witness to the alienated if and when the department is ready to show the proper regard for their legitimate requests. It behooves the department to make this move and employ this moment of truth and reconciliation between black citizens and black policemen to set new goals and adopt healthier attitudes in building a city where justice will be pursued with compassion by an aware police department.

Proposed topics of discussion for the first meeting:

(A) Relationship of the League to the Chicago Police Department.

(B) Discussion of A.A.P.L. suggestions for an improved Chicago Police Department. Order of priority and convenient method of testing and implementing proposals.

(C) Discussion of other participants necessary to insure the success of our efforts in improving the Police Department of the City of Chicago.

Sincerely,

RENAULT A. ROBINSON,
President.

NEW MEXICO CITIZENS RESPOND TO QUESTIONNAIRE

HON. MANUEL LUJAN, JR.

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. LUJAN. Mr. Speaker, the residents of New Mexico's First Congressional District have expressed strong opinions on a number of important national issues in their answers to my recent voter questionnaire.

Over 40,000 individuals in all 14 counties of northern New Mexico took the time to think over my questions and send in their answers. The actual number of questionnaires returned numbered 22,456 with most responding for both him and her.

I am grateful to those many citizens for their efforts, and I draw encouragement from the fact that so many people are willing to take an active interest in government and in their elected representative in Washington.

The questions read as follows:

QUESTIONNAIRE

1. What is your opinion of President Nixon's handling of the Vietnam war?
2. If inflation continues, should wage and price controls be considered?
3. Do you favor ending the draft and creating a volunteer army?

The answers to these first three questions are as follows:

[In percent]

4. *Controlling Inflation:* View of voters in New Mexico's First District—

In order to keep federal spending in balance with income, it may be necessary to further cut the national budget. Any cuts should be made in the following order:

1. Foreign aid.
2. Space.
3. Federal construction.
4. Welfare.
5. Defense.
6. Labor training programs.
7. Education programs.
8. Health programs.
9. Antipollution programs.

One of the most gratifying aspects of the response to this question was the number of people who took the time and trouble to add individual comments on items they felt to be of special importance. It is significant that by far the greatest concern was with the high cost of just running our Government, and especially about the high salaries and expenses of Congress itself. I am glad that voters are keeping an eye on us here in Washington, and I hope they continue to do so.

I again want to thank the residents of the first district for sharing with me their thoughts on these issues.

PORTSMOUTH NAVAL SHIPYARD CITED FOR OUTSTANDING PERFORMANCE IN COST REDUCTION

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. WYMAN. Mr. Speaker, I am submitting for the RECORD a recent news article from the Portsmouth, N.H. Herald which highlights the outstanding performance of the Portsmouth Naval Shipyard in the Department of Defense cost reduction program for fiscal year 1970.

Since 1964, Portsmouth has made an exemplary showing in this program in competition with a total of nine other naval shipyards. It should be emphasized that this consistently high performance during the past 6 years has been achieved in spite of the handicap occasioned by the pronouncement of the former Secretary of Defense, Mr. McNamara that the shipyard would be phased out by 1975.

Mr. Speaker, Portsmouth has again demonstrated its ability to produce new

ideas for the improvement of work techniques and procedures in order to achieve real economy as well as greater effectiveness in operation. Once again, I appreciate the opportunity to bring to the attention of readers of the RECORD the outstanding contribution being made to our national defense effort by the skilled men and women of the Portsmouth Naval Shipyard.

The article follows:

SHIPYARD HONORED FOR COST REDUCTION

Portsmouth Naval Shipyard, recently notified that its 1974 closure order had been rescinded, has now been nominated for a Defense Department award for outstanding achievement in cost reduction.

Rear Adm. Nathan Sonenshine of the Naval Ship Systems Command in Washington, D.C., said the shipyard has been nominated for attaining 225.5 per cent of its assigned goal, a validated savings of $3,748,200.

The shipyard commander, Capt. Donald H. Kern, said the recognition again emphasized the determination of shipyard employes to make Portsmouth a leader among all naval shipyards.

Twenty-five employes and PERA division, a unit within Design Division, received awards from Capt. Kern yesterday for contributions to the cost reduction effort.

Norman R. Turgeon, of Somersworth, received a Naval Ship Systems Command certificate of merit for cost reduction actions totaling $1,177,000.

Capt. Earl deR Barondes, director, and William H. Eckhart, chief engineer, received the awards on behalf of PERA personnel.

Certificates of merit for individual administration and wholehearted support of the program were presented to Richard P. Russell, 27 Wyman Ave., Kittery; Robert W. Burton, 9 Oliver St., New Castle; Michael A. Cyr, Somersworth; Clay B. Tucker, 26 Downing Ct., Exeter.

Certificates for outstanding individual achievement were presented to:

Henry J. Carpenter, 11 Lindsay Road, York; Mrs. Christine S. Bilodeau, 76 State Road, Eliot; Warren C. Galle, 32 Beach Road, Eliot; Gordon A. Fernald, 126 Main St., Eliot; John F. Lincoln Jr., Foyes Lane, Kittery Point; Robert W. Randall, Norwood Farms Road, York Harbor; James G. Tarling, Old Post Road, Kittery; James H. Pike III, Salisbury, Mass.; Domenico DiBona, Dover; Roger A. Blouin, New Road, Newmarket; Kenneth D. Lurvey, 9 Winchester St., Portsmouth; John K. Hall, Sweetbriar Lane, Hampton; Paul E. Moody, 6 Gray Ave., Portsmouth.

Also, Paul W. Smith, Portsmouth Ave., Stratham; James A. Coellner, 2 Blake Lane, Hampton; Richard M. Grossman, 6 Pamela Drive, Portsmouth; George W. Marston, Dover; William J. Minnon Jr., 4 Bonnie Drive, Exeter, and Bernard L. Bergeron, Dover.

THE SOVIET DAY OF SHAME

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. COLLIER. Mr. Speaker, the week of August 17 marks the second anniversary of the invasion and occupation of Czechoslovakia by the armed forces of the Soviet Empire. It was on August 20 and 21, 1968, that half a million Russian, Polish, East German, Hungarian, and Bulgarian troops crossed the borders of this small nation and brutally subjugated it.

What made this invasion and occupation particularly shocking was the fact that Czechoslovakia had been behind the Iron Curtain since February 1948. A few trifling political and economic reforms which had encouraged the people to believe that a brighter day was dawning were more than the tyrants in the Kremlin could stand.

Like its unhappy neighbor, Poland, Czechoslovakia has experienced but a brief interval of freedom. Just before World War I drew to a close, the Czechs and Slovaks secured their independence from the disintegrating Austro-Hungarian Empire.

Nowhere was the infant nation of Czechoslovakia greeted with greater enthusiasm than in the United States, where tens of thousands of Czechs and Slovaks had gone in search of the freedom that had been denied them by the Hapsburg monarchy. Unfortunately, their enthusiasm was short-lived, as the new nation's independence was extinguished by National Socialist Germany in 1939.

The end of World War II brought about the exchange of one set of masters for another. National socialism was dead but Marxian socialism was still very much alive. The Communists gradually took over and have controlled Czechoslovakia ever since.

Mr. Speaker, the Czechs and Slovaks have suffered much through the centuries. We know that their Christian faith will sustain them through the dark and difficult days that lie ahead and that despair will never overtake them.

Next Friday will truly be the Soviet Day of Shame, a reminder of the horrors of 2 years earlier. Let us on that day lift our voices to the Lord of Hosts and pray that the Czechs and Slovaks will soon be free again.

COMPETITIVE BIDDING

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to place in the CONGRESSIONAL RECORD a letter recently received by me from Michael Baker, Jr., of Michael Baker, Jr., Inc., consulting engineers, planners, and surveyors.

Mr. Baker calls attention to a problem existing in the area of the Federal Government and the professional services. As Mr. Baker points out in his letter, competitive bidding is the best way to get the lowest price for a product, but not necessarily the best method of getting professional services where quality and safety are especially important.

The material follows:

MICHAEL BAKER, JR., INC.,
Rochester, Pa., August 10, 1970.

HON. JAMES G. FULTON,
House of Representatives,
Congress of the United States,
Rayburn House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FULTON: Please find attached a copy of page 30 of the August 8, 1970 issue of the Business Week magazine. I have circled the article entitled "Pentagon wants engineers to talk price."

I ask you to exert your influence to stop this trend in Government of getting "competitive prices" for professional services.

We in private practice in professional engineering are required to be licensed as Professional Engineers. This requires education and experience and the taking of written examinations of two days' duration. It is required in each State for the protection of the public's health, welfare and safety. I am personally registered in 48 States, the District of Columbia and the Panama Canal Zone.

Engineers are professionals just the same as Attorneys and Doctors. Having three Doctors submit a bid for performance of a surgical appendectomy operation does not guarantee you will get the best quality performance. The same is true in submitting bids on engineering for government projects.

All State Laws recognize that the public's health, welfare and safety must be predominant in the determination of the qualifications of the Engineer to perform the professional service. Price is secondary and is negotiated between the client and the engineer or architect *after* the client has selected a firm presenting the best qualifications to fulfill the needs of the client.

I write to ask you to intercede with the Government to stop this effort to acquire and require "competitive bids" for professional service. The most efficient professional service in the taxpayers' interest will come by the selection of firms qualified to perform the service in the public's interest. Initial "bidding" price does not necessarily determine efficiency or quality to protect the public's life, health and safety.

I would indeed be grateful for your help and support in response to this request. Thank you.

Sincerely yours,

MICHAEL BAKER, JR.

PENTAGON WANTS ENGINEERS TO TALK PRICE

The Pentagon is trying to pressure architects and engineers into competing for contracts on the basis of price, but they are resisting the idea.

Still, the Defense Dept. wants to try. Unless blocked by Congress, it plans a one-year test in the Sacramento district of the Army Corps of Engineers and in the Charleston district of the Navy facilities engineering command.

Under the experiment, architectural and engineering firms would submit technical proposals accompanied by sealed-price estimates for contracts of more than $10,000. Contract winners would tentatively be selected on the basis of the technical proposals. Then the sealed prices would be looked at to determine who really wins.

If Defense decides that comparison shopping saves money, private industry might move in the same direction.

COMMENTS ON COLLECTIVE BARGAINING

HON. ROBERT O. TIERNAN

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. TIERNAN. Mr. Speaker, on Wednesday, August 12, Lane Kirkland, secretary-treasurer of the AFL–CIO, addressed the American Federation of Government Employees Convention held in Denver, Colo.

Mr. Kirkland's comments on collective bargaining are interesting and enlightening.

Without objection I include his address in the RECORD:

COMMENTS ON COLLECTIVE BARGAINING

I want first to tell you of the high regard in which the AFL–CIO holds this union and its President, John Griner. That regard is shared by all of his fellow members of the Executive Council. Brother Griner has been a vice president of the AFL–CIO for less than a year, yet he has already made a lasting contribution to the policy-making work of the Executive Council.

He is a fine trade union leader who really works at his trade and, day-in and day-out, gives the members of this union his total concern and devotion.

I want also to pay a well-deserved tribute to a group of workers too often abused—or as best taken for granted—the workers you represent, the dedicated civil servants of the United States.

One of the popular sports in America, widely encouraged by the press, is the game of kicking the federal worker around a bit.

No matter what the economic problem, the federal answer to fiscal crises is always the same—cut the federal payroll, eliminate jobs, refuse pay increases, scoff at the services of federal workers, make the federal worker bear the brunt every time.

The AFL–CIO does not enjoy that sport, and we strongly disagree with that approach.

We believe that America should be proud of its public workers.

They are fine, hard-working, conscientious—and underpaid—men and women. They deserve better from their employer—the federal government.

And the way they can achieve betterment is through collective bargaining. I am sure you are going to win it and the AFL–CIO is going to help you win it.

I want to register another vigorous objection—to the phony claim of some that federal workers are somewhat so different a breed that they shouldn't have the right other workers enjoy, the right to freely determine their own economic destiny. I refer, of course, to unionism—to united action—to collectively and freely negotiate the conditions of work and pay and standards that will exist in federal employment.

Federal workers have exactly the needs and aspirations of all workers. They need an adequate income, sound job security, realistic protections against the hazards of illness and old age, and the opportunity to make tomorrow better than today. All workers—no matter what color collar they wear or no matter who their employer—want to clothe, house, educate and care for their families.

I know you agree—that's why you are here as representatives of your fellow workers, at a union convention.

And I am sure federal workers agree. That's why the growth chart of the American Federation of Government Employees is encouraging.

So I congratulate you—on giving us such a fine Executive Council member as John Griner; on your adherence to the traditions and standards of the world's greatest self-help organization, the trade union movement; on your record of growth in numbers, in strength, and in dedication; and in your help to the rest of the trade union movement.

Let me report to you about the record of the American trade union movement as represented by the AFL–CIO in the last year.

It has been a very eventful one. In industry after industry, higher wage settlements have begun to move toward equity—to narrow the inflation gap and reach toward a more equitable comparison with industry's record profits.

The labor movement, along with our allies in the civil rights movement, has twice successfully defended the integrity of the Supreme Court on behalf of all the people of this land. We have— again on behalf of all the people—secured a measure of tax reform, and helped secure real progress on a long list of social legislative goals.

It would take a long time to review all of labor's recent achievements, which demonstrate, I believe, that the American trade union movement was never more alive and active than it is today, and that it is the most effective force for social and economic progress at work in America.

I want to talk about three great, historic victories of recent months. Each of them was a milestone in labor's long fight for the right of every American to join a union and take a voice in his own economic destiny—to bargain with his employer on the terms and conditions under which he will do his share of the nation's work.

I mean the strike at General Electric, the beginning of a new life for farm workers, and the breakthrough of your fellow government workers in the postal service into real, meaningful, collective bargaining.

All three of these achievements are victories for the entire labor movement, as well as for the union members directly affected. Each of the three has some meaning for members of the AFGE.

The General Electric strike, of course, was a battle to defend the basic principle of collective bargaining.

Any of today's giant corporations is, in effect, a government within a government. But none has any of the elements of a democratic government. Each is operated as an authoritarian regime.

Unions were created to balance their power over working people. And 35 years ago the National Labor Relations Act was passed in recognition of the fact that unions are essential if American workers are to remain American citizens, instead of corporate subjects.

General Electric has long been the chief citadel of opposition to that principle. It refused to really recognize that its employees had a right to advance goals of their own, and it refused to do business with their elected spokesmen.

So the General Electric strike was, at bottom, a test of democratic principles, of the people's right to speak on their own behalf.

Other corporate governments, of course, supported and applauded GE's position. If trade unionism had been destroyed at GE, the door would have been opened for attacks on unions everywhere.

But, of course, that didn't happen. The 150,000 strikers refused to be shaken by any weapon in the corporate arsenal. And they had the full support of all of their trade union brothers and sisters.

Members of this union played their full share in winning that victory, and on behalf of the AFL–CIO and the strikers I would like to thank everyone here for the financial and moral support that sustained the morale of the strikers and made victory possible.

You were among those who contributed more money than has ever before been raised to win a strike. You were among those who helped make the boycott of GE products the most successful action of its kind ever undertaken.

And you can be sure that you are among those who have a share in the fruits of victory. Because of the GE strike, the principle of collective bargaining is more secure. And the vitality of the labor movement, and the determination of its members to see justice done, is more clearly understood.

The other two victories have something in common. And they come even closer to home as far as members of the Government Employees Union are concerned.

Farm workers and government workers are, of course, the two groups of workers who were specifically excluded from the National Labor Relations Act. It has taken 35 long years to make the first step in winning for them the same basic rights that other workers won so long ago. And they have had to win their battle alone, not only unprotected by good laws, but victimized by bad ones.

For a long time the labor movement has protested the callous way in which Congress has sat back and watched indolently as the farm workers waged their uphill battle for equity.

That battle is far from over. But the start has been made. After years of effort, the members of the AFL–CIO United Farm Workers Organizing Committee have won their initial union contracts in the great majority of California's grape fields.

It was, of course, the grape boycott that made the difference, just as the GE boycott helped to make the difference in that battle. The American people, led by America's trade unionists, recognized a wrong that Congress ignored. They stopped eating grapes. and the strikers stood firm and the growers got the message.

Nobody knows better than the members of this union how hard the labor movement has protected the exclusion of that other group denied protection of America's basic labor law—government workers.

It is our conviction, as it always has been, that every American worker has a right to meaningful collective bargaining. It is our goal, as it always has been, to extend the right to every worker in the land. We can see no justification whatever for the exclusion of farm workers or government workers or any other workers.

We will never stop resisting the efforts of Congress and state legislatures and city councils and school boards to legislate their employees into second-class citizenship.

As far as the labor movement is concerned, there will never be more than one class of citizenship: First class.

A first-class citizen has a voice in this nation's political life, which he exercises through the representatives he elects at the polls. A first-class citizen has a voice in the nation's economic life, which he exercises through the representatives he elects at the polls. A first-class citizen has a voice in the nation's economic life, which he exercises through the representatives he elects and sends to the bargaining table.

Both of those rights are equally important. To deprive anybody of either is to deprive him of hope that he will be able to build a better future for himself and his family.

It is to leave him at the mercy of somebody else—a paternalist who says that he knows best and that what he says goes—leaving no hope that the worker's own needs and desires, as he sees them and lives with them, will be considered.

Those days are coming to an end for postal workers. They have won, for the first time, the same rights to collective bargaining that other workers in private industry have had for 35 years.

In the historic negotiations that brought about the end of the postal strike, the postal workers stated their case very well, and they had the support of the overwhelming mass of their fellow-citizens, as well as all their fellow trade unionists.

In a public-opinion survey last month, long afttr the issues have been off the front page, 61 percent of the American people told the Louis Harris organization that they *still* believe the postal workers were right, and the government was wrong.

The issues were quite clear to the American people, and they still are. The people agreed that another stopgap wage increase wouldn't solve anything, and that the basic injustice would not be solved until the postal workers had a means to prevent being victimized all over again by neglect, by political expediency, and by down-gradings and delays of legislative priorities.

So the postal workers are on their way. They have broken through the barrier, and I don't believe it's going to take 35 years or even 35 months for the next breakthrough to be made.

All three of these major victories of the GE workers, the farm workers and the postal workers indicate that the American people believe in collective bargaining as the best and most effective means that man has devised for resolving disputes between employers and employees.

Collective bargaining, through give-and-take at the bargaining table, is meant to produce solutions, not victories and defeats. It has nothing in common with the sort of confrontations that develop from the submission of take-it-or-leave-it offers on the one hand, or non-negotiable demands on the other.

There shouldn't be anything that is not negotiable if we hope to steer a course between tyranny and chaos.

So I am convinced the American people would see it as right and proper for the prnnciple of collective bargaining to be extended to every federal worker and every public employee, at every other level of government throughout the land.

That is the great unfinished task of the Federation of Government Employees, the AFL–CIO, and the labor movement. It is a task we mean to complete. It is an aim that we mean to gain, for the sake of human progress.

Thank you.

SPECIAL REPORT ON CRIME

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 19, 1970

Mr. HOGAN. Mr. Speaker, WMAL radio and television consistently supported the passage of the District of Columbia omnibus crime bill throughout the long months of the Senate-House conference on the measure. I applaud their steadfastness in the face of constant pressures to relent on their support of the bill.

After enactment of the legislation, WMAL continued its battle against crime in Washington, by urging listeners to support the implementation of the new law. They have made several important points in a recent editorial which I would like to call to the attention of my colleagues in the event they did not hear the editorial broadcast. It follows:

WMAL EDITORIAL, JULY 30, 1970

Now that the District of Columbia anti-crime bill has become law, let us recognize that it is not a cure-all. The year-long debate over the bill is over. The hard work lies ahead. The major provisions of the law do not go into effect for 6 months. Now everyone has a job to do to make the law work properly. The President has the responsibility of naming outstanding judges for the new court system. Judges need to select an efficient manager to administer the court structure. Congress should show concern for other needs of District residents. Citizens ought to follow the advice of Mayor Walter Washington, who urged them not to prejudge the effects of the law—but to work toward its fair and impartial administration. The District of Columbia Police have the toughest job. The force under Chief Jerry Wilson deserves confidence that they can implement the new law wisely. They should make the law in practice as in theory—a model for the Nation.

Mr. Speaker, shortly after President Nixon signed the omnibus crime bill into law at the end of July, I sent a special newsletter on crime to all the residents of my congressional district. I include it at this point in the RECORD:

SPECIAL REPORT ON CRIME

(By Congressman LARRY HOGAN)

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August, 1970.

To residents of Prince George's and Charles Counties:

The highest item on my list of priorities since coming to Congress has been trying to curb the alarming increase in crime.

I am making this report to inform you of the action which has been taken on crime legislation I have sponsored. I am hopeful that this legislation will help to reduce the lawlessness which has plagued residents of Metropolitan Washington. Because statistics show that a high percentage of those arrested in Prince George's and Charles Counties have D.C. addresses, the recent enactment of the D.C. Crime Bill should help curb crime in the two counties I represent in Congress.

Sincerely,

LAWRENCE J. HOGAN,
Member of Congress.

CRIME PREVENTION

During his 1968 election campaign, Congressman Larry Hogan cited the alarming crime increase and promised to make the fight against crime his greatest concern in Congress.

As a member of the House District of Columbia Committee Congressman Hogan has been able to translate this campaign pledge into action. The subcommittees on which he serves were the two key subcommittees responsible for writing the District of Columbia omnibus crime bill. Minority Leader Gerald Ford has referred to Rep. Hogan as "the prime architect of the D.C. Crime bill."

Ranking Republican Ancher Nelsen said, "I don't know what we would have done without him."

Congressman Hogan has also served on three Senate-House Conference Committees. He was a Conferee on both the crime bill and the police, firemen and teachers salary legislation as well as the D.C. Revenue bill.

The omnibus crime bill contains many tough measures initiated by him which will help curb crime in the entire Metropolitan Area. D.C. crime has become suburban crime. Nearly 63% of persons arrested in Prince George's County are residents of the District of Columbia.

The omnibus crime bill responds to this area-wide problem and provides a total approach to the fight against crime.

APPREHENSION OF CRIMINALS

The current attitude toward law enforcement officers who daily risk their lives to protect others has made the apprehension of criminals a much more difficult task than it has been in the past.

Respect for law, and for the men in blue who enforce the law, is a key element in the fight to apprehend the perpetrators of criminal acts. It is the citizen's responsibility to cooperate with the police to make their job easier and more efficient.

If we want to attract the best possible men to this field, we must provide the monetary incentive. Police salaries must keep abreast of the times. The most recent salary increase for policemen was based in great part on legislation introduced by Congressman Hogan.

More funds must be channeled into education and training for law enforcement officers if the crime fight is truly to be a national priority. The Nixon Administration has taken notice of this factor by increasing by 33% over the 1970 appropriation the 1971 budget request for the Law Enforcement Assistance Administration. As a result, Federal assistance to State and local governments in the area of law enforcement will amount to over $1 billion this year.

Considering that only 11,504 arrests were made in 1969 while felonies in the District of Columbia totaled 51,419, it is readily apparent that the police must be given the tools to apprehend criminals. Of the 11,514 arrests only 2,583 were indicted and only 1,461 convicted. These are astounding statistics and indicate why the Nation's Capital needs a thorough reform and review of the arrest and conviction procedures. Crime legislation must provide these legal tools for the law enforcement officers in the Washington area.

COURT REFORM AND MODERNIZATION

Court reform is one area in which the fight against crime can be carried on immediately and where the results of effective change will be most evident.

Modern methods of management must replace the age-old traditions of court procedure which now bog down the judicial system and leave a backlog of hundreds of cases. Speedy trials and immediate sentencing will cut down drastically on the number of crimes committed by recidivists and hard-core criminals who now commit crimes while awaiting trial.

Redefinition of the roles of the public defender and the legal aid agencies and how they can be utilized to streamline the case backlog must also be accomplished. Congressman Hogan has introduced legislation to provide for this type of reorganization. In addition, he has approved a bill to establish a new District Court in Prince George's County to handle the large case load derived from the suburban areas. The case backlogs in the courts aggravate the crime problem.

The juvenile court system, in particular, deserves more attention and, in many areas, needs drastic overhauling. In recent years, juveniles have been committing a substantial number of serious and violent crimes. The attitude of the modern, sophisticated juvenile is that, if he commits a crime, nothing will happen to him because he is under 18 years of age. One solution to this problem is to remove from the juvenile court system 16- and 17-year-olds who commit serious and violent crimes such as murder, rape, robbery, burglary, and kidnaping. Treating these individuals as adult offenders would remove from the juvenile system the most hardened youths who frequently interfere with the potential rehabilitation of other less mature juveniles.

Outdated and incomplete methods for processing juvenile cases must be replaced

with modern and detailed procedures to provide expeditious and efficient handling of juvenile cases.

REHABILITATION

Incarceration and rehabilitation are probably the areas where society's response to criminal activity has been most lacking. Incarceration should be humane and the most modern techniques of rehabilitation should be employed. However, this is rarely the case.

As a member of the Select Investigating Subcommittee of the House District of Columbia Committee, Congressman Larry Hogan heard hours of testimony about penology.

Most prison systems throughout the country are archaic. This finding was corroborated in a meeting Congressman Hogan had with a group of rehabilitated ex-convicts who are seeking to improve the Nation's penal institutions.

Psychiatric care for inmates must be vastly increased for there is no segment of society which more desperately needs this care than the prison population.

In addition, more effort must be expended to teach inmates new work skills to equip them to lead productive lives in society after they have fulfilled their prescribed terms. The lack of adequate job training facilities in penal institutions is a major cause for the high rate of recidivism among ex-convicts. Not being prepared to function in society, the ex-convict soon resumes a life of crime to finance his needs.

Congressman Harry Hogan has introduced legislation to assist State and local governments with grants to construct new penal institutions and to modernize correctional institutions.

Of even greater urgency is the need for rehabilitation facilities in suburban areas, such as Prince George's Country and other metropolitan area jurisdictions, for teen-age drug addicts. This country is losing tremendous resources of talent because so many of its young people are becoming physically and mentally addicted to drugs. Rehabilitation in this field must be made available because so many drug abusers want to kick the habit but don't have any place to go to find help.

Congressman Hogan has introduced legislation which responds to the drug problem, not only from the legal, punitive point of view, but also from the rehabilitative aspect. He has introduced a bill dealing with the prevention, treatment and rehabilitation of drug abusers and two other bills which amend current narcotic and drug laws.

Congressman Larry Hogan recently said, "Criminal acts cannot be tolerated if our democratic society is to continue. Lawlessness must be prosecuted wherever it occurs so that respect for justice and rights will prevail.

"No segment of society should be given the impression that it can violate laws and the rights of others with impunity. This message must get through loud and clear to students—especially to that handful of troublemakers whose criminal acts disrupted the University of Maryland last Spring.

"Society's response to the crime problem should be fourfold: prevention, apprehension, adjudication, and rehabilitation."

OFFICE OF THE ATTORNEY GENERAL,
Washington, D.C., March 20, 1970.

Hon. LAWRENCE J. HOGAN,
U.S. House of Representatives,
Washington, D.C.

DEAR LARRY: I want to express my personal gratitude for your able and indefatigable work on the District crime bill. I am informed that your efforts on the floor yesterday were superb and contributed invaluably to the passage of the legislation.

Every person in the Washington area should recognize your leadership on the crime issue. Your cooperation with the Department of Justice and your tireless work on this vital legislation, are frankly acknowledged with my deepest appreciation.

Sincerely,

JOHN MITCHELL,
Attorney General.

THE WHITE HOUSE,
Washington, D.C., March 24, 1970.

Hon. LAWRENCE J. HOGAN,
House of Representatives,
Washington, D.C.

DEAR LARRY: You know how pleased I am by the House action which resulted in a wide margin of victory on the District of Columbia Omnibus Crime Bill, but I did want to tell you how much I appreciate your own role, while the bill was in Committee and also on the House floor. Without your fine work over the past months, this favorable action might not have been possible.

With warmest personal regards.

Sincerely,

RICHARD NIXON.

THE AMERICAN FLAG

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks I wish to include the contents of a pamphlet issued by the T. J. Oakley Rhinelander II Post No. 6, American Legion, located in my congressional district at 248 West 14th Street, New York City. The pamphlet has a picture of a waving American Flag and is entitled, "Hello, Remember Me?" It has received wide distribution in New York.

The contents follow:

HELLO, REMEMBER ME?

(By T. J. Oakley Rhinelander II)

Some people call me Old Glory, others call me the Star Spangled Banner, but whatever they call me, I am your Flag, the Flag of the United States of America. . . . Something has been bothering me, so I thought I might talk it over with you . . . because it is about you and me.

I remember some time ago people lined up on both sides of the street to watch the parade and naturally I was leading every parade, proudly waving in the breeze, when your daddy saw me coming, he immediately removed his hat and placed it against his left shoulder so that the hand was directly over his heart . . . remember?

And you, I remember you. Standing there straight as a soldier. You didn't have a hat, but you were giving the right salute. Remember little sister? Not to be outdone, she was saluting the same as you with her right hand over her heart . . . remember?

What happened? I'm still the same old flag. Oh, I have a few more Stars since you were a boy. A lot more blood has been shed since those parades of long ago.

But now I don't feel as proud as I used to. When I come down your street you just stand there with your hands in your pockets and I may get a small glance and then you look away. Then I see the children running around and shouting . . . they don't seem to know who I am . . . I saw one man take his hat off then look around, he didn't see anybody else with theirs off so he quickly put his back on.

Is it a sin to be patriotic anymore? Have you forgotten what I stand for and where I've been? . . . Anzio, Guadalcanal, Korea and now Vietnam. Take a look at the Memorial Honor Rolls sometimes, of those who never came back to keep this Republic free . . . One Nation Under God . . . when you salute me, you are actually saluting them.

Well, it won't be long until I'll be coming down your street again. So, when you see me, stand straight, place your right hand over your heart . . . and I'll salute you, by waving back . . . and I'll know that . . . You remembered!

THE VITAL IMPORTANCE OF SCHEDULED AIR SERVICE

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. PELLY. Mr. Speaker, the growth of the mass air travel market, within the United States and from this country to points abroad, is one of the most striking commercial developments of modern times. The Pacific Northwest, a part of which I represent, is a major producer of the commercial aircraft which have helped make possible the development of the mass air travel market. The market has also been made possible by the long-term lowering of air travel costs, through the promotional fares pioneered by the scheduled airlines and the more recent growth of the supplemental air carriers.

Congress has given each class of air carriers a distinct role. The scheduled air carriers must provide service at all seasons of the year, over heavily traveled routes as well as the less productive ones. The supplemental carriers, as their name implies, supplement this regularly scheduled service by providing charter service to a relatively few prime tourist spots.

A recent speech by James E. Landry, general counsel of the Air Transport Association, emphasizes the importance of preserving the essential difference in these two roles of commercial air service. Mr. Landry points out that the more productive routes of the scheduled airlines support less productive routes, thus enabling regularly scheduled air service to be provided to 525 cities in this country and 119 foreign countries. He concludes that diversion of scheduled traffic from a few prime routes threatens the economic strength of the entire scheduled system.

Scheduled service is the backbone of air transportation. In view of its importance to commerce, national defense, and the postal service, a weakening of the economic underpinnings of the service would not be in the national interest. Consequently, I think the points raised by Mr. Landry should be carefully considered and I include them at this point in the RECORD:

THE VITAL IMPORTANCE OF SCHEDULED AIR SERVICE

(By James E. Landry)

The current discussion of U.S. international aviation policy has about it a great air of irony. It is an irony of success.

We have long since proved out the technology of international air commerce. The public has made its demand for this service abundantly clear—to the point where it is the fastest growing phase of air commerce. International passenger air traffic has more than tripled in the past decade and international freight has increased more than fivefold.

Yet, there are some whose gloomy predictions make them sound rather like the Italian Jesuit of 300 years ago. Francesco de Lana, who said: "God would never allow such a machine to fly since it would cause much disturbance among the civil and political governments of mankind."

Most of today's ferment surrounding international air commerce arises because of the growth and the value of this commerce and the desire of governments and of various classes of carriers to secure themselves the greatest possible share of this commerce.

Understandably, more and more people wish to fly abroad and at the lowest possible rate.

Everybody loves a bargain. Nowhere is this better illustrated than by the new generation of economy-minded international air travelers taking advantage of the lower fares pioneered by the scheduled airlines in developing the mass travel market and, more recently, flying in groups aboard supplemental carriers over a few of the world's most heavily traveled tourist routes.

This phenomenon has led to a great deal of confusion in some quarters about the separate and distinct roles of scheduled and chartered services.

THE LAW REMAINS UNCHANGED

The confusion persists even in the face of the recent Presidential statement on international air policy which spells out the separate roles with unmistakable clarity. It say: "Scheduled services are of vital importance to air transportation and offer services to the public which are not provided by charter services. Only scheduled services are expected to offer regular and dependably frequent schedules, provide extensive flexibility in length of stay, and maintain worldwide routes, including routes to areas of low traffic volume. Substantial impairment of scheduled services could result in travelers and shippers losing the ability to obtain these benefits. Accordingly, in any instance where a substantial impairment of scheduled services appears likely, it would be appropriate, where necessary to avoid prejudice to the public interest, to take steps to prevent such impairment."

The Presidential statement on U.S. inter-

national air policy did not change the law. It could not and did not purport to do that. In the world of air commerce the role of the scheduled carirers is still preeminent. It must be, in the national interest. The role of the supplementals is still to supplement the regular service provided by the scheduled airlines, not to undermine it.

In view of such a clear statement, it is laughable that a president of a supplemental carrier should have said, and I quote: "For the first time it is now the stated position of the Federal Government that the role of the charter airlines is on a parity with that of the scheduled air carriers."

To the contrary, the role of the supplementals is still wisely confined to the performance of three types of charter service.

First, there are the single-entity charters, in which one entity charters an entire aircraft. An example would be the case of an insurance company chartering a plane to take its prize-winning salesmen and their wives on a holiday.

Next, there are the affinity group charters. Legally, these are not to be groups assembled on the spur of the moment for the purpose of flying off someplace. Rather, these have been defined as groups whose members share some continuing interest and activity other than the desire to take an air trip.

And lastly, there are the inclusive tour charters, in which a tour operator charters an aircraft and then sells tours to individuals who are not members of a group. The cost per person for such a tour package, however must include charges for ground transportation, hotels or other elements in addition to the cost of air transportation.

Those are the three legitimate areas of operation for the supplemental airlines. Nothing more, nothing less. Their role is, as the policy statement explicitly recognized, quite different from that of the scheduled carriers. It is a secondary role, a *supplemental* role. Implicit in the very naming of this class of carriers is a recognition that there is a primary, indispensible backbone of the air transport system. That, of course, is the scheduled service. The policy statement did not change that.

VITAL IMPORTANCE OF SCHEDULED SERVICE REASSERTED

The statement flatly declares that scheduled services are of *vital* importance to air transportation and offer services to the public which are not provided by charter services. It goes on then to explain the benefits that only scheduled services can provide. And, the statement realistically concludes that travelers and shippers could lose the benefits if scheduled services were undermined in any way.

As a further recognition of the separate roles of point-to-point scheduled services and the generalized, area-type charter service in our air transport system, the policy statement declares that intergovernmental agreements covering charter services should be kept separate and distinct from the agreements covering scheduled services and even more important, that there should be no trade-off as between scheduled service rights and charter service rights.

In a negotiating process that is horse-trading in the truest sense, that was the only way to insure that our scheduled airlines would not become the disadvantaged participants in the all-out competition for the world's air transport market.

When I referred to the text of the policy statement, I stressed the inclusion of the word "vital". I did that purposely because only the scheduled services are so described.

By contrast, charter services are described as having been useful, and as being a most valuable component of the international air transport system. No amount of rhetoric can change the fact that the preservation of an economically viable, extensive system of scheduled air service has always been, and continues to be, in the paramount national interest.

No one here, I am sure, would challenge the fact that it is the scheduled air transport system which meets the basic air transportation needs of the general public—by operating frequent, regular schedules, serving small points as well as large, in season and out of season, while offering a wide variety of group and individual fares including excursion fares, off-peak fares, family fares, group inclusive tour fares and bulk inclusive tour fares, and so forth.

As the supplementals' spokesmen have themselves conceded, we alone have a legal obligation to provide continuing service. They alone live in a permissive world in which they can operate when and where they deem demand sufficient on a flight-by-flight basis. Low fares are indeed easy to attain for the charter operator with permissive authority who can operate over high-density routes, in established markets, on long-hauls with controllable load factors far in excess of break-even requirements, and with no responsibility to provide regular and adequate service over thin national interest routes of lower density and shorter haul.

I do not mean to leave the impression that there is something improper about the way the supplementals conduct their business—tapping rich, established markets at times of peak demand. In a permissive world, without public service responsibilities, this is merely prudent business. It's about as simple a decision as the one Willie Sutton described in his hey-day. When asked why he robbed banks, Willie looked a little bit incredulous and responded "Because that's where the money is." The money . . . the *profit* is in the thick, developed markets.

THE CONSUMER'S STAKE IN SCHEDULED AIR SERVICE

The spokesmen for the supplementals have drummed incessantly and loudly on the theme that this is the age of the consumer. Their shibboleth is that the consumer will be heard. The scheduled airlines hope and pray that the consumer will be heard. He is our customer, as well.

But we urge the consumer to look behind the superficial blandishments tossed his way by our friends, the supplementals. The favorite argument of the supplementals that lifting of restrictions on responsibility-free operations is a magic wand leading to cheaper and cheaper air transportation overlooks a very important point for the consumer. What the supplementals are not telling the consumer is that a headlong rush to responsibility-free operations will lead inevitably to the product of air transportation simply not being available in many, many cases.

Let me try to explain that, because it is one of the least understood threats inherent in the supplementals' continuing drive for expanded authority. As I indicated, scheduled carriers have a requirement to serve adequately their non-profitable routes as well their profitable markets. In effect, the profitable routes of scheduled carriers subsidize many unprofitable routes. Therefore, when traffic is diverted from a profitable route the impact on that carrier's over-all profitability is much greater than the relative traffic which was diverted.

The degree of impact which traffic diversion from a highly productive route will have upon a scheduled carrier's systemwide profit picture depends upon the carrier's route structure. Although the impact would be most severe in cases where relatively few major markets accounted for most of a scheduled carrier's system operating profit—and there are such cases—all of the scheduled carriers are economically vulnerable when other carriers, such as the supplementals, cream-skim the scheduled carriers' most profitable routes.

I might add that while I have been stressing profitable and unprofitable routes, we should equally recognize that there are within a given route operation profitable and unprofitable seasons, profitable and unprofitable days, even profitable and unprofitable hours. And, if you allow wholesale raids on those thick routes or peak time periods, the scheduled carrier will ultimately be forced to seek authority to suspend or even abandon all but the cream of its own operations.

Think, for a moment, about the role of a good city bus service. We can naturally expect that it will be operating at maximum capacity during the rush hours. But we also expect that there will be a bus coming along to meet our needs when we work late at the office, or when the housewife decides to go in-town at mid-morning to do some shopping, without incurring all the headaches of a search for parking space for a private vehicle. The fact that the bus service is available both at the peak and off-peak hours is reflective of the genius of our transportation policy, which promotes, develops and *relies* upon a comprehensive system of scheduled service. But if you allow other operators to come in and take away a significant number of the rush-hour passengers, the off-hour service has to be dropped and you eliminate the genius of the policy, vastly inconvenience the public and ultimately destroy the system.

The scheduled air service right here in Milwaukee offers some good cases in point. Milwaukee-New York is a sufficiently thick run to permit one of the carriers to feed into it with a Madison-Milwaukee operation, and to feed into that with a Minneapolis-Madison operation. But that Minneapolis-Madison-Milwaukee-New York service could not be operated without the strength provided by the Milwaukee-New York segment. Take the strength away from that segment, and the Madison-Milwaukee and Minneapolis-Madison services begin to fade away. In fact, even on the thick Milwaukee-New York run, you have such traffic variations that the Friday/Saturday/Sunday operations support the services on Tuesday and Wednesday.

SUPPLEMENTALS NOT MEANT TO ERODE SCHEDULED SYSTEM

The great scheduled air transport system which we have developed in this country now links some 525 domestic points with 119 countries, covering most major cities—and many not so major points abroad whose commercial and developmental needs must be served by air, nevertheless. The service is performed year-round, in both the peaks and valleys of demand. Highly productive routes, as well as some that might be called "losers" are included in the system. Every citizen, every consumer has a great stake in the preservation of that system, designed as it is to meet the present and future needs of the foreign and domestic commerce of the United States, of the postal service and of the national defense.

When Congress recognized the new class of supplemental air carriers in 1962, it authorized them to provide a useful service as a "supplement" to the regular service provided by the scheduled airlines; at the same time placing certain restrictions on their operations so as not to permit them to erode the scheduled system. Consequently, Congress placed certain restrictions on the supplementals prohibiting the selling of air transportation to individually ticketed passengers and prohibiting the solicitation of the general public.

Of late, the supplementals have been raising a great hue and cry about those restrictions. They would have us believe that regulations framed by the CAB are too onerous to permit their healthy growth, or too restrictive to meet the charter demands of the traveling public. As to the question of

their growth, I would point to the 40% increase, from 1968 to 1969, in the total ton miles of civilian passenger traffic produced by the 14 certificated U.S. supplementals. Also, the U.S. supplementals accounted for 24.2 percent of all U.S. flag passenger traffic over the North Atlantic last year, a doubling of their share of the market in two years. These same supplementals accounted for 47 percent of all passenger charter activity over the North Atlantic last year, compared to 36 percent by foreign flag carriers and 17 percent by U.S. scheduled airlines.

But, most of all, I invite your attention to the fact that of all of the passenger traffic flown by U.S. flag carriers over the North Atlantic during last summer's peak tourist season, the U.S. supplementals scored the following penetration in key markets:

	Percent
New York—Rome	39.7
California—Europe	63.7
New York—Amsterdam	67.4
New York—Frankfurt	68.2

It should be remembered that with every percentage point rise in the diversion of scheduled service traffic in the thick markets, the possibility that a city such as Milwaukee can be developed into a substantial hub of international scheduled service operations becomes slimmer and slimmer.

As for the other point being argued by the supplementals, that the regulations are too restrictive, we need only note that a recent analysis revealed some 600 million memberships in charter-worthy organizations in this country at the present time. This averages out to three charter-eligible memberships per citizen. We are a nation of joiners . . . just pause to think for a moment of how many organizations you, or your wife or your children belong to right now. Most of them are charter eligible.

And pay no heed to the charge that the CAB is now planning a drastic curtailment by limiting the size of eligible organizations to 20,000 members. This limitation is high enough to take in virtually every organization you can think of, particularly if you consider it in terms of local chapters. And all that the CAB is proposing is a rebuttable presumption that eligibility for organizations of greater size would effectively entail the solicitation of the general public which Congress specifically precluded. If a bona fide organization of greater size seeks a designation as charter-worthy, it need only expose itself to CAB scrutiny and review—authorization by waiver is specifically contemplated.

CHARTER MARKET AMPLE FOR ALL CARRIERS

The supplementals are underestimating the potential of their legitimate market. It is an ample market, both under existing and proposed CAB regulations. The policy statement describes the need for charter services and repeatedly stresses that both scheduled and supplemental carriers are to engage in this activity, each with a fair opportunity to compete for that market.

Those who would embark on an increased cream-skimming from the scheduled system should consider two very important facts. The first is the current economic state of the scheduled airline industry. To put it succinctly, in 1969, 26 out of the 39 scheduled carriers lost money.

The second fact is that the scheduled airlines have written a history of promotional fares that began to lower the price of the average airline ticket long before the supplementals were born. By way of example, based on average yield per passenger mile, airline fares over the North Atlantic began declining nearly twenty years ago and are now 41 percent lower than they were back in 1951. In the last 10 years alone, our fares and rates in this market have resulted in a 32 percent drop in cost per mile to the passenger, a 39 percent drop in cost per ton mile to the shipper, and a 61 percent drop in cost per mail sack to the Post Office.

The present distinctions between scheduled and charter service have been established after the most careful deliberations by both the legislative and executive branches of government. Rather than making ill-conceived efforts to blur these distinct roles, both the supplementals and the scheduled carriers have more to gain by living within present well-defined boundaries.

The market is ample for all classes of carriers.

Most of our international market is fed by the U.S. traveler. It is in the interest of both the U.S. supplemental carriers and the U.S. scheduled carriers that they act to maintain and expand the share of the international air transport market served by U.S. flag carriers as a whole.

And rather than concentrating so much of our efforts on a few peak travel months, all classes of air carriers might be better served by working to create a heavier demand the year-round.

A principal roadblock to a heavy personal air travel market the year-round is the built-in system of summertime vacations from the classroom and from the job.

If schools operated year-round, with some groups taking vacations in Spring, others in Fall, others in Winter and others in Summer, the office vacation pattern could fall quickly into line.

The entire tourism industry, indeed the entire economy would benefit—not merely the vacationing public.

I leave this thought with you as an example of the type of positive approaches we should be exploring, rather than the all too-frequent, short-sighted internecine warfare approaches that can, in the long run, only weaken or destroy.

PROFESSORS DISAPPOINTED BY AGNEW'S VIEWS

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FRASER. Mr. Speaker, as a followup on a meeting on June 4 between the Vice President and a group of regents' professors of the University of Minnesota, I believe the House will be interested in the enclosed letter which these professors have addressed to the Vice President:

DEAR MR. VICE PRESIDENT: It was with disappointment that we read your letter to the columnist, Victor Riesel, published on Aug. 2, 1970, regarding the supposed justification for a more charitable appraisal of the "hard-hat" demonstration which culminated in serious violence than you would give to student demonstrations which led to comparable violence.

When we spoke with you on June 4 we were encouraged to believe that you would give more credence to the reality of the moral integrity of the student antiwar protesters and be more even-handed in your condemnation of violence on the part of either the right or the left or the police establishment. We cannot agree with you that it is less reprehensible for hard-hats to employ violence, because they are acting out their convictions regarding "patriotism," than it is for war-dissenters to employ violence because they are following their moral convictions as to their ethical responsibilities to their countrymen and to humanity at large. Your attempted justification of hard-hat "protective anger" as opposed to the "destructive anger" which you ascribe to youthful violent protesters does not meet the essential issue. Violence arising from either emotion is equally incompatible with an orderly society.

We were also chagrined that you would endorse the archaic sentiments of Stephen Decatur: "Our country—in her intercourse with foreign nations—may she always be in the right; but our country, right or wrong." We consider that statement, if taken literally, to be not only chauvinistic but immoral. We consider it to be the duty of a true patriot in a democracy to do his best to persuade his country in non-violent ways to change course if it is wrong. We ardently hope that you did not really mean to endorse the opposite view. We subscribe to quite another sentiment: "Our country, may it always be right! When it's right, keep it right. When it's wrong, make it right."

As we said to you on June 4, what the Vice President of the United States of America says is too important to the country and to the world to be written or spoken with casual consideration of its consequences at home and abroad. We consider any approval of sentiments like those of Stephen Decatur to be both reprehensible and alarming. Alarming both to sincere patriots at home and to persons and nations abroad who look to the United States of America for leadership and guidance in the building of a moral society of nations. To exonerate, even partially, violence by hard-hats and to praise support of wrong national policy in the name of patriotism is not the way to enhance national stature.

REGENTS' PROFESSORS

Neal Amundson, chemical engineering; John Berryman, humanities; Ralph E. Comstock, genetics and cell biology; Ernst R. G. Eckert, mechanical engineering; Herbert Feigl, philosophy; Robert A. Good, pediatrics.

Paul Meehl, psychology, adjunct professor of law; Walter W. Heller, economics; Leon Hurwicz, economics; Alfred O. C. Nier, physics; James Serrin, mathematics; Wesley W. Spink, medicine; Maurice B. Visscher, physiology.

PAYS TRIBUTE TO NATION'S FIREMEN

HON. ALLARD K. LOWENSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. LOWENSTEIN. Mr. Speaker, I would like to take a few moments today to pay tribute to the Nation's firemen, particularly to the 250,000 volunteer firemen. These men do such a magnificent job, and they do it at a far greater cost to themselves than the public often realizes. Although we can never pay the debt we owe them, it is time we pay tribute to all they have done for us.

Some 12,000 persons die in fires in a typical year, and $2.5 billion worth of property is destroyed, almost double the loss attributable to crime. Yet while we quite properly often hear of the problem of crime, we fail to adequately consider the devastation of fire.

We are especially grateful to firemen because they protect those who are least able to protect themselves—our senior citizens and our children. Of all our people, the poor, the halt, the lame, the blind, and the young most need the concerned watchfulness of our fire departments because they have such a high risk of injury from fire.

In spite of all that firefighters have

done to protect us, it has only been in recent years that the Federal Government has taken even minimal steps to aid local firemen's units.

The Fire Research and Safety Act of 1968 has provided funds for needed research into the causes and the most recent techniques for the prevention of fires. This act has provided a comprehensive fire data bank, upon which all fire departments can draw for their information and improvement; has set up fire safety education and training programs for the public; and has funded the training of volunteer firefighters.

I have joined in sponsoring several measures in the House and will continue to press for their quick enactment into law. One would provide Federal pensions to the widow and family of a fireman or policeman killed on duty. Another would make programs for the training of volunteer firemen eligible for financial assistance under the Vocational Education Act. A third proposal would allow firemen to deduct for income tax purposes nonreimbursable expenses, such as those for uniforms, automobile accessories, gasoline, and other necessary items incurred by a volunteer fireman. Another proposal would exempt volunteer firemen's organizations from all liability for Federal income taxes, and exempt them from the filing of all reports pertaining to their income from donations and membership dues.

If my proposals become law, there still remains a great deal to be done to help protect these patriots who have willingly taken on the burden of protecting our lives and our belongings. Few men are so entitled to be called by the noble word of "patriot" as these firefighters who risk their lives to guard the community and their fellow men against the terrible threat of uncontrolled fire.

I would particularly like to call attention to the pride felt by many thousands of citizens in the work of the Massapequa Volunteer Fire Department, this year celebrating its 60th anniversary. It started simply and modestly enough in 1910 with a handful of men who manned a horse-drawn carriage apparatus, and has now grown to 200 volunteers in seven companies who can boast of having the most modern equipment in the world: seven pumper trucks, two ladder trucks, four rescue and emergency vehicles, one fire police truck, and several auxiliary vehicles.

Few communities have drawn so heavily on the valor of its volunteer firefighters, and few have had as many occasions to be grateful for their selfless and courageous response. There have been so many instances of sacrifice that they have almost become commonplace for this group of volunteers.

All of us familiar with the history of Massapequa remember these men fighting the brush fires on Palm Sunday in 1945 from 8 in the morning until 10 at night without a moment's rest, and battling the blazes on the Carroon Estate in 1952 in near-zero temperature at 4 in the morning. These and many less dramatic instances of devotion beyond the call of duty mark the tradition of this group of men.

I want to call to the special attention of my colleagues here and public spirited citizens all across the country the remarkable career of Christian Diehl, a charter member of the department in 1910 and an active member today, who personally contributed to the force's unique achievements over the past 60 years and is a living example to all members of the unit's rich history. He helped to build the fire department from the days when Mrs. Avignone, who owned the barn in which the first fire truck was housed, would run from her house and strike a large steel nail with a sledge hammer to alert the men to a report of a fire.

We in Nassau County are especially proud of Christian Diehl of the Massapequa Fire Department for through his 60 years service to the department, he is a symbol of national spirit, a spirit that is in the great tradition of America. I remember seeing an article just a few years ago where five volunteers from New Jersey were killed when a wall collapsed. This national spirit became clearly visible when, after the story was published, the number of volunteer firemen did not diminish—it increased. And, of course, one thinks of the five volunteer firemen in Corry, Pa., where, just a few months ago, an explosion at a paint firm, during what had appeared to be a routine fire, toppled a three-story brick wall over on them.

The names of such men deserve a special place on the honor roll of all the men who have died in the service of their country. It is sad that it took this terrible tragedy to prompt the House, and Senate to take the long-overdue action of setting aside the week between September 19 and 26 as National Volunteer Firemen's Week. One can, of course, think of no more fitting gesture that the American people might make toward their volunteer firefighters.

I hope that this year during National Volunteer Firemen's Week we will not only participate in ceremonies to honor these men but that we will also pay the greatest single tribute to them: pledge to take all preventive steps we can to guard against fires and to protect the Nation's volunteer firefighters. For these men who are prepared to risk their lives for others, we should not stint on doing whatever we can to minimize the risks they must face each time the scourge of fire threatens the community.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

PRAISE FOR OEO LEGAL SERVICES PROGRAM

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. MIKVA. Mr. Speaker, at the annual meeting of the American Bar Association currently underway, a joint anniversary is being celebrated: the 50th anniversary of the National Legal Aid and Defender Association and the fifth anniversary of the legal services program of the Office of Economic Opportunity. Chief Justice Warren Burger, in his "State of the Judiciary" message at this meeting, praised the legal services program.

Both of these tributes indicate that the legal profession is justifiably proud of the accomplishments of what the New York Times calls "the Nation's biggest legal bargain." The program was begun on the assumption that the poor were being denied their legal rights and access to the courts, and that unless this was charged the poor would lose their faith in the Nation's judicial system.

Today there are 2,000 lawyers working in 850 offices to furnish legal aid and assistance to the poor. The Washington Post refers to the legal services program as "the Nation's largest and most powerful law firm," and it appears so. Nearly 1 million clients have been served and the program has won a number of important judicial decisions protecting the rights of the poor.

There are two very excellent editorials which appeared in the New York Times and the Washington Post this week which I would like to place in the RECORD. And I would like to echo the Post by saying that "the practice of poverty law has proved to be anything but poor law."

The article follows:

POVERTY LAW HAS NOT BEEN POOR LAW

In his "State of the Judiciary" address—on which we shall be commenting at length tomorrow—Chief Justice Warren Burger paid tribute to the performance of the Legal Services Program of the Office of Economic Opportunity. Among the many antipoverty efforts begun in the mid-Sixties, this has been one of the more quiet and more effective. It began on the assumption that many of the poor are not only denied their rights by law, but that few lawyers are available to protect those rights which do exist. "As late as five years ago," writes Bernard Segal, president of the American Bar Association, in the current ABA Journal, "less than 2 per cent of the legal needs of the poor of the country—more than 20 million of our people—were being filled." Five years ago this week, in a move that it was proud of then and is prouder of now, the American Bar Association embraced and endorsed the Legal Services Program.

Today, approximately 850 LSP offices operate in 49 states, staffed by 2200 lawyers and funded by the Office of Economic Opportunity for $53 million. In a real way, it is the nation's largest and most powerful law firm. The major accomplishments of the program can be listed under a variety of headings. First, there has been the day-to-day service—consumer cases, divorces, garnishments, repossessions. Many of the LSP clients have problems that do not require court action; often, only advice is needed, or

a phone call to the proper authority. Second, test cases brought by LSP lawyers have resulted in the expansion of such previously narrow areas as landlords-tenant law, welfare law, public interest law, the administration of food programs. Third, the program has developed new kinds of legal forums for the resolution of disputes outside the courts—to lighten the strain on an already overburdened court system.

The program has not been without failures, nor has it lacked critics. Regarding the latter, however, it has had the right kind of critics—like Sen. George Murphy and Gov. Ronald Reagan of California. They have repeatedly tried to undermine legal services lawyers, but their bumbling efforts have usually led nowhere. Elsewhere, the governor of Missouri recently vetoed two LSP projects in his state; but his veto was overridden by OEO director Donald Rumsfeld, who stood by the poverty lawyers in the field.

One reason the Legal Services Program has the backing of both liberals and conservatives in the organized bar is the awareness that law is above partisan ideologies. Contrary to the rantings of some current "revolutionaries," the system can be changed, the overthrow of injustice can be orderly and the law can be converted from an enemy to an ally.

The same law theoretically applies to everyone, and there is no reason that an impoverished inner city client should not receive the same first class service and intelligence that is available to others. Increasingly, such service and intelligence are being provided: in thousands of cases, the practice of poverty law has proved to be anything but poor law.

ATTORNEYS FOR THE POOR

In what was once regarded as a citadel of rigidity, there are new stirrings on behalf of the legally deprived in the United States. At the annual meeting of the American Bar Association in St. Louis, the fifth anniversary of the Office of Economic Opportunity's legal services program as well as the fiftieth anniversary of the National Legal Aid and Defender Association are being celebrated today. The fact that the A.B.A. is choosing to honor these lawyers and programs for the poor is a symbol of their acceptance in the courts.

Nearly 2,000 attorneys now work in 850 neighborhood law offices in hundreds of communities. They are representing people as clients, not simply as charity cases; in the process these dedicated young lawyers are making legal history in many fields affecting the most disadvantaged of Americans. So well have these O.E.O. attorneys performed that, paradoxically, the big city law firms have had a hard time competing for the talents of top graduates who often choose to enter the less remunerative field of antipoverty law and legal-defender representation.

In the course of serving nearly a million clients, the O.E.O. attorneys have won important judicial decisions protecting and broadening the rights of tenants, consumers, food-stamp users, migrant workers and families on welfare.

The O.E.O. legal services program was funded for $54 million this year; $61 million is proposed for fiscal 1971. At least this amount is necessary to expand the services of the nation's biggest legal bargain—the talents of its finest young attorneys working for the poor.

SENATE—*Thursday, August 20, 1970*

The Senate met at 9:30 a.m. and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Most Reverend Edward J. Herrmann, vicar general, Archdiocese of Washington, Washington, D.C., offered the following prayer:

O Lord, provident master of all things, You who have said through the mouth of the psalmist "Unless the Lord build the house, they labor in vain who build it"—Psalm 127: 1—we come to Thee at the opening of another session of this Senate to seek Thy divine assistance. In these halls some of the most important decisions which affect this Nation are made. The social and economic well being of other nations is also under their careful and fraternal interest. Grant that each and every action which finds its origin in this Chamber may be a reflection of Your divine love and in some way a participation of Your good providence.

May their efforts here establish a political, social, and economic order which will serve all men and individuals, and assist here and abroad to affirm and develop the dignity proper to them.

May all their actions be in harmony with Your divine knowledge so that as this Nation prospers and the individual citizen participates in the affairs of government through them, peace, justice, sincerity, and true charity may prevail and that all will redound to Your honor and glory and for the good of mankind. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore of the Senate (Mr. RUSSELL).

The legislative clerk read the following letter:

U. S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 20, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS

Messages in writing from the President of the United States were communicated to the Senate by Mr. Leonard, one of his secretaries, and he announced that on August 18, 1970, the President had approved and signed the following acts:

S. 1703. An act for the relief of Rosa Pintabona;

S. 1704. An act for the relief of Lillian Biazzo;

S. 2427. An act for the relief of Cal C. Davis and Lyndon A. Dean;

S. 2484. An act to amend the Agricultural Marketing Agreement Act of 1937 to authorize marketing agreements providing for the advertising of papayas,

S. 2863. An act for the relief of Mrs. Cumorah Kennington Romney; and

S. 3136. An act to confer U.S. citizenship posthumously upon Guy Andre Blanchette.

EXECUTIVE MESSAGE REFERRED

As in executive session, the Acting President pro tempore (Mr. ALLEN) laid before the Senate a message from the President of the United States submitting the nomination of Edward E. David, Jr., of New Jersey, to be Director of the Office of Science and Technology, which was referred to the Committee on Labor and Public Welfare.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Wednesday, August 19, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate turn to the consideration of Calendar Nos. 1138, 1139, and 1141.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

U.S. DISTRICT COURT FOR THE WESTERN DIVISION, SOUTHERN DISTRICT OF MISSISSIPPI, AT NATCHEZ

The bill (S. 3225) to provide that the U.S. District Court for the Western Division of the Southern District of Mississippi shall be held at Natchez was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 3225

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the last sentence of section 104(b)(3) of title 28, United States Code, is amended to read as follows: "Court for the western division

shall be held at Natchez and Vicksburg: *Provided*, That court shall be held at Natchez if suitable quarters and accommodations are furnished at no cost to the United States."

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1126), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

STATEMENT

The purpose of S. 3225 is to enable the District Court for the Western Division of the Southern District of Mississippi to hold court at Natchez, Miss., provided that the holding of court at Natchez be at no cost to the United States. Natchez is an industrial center with a very active bar generating a substantial amount of Federal litigation. Moreover, local facilities are available at which court could be held without expense to the Federal Government.

Your committee believes that the District Court for the Southern District of Mississippi should be authorized to sit in Natchez when it determines that the litigation generated from that geographical area so warrants.

The Judicial Conference of the United States at its meeting on March 16–17, 1970, considered the provisions contained in S. 3225, and voted approval thereof with the proviso that the holding of court at Natchez be at no cost to the United States.

Attached hereto and made a part of this report is a letter to the chairman from the Acting Director of the Administrative Office of the United States Courts.

CHOCTAW INDIAN TRIBE

The bill (H.R. 15866) to repeal the act of August 25, 1959, with respect to the final disposition of the affairs of the Choctaw Tribe was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1127), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of H.R. 15866 is to repeal a 1959 statute which directed the Secretary of the Interior to complete the action authorized by a 1906 statute entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and for other purposes." The committee also considered a companion bill, S. 3445, introduced by Senators Harris and Bellmon of Oklahoma.

NEED

The 1959 statute directed the Secretary to complete this action by disposing of the few remaining tribal assets; and by conveying to a tribal corporation organized under State law any tribal assets which the tribe wants to retain. A per capita distribution of any tribal funds was already authorized by the 1906 act.

The 1959 statute did not affect the trust status of lands allotted to individual members of the tribe, but it did provide for a termination of all special relationships between the United States and the tribe as a governmental entity.

Numerous problems arose in carrying out the provisions of the 1959 statute, which directed that the statute should be fully executed within 3 years or as soon thereafter as practicable. This time requirement was extended by Congress three times to the present date of August 25, 1970.

The problems encountered revolved principally around clearing land titles and finding able and willing buyers for the tribal lands. In addition, some Federal programs initiated during recent years require continued Federal recognition of the tribal entity in order for the tribe to participate. Finally, there has been a change of sentiment within the tribe and within the Department of the Interior regarding the wisdom of terminating all special relationships between the Federal Government and the tribe.

Enactment of the bill is justified, the committee believes, on the grounds that (1) it has been difficult to clear title to tribal lands and dispose of them, (2) there is no need to proceed with the process rapidly, (3) dissolution of the tribal government at this time is not necessary for the accomplishment of any current Federal policy, (4) retention of the tribal government is desired by the Indians and will facilitate participation in some Federal programs, (5) if the 1959 statute were not repealed it would need to be amended in some particulars, (6) repeal of the 1959 statute will contribute to the economic betterment of the tribe and its members, and (7) under the language of the bill any possible rights vested under the 1959 statute would not be impaired.

The committee does not regard the enactment of this bill, before the termination of the Choctaw tribal government is an accomplished fact, as any precedent for reestablishing a tribal government that has already been terminated.

COST

Enactment of H.R. 15866 will require no Federal appropriation.

NATIONAL MACHINE TOOL WEEK

The joint resolution (H.J. Res. 1194) to authorize the President to designate the period beginning September 20, 1970, and ending September 26, 1970, as "National Machine Tool Week," was considered, ordered to a third reading, read the third time, and passed.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. In accordance with the previous order, the Senator from New Hampshire (Mr. MCINTYRE) is recognized for not to exceed 20 minutes.

WILL ELK HILLS BECOME AS INFAMOUS AS TEAPOT DOME?

Mr. MCINTYRE. Mr. President, on June 11 of this year, the Department of the Interior sent a message to the Congress proposing that oil be pumped from the Elk Hills Naval Petroleum Reserve in order to compensate some, though not all, of the oil companies holding drilling leases in the Santa Barbara Channel.

It is not my intent here today to question the merit of that part of the Interior Department's proposal dealing with the compensation of the larger companies polluting the Santa Barbara Channel.

I do intend to question, however, the recommendation that the Elk Hill Reserve be invaded for a purpose not related to the national security, the methods by which this recommendation has been handled, and the implications of this proposal in light of the announcement earlier this week that the administration will not seek a structural change in the present oil import quota system.

ELK HILLS AND NATIONAL SECURITY

The Elk Hills Naval Petroleum Reserve consists of the second largest proved oil field in the United States, one of the 20 largest oil fields in the world, and a field which has been maintained as a national security petroleum reserve for half a century. Let me make this clear: Although Elk Hills is administered by the Navy, it serves as a total national defense reserve for the needs of all of the armed services and related industry. It is thus vitally essential to our overall strategic needs for petroleum sufficiency.

Let me point out just one of those strategic needs. At present, the U.S. Pacific Fleet receives the majority of its fuel from the Middle East. If, for any reason at all, those supplies were to be cut off, the fleet would look to the U.S. west coast for the fuel to keep ships in operation. The west coast is a crude oil deficient area. It does not produce enough crude oil to meet its own needs, let alone to meet the needs of the fleet. Elk Hills provides the only source of crude oil on the west coast immediately available to the Navy.

It was thus with some surprise that I recently learned of the Interior proposal to turn a portion of Elk Hills over to a small group of major oil companies. The strategic importance and requirement for the preservation of as much of Elk Hills as possible for national security needs are clear, so clear that I am absolutely amazed that this proposal is getting serious consideration.

But, Mr. President, perhaps I should not have been so surprised. Side by side with decades of national reliance upon the naval petroleum reserves, there has been a history of attempts by private companies to rape those reserves for their own gain. The most famous of such attempts was the attempt to raid Naval Petroleum Reserve No. 3, located at Teapot Dome, Wyo.

In 1921, President Harding, with the approval of Secretary of the Navy Denby, transferred the administration of the naval reserves at Teapot Dome and Elk Hills to Secretary of the Interior Albert B. Fall.

In 1922, the Department of the Interior leased the reserves at Teapot Dome to Harry F. Sinclair and the reserves at Elk Tills to Edward L. Doheny.

As a result of a Senate investigation under the chairmanship of Senator Thomas J. Walsh, of Montana, an extensive network of corruption was revealed at the foundation of these transfers. Doheny, for example, had made an unsecured interest-free loan of $100,000 to the Secretary of the Interior. The Secretary of the Interior had also received a $25,000 gift from Sinclair.

Secretary of the Interior Fall was ultimately convicted of bribery and sentenced to prison.

Today, I am happy to say, outright gifts from oil operators to high Government officials are no longer the normal way of doing business with the Federal

Government, though, of course, the penetrating articles by the Washington Post's Bernard Nossiter have revealed some disturbing latter day instances of these practices. Nevertheless, they have generally been replaced by the equally corrupting, though apparently somewhat more legal use of massive campaign contributions to the party in control of the White House.

But the aims remain the same—to gain access to these vast public reserves for private gain.

PROCEDURAL PROBLEMS OF THE INTERIOR PROPOSAL

After the sorry revelations of the Teapot Dome scandal had burst into public light, a number of steps were taken to protect the integrity of the naval reserves to avoid any further repetition.

One basic procedural requirement was to have a salutary effect, as long as it was observed. Under this procedure, found in 10 U.S.C. 7431, the Secretary of the Navy is required to consult with the Armed Services Committees of both the Senate and the House before agreeing to give up a single drop of oil for any purpose other than the national defense.

The Secretary of the Navy has not consulted with the Senate Armed Services Committee about this proposal to open the Elk Hills Naval Reserve.

Instead, the proposal to diminish our national security reserves was quietly steered to the Senate Committee on Interior and Insular Affairs. That committee is made up of many of the most honorable and distinguished members of the Senate, but their primary concern is logically directed to those provisions of the proposal dealing with the mess in Santa Barbara. Indeed, at the hearings held by the Interior Committee, not a single question was raised concerning the damaging impact on the national security which would occur if naval petroleum reserves were to be applied to nondefense purposes.

And up to this time the Secretary of the Navy has not complied with the requirements of the United States Code that he consult with the Senate Committee on Armed Services, a committee which has justifiably earned its reputation as a watchdog over our national security needs.

Indeed, Mr. President, the parallel between Teapot Dome of the twenties and Elk Hills of today grows more and more disturbing. One might think that the Department of the Navy, which this very month celebrates the 25th anniversary of its victory at sea in the Pacific, may be going down to defeat under the assault of a small group of powerful oil companies.

Perhaps, Mr. President, the Navy of today, like the Navy under the Harding administration, is simply unaware of what is being done to it. But I think that an unlikely explanation. Is it not more likely that the Navy has been told to remain quiet?

Now I have always been a strong supporter of the principle of civilian control over the military. But that civilian control must come from elected officials representing the will of the people. It must not come from corporate officials exercising the power of campaign contributions and corrupting influence in order to increase their profits at the expense of the national security.

Mr. President, in view of the implications of the proposal of the Department of the Interior and the procedures under which that proposal has been handled, I have requested that the chairman of the Senate Committee on Armed Services convene hearings, as promptly as possible, to consider the national security implications involved.

I have great confidence in the integrity and judgment of the Senator from Mississippi who heads the Committee on Armed Services, a confidence which is shared by every Member of this body. I am content to let him be the judge of the prompt need for a full and frank airing of the Navy's position.

RELATIONSHIP TO OIL IMPORT PROGRAM

One of the strangest and most confusing aspects of the Interior Department's proposal for Elk Hills is the lack of any consistency between that position and the position normally taken by the Interior Department and the industry. That position holds that our national security needs for oil reserves are so great as to require a $5 billion per year import subsidy for the oil industry.

For the past few years we have been hearing, on an almost daily basis, that our national security depends on a fragile interruptible, undependable supply of crude oil. But now we are told that Elk Hills, the largest, most efficient reserve of oil that we have, a reserve already earmarked for national defense needs, may be used for other purposes.

Mr. President, if we can give a portion of Elk Hills away, then we have no further need for the import quota system that the oil industry tells us is indispensable to national security.

Indeed, it seems, Mr. President, that the phrase "national security" is a very slippery phrase indeed in the mouths of the apologists for the oil industry. When their profits and campaign contributions must be expanded, they say that the "national security" requires an expensive subsidy program to build up new domestic reserves. But when they finally get a chance to use those reserves for other than defense purposes, then the "national security" fades into the background. It is a sorry day for the people of the United States, when a single industry can dictate the defense policies of the Nation for its own profit.

Mr. President, I yield the floor.

The ACTING PRESIDENT pro tempore. Under the previous order, the distinguished Senator from Ohio (Mr. YOUNG) is to be recognized at this time.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum, and I ask unanimous consent that this be without prejudice to the time allotted to the able Senator from Ohio under the previous order.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. At this time, the Chair, in accordance with the previous order, recognizes the Senator from Ohio (Mr. YOUNG) for not to exceed 20 minutes.

MURDER COMMITTED ON KENT STATE CAMPUS BY OHIO NATIONAL GUARDSMEN

Mr. YOUNG of Ohio. Mr. President, Allison Krause, daughter of Mr. and Mrs. Arthur Krause, 2010 Garrick Drive, Pittsburgh, Pa., a student at Kent State University and a very lovely young girl, was one of the four students, two boys and two girls, who were murdered on the campus of Kent State University at about 12:22 p.m. on a beautiful sunshiny day, Monday, May 4, 1970, at a time when the university was fully functioning and when classes were being held.

Allison was 19 years of age. On the afternoon of the day before she was murdered she walked up to a National Guardsman, spoke gently to him and put a flower in his gun barrel saying to him "Flowers are better than bullets."

On Monday afternoon at the moment she was struck down and killed she was a distance of about 450 feet from the nearest National Guardsman. The Akron Beacon Journal of May 24 reported:

> Alone of the four dead students, much of the bullet that struck Allison remained within her body. According to Dr. Robert S. Glasgow, the pathologist who performed the autopsy, the bullet fragmented into at least four pieces as it tore through her left lower lung, spleen, stomach, duodenum, liver and vena cava, the large vein leading to the heart.

It is evident that the National Guardsmen guilty of shooting to kill these unarmed students had been permitted by their officers to have their M–1 combat rifles loaded with live ammunition. Governor Rhodes and Adjutant General Del Corso must bear their share of the blame for this, and it is a huge share indeed. Furthermore, such unnecessary force is compounded by the evidence that some of the National Guardsmen "doctored" their regulation ammunition or had adopted a form of dumdum bullet which expands or shatters upon striking the victim. The effect of this shattering is comparable to an explosive charge going off inside the victim's body. From the description of the massive internal damage sustained by Allison Krause the bullet that entered her body had been "doctored" by the guardsman who did the shooting.

At about the same time Thomas Grace, a student from Syracuse, N.Y., suffered a bullet wound in the side of his leg close to the ankle and that bullet penetrated downward to the ankle and exploded or shattered there. This inflicted a very severe wound and permanent disability.

Robert Stamps of Cleveland who was seriously wounded by a rifle bullet was 610 feet away from the frontline of the National Guard. This is approximately the distance of two football fields. He was struck in the rear by a bullet entering

his buttocks, missing his spinal column by approximately an inch or an inch and a half and emerging from the front part of his body. He is still disabled and under treatment.

Mr. President, in an attempt to justify these murders, Adj. Gen. Sylvester Del Corso made a number of false claims. One utterly untruthful statement he made was that a sniper fired at National Guardsmen from a rooftop. All evidence was to the contrary. For example, seven helicopters of the Ohio State Highway Patrol were flying back and forth over the university buildings and commons throughout the entire day of May 4, 1970, right up to the time of the shooting and killing, and all these pilots reported there was no sniper on any rooftop or firing from any window. Del Corso later reversed himself and said there was no sniper fire at the guardsmen. His allegations that guardsmen fired in self-defense have been proven fantastically false by the findings of the FBI. Their report to the Department of Justice following a thorough investigation by approximately 100 FBI agents covering a period of about 2 weeks directly proved the falsity of Del Corso's allegation, as did the statements and conclusions of seven investigative reporters who spent 2 weeks interviewing witnesses.

Adjutant General Del Corso should apologize for his untruthful allegations and resign forthwith from the political job he now holds.

President Robert I. White testified yesterday, Wednesday, August 19, before the President's Commission on Campus Unrest that he never requested Gov. James A. Rhodes to send National Guardsmen onto the campus of his university. Indeed, it is a matter for amazement that Governor Rhodes called out some 600 National Guardsmen for alleged riot control duty at Kent State University in the absence of any request from the president of that university.

Furthermore, Governor Rhodes and his political appointee, Adjutant General Del Corso, have a tremendously heavy burden to bear in that they, on their own, called to serve on the campus at Kent State University tired and wornout National Guardsmen who had, from April 29 to the evening of May 2, lost sleep and sustained injuries in Cleveland, having been called there by Governor Rhodes at the request of Cleveland city officials to restore order from a chaotic situation which had developed during a wildcat strike between truckers and conflicting elements of the Teamsters Union. There had been shootings and brutal assaults. Truck drivers had been pulled from their trucks and beaten. Their trucks had been burned and overturned. All this strife continued night and day from the time the guardsmen commenced their duties in Cleveland on April 29 until Saturday evening, May 2 when the wildcat strike ended. Then this particular sleepless, battered and wornout contingent of guardsmen were ordered that Saturday night to go immediately to Kent State University.

This, despite the fact that in nearby cities such as Warren in adjoining Trumbull County and in Youngstown in adjoining Mahoning County, there were National Guard military police units trained in riot control who had not been called on by Governor Rhodes for any service.

In addition, Governor Rhodes and his political appointee, Adjutant General Del Corso, have a tremendously heavy burden to bear in that the National Guardsmen ordered to Kent State University were furnished with, and permitted to have in their rifles, live ammunition.

ADMINISTRATION LEADER HEDGES ON TROOP WITHDRAWAL

Mr. YOUNG of Ohio. Mr. President, Secretary of State Rogers stated in a recent press conference:

I said we'd get our troops out of combat in South Vietnam. Now, we have made it clear all the time that there will have to be some combat troops remaining to function with the support of elements that are left, but the objective is to get American troops out of the combat role in about a year. . . .

The following question and answer period then ensued:

Question. Mr. Secretary, on this mid-1971 target date for getting out of combat, as I understand it that would leave 250,000, roughly, of American troops in South Vietnam.

Answer. It might be a little bit more than that. I'm not sure. I think the mathematics are something like 280,000 or 275,000, something like that.

Question. What's the target date for getting all out? That's what the young people are asking now.

Answer. Well, we haven't announced any target date for that. . . .

Then the Secretary disclosed that the Nixon administration will not bring the boys home next year.

He said:

Question. Mr. Secretary, can you state with fair confidence, or good confidence, that American troops will continue to be withdrawn from South Vietnam after 1971?

Answer. I don't want to comment on what is going to happen after 1971.

Mr. President, in 1968 in New Hampshire and elsewhere during the presidential campaign, Richard Nixon stated he had a secret plan to end the war in Vietnam. Now, almost 2 years later, that plan is still his secret. However, his Secretary of State makes no secret of the fact that at least 275,000 young American servicemen will still be in Vietnam in mid-1971. Even more tragic, the top cabinet official of the Nixon administration, Secretary Rogers, cannot state with any confidence whatever that troop withdrawals will continue after 1971. How long will this madness continue?

Instead of an involvement in a civil war in Vietnam American GI's and airmen are now waging an expanded war in Laos, Cambodia, and Thailand, and Americans are now being killed in combat in these countries. Also, mercenaries maintained by billions of dollars of our taxpayers' money, directed by our generals and CIA, are fighting in increasing numbers and Nixon administration leaders now term this the Indochinese war.

THE OIL LOBBY IN ACTION

Mr. YOUNG of Ohio. Mr. President, over the years, a number of Senators, newsmen, and other interested observers have speculated on the ways that the powerful oil industry seems to always be able to take care of itself in the councils of government at the public's expense.

Last month, the public received a rare glimpse into the ways that the oil lobby actually works. The Oil Daily of July 27, 1970, in its regular column, "Petty's Oil Letter," reminded the industry of its source of power. According to this column in the Oil Daily:

We would suggest that if they (oilmen) make contributions to political office-seekers—as many do—they should urge, if not insist, that if their candidate is elected he will at least give the oil industry the full-time active support which it deserves in the politician's home state, and will put on his staff men who have the oil facts and are ready to help the senator or congressman debate, quickly and fully, with those who can find little, if anything, good about the oil industry.

Mr. President, this is an unusually frank statement from the oil industry to its members, frank in that the Oil Daily is publicly admitting that the oil industry uses its campaign contributions to obtain leverage on high public officials. I feel that the general public ought to become familiar with this article, so I ask unanimous consent to have it printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PETTY'S OIL LETTER

WASHINGTON, D.C.,
July 25, 1970.

DEAR SIR: There's no substitute for an executive, or a politician, doing his own home work on issues, rather than relying on outside help when he gets in a bind. The man who commands the facts, and can interpret them simply but effectively, has a big head-start on those who debate with him.

This goes double for Washington politicians and the oil industry on Capitol Hill. The truth is that today oilmen have no steadfast champion on Capitol Hill—unless it is Sen. Cliff Hansen, R-Wyo., former governor of his state, former chairman of the Interstate Oil Compact Commission and a man with a sensitive realization of how important oil development is to his state—ranking among the top five oil producers in the nation.

Hansen is articulate on oil issues, ever ready with the rejoinder to oil's attackers in the Senate, and, perhaps more important, personally convinced that Oil is too important to the nation for the raw deal it has been receiving, politically, over the past couple of years.

The trouble is that there are too few Hansens in the Senate, or the House. While there are many members of both houses from oil states, they seem to take oil issues for granted, supine in the feeling that it does no good to debate oil issues with their critics, or, simply, that the issues will just blow away and the status quo will remain.

But, that's not how it has been for the last 18 months under the Nixon Administration—an administration, ironically, which was believed to have had a sharper appreciation for the importance of energy to the American economy and the role which the petroleum industry plays in meeting energy needs.

One reason Hansen has become the most

vocal and articulate champion of the industry in the Senate—for outshining the senators from Texas, Oklahoma, Kansas or other big oil states—is that he has a man on his staff who knows the industry, is able to gather the facts quickly and accurately and keeps the senator posted on all the big oil issues and each development as it occurs.

This is what every other oil-state senator and congressman should have on his staff, too. But, with startling rarity, few do. Some, like George Bush, R.-Tex. running for the Senate this year, need no oil "expert" to advise them because they are oilmen themselves. But far too many oil-staters on the Hill, with no personal experience in the petroleum industry, have been coasting too long on the big oil issues.

True, they are ready to make a speech on the Senate floor, once in a while, or speak to an oil meeting, but their interests appear heavily weighted in other directions—perhaps because of the lofty heights of greater political rewards they can see in the distance, which they believe far transcend parochial or sectional support for the industries in their states.

On the other hand, Oil's opponents have become much more sophisticated on oil issues in the last few years, with men on their staffs who are young, bright and dedicated, who are able to put to the greatest possible advantage for their senators or congressmen the real or imagined weaknesses of the petroleum industry. And, Oil's opponents have an easier job of it—they can make one charge after another, never waiting for the answer to the first charge. And, it is always easier to make a charge than to prove it is wrong.

We assume that oilmen, like all other citizens, work for, or at least vote for, the men of their choice who are running for political office in Washington. We would suggest that if they make contributions to political office-seekers—as many do—they should urge, if not insist, that if their candidate is successful he will at least give the petroleum industry the full-time, active support which it deserves in the politician's home state, and will put on his staff men who have the oil facts and are ready to help the senator or congressmen debate, quickly and fully, with those who can find little, if anything, good about the oil industry. And, it wouldn't hurt if the senator or congressman did a little homework himself, ready to speak from personal conviction on the issues, as they develop. The stakes are too high to accept any less of a man in Congress from the big oil states. The next big battle could come from those who see the petroleum industry ripe for full federal control—as a "public utility"—in the U.S.

Very truly yours,

JAMES M. COLLINS.

A NONVOTING DELEGATE FOR THE DISTRICT OF COLUMBIA

Mr. YOUNG of Ohio. Mr. President, Calendar No. 1134 has been on the calendar for a number of days. This is an act to establish a commission on the organization of the government of the District of Columbia and to provide for a Delegate to the House of Representatives from the District of Columbia.

If a majority of the Members of the House of Representatives really want a nonvoting delegate for the District of Columbia in that body, as a humble Senator, the senior Senator from the State of Ohio, I have no objection. I have no voice in what they may do in the other body. But this measure is on the Senate Calendar, and I wish to speak briefly on the entire matter.

Mr. President, this is a fantastic amendment—in my judgment, an unthinkable amendment—yet it is likely to be offered here and would provide a nonvoting Delegate for the District of Columbia. Let us consider that very briefly.

Other Senators and I are confronted with the predicament of a lack of office space. Allowing for a nonvoting Delegate from the District of Columbia would involve more office space and an unnecessary waste of taxpayers' money for the salaries of the nonvoting Delegate and all the members of his staff. Indeed, this would involve the expenditure of many thousands of dollars every year for a clerk hire allowance and maintenance of an office suite and equipment for the Delegate and his staff.

The patriots who drafted the Constitution of our country drafted a wonderful document, to which we should pay attention. The very first section of the Constitution deals with the legislative branch of the Government. They wanted three equal, coordinate branches of our Federal Government, which we have had for nearly 200 years, but they placed first in the Constitution the provision relating to legislation and to the Congress, article I, section 8 of the Constitution states:

> To exercise exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square)—

Mind you, Mr. President, not a State but a little district—

> as may, by Cession of particular States, and the acceptance of Congress, become the Seat of the Government of the United States, and to exercise like Authority over all Places purchased by the Consent of the Legislature of the State in which the Same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings;—And
>
> To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.

Thus the District of Columbia was created, not to exceed 10 miles square, as provided in the Constitution.

Let us now consider the facts, when they talk about two Senators and one Representative from the District of Columbia, or talk about a nonvoting Delegate. In 1968, in the District of Columbia, there were nearly 828,000 residents. That number has now decreased.

On July 1, 1969, the Census Bureau estimated there were 798,000 persons living in the District of Columbia.

An estimate furnished me by the Census Bureau recently shows that the number of persons now living in the District of Columbia will be considerably under the estimated 798,000 of 1969.

It seems fantastic that anyone would consider a nonvoting Delegate to represent that number when we have in both the Senate and the House the District of Columbia Committee. Fine committees, with dedicated and knowledgeable Senators and Congressmen working with fidelity and zeal to improve conditions in the District of Columbia. Indeed, a valid argument against a nonvoting Delegate in the House is that it would involve duplicating the very effective work of the House Committee on the District of Columbia.

A nonvoting Delegate is not needed in either branch of Congress. I want to say now, Mr. President, that I will oppose to the utmost of my ability and energy any such proposal.

I may not have anything to brag about when it comes to ability, but when it comes to energy I know that the Presiding Officer, the distinguished Senator from Alabama (Mr. ALLEN), who is my personal friend, will agree with me that when I say I am going to dedicate all the energy I possess in opposition to any proposed constitutional amendment to give two Senators and one Representative to the Congress for this Federal district, this Federal city, which gets so much from the Senate, I may have something to offer.

Very definitely I am unalterably opposed to any constitutional amendment that may be offered to give the District of Columbia a nonvoting Delegate in the Senate or to give valuable space to a large staff that would have very little to do and could not accomplish as much for the people of the District of Columbia as the Senate has already done over the years, and is now doing in the fine District of Columbia Committee.

We should let well enough alone and not fall for these fantastic ideas being urged on us by some ambitious politicians living in the District of Columbia.

Mr. President, I yield the floor.

HANOI'S BLACKMAIL

Mr. PERCY. Mr. President, the word "blackmail" has an ominous sound about it. It was originally used to describe the practice of Scottish bandits who demanded a tribute from travelers wishing to proceed safely. Since then, it has been applied to all manner of coercion. It has been variously called black rent, Danegeld, and blood money. It is universally recognized as one of the lowest forms of intimidation.

The North Vietnamese are callous extortionists. They currently hold an undisclosed number of Americans captive, hoping to ransom our men for military and political advantage.

It has been 6 years since they first adopted this practice. Six years of frustration, pain, and degradation for our men; but no benefit to their captors.

Hanoi should realize by now we will not negotiate out of fear; we will not capitulate in the face of criminal acts.

Our refusal to pay ransom does not stem from any lack of compassion for our men. We keep faith in them and daily pray for their safe return. But we also remind ourselves of words once spoken by a great poet:

> We never pay anyone Danegeld,
> No matter how trifling the cost.
> For the name of that game is oppression and shame,
> And the nation that plays it is lost.

ORDER OF BUSINESS

Mr. PERCY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. ALLEN). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. JAVITS. I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. YARBOROUGH). Without objection, it is so ordered.

Under the previous order, the Senator from New York (Mr. JAVITS) is now recognized for 15 minutes.

U.S. STATEMENT ON MIDEAST CEASE-FIRE VIOLATIONS

Mr. JAVITS. Mr. President, I have asked for this time this morning in order to make a brief statement respecting the situation of the cease-fire standstill in the Middle East and the reaction yesterday of the Secretary of State on that score.

Mr. President, I ask unanimous consent to have printed in the RECORD the statement of the Secretary of State.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AUGUST 19, 1970.

We have concluded that there was some forward deployment of surface to air missiles into and within the zone west of the Suez Canal around the time the cease-fire went into effect: there is some evidence that this continued beyond the cease-fire deadline although our evidence of this is not conclusive.

With respect to additional information which the Israeli Government has brought to our attention concerning possible violations of the cease-fire, we will examine it and be in touch with Israel through diplomatic channels. We do not now anticipate making further public statements on this matter.

Adherence to the cease-fire and standstill is of great importance to the success of current peace efforts. The main thing now is to concentrate all efforts on getting discussions going under Ambassador Jarring's auspices. The United States believes that these talks should begin promptly.

Mr. JAVITS. Mr. President, the fragility and continuing danger of the situation in the Mideast have been underscored by the developments relating to violation of the cease-fire standstill agreement. Yesterday's statement of the Secretary of State, while conceding the basic question of a violation, concludes that calling off the peace talks is not warranted. We expect that the flow of needed military equipment to Israel will continue. This is an indispensible element in the situation and for the prospects for peace, given the factors on the Arab and Soviet side.

The President's words in announcing the historic new U.S. Mideast policy on July 1, must be borne constantly in mind. He said:

Once the balance of power shifts where Israel is weaker than its neighbors, there will be war.

The President's statement emphasized the new dimension of the Mideast struggle in these words:

It is not just a case of . . . Israel versus the Arab States, but the Soviet Union is now moving into the eastern Mediterranean.

Seventy-one Senators have assured the President of their support for his "clearly expressed policy on the part of the United States to protect and defend its interest in the Middle East."

Mr. President, the euphoria of people about the Mideast, if it ever existed, was certainly shattered by the events of the last few days. Indeed, euphoria over Mideast peace prospect is far from warranted, as demonstrated by the standstill violations which have already occurred. Vigilance and determination are very much demanded.

The basic consideration is that the Soviet Union and the United States both have far too much at stake in avoiding a resumption of war in the Mideast to condone violations of the cease-fire and standstill.

The Soviet Union can jeopardize the cease-fire and standstill by tolerating any violation by Egypt, thus providing that Egypt cannot be relied on, and freeing Israel of any obligations to keep the cease-fire and standstill.

The United States through its bold and brilliant initiative in proposing the cease-fire and standstill, has a moral responsibility to withdraw its sponsorship of it if it is going to be violated or undermined, thereby putting Israel in grave jeopardy. Israel's participation in the cease-fire and standstill and in the impending peace talks was gained only after the most solemn assurances that the United Arab Republic's undermining of the cease-fire and standstill would not be tolerated.

Indeed all should understand very clearly that Israel's very existence and the life of its people are at stake. Its statesmen have said as much in recent days. Israel must necessarily be highly sensitive to any breach or threatened breach of the cease-fire and standstill. The Secretary of State's statement obviously and, probably wittingly, plays down the issue. Nonetheless, even that statement gives a clear though implied warning that "adherence to the cease-fire, and standstill is of great importance to the success of current peace efforts."

These incidents emphasize how critical it is that the Soviet Union and the United Arab Republic feel themselves committed in good faith to honoring the cease-fire and standstill. If they do not, it could dash all hopes we have for Mideast peace; and it is hard to believe that the Soviet Union would want to be responsible for such dire consequences. The peace talks should go forward as the Secretary of State asks.

The United States should make it clear to Israel that we would have no hesitation if further violations continue, to agree to a discontinuation of the cease-fire and standstill, as we are the ones who created it in pursuance of our responsibility in undertaking negotiations.

We should express the hope that the United States has a very clear duty not to hold back now in terms of supplying Israel with the military equipment, including aircraft, parts, electronics, and so forth, which it needs in order to maintain its balance of force, which the President himself spoke about on July 1.

I have the deepest confidence that the President understands this matter and will follow through on this. But the support of 71 Senators is indispensable to that effort.

My purpose in speaking today is so that my colleagues may maintain their interest which is so essential in the giving of their support without which, in my judgment, it would be very difficult to move forward.

Mr. PERCY. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. PERCY. Mr. President, I would like to say that we are fortunate indeed to have in this body, the senior Senator from New York, a Senator who has such expertise in this particular area of the world because I think that peace and stability in that area depends on such vigilance.

Obviously not only the people of Israel, but also the people of Arab nations want peace and security. They have seen the utter futility of years of warfare which has certainly not benefited any of the people of that area.

I would like to commend the administration for the initiative it has taken and for the cautiously conservative optimistic outlook we can now have, in our expectations that peace can be brought about through negotiations.

For the most part, the end of conflicts throughout history has been brought about only through surrender of one side or through negotiations.

There is going to be no surrender here. There will have to be a negotiated settlement.

The Nixon administration should be commended for its creativity and initiative in this respect.

I feel that we must now make certain that the integrity of each side is maintained. All parties must recognize that they would bring about a destruction of what is now a very hopeful outlook for peace if the cease-fire is broken.

I would like to ask one question of the distinguished Senator. I do not think we have any chance of having our peace objective reached if there is not a national interest to be served by the various parties involved. The various parties involved are the State of Israel, the Arab nations, and the Soviet Union, as well as ourselves, because the latter are both involved in supplying equipment.

When we see that the action of the commandos—the Fedayeen and others—could carry them and force them into a position where it would jeopardize the stability of the Arab Nations themselves and pull the Soviet Union into a situation beyond their control, is there not a national interest, therefore, to be served for all parties, including the governments of the Arab States, as well as the Soviet Union, to have the cease-fire scrupulously observed and have negotiations begin and get underway in a serious manner?

Mr. JAVITS. I thoroughly agree with everything the Senator said about the desirability of peace for the Arab States

themselves. I have striven for that all of my public life, and I will continue to do so.

My words today are only designed to see that there is a peace negotiation that is meaningful, that it is a true peace and not a prelude to further war. Let us remember the bitter experience of 1956 and 1957 when the President really induced Israel to pull out of Sinai, based on Nasser's promises. When they were not honored, the United States did nothing about it. This is a bitter experience, and I am sure Israel remembers it more than we do.

We have to realize Israel's concern to screen out guerrilla activity from government activity on the part of Jordan. I think that confidence in Israel's ability to do this is well placed.

We have every right to expect Jordan and other Arab governments will help in that process by isolating the commando activity to make sure that it is commando activity and that it is not government backed.

I thank the Senator.

Mr. PERCY. Mr. President, I further commend the distinguished Senator from New York for approaching this matter in an absolutely bipartisan fashion. There are very few controversial matters where greater unanimity of accord has been reached in the Senate than in this matter where 71 Senators on both sides of the aisle are working with the administration to bring about an accord and to make certain we do move in the proper direction.

I commend the Senator.

Mr. JAVITS. I thank the Senator for his remarks.

ORDER OF BUSINESS

The PRESIDING OFFICER. Pursuant to the previous order the Senator from Connecticut (Mr. RIBICOFF) is recognized for not to exceed 10 minutes.

FAMILY ASSISTANCE ACT OF 1970—AMENDMENTS

AMENDMENT NO. 850

Mr. RIBICOFF. Mr. President, the proposed family assistance plan is now under intensive review by the Senate Finance Committee. Several weeks of hearings have already uncovered serious deficiencies in the work-incentive features of the legislation.

I wholeheartedly share the concern of my fellow committee members that adequate incentives to move Americans from relief to productive employment must be an integral part of any welfare reform bill.

But the foundation of any work incentive program must be the availability of actual jobs. The lack of real job opportunities makes meaningless any effort to reduce the number of relief recipients. There can be no "workfare" without work.

And yet the present form of the family assistance plan fails to provide a single job opportunity.

Therefore, the distinguished Senator from Oklahoma (Mr. HARRIS) and I submit an amendment intended to be proposed by us, jointly to the pending welfare bill, H.R. 16311, to provide a minimum of 30,000 public service jobs at the beginning of this program. This amendment would authorize the Secretary of Labor to contract with public or nonprofit organizations in establishing a program of employment in the public domain for welfare recipients eligible for work training provisions of H.R. 16311.

Mr. President, there has been much rhetoric about the necessity for welfare recipients to find employment. No one questions that we are all better off if the basic needs of Americans can be met by earned wages rather than public relief checks.

But, we have to do more than just talk about jobs. We have to provide them as well.

Over $600 million has been earmarked for the work training sections of family assistance. But, not one dollar of these funds will actually provide a job. Much of it will instead be spent on more training and counseling.

Obviously, better skills can markedly increase a man's employability. But, it cannot add a penny to his income if there is no job opening at the end of his training cycle.

This Nation spends more money on training people for fewer jobs than anybody else in the world. The result has been justifiable frustration for the poor and unemployed.

Under the present AFDC program, HEW estimates that over 1.2 million people are employable. With increased training, this number will rise.

But, where will they work? The present labor market in the private sector is already glutted. The unemployment rate stands at 5 percent. Over 4 million Americans are out of work. Many of these are highly trained professionals or skilled craftsmen.

In the face of this gloomy picture of employment opportunities in the private sector, H.R. 16311 provides only more training and counseling funds.

Former Health, Education, and Welfare Secretary Robert Finch readily admitted before the Senate Finance Committee on April 29:

> I don't think this bill really attempts to meet the problem of guaranteeing jobs.

Mr. Finch stated that 150,000 training slots would be created but no jobs.

We cannot continue this charade that a little training will enable the poor and undereducated to find decent job opportunities. We must learn from sad experience that training is no guarantee of work.

In 1967, Congress authorized the work incentive program—WIN—to provide a comprehensive network of services to increase the employability of AFDC recipients. These services included remedial medical care, an income supplement, child care, training, counseling, and placement.

The results of WIN have been disappointing. An independent evaluation by the Auerbach Corp. for the Department of Labor points out that the major failure of WIN has been the lack of job opportunities at the end of the training cycle. The report states:

> Now that the program is underway, there is a growing feeling among local WIN staff that many participants, women in particular, will not obtain jobs in the already tightly restricted—and, in some cases, declining—labor market existing in many communities.

Yet, there is work to be done in this Nation which only lacks manpower and money for its accomplishment.

A study undertaken by Harold Sheppard for the Urban Institute in 1968 shows that at least 140,000 job opportunities for nonprofessionals already exist in the 130 largest cities in the United States. These are jobs existing and available now. They could be filled in a few weeks if the necessary funds were provided.

For a longer period, the National Commission on Technology, Automation, and Economic Progress has estimated that over 5 million additional jobs could be filled in the public sector.

Too often we allow ourselves to equate public sector job programs with makework. But, the truth is we are only beginning to recognize the massive need to upgrade and expand vital community services.

Several months ago, in hearings before the Senate Finance Committee, Mr. Charles Stewart of the Arkansas Nursing Home Association, pointed out the great need for more manpower in his particular field. Stewart stated that 95 percent of the subprofessionals hired through training programs stayed on the job. Most started at around $1.45 an hour but quickly worked up to wage levels of $2 or more an hour in only a matter of months.

As Stewart pointed out, every hospital and medicare care facility in the country is in dire need of more manpower. In addition, other problems need our immediate attention. Our major cities are dying at the core. Social service agencies are understaffed. Police and fire stations are often manned by skeleton staffs. Teachers aides and housing inspectors are in short supply. Our sidewalks, streets, and countryside are often filthy.

There is work to be done in America and there are people who are willing and able to perform the necessary tasks. It is time we brought these ends and means together.

At the same time, the amendment we propose will provide the means to put welfare recipients to work in a meaningful capacity without markedly increasing the cost of public assistance programs.

The administration has estimated that over $600 million will be spent in the first year on work training and child care programs.

This amendment would earmark 30 percent of these funds or approximately $180,000,000 for the creation of 30,000 jobs.

But, let us make clear that the creation of these jobs may well eliminate or markedly reduce welfare payments to the new job holder and his family. It is estimated that the 30,000 or more jobs authorized by this amendment would result in welfare savings of approximately $90 million.

We believe that using a portion of the funds directed toward counseling and training for the creation of actual job

opportunities in areas of urgent national concern is a wise investment in the future.

The PRESIDING OFFICER (Mr. YARBOROUGH). The amendment will be received and printed, and will be appropriately referred.

The amendment, No. 850, was referred to the Committee on Finance and ordered to be printed.

Mr. RIBICOFF. Mr. President, I wish to pay tribute to the distinguished Senator from Oklahoma (Mr. HARRIS) for his deep concern and unflagging attention to the social and economic problems of this country. On the Committee on Finance the Senator from Oklahoma is a very constructive force in analyzing the complex matters which the committee undertakes. He is deeply concerned with the inadequacies of many of the provisions of the administration's welfare program and he has introduced a series of most constructive amendments.

I have great hopes that members of the committee, including the Senator from Oklahoma and I, and the Senate, can work together to improve the present welfare program now before the Committee on Finance.

Mr. HARRIS. Mr. President, will the Senator yield?

Mr. RIBICOFF. I am happy to yield to the Senator from Oklahoma.

Mr. HARRIS. Mr. President, I am grateful for the fine words spoken about me by the distinguished Senator from Connecticut. I am very happy to join with him today in this amendment to the family assistance plan which is now pending before the Committee on Finance of which the distinguished Senator from Connecticut and I are members. No member of the Committee on Finance or the Senate is more knowledgeable in this broad field than is the Senator from Connecticut, who is a former governor and the former Secretary of the Department of Health, Education, and Welfare. I am grateful to him for the fine work he has done in the past and is doing now on the Committee on Finance in connection with this subject matter. He is constantly trying to improve the law and the programs now on the books, and is trying in particular to improve the family assistance plan which President Nixon has recommended to the committee and that is now under consideration.

Mr. President, the amendment which the Senator from Connecticut and I offer today would provide a program of public service employmcnt. We believe the addition of this employment program will be a significant improvement to the family assistance plan.

In the President's Family Assistance plan, responsibility for employment lies with the private sector alone. Certain employment services are provided by the Government: job counselling, testing, job training, job development and funds for relocation. But the actual jobs are to come from private industry. The single exception to this philosophy is the provision for special work projects defined in section 431(d).

If we are actually concerned about getting people employed, we must recognize that this approach has serious weaknesses.

It is unrealistic to expect private industry to increase employment when the economy is slack. Unemployment is currently at 5 percent. It is expected to be at least that high for the next 12 months. Many of those now unemployed were working 2 years ago. They are unemployed primarily because of a lack of jobs in the economy. Programs which retain people for jobs that do not exist can only add to their frustration. If we really want to put people to work, we will not provide them training alone. There must be jobs. That is the purpose of this amendment.

The jobs we provide should be good jobs. They should offer stable employment and a chance for advancement. As I mentioned, the family assistance plan provides for some Government employment through special work projects. But at best, these special projects are short-term affairs. Under these projects, a man may become employed, but 6 months later the project may expire and, through no fault of his own, the person may be unemployed again. Clearly, this is no way to stabilize a family's economic situation.

It is for these reasons that Senator RIBICOFF and I propose that $180 million of the funds currently proposed for job training be reallocated for a program of public service job creation.

By public service employment, we mean such jobs as teachers aides, community health aides, and comparable jobs in the fields of public safety, recreation, pollution control, housing, and rural development—jobs which need to be done. Anybody familiar with these areas knows we are not talking about make-work. These jobs represent critical needs in the public sector. By providing FAP recipients an opportunity to take such jobs we will be making one program serve two needs.

Under our amendment, employment grants would be allocated by the Department of Labor to programs designed by the States and cities. In these programs, the Federal Government would pay 90 percent of a job, while the State governments would pay 10 percent. We include this 10 percent State share because we believe that a State's planning will be improved by the recognition that some of its own funds are involved.

It is important to keep the size of the program in perspective. As I have said, we propose that the program be funded at a level of $180 million. By our estimates, that will mean the creation of 30,000 jobs. In addition, we specify that these jobs should be monitored by the Department of Labor to provide badly needed information on Government employment of poor people.

These are important steps, but they will not end our employment problems. In no sense can we consider this bill a substitute for the comprehensive manpower program contained in Senator GAYLORD NELSON's bill, S. 3867, which was recently reported out of committee. It is at best a partial supplement.

Finally, let me make a remark about cost savings. By reallocating funds from job training to jobs, we will be giving employment to about 30,000 people. We will be removing those people and their families from the family assistance rolls. We will be saving the money which would otherwise be allocated for their welfare payments.

It is our intention that these welfare savings should be plowed back into the program. They can be used to expand day care services. They can be used for more employment creation. They can be used in other ways to strengthen the working of FAP.

In proposing the family assistance plan, President Nixon said he wanted to remove people from welfare rolls and put them on payrolls. Senator RIBICOFF and I agree. At the same time, we recognize that you cannot put people to work if there are not any jobs. But with this amendment, we believe we can make a dent in that problem.

ORDER OF BUSINESS

Mr. PERCY. Mr. President, I ask unanimous consent that I be permitted to speak for not to exceed 3 minutes.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

ILLINOIS FISCAL POLICY

Mr. PERCY. Mr. President, during the past several weeks I have been reviewing in depth the Federal budget to see where we might cut waste and eliminate unnecessary and outmoded programs; only in this way can we avoid the double dangers of more deficit spending and less Government service where it is so badly needed today in the fields of health, housing, education, job training, welfare reform, law enforcement and the like.

My State of Illinois, like her sister States throughout the country is grappling with the same problem. Because I believe that one way the public can get more for its tax dollar is for the Federal Government to coordinate and avoid duplication with what our States and local governments are doing, I have examined in some detail the budgetary situation in my own State. Today I want to commend the State of Illinois for what is being planned for this fiscal year and particularly the manner in which the State administration of Gov. Richard B. Ogilvie is going about getting the job done.

Moreover, this success story is pertinent to our deliberations, and I wanted to pass on to my colleagues here in the Senate, as a member of the Senate Government Operations Committee, the benefit of my findings in an area vital to the Nixon administration's concept of "New Federalism" and to the health of our 50 States.

Last year the financial position of my State was near bankruptcy. Under the leadership of Governor Ogilvie this crisis is being solved in two ways—tax reform and tight fiscal controls. Regarding the former, Illinois adopted a growth-responsive income tax and reduced considerably its heretofore exclusive reliance on consumption and propety taxes.

A review of the objectives and accomplishments of the fiscal control system is

appropriate because the budgetary process should provide direction to State government. For only with the discipline that the chief executive can bring to bear through fiscal controls can we hope to achieve our vision for Illinois.

This budget is superior, in my judgment, to any Illinois budget in recent years in allocating money where it is most needed. Before last year executive review of budget requests was limited. Individual agencies often dealt directly with the legislature. Agency submissions often were passed on to the legislature without change. Once appropriation bills were enacted into law, the Governor had no mechanism to control expenditure of money by the agencies.

This year, the Illinois Bureau of the Budget within the office of the Governor has breathed new life into Illinois State government. No new taxes, reduced operating costs, and smaller payrolls are the direct results of the modern tools of management approved by this general assembly and utilized to the fullest extent possible by the Ogilvie administration.

In place of the decades-old procedure of allowing agencies to submit budget requests with little or no executive direction and then passing on the entire package to the legislature, we have substituted a system of controlled executive budgeting. Department heads submitted their final requests this year only after receiving detailed guidelines and policy determinations about the direction of the State's overall program. As a result, no less than $350 million was cut from the original requests before the final budget was presented to the general assembly.

In applying tight fiscal controls the Ogilvie administration stressed four management objectives:

First. Cutting costs. The goal is to insure that all the State money is spent efficiently. Previously, Illinois has had no effective control over the cost of State government. This year, Governor Ogilvie instituted a system of apportioning funds to State agencies every 3 months. Under the former practice, agencies were free to spend at will without controls during the entire 2-year life of their individual appropriations. Now they must justify their commitments and costs each quarter. The apportionment system has enabled the administration to conduct an ongoing budget and expenditure review throughout the year.

In addition, a cost reduction team has been trained to review ongoing agency operations. Each agency is compelled to assume that its operations will increase in productivity through experience and effective management.

Second. Holding down State employment. State government has always employed too many people to do the jobs assigned, a problem that plagues our State governments, particularly those with outmoded spoils systems. The result has infected all State government operations. Our present Illinois State administration is determined that there not be more people on the State payrolls than are needed; coincidental with this goal is a determination that each State employee earn his keep.

The Governor has instituted a personal control system designed to provide the information required to insure that people are employed only where they are needed.

Third. Getting government out of activities it need not be in. One of the basic functions of State government is to provide people with services that they truly need and want. All too often, however, government continues to operate programs that are no longer effective. Frequently, traditional formulas for distributing funds become excuses for avoiding the hard decisions. The budget review provides an opportunity to examine the base of each State program.

The Governor has served notice that next year he intends to look at traditional institutional funding practices and formula grant programs just as critically as his administration surveyed operations this year.

Fourth. Accountability. State government has not been held accountable as it should have been. In the past agencies have proliferated so that responsibility became diffused and avoided. Over 50 agencies with separate appropriations report directly to the Governor.

Many governments, facing a troubled society and major new demands, have taken the easy route of reorganization, at the top, into super-agencies. All too often nothing has changed below. This year careful consideration is being given to the reorganization of the executive branch. This will be reorganization from the bottom with the emphasis on programs, not hastily imposed box shuffling from the top down.

This approach means that Illinois is attempting to make every tax dollar provide the maximum possible benefit for those who pay the bills, the general public. It means the Ogilvie administration is putting an end to programs which are no longer effective, and phasing out jobs that are no longer necessary. Sound management also demands accountability. Illinois is avoiding the easy answer of reorganizing at the top to simply create a more ponderous bureaucracy.

It also means that my State has instituted a system of controls which will bring under a continuing review the spending process of government—thus ending the year-end rush to spend all appropriations in order to justify the same or a higher budget the next time around.

The evidence of this kind of sound management philosophy can be found on every page of the detailed State budget document itself. And the result has been good news for our people in 1971—no new taxes.

And probably most important of all, the 1971 budget actually reduces the operating costs of Illinois government. This means that more State tax money will return to the communities and individual citizens of Illinois—in the form of unrestricted bloc grants to local governments, aid to hard-pressed police departments, assistance for hard-pressed school districts, and help for the needy, the sick, and the disabled. And fewer tax dollars will be staying behind in the agencies and departments of the bureaucracy.

Sound management, of course, is only half the battle. The other—and equally important—half is the establishment of firm, clear priorities for the allocation of our limited resources. The fiscal year 1971 budget for my State reflects those priorities.

It provides for the strongest and most far-reaching program of environmental protection in the history of our State—or of any State in the Union. Every power proper and necessary to arrest the continued damage to our air, water, and land is contained in that legislation. The general assembly also approved appropriations necessary for hard scientific study of pollution problems and ways of solving these problems.

The State has undertaken a massive program for land acquisition for public parks and recreation areas, and funds have been appropriated to permit State installations to come into complete compliance with high standards of pollution control. Moreover a long-range plan to help finance sewage treatment projects in Illinois communities to abate the major source of water pollution in our lakes and rivers will be put to the voters at this coming general election.

Social legislation with the potential for making historic breakthroughs got priority attention this year. It includes an expanded program of providing day care for children to free their mothers to work and to learn, a new school breakfast program for the hungry, and continued pilot efforts in welfare services aimed at breaking the cycle of despair and defeat among the poor.

For education, the State is providing more money than ever before in the history of Illinois—nearly $1.7 billion—to aid local schools at all levels, to provide increased support for State colleges and universities, and to broaden substantially the opportunities to provide financial assistance for deserving students.

The current State budget implements new programs and funds for housing, an area of great personal interest to me, that made it possible for Illinois to qualify for private foundation grants and Federal funding. This support, in turn, may lead to dramatic progress despite the current stagnation in housing development.

For correctional work and law enforcement, there are major new efforts to educate and rehabilitate prisoners. Additional agents were authorized for the Illinois Bureau of Investigation, and a high level of support was given to the Illinois Law Enforcement Commission to allow it to continue as the best such State-directed effort in the Nation.

Tax relief has been extended to larger numbers of the elderly and special assistance was given to local governments which will feel the impact of the exemptions granted individuals from the hated personal property tax.

For road building, the legislature has approved the largest program in our history to rebuild and extend a system that had fallen into a State of disrepair and neglect. Necessary funds have been provided to create a new major airport near East St. Louis that potentially can be the catalyst to restore prosperity to this sadly impoverished area.

I would like to call attention to several significant new programs in the Illinois budget. The total dollars involved are comparatively small. But each has importance far beyond its dollar amount. These are innovative developmental programs. Echoing Justice Brandeis, Governor Ogilvie said:

> I am convinced that the state must be the laboratories for the nation. Ours is the opportunity to launch new starts without wasting money in potential failure.

If these programs—in housing, manpower, rehabilitation of prisoners and social services—prove successful, they can be expanded. The objective at this time is to advance each of these programs prudently and well, and to carry them through with quality performance.

First. Housing: The traditional State role in housing has undergone qualitative expansion since the beginning of the Ogilvie administration, and it will continue to do so through innovative programs under the Illinois Housing Development Authority. This year's budget for housing includes $1 million for a slum rehabilitation program under which rents withheld by the department of public aid will be added to proceeds from receivership certificates.

Second. Manpower: Manpower training efforts are budgeted in several major departments to link people with jobs in industry, and to take people off welfare rolls and put them on payrolls, an objective I have long sought and the reason why I support the Nixon program of welfare reform. Our State administration is actively seeking out potential trainees for the new work-incentive program by making sure that special teams of doctors, day-care specialists, and counselors are in contact with welfare recipients. Moreover money has been budgeted for intensive minority group recruitment and training programs within State government.

The most basic challenge of crime control, of course, is to do more than merely punish offenders. We must rehabilitate them. The Illinois Department of Corrections' budget has been increased by 20 percent to do this. It will concentrate upon remedial education of the one-third of its inmates who are functionally illiterate and will revamp its vocational training program. It will shift its emphasis from isolated institutions to communities, where through group homes, halfway houses and intensive counseling it can supervise men while they do useful work.

The Ogilvie administration cooperated fully with the Illinois Law Enforcement Officers Conference I sponsored in Washington this month.

Third. Social services: The State budget also renews the request for funds for experimental social service work designed to end the redtape and the confusion which permeate Government efforts to help people who need help. Results from projects now in the design stage may show that with new management programs the effectiveness of the welfare system can be dramatically improved. We cannot just strike out senselessly at this system even though we recognize its obvious deficiencies.

Through sound fiscal management, continuing review of program development, and the proper allocation of its limited resources, the State of Illinois is better meeting its responsibilities and serving its people.

Mr. President, I commend Governor Ogilvie and the members of the general assembly for their outstanding record and recommend a study of this record to my colleagues in the Senate who so graciously have shared their own creative thinking in many areas with me.

PROPOSED USE OF UNUSED HIGHWAY TRUST FUNDS FOR URBAN MASS TRANSIT

Mr. PERCY. Mr. President, this year the CTA raised its fare to an all-time high of 45 cents to keep from going broke. And the bus systems in Joliet, Danville, and Peoria failed for lack of funds.

Urban centers are finding it more and more difficult to get funds for adequate urban mass transit. Yet last year the highway trust fund had a surplus of over $2 billion in unobligated funds.

That situation seems pretty ludicrous to me.

I have cosponsored a bill to allow highway trust fund money to be used for urban mass transit. The money could be used to purchase equipment and to retire debts incurred by forward-looking mass transit systems like the CTA, which obligated itself and is now having difficulty paying off bonds.

I strongly feel that as long as mass transit systems are raising rates or failing or both because of lack of funds, enormous amounts of money should not be going unused when their judicious use in mass transit may help greatly in relieving the pressure on highways in or in proximity to our metropolitan areas.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The PRESIDING OFFICER. Pursuant to the previous order, the Chair lays before the Senate the unfinished business, which will be stated by title.

The assistant legislative clerk read as follows:

> A bill (H.A. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The Senate proceeded to the consideration of the bill.

The PRESIDING OFFICER. Under the previous order, the Senator from Oregon (Mr. HATFIELD) is recognized.

Mr. MANSFIELD. Mr. President, if the Senator will yield, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HATFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, I shall speak briefly, partly on a matter of procedure concerning the amendment offered by the Senator from Oregon and other Senators, which incorporates the plan of the so-called volunteer army.

Let me preface those remarks by a brief statement. This is more than an amendment, as that term is ordinarily understood. It is a basic, sweeping change in policy in our plans for national security and for the plan of having the manpower available to carry out those policies.

In effect, it would say that we are not going to have a selective system any longer, after it expires on June 30, 1971. Instead, we are going to have the so-called volunteer army.

This amendment, as an amendment, in its present form, is opposed by the President of the United States.

President Nixon made a recommendation on this subject matter. He appointed a commission and that commission made an affirmative recommendation which was filed sometime in April of this year.

But when the matter was coming to the floor and was being pressed in a serious manner, I needed to know exactly what the position of the White House was. I therefore made that inquiry and I got an answer.

I am authorized to say on the floor of the Senate that in its present form, and as a part of the procurement bill, the President of the United States is opposed to it.

Generally, what he favors in this field would be the orderly and regular development of a legislative enactment contemplating hearings, and contemplating the ordinary procedures necessary to a substantial change in policy.

I have not talked to the President myself, but I talked to one representing him directly. I do not think it is necessary for me to go any further than to say that the White House has backed up what I have just said. I will give the name of the man I talked to, upon request of any Senator. It is no secret. I have not spoken to the President. I just do not want to go any further than I should. But I had to know on that point, and I got the answer.

I state that as a fact now, as a part of my background of thought that, after all, this is not an ordinary amendment.

Now, Mr. President, in a bill of this magnitude——

Mr. HATFIELD. Mr. President, will the Senator from Mississippi yield for a question at that point, for clarification?

Mr. STENNIS. I yield.

Mr. HATFIELD. I thank the Senator from Mississippi.

Do I correctly understand that the President has provided the Senator from Mississippi with some written statement on his position on this amendment?

Mr. STENNIS. No, he has not. He has not. We need not waste a bit of time in questioning now how the President feels about this, I do not think.

Mr. HATFIELD. May I ask another question?

Mr. STENNIS. Yes.

Mr. HATFIELD. I understand that the President's position on the concept of a volunteer military is that he has very definitely come out in support of it. Both during the campaign and, I think, when he appointed the Gates Commission to make this study, he indicated his support. I am a bit confused as to whether the President is expressing himself on the concept of a volunteer military or on the timing or implementation.

Mr. STENNIS. I said, as plainly as I could, that the President opposes this amendment, as an amendment to the bill. The thing that he favors about the volunteer army is a bill which would be enacted in the regular course of the legislative process. That is what he, in effect, has already said over and over, and made a start on it with the Gates Commission.

Now I want to continue, as that is the situation.

Mr. HATFIELD. This has been a telephone conversation with the President with the Senator from Mississippi?

Mr. STENNIS. No. I said I had not talked with the President. I am not in the habit of quoting people by name from the President. I have my facts.

Mr. HATFIELD. I am not challenging the Senator's facts. I just want to understand what the facts are, as to whether the Senator talked with the President, or a staff person, in writing, or what.

Mr. STENNIS. I told the Senator that I do not have it in writing. But I have it. I can back it up.

Mr. HATFIELD. I thank the Senator from Mississippi.

Mr. STENNIS. Yes. I thank the Senator for his questions.

Mr. President, another thing that affected me, I cannot agree to a request here for a few hours debate on this measure. I think the Senate is due an explanation on that.

There comes a time when the man who is the so-called manager of a bill must make up his mind what his duty is.

Thus, confronted with this amendment, so seriously pushed yesterday afternoon, I saw that I had to decide what my duty was, not what I would like to do.

Accordingly, I was satisfied that my duty was to say that this matter should not be passed on by the Senate in its present mood, until it is fully debated and the facts are known to the membership, and to get those facts out. It just cannot be done in these few hours. I have proposed to develop the facts here on the floor as best I can, as will others.

Another point that weighed on me was that the amendment, in its present form, calls for a $4 billion increase per year—a $4 billion increase per year, Mr. President, in the budget.

I do not know of any time in the history of the Senate that it has ever passed a new policy and a new bill that added—and this is just wartime, like World War II—that added $4 billion to the budget with 4 or 6 hours of debate. Of course not.

This thing has got to be developed on the facts, as far as it can.

The $4 billion is actually $4.3 billion, and that is the lowest responsible estimate that I know of. It is generally admitted that it may be more. Some think considerably more.

So, I reached the conclusion as to what my duty was and I do not hesitate to try to carry it out.

I want to mention that I am getting the actual facts together that will have a bearing on this issue.

It is said that we are going to get men who will take volunteer courses to carry out this policy.

We are at war now, Mr. President, and I want it to end; but I do not favor just pulling out, regardless.

The amendment would increase the pay of an E2, which is the corporal level, $160 a month.

My commonsense tells me that that is not going to get the men to do the job that we are involved in now. We are already in war.

I am going to show the full facts from authenticated official figures before the debate is over. But as a preliminary matter, the riflemen in Vietnam represent 16 percent of the Army in Vietnam. But they took 54 percent of the casualties.

When we add the mortarmen and the tank helpers that go along with the riflemen, they constitute only 22 percent of the Army in Vietnam. But they took 67 percent of the casualties in the fiscal year 1970.

Those are official figures in Vietnam.

Can we argue here that we are going to get men to volunteer for a $160 a month increase in pay to go into a situation like that? I do not think so. At least, the matter should be weighed more than it can be here on the Senate floor.

I am going to develop these figures more at length. They are not classified. They show what we are up against.

Those are just some of the matters that come to my mind more readily that have a direct bearing.

The volunteer army may be all right once the shooting is over. I do not just condemn everything about it, but I think personally that it will be many years before it would work.

Those who sponsor the call lay down certain necessary transition steps to take. I am talking now about the President of the United States. He is the man who sponsors the call.

Mr. Laird in a recent letter to me in response to a request I made for his ideas on this amendment said:

> This amendment assumes the termination of the draft legislation in July, 1971. I am convinced that the military manpower need will require the continuation of the draft beyond that date.
>
> I point out that the President in his April 23, 1970, message to Congress stated that steps to reduce the draft call to zero, increase the number of volunteers, and to end the draft system should be initiated subject to overriding considerations of national security.
>
> In stating his position, the President provided three safeguards in proposing the termination of the draft.
>
> First, the draft could not be ended all at once. There must be a phase-out of the system in order to secure maintenance of our defense posture in each step.
>
> Second, it would be necessary to extend the induction authority beyond July 1, 1971.
>
> Third, as reliance on the draft is decreased, a standby draft mechanism for emergency use should be developed.
>
> The amendment does not provide for these essential safeguards.

This is the President speaking and not the Senator from Mississippi.

I continue to read:

I will develop this later. I want to bring out now some of the major things that this amendment does, and would do, contrary to the recommendations of the President of the United States. He is, of course, the one whose opinion carries weight. Even though some might have suggested it before he did, the President is still the real father of this proposal. So, those points will have to be debated and argued.

I call on those who sponsor the amendment to give some solid, sound reasons to show why the President is wrong, where he is in error, and where he cannot sustain these reasons that he gives.

Let us not refer to the Commission. I have great respect for the Commission. The responsibility of that Commission was over when its report was filed. They are eminent men. They did the best they could.

I know some of them and I respect those that I know and I respect the reputation of all of them. But I doubt that they talked to a GI since World War II. I doubt that they have talked to any GI concerning the things he thinks about since World War II. That was a long time ago. Maybe some of them did. I hope that they did. It sounds kind of like a remote proposition.

Mr. President, I think the President of the United States has had more contact by far—I know he has—than any of the Commission members have within the last few years with this problem. Those are some of the things in the background of my mind.

I want to identify the statement of the President to which I have referred. It was a message from the President relative to reforming the draft system, 91st Congress, second session, April 23, 1970. That was referred to our committee. There were hearings. As I have said, I am not trying to kill the whole concept of a volunteer army.

The thing that I have been concerned about in the hearings has primarily concerned the extension of the draft, which I think is absolutely necessary. It expires by operation of law next June 30.

This matter came up last December after the House had passed an amendment providing for what we call the lottery system. There was a feeling and a sentiment in the Senate that, when that matter came to the floor, it would have a lot of amendments tied to it. It was already about November, as I recall.

I felt certain that, if there were a lot of amendments, the matter would not pass in conference.

I favored the so-called lottery system. I remember that we talked to the leader about it. However, skipping over all of those things, there was an understanding that, if the amendment that the House had passed was permitted to come to the floor and not be amended, that in early 1970, this year, our committee could

start hearings on the proposition of the extension of the Selective Service Act. That was agreed to. I agreed to that, and the bill came on the floor and was passed without the scintilla of amendment. It became law. The President got his request on that matter. I think as a whole that it has operated all right.

Mr. President, I want those Senators who are present to listen to this. We were back in session in January and February. General Hershey was retired and a new draft Selective Service man was to be selected.

Mr. President, I will go back just a little. As early as last fall when this agreement was had we had a man in Selective Service assigned to the preparation of these hearings. Mr. Braswell, our Chief of Staff, worked with him during that preparation, and they made a lot of headway getting ready for these hearings that I planned to hold.

They had to have a head of Selective Service. Without recalling names, several persons were discussed and it took a good while. Finally, Mr. Tarr was selected. I thought he was an outstanding choice. He was approved and he went into the matter with his sleeves rolled up. I said, "What about hearings?" He said, "Please give me time." I thought he was entitled to it.

We called on the White House for a bill on Selective Service extension and they had to work on it a good deal but they got it together. However, time was running all the while and we had to start our hearings on this massive bill that is now before the Senate.

I made some effort and thought a lot about the appointment of a subcommittee for hearings on the Selective Service. It is a sticky subject. I just never did get to the selection of that committee. I am thinking now in terms of the Selective Service Act.

In the meantime discussion about the volunteer army came up, and that report was filed in late April. I recall that Mr. Gates came by my office and talked about it before they filed it. In my mind, and I know everyone agreed with me, the Selective Service hearings would bring up the subject of the volunteer army.

I never dreamed that, with the exception of some opposition, the proposal would be not to have Selective Service continue. The war was still on. According to the President's plan, it would probably continue a while, and the President himself was saying all the time, "We have to have a transition and I have to have an extension of this Selective Service."

The Senator from Massachusetts had been in favor of hearings early, and he continued to be in favor of them. I conferred with him from time to time. We got into this massive bill, and we had subcommittees running day and night. They held hearings. That has already been described.

This is a huge bill and we had witnesses of all kinds. We finally got to the markup of the bill and we spent 2 weeks on that. Then, there was the campus unrest and everything else going on by then. That loomed pretty large in my mind about opening those hearings then. It was not the proper time to get at it in that atmosphere. I wish to be frank about the matter. I knew the House would not start hearings unless it was after the election. That is part of life, running for reelection. We had men running for reelection, too. That added to the problem. It was not reason enough, but it was part of the picture.

Anyway, I always thought we should have hearings as soon as we could. I was prepared for them. I expected and really wanted the volunteer army matter to come in with the hearings and as part of those hearings. I still think the only logical way to hold hearings is to have the hearings on the extension of Selective Service.

Am I impinging on anyone's time?

Mr. MANSFIELD. No.

Mr. STENNIS. Then, we could take up the volunteer army as maybe a segment of those hearings, as soon as we get this bill off the floor, whenever that is, and subject to the necessary duties our committee will have and that many members of the committee will have in conference on this bill, which I hope will be short. This is the very matter I expect our committee to take up next, and I am talking about in the year 1970.

It is a matter of making room for other things that will be coming along. I want to get Selective Service hearings started in 1970, and that will include this volunteer army concept. We will get the views of the Secretary of Defense and anybody else in official life, and outside witnesses. We will be churning along on this matter because we are already ready on the Selective Service part.

Now, I stated a moment ago the White House sent down its proposals. I am reminded now that it was limited to giving the President discretion in this student deferment and a change in the quota system. We do not yet have an actual bill for extension of Selective Service from the administration. We have several proposals from Senators, one of them being rather long. We have bills for the volunteer army. However, we do not yet have an actual bill on Selective Service extension as a whole, although we know about what it will contain. We know the problems that go with it and that have been worked on.

If we can get this bill off the floor and subject, as I said, to the situation with respect to the conference, the hearings on Selective Service and also the volunteer army will be the next order of business.

I revert to what I started to say in the beginning, to outline the matter briefly, about the matter being pressed for passage here as a part of procurement for the military services. I do not blame anyone, but I think before it is passed the facts should be before the membership in the best way we can get the facts under the circumstances. I am getting together all those facts, as are other Senators, and we are trying to draw these issues as well as we can.

I warn the membership of this body that we are running far, far ahead of time; we are running away with the recommendations of the President. It seems to me we are closing our eyes to the war that is going on in Vietnam. Unfortunately, I think it will continue for some time under the policy of the President, which I am supporting.

Now, to come in here contrary to his recommendations and his wishes and pick this thing up off the floor without really a chance to develop all the facts and put it on such an important bill, a bill that must pass this year because they cannot make appropriations until this bill passes, I think is a highly unwise thing to do. I think it would cause harm; I think it is unsound. I think it would seriously jeopardize our security—not some alliance; I am not thinking about some obligation we have on the other side of the world.

I am thinking about the security of our Nation, our people. I am concerned about the war we are already in. It is on the other side of the world. I feel a precipitate withdrawal there would cause us far more trouble in the future than we are in now. There is a difference of opinion on that.

I think we have to meet these facts as they are, rather than as we would like them to be.

Whatever merit the proposal has, it ought to stand on its own rather than be brought in here as a part of this bill. I will oppose it to the utmost for the reasons I have given.

Mr. President, that states, in brief form, the reasons I have in asking for more time to gather the facts and debate this amendment.

I yield the floor.

Mr. GOLDWATER. Mr. President, I have no intention now, or ever in the future, of debating with my chairman. I hold him in as high a respect and admiration as I do any man that I know in this world. I am not going to dispute anything that he said, because he speaks from years of accumulated wisdom, far superior to mine.

I would, however, like to reemphasize several things I said yesterday. While they might be termed "rebuttal," they are not; they are just a restatement of this amendment because I happen to be one of the cosponsors.

First of all, this amendment does not repeal the draft. I want to make that abundantly clear. The draft ends automatically the end of June, 1971. If the Congress wants to renew the draft, it can do it; but this amendment has nothing to do with July 1 or June 30, 1971.

I like to think of this proposal as I used to think of a promotion when I was in business. If I had an idea to advertise, to attempt to get more customers or keep customers, I did not spring it overnight. I would sort of urge them on, entice them, you might say. I think that is something this measure does. Before we can ever talk about a voluntary military, we have to let the troops know that they are going to get more money, they are going to get more fringe benefits; and I do not think the time to do that is July 1. I think we should pay it to them now, so that they can be thinking about it, and think, "Well, by golly, maybe the grass is greener in my uniform than it is going to be in my backyard at home, looking for a job."

The pay increases, the fringe increases,

are, to me, the real meat of the Gates Commission report.

We have raised the pay of the military several times in the last few years, but I do not think anybody can say that the military pay, particularly in the lower enlisted grades and the lower officer grades, would be enticing enough to anybody to say, "I want to be a soldier." Yes, there are many young men in this country who look forward to wearing the uniform, and they do not care about the pay, just as we have many young men in this country who are going to become ministers and do not care about the pay. We have many men in this country who engage, in many areas, in politics that are not profitable. I cannot make that same argument about the Senate and the House. Many men are going to become policemen and firemen; certainly the pay is not what attracts them to that. But whether we can get the 75,000 men a year that we need to keep a standing Army, Air Force, Navy, and Marine Corps going I think, is something we cannot gamble with. Certainly, a little more enticement is going to help.

So all this amendment really does is say, "Look, fellows, here is what you are going to get if you decide to stay in the military."

I can say that the last pay bill had a very salutary effect on the troops, and I think this one will have the same effect.

I became interested in this subject a long time ago, I think before anybody else in the country. As I said yesterday, I have spent 37 years in the Active Reserve, the Air Force, and the National Guard. In my last 5 years, when I was in the Senate, before my self-imposed sabbatical leave, I had a Mobilization Day assignment, Deputy Chief of Staff for Personnel for the Air Force. That meant that if war came, within 10 days I would put on a blue suit, march over to the Pentagon, and be a Deputy Chief of Staff for Personnel.

So I have spent a good many years in that area. I have taken whatever correspondence courses could be taken on military pay and on control of personnel.

Looking at the number of dropouts that we have every year in just the Air Force alone, young enlisted men who had spent 4 years, say, studying electronics at Keesler Air Force Base, or photography, or hydraulics, or engine maintenance, only to lose them and see them go to work for some company at a much better salary, I became convinced that we could save money by this move.

Dr. Milton Friedman is a member of the Gates Commission. I am not. He is a learned economist. I am a layman at best. But I have had quite a bit of experience in the personnel field in both civilian life and in the military. Both he and I agree that there ultimately will be a saving.

Here we are talking about what I have to confess are estimates. The Gates Commission is pretty much talking on guesses. The figures the military will use to oppose this amendment are guesses. My guess at one time was that the Air Force would save $1 billion a year if there were a proper pay scale and fringe benefit improvements and promotion improvements to entice young men into making the Air Force their career. I apply this to every other branch. Possibly in the Air Force there has to be more of an education program because we are in a little more sophisticated area than the other services find themselves in—without any reflection on the other services.

So I feel that my original motive in this matter certainly has not changed. We are not proposing to end the draft. We are merely proposing to set the foundation stones on which we can build a voluntary military service.

The question arises, what are we going to do in an emergency? What have we always done in an emergency? The Congress has passed draft laws. We had one in 1917. We had one in 1940. We had one again in 1948, and the one passed in 1948 has never been rescinded.

In the amendment that the distinguished Senator from Oregon, I, and other Senators are sponsoring, we provide for something that has never been provided for before—a real basis on which to build a working Reserve. After 37 years spent in the Reserve I think I know a little about it, perhaps not as much as some people know, but more than most people know. We have never had a universally effective Reserve force in this country, except for the ground National Guard and now the Air National Guard, and some segments of the Reserves which are active in air transport. We have never had a Reserve, for example, that could be called up. I remember back in 1939—I was then a first lieutenant in the Infantry Reserve, I think it was the 317th Brigade, though I may have forgotten it—but they called up all the officers. First of all, we had only half officer strength, and only three of us could pass the physical. That would have been a heck of a division, marching off with three officers, three first lieutenants with rifles on their shoulders. I have never seen any improvement in the Reserves since, except the National Guard, ground and air, and I would add the Navy, although I do not think the Navy, outside of the air component, could muster a real reserve force.

When I think of Reserves, I think of young men in this country up into their thirties, who have had some exposure to military training. I do not necessarily mean ROTC. I can remember the days of the Citizens Military Training Corps, that gave us many fine officers in World War II, and its training consisted of a month each year for 4 years, and then an examination, and the young man would be commissioned a second lieutenant in the Reserves.

We are turning out, contrary to what Senators might hear in the media or read in the newspapers, more Reserve officers than we ever have in the ROTC. The Air Force alone has about 140 requests from colleges that it cannot meet. The Army has about 67; I think that figure is substantially correct.

So the source of our officer strength, the ROTC, is not disappearing. We wish we had had better reception at some of the colleges where we have it, but it has not been received, and I suggest that the Pentagon take it out of all the schools that do not want it. If some of our fine eastern and western colleges do no want the ROTC, let us take it away from them and give it to some of the little schools that do want it, because frankly, I think we get a finer grade of officers from the smaller schools anyway.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. GOLDWATER. I am happy to yield to the Senator from Kentucky.

Mr. COOPER. I was interested in the Senator's point, because two colleges in my State of Kentucky have been seeking for 5 years or more to have ROTC installed in those colleges, and they have the support of both the faculty and the regents and the student body. One of them has more than 8,000 students.

Mr. GOLDWATER. I appreciate the remarks of the Senator, and I happen to know that is true, because I have seen those two schools listed among those that want to have an ROTC program, either Army, Air Force, or Navy.

But, not having had what you could really call a reserve system in this country, where we could call the troops up, except in the cases I have listed, this bill is designed to provide a starting base for a Ready Reserve. One of the ways in which that can be accomplished is that we are going to require the continued registration of every young man in the country. This does not mean he will be drafted; it just means we will have the name and address of every young man, and then we can try—we are not going to force him—but we can try to interest the young man in taking some kind of military training. I do not mean 25-mile hikes and all that business, but at least to understand what war is and why nations have to go to war sometimes, to understand the need for discipline, and to begin to understand the need for leadership.

I think we could do a pretty good job with young men of this country if we approached them on a voluntary basis and said, "Look, we have a voluntary Reserve in this country; it would be to your advantage to join it. We are going to pay you a little bit to attend drills; you are not going to get rich on it, but one thing you are going to do, you are going to know a little bit something about being a soldier or an airman or a sailor or a marine, and if it ever becomes necessary to institute the draft again, you will be called."

I think I can speak with experience greater than that of any other Member of this body who has been in the service in saying that the man who has been exposed to training is usually the man who does not get hurt. It is the man we try to make a soldier of in 6 weeks, or an airman of in 8 weeks, or a marine of in about the same time, who just does not understand it, and he is more prone to be hurt than the other men. I would use that argument with any of my grandchildren, in urging them to take some kind of military training.

Mr. KENNEDY. Mr. President, will the Senator yield at that point?

Mr. GOLDWATER. I am happy to yield.

Mr. KENNEDY. I have read some of the comments of the Senator from Arizona on this question at other times.

Just looking through the amendment, is there a provision in this amendment to require some kind of universal military training?

Mr. GOLDWATER. No.

Mr. KENNEDY. There is nothing in the amendment that would require, in any way, some sort of universal military training for all young people, even for the limited period of time of which the Senator from Arizona has spoken. Is that correct?

Mr. GOLDWATER. No; and I say to my friend from Massachusetts, moreover, that I would lead the fight against universal military training. In addition to my interest in this legislation from the point of view of thinking we could save money, there is also my concern with the rights of the people of this country. As I said yesterday, I do not think it is right for our Government to tell any young man how he is going to spend 2 or 3 or 4 years of his life.

I think we have enough young men who, if they were left alone, would meet the need for 75,000 volunteers a year. But universal military training, while it has been very effective in some countries, I just cannot fit in with the American way of life, and I say to my friend from Massachusetts that if anything like that is ever proposed here, I will be out in front, leading the fight against it.

I would propose an appeal, a very understanding appeal by the military services to the young men to associate themselves with some Reserve unit; and while I may have sounded critical here this morning of the services, we have had very little attention paid to the Reserves over the period of years that I was associated with the Reserves, which was well over half of my life. Outside of the Navy, which constantly pays attention to its Reserves, and the Air Force, which pays attention to the Reserve units that have transport assignments, and the National Guard, both ground and air, we have nothing that we can bank on in time of war.

So we have proposed, through the mechanics of this amendment, to set up a way for the services to become interested.

Mr. KENNEDY. The training the Senator was talking about, then, was in relationship to the Reserves?

Mr. GOLDWATER. That is right.

Mr. KENNEDY. Strengthening the Reserves?

Mr. GOLDWATER. The Senator is correct.

Mr. KENNEDY. I thank the Senator.

Mr. GOLDWATER. Mr. President, I have four grandsons. When they get to the appropriate age, in school, I would try to interest them in taking military training. I might go farther than some grandfathers, because I have got a lot out of it myself. I would urge joining up with a local Reserve unit that would meet, say, twice a month for 2 hours to learn about the problems of being a soldier, an airman, or a sailor. But in no way should this be mandatory or required.

My personal feeling, I might say to the Senator from Massachusetts, is that a young man is a lot better off having exposed himself to some military training. It is much like when I was a boy, all of us learned how to box. We did not do it to go around being bullies; we just did it so we could protect ourselves, and because if others knew we could box, they would put us on a list to be left alone.

This might be important to the United States; if the potential enemies of this country knew we had a Ready Reserve, ready to go, that could be called up overnight, maybe it might have a salutary effect so far as peace is concerned.

Mr. President, I did not intend to speak long on this measure at this time. I shall devote further time to it. But I hope Senators on both sides will pay close attention to this matter. The learned Senator from Mississippi has had more experience in this field than, possibly any of the rest of us.

But we think—those of us who sponsor this amendment—that now is the time to lay the groundwork. Now is the time to tell the troops around the world that we are going to pay them a little more money and that we are going to give them a little better fringe benefits. I have in mind, for example, if a man is stationed in the Mediterranean, let his wife come to the Mediterranean. If he is stationed any place that his family can go, take the family there. Make it easier for him. We do not make it impossible for our civilian employees to live overseas, but we certainly put all the rocks in the world in the road of a man going overseas in uniform.

We could improve the fringe benefits in medicine, for example. We could provide better housing where better housing does not exist now.

We are talking about a large chunk of our population. It is not going to be 3.5 million men. It is probably going to be between 2 million and 2.5 million men when Vietnam is over, or it might even be before Vietnam is over. But, still, that is a lot of people.

I witness Senators on the floor of the Senate every day shedding big crocodile tears about 100,000 people or 500,000 people who lead a tough life. Right now, 3½ million men—potentially 2½ million men—lead a tough life all the time, regardless of what they are paid. When a man is risking his life and defending the rest of this country and the free world, I do not think one can put a dollar sign on it.

So it is something we have to be serious about and considerate about—all the things I have mentioned and many, many more.

Mr. President, I hope that we have a long debate on this matter. I think it will help the country to understand what we are trying to do and to understand what I think we will have to do.

Mr. ERVIN. Mr. President, will the able and distinguished senior Senator from Arizona yield for several questions?

Mr. GOLDWATER. I yield, but I should like to remind the Senator that I am the junior Senator. I am one of the oldest junior Senators in the Senate. [Laughter.]

Mr. ERVIN. I would say, if the Senator from Arizona would permit me to do so, that the seniority in experience of the very distinguished junior Senator from Arizona has conferred upon him great wisdom.

My questions are these:

First, does not the Senator from Arizona think that every man has the same duties to his nation that all other men have?

Mr. GOLDWATER. I agree with the Senator. I feel that way. But I do not think we should force that service on a man, unless we are in times of real emergency, when we have to get 10 or 12 million men into uniform.

Mr. ERVIN. Does not the Senator from Arizona agree with the Senator from North Carolina that service in the Armed Forces of the Nation has a tendency to make a man understand more clearly his duties to his country and to value his country more highly?

Mr. GOLDWATER. I could not agree more with the Senator from North Carolina. He is a distinguished veteran himself and wears one of the highest decorations this country gives.

I know of very few men who have served in the military services who have ever turned against their country. A few, yes. But, on the whole, they not only come out of this experience with a greater regard for their country but a better understanding of their country as well. In addition, they come out of it with a distinct, clear understanding of the need for leadership—and we have too little of it in this country today—and the need for discipline. I do not mean the kind of discipline of clicking heels or popping to a salute. I mean the discipline that we do not find today—the discipline of respect, the discipline of time, the discipline of work.

If I had my life to live over again—I have said this often—I probably would have taken my appointment to West Point, and I would either be a general today or I would be dead; but I would have enjoyed my life a great deal more.

Mr. ERVIN. I know it to be true that the distinguished Senator from Arizona. nothwithstanding the fact that he did not make of himself a professional soldier, has devoted a large part of his time and his energy to serving his country in the armed forces—and even in times of peace, in the Reserves of the United States. I think he merits the commendation of our Nation for having so conducted himself.

I should like to ask the Senator from Arizona if he does not agree with the Senator from North Carolina that, if the financial status of the Federal Government permitted, it would be highly desirable for the Federal Government to require every young man to receive training in the armed services of the Nation for a limited period of time, and if he does not agree with the Senator from North Carolina that such a policy would ultimately promote the health of the Nation as well as better citizenship in the Nation.

Mr. GOLDWATER. I might say to my friend that I have always said that there are two things a man has to do—he has to pay taxes and he has to defend his country. I would not agree that, even if the Federal Government could afford it, we should force an unwilling young man to take military training. I think it would be to his advantage. But he might disagree.

In answer to a question from the distinguished Senator from Massachusetts, I said that I would not favor universal military training, because one of the two major premises that I stand on in relation to this amendment is that I do not think the Federal Government has the right to tell any man or woman how they are going to spend 3 or 4 years of their life. This is in regard to the young man who does not want to be drafted or does not want to be a voluntary member of the military. I think it would be to his advantage to take this training, but I could not back the type of universal training that it would take to do what the Senator thinks is wise, even though I think the training would be wise.

Mr. ERVIN. Does not the Senator from Arizona concede that a very good case can be made for the proposition that it is just as fair to depend on voluntary taxpayers for the support of the U.S. Government as it is to depend solely upon volunteers for furnishing the manpower for our armed services?

Mr. GOLDWATER. The Senator makes a very interesting point. I am afraid that if we had voluntary taxpaying, we would not raise a great deal of money. But I am not worried about depending upon the young men of this country to provide a voluntary military force.

Keep in mind that I am talking about the normal times in which we hope to live. I am not talking about World War I or World War II or—well, I do not like to use Korea, but even Vietnam. Had we had a voluntary military, I think that we would have been able to fill all the slots needed in a war the size of Vietnam had we fought that war the way we should have fought it. I do not happen to agree that under the direction of Secretary McNamara or President Johnson, this war was fought in a proper way. But that is beside the point. So while I am very much interested in becoming a voluntary taxpayer—something I do not believe we will ever see—I do not believe we can compare the two, enticing as that might be.

Mr. ERVIN. I would certainly agree with my distinguished friend from Arizona that the conflict in Vietnam has not been fought in the proper way. I would be inclined to the opinion that the same observation could be made with respect to the Korean episode. I have always been convinced that those civilians who have the ultimate charge of our military forces would be intellectually enabled to serve their country in troublous time in a more effective manner if they would pay less attention to trying to find out a concensus of opinion and would spend more time reading the advice which Polonius gave to his son, Laertes, on the occasion when the latter was about to journey from Denmark to Paris. In substance, Polonius told Laertes, "Beware of entrance into a quarrel, but once in it, so bear thyself that the enemy will beware of thee."

I say with the firm conviction of the correctness of my assertion that if the civilian authorities had permitted the military to take charge of the situation in South Vietnam, the military would have won this war 3 or 4 years ago.

I cannot help confessing another abiding conviction, that a nation can never justify sending its boys into battle to die in a war it does not permit them to win.

I want to thank the distinguished Senator from Arizona for his courtesy in yielding to me. I rejoice in the fact that he and I ordinarily share kindred views on military subjects, even though my views in respect to the pending amendment prevent me from voting for it.

Mr. GOLDWATER. I thank the distinguished Senator from North Carolina with whom I have served in such a delightful way for many years. It is true that we do not agree on this question, but I would hope that the Senator would lend his judgment to it as we go along. I certainly agree with the remarks he just made. The observation made after the fall of Dienbienphu, that the French did not lose Dienbienphu in Vietnam, they lost it in Paris, is precisely what is happening in America today.

If we lose the war in Vietnam, we will have lost it in New York and Washington. We will have lost it through the distortions made by the news media regarding the war and what it does.

I have said time and again that had we made up our minds to win the war in Vietnam at the same moment we went into it, the war might not even have started, because any nation facing up to the fact that they would be opposed by the greatest power on earth, by the naval and air forces of the United States, I do not think they would choose to fight.

I suggest, as distasteful as it might seem, this is one of the instruments of national policy which this country has never understood.

I do not believe that World War II would have occurred had the United States been armed and prepared and had Germany known that a foot on Poland, or a foot on England would also mean a foot on the United States.

Mr. President, it is unfortunately true that peace is kept only through power. I wish it were not so. I hope that my grandchildren will live to see the day when peace in the world will be kept because of the goodness in men's hearts and minds and not their evil.

Mr. ERVIN. Mr. President, if the Senator will permit me one more observation, without losing his right to the floor, I should like to state as an abiding conviction that when statesmen or politicians, or whatever we may call them, fail to such an extent that war comes, they should take a back seat and allow the military men, who have been especially trained to wage war, to direct the actual tactics in the area where the war is being waged.

Mr. GOLDWATER. The Senator is absolutely correct. There is not one single instance in history that will not back him up. It is unfortunate, but it is true.

Mr. President, I yield the floor.

Mr. DOMINICK. Mr. President, continuing this dialog on the voluntary Army concept which has been proposed by the Senator from Oregon (Mr. HATFIELD) and cosponsored by the Senator from Arizona (Mr. GOLDWATER) and other Senators, I want to make some comments at this time concerning the dilemmas in which we find ourselves.

I have had an opportunity to read the Gates report and to read the proposed amendment. I have been in favor of a voluntary Army, and have made speeches on the subject, for at least 5 years.

The question obviously becomes filled with emotion when we think of the deep resentment people feel around the country, be they young or old, over the arbitrary selection caused by the draft laws.

The other day, I had the opportunity to talk to people in the Defense Department and to talk to some people, impartial civilians, looking into the subject; and almost everyone agrees, so far as I can see at this time, that any draft law which drafts less than all the people must, of necessity, be inequitable. There is no possibility of making it operate evenly, because we are going to select certain people and make them do things which we are not going to make others do.

It is also obvious that the country and the taxpayers, cannot possibly afford any kind of uniform service law, where everyone is required to serve for a stated length of time whether we are at war or peace. I am not sure that it would be right anyhow, for reasons which the Senator from Arizona (Mr. GOLDWATER) just stated.

Then we have the other situation, when we are at war, whether declared or undeclared. Many Americans have been killed and many Americans are still in Vietnam. In an unpopular war of this kind can we maintain the necessary forces to complete the President programs if the draft is dropped? What we are looking at is not the situation we were faced with as this administration came into office, but what the situation will be in Asia and the rest of the world after July 1, 1971. Hence, we will try to determine what kind and what categories of personnel will be needed to provide security for this country.

According to the President's announcements which have already been made public, our armed services in Southeast Asia, as of May 1, 1971, will be about 240,000 troops as compared to 540,000 in January of 1969.

Many of these troops will be logistic forces—communications, supply troops, and so forth. Some of them will be artillery. Some of them, obviously, will be ordinary infantry, defending whatever bases and depots we have still there.

No one knows now what the situation will be 3 months later, whether we will be reducing the number of troops still further—which we all earnestly hope we will be—or whether by that time we will have reached some kind of agreement with North Vietnam which will enable us to get out even more rapidly.

In looking around the rest of the world outside of Southeast Asia, where else are we liable to be using troops in ground infantry action? It is very difficult to see where this would happen except perhaps in Western Europe in the event the Soviets decide to heat up that area.

We have had some 350,000 troops, members of the armed services, in Europe for 25 years. For the life of me I have

been unable to understand why we have done this. For the life of me I have been unable to understand why the United States should use its own forces in the area of Western Europe, which is economically and, from the point of view of manpower, better able to protect itself than is any other area that I know of around the world.

It makes no sense to me. Over and over again I have joined with the Senator from Montana (Mr. MANSFIELD) in urging that we have a very substantial reduction of forces in that area.

In the Mideast fortunately, and through the very fine activities of our Secretary of State and President, we have at least a tenuous cease-fire. We hope that we will be able to move from that into further negotiations for a permanent peace in that troubled region.

Mr. PERCY. Mr. President, would the Senator yield for a comment on that point concerning his comments on the European forces?

Mr. DOMINICK. I am very happy to yield to the distinguished Senator from Illinois.

Mr. PERCY. Mr. President, I think the distinguished Senator's comment is most pertinent. I can well understand why Europe would want to have more than 500,000 Americans in Europe today, more than we have actually in Vietnam. They are there as hostages. In the event western Europe should be attacked, we will be there.

What I cannot understand is their reluctance in the past to bear their fair share of the cost of troops needed for a common defense. This, I think, has been ludicrous and I think it is a scandal that in years past we have not said, "If you want us here, the least you can do with your high level of prosperity is to pay a fairer share of the costs involved."

These countries now recognize that they must pay a fairer share. The question is how much. I think we are some ways apart in what we think is a fair share.

The point the Senator makes is very well taken. It has been an unfair situation. I have talked with officials who helped create NATO. They never envisioned that we would, 25 years later, have troops in Europe to the present extent and bear the present level of expense.

I thank the Senator for yielding.

Mr. DOMINICK. Mr. President, I thank my friend, the Senator from Illinois. The points he has made are very accurate. Not only have they not paid for the costs of our troops, but also they have not fulfilled their own NATO commitments. As a matter of fact, one of our NATO allies, France, has thrown us out and required that we be in another country.

Apparently the whole complex was developed from the idea that we might be facing a threat from Eastern Europe. I think that is still a possibility. But one country that has been urging us to keep our forces there Western Germany has now reached a nonaggression treaty with the Soviet Union. I do not know that it is worth anything but if it is this further emphasizes the desirability of removing our troops from there. We can meet our commitments to NATO by airlift. We can bring our troops back in. We have no desire to go back on our commitments.

The point I make is that 1.25 million volunteers are in the armed services. Some 800,000 additional men are volunteers in their first term of service. If we have this capability now in this country, do we in fact need to further extend this draft situation which can be nothing but inequitable, no matter how we look at it?

The major argument in favor of it is that we cannot get troops for the "nitty-gritty" ground combat. People are enlisting in other specialities. They will volunteer to be pilots or to go on Navy ships. They will enlist for the electronics field or communications. But we do not find many people enlisting for ground infantry action.

This is a problem and the question is how do we solve it.

Again, we have to look at where we will use troops of this kind in the future. What is the immediate threat which would create a need for drafting a number of troops of this kind?

It is hard, frankly, to see the realism behind it.

We now have a proposal to reduce our overall services to 2.9 million from about 3.5 million. But for each troop we put into combat, for each flier, for each Navy combat person, or for each marine we have more backup support troops than any other country in the world. I think it is somewhere in the neighborhood of 11 to 13 or something of that number for each person who actually conducts any fighting. I am not sure of the exact figure, but it is very, very high.

We do not need to go in this Cadillac form if we are engaged in a war which involves the security of the United States.

We need to give the necessary support pay and recompense to the actual people who are engaged in this as a career, yes. But do we need an overall force of this size—2.9 million persons?

My own thinking is that we do not as long as we have a method of calling up large masses of people if we find ourselves in a very serious problem, as well as keeping a strong Reserve and National Guard force.

We can reduce the Regular Army by a considerable amount of personnel. These points seem to militate in favor of this amendment and in favor of a volunteer army and dropping the draft as of July.

The things that we cannot envisage right now concern the defects that would turn up if we were to have rather extensive hearings on this matter next year.

Does this amendment which we have under discussion in fact provide the proper amount in order to be able to make a high-class volunteer army more practicable?

How much additional training allowance or pay will we have to have in order to get combat troops in the infantry?

Why are the Marines able to fill their lists with volunteers while the Army infantry cannot. Is there that much difference in their fighting roles, or their pay and allowances or their service living conditions? Or is it the method of recruiting or the allure of the Marine morale? These questions need to be examined.

What are the policy problems of the future with respect to the actual use of troops?

Will we have to find ourselves in the Cuban area, for example?

Strong intelligence indications that have recently come to light show that the Cuban problem, far from getting better, is getting worse. They are stronger militarily, their missile capability is getting better, and their nuclear capability is being increased.

There is at the present time one nuclear noncritical plant in operation used for peaceful purposes. It is my understanding that another one is proposed for 1971 or 1972 which is a critical mass type nuclear plant.

Every Cuban working in it has been trained in the Soviet Union. There are continued reports from Cuban intelligence that missiles are in the country. What is going to happen in Western Europe? Is there going to be an agreement which will calm down some of the tensions which have existed in that area? Are we going to be able to stay out of the Middle East or find ourselves engaged there, God forbid, in a more direct way?

These are all problems we are going to have to wrestle with in determining what we are going to do in connection with this amendment. I am frank to say I have not made up my mind. Are we being premature in taking the amendment up at this time or is it necessary to get started on it now, as has been suggested by the Senator from Arizona and the Senator from Oregon so we can test it out in the intervening 6 or 8 months prior to the time the draft expires and comes up for renewal? It is a most perplexing and difficult problem and it is one that should be examined at this time.

We have been wrestling with other problems that are difficult but we have not been wrestling so much in connection with problems which affect the welfare of so many of our young people, as well as those who are enjoying the luxuries and freedoms we have in our Nation. I have not made up my mind on what to do about this matter, but I hope before the final vote we would have some debate, some discussion, and open remarks as to what our policy position may be around the world within the next 2 years, because it is within those 2 years that I feel this voluntary Army versus the draft situation will be most critical.

Mr. HATFIELD. Mr. President, I am grateful to the distinguished Senator from Colorado and Senators who have engaged in this colloquy today on the subject which we intend to lay before the Senate very shortly, namely, amendment No. 844.

Mr. President, Before I make any further comments, I ask unanimous consent that the name of the distinguished junior Senator from Illinois (Mr. SMITH) be added as a cosponsor of the amendment.

The PRESIDING OFFICER (Mr. EAGLETON). Without objection, it is so ordered.

Mr. HATFIELD. Mr. President, the

very able Senator from Colorado has just addressed himself to some of the most fundamental points we are concerned with in the overall manpower procurement responsibility that we in Congress have, a responsibility to enact legislation that will provide our military organization with sufficient manpower to meet not only domestic defense needs of this Nation, but to implement our foreign policy as well. I am pleased that the Senator touched on these important points of foreign policy which depend on an adequate military force to carry them out and to implement them.

I shall make only one or two points this morning because when we call up the amendment we will go into other arguments and debate on the matter.

The question has been raised this morning by the distinguished chairman of the Committee on Armed Services, the Senator from Mississippi (Mr. STENNIS), about the cost of an all-volunteer military. The distinguished Senator from Mississippi has used the figure $4 billion as the cost which would be required to implement an all-volunteer system.

I would like to quote from the same letter from the Secretary of Defense, Mr. Laird, who indicated that there is not today in the Pentagon a real basic set of data on which to compute accurately an exact cost. I would add further that the Gates Commission report, on page 7, indicated that with the basic pay increase, proficiency pay, Reserve pay increase, additional Medical Corps expense, recruiting, ROTC, and miscellaneous, the figure would come to $3.24 billion.

Mr. President, I wish to emphasize very carefully this morning that it costs approximately $6,000 to train a soldier. Today we have draftees coming into our military program under what we call a mixed force; namely, we have volunteers, and we have those volunteers who volunteer to avoid conscription, and we have draftees. When one considers we have a 92 percent to 95 percent turnover rate within our draftee group, I think it is very apparent that we are expending a great deal of taxpayer money to train people to a point where, at about the time they become proficient, they are out of the service.

The Navy has indicated that it is believed the No. 1 problem they face today is what they call "personal turbulence," and that is simply another word for turnover rate. That is in a branch of service in which there is today an all-volunteer recruitment program. Some of those volunteers are not true volunteers; they are enlisting to avoid the draft. The point is that even in enlisted situations there is this high turnover rate.

We are expending over $3 billion for the training of draftees. Our present system is costing us over $3 billion and I am saying, and my cosponsors believe, if we accept these figures—and they are very general and I do not purport to say they can be computed to the exact dollar or perhaps even millions of dollars—if for the moment we accept the $4 billion figure given by the chairman of the Committee on Armed Services, that the all-volunteer system would cost us, I would point out that it costs us over $4 billion to maintain the coercive nonvoluntary draft program.

When one considers the two figures, it is obvious that by reducing the turnover rate under a voluntary system, we would receive far more in return for our $4 billion in an all-volunteer force than we get from $4 billion in a draft mix system.

Further, we have the support of a very important committee appointed by President Eisenhower in 1957, which was headed by Ralph Cordinier. The report became known as the Cordinier report, and I would like to quote from that document.

It was estimated at that time, and this goes back to 1957, so if anything the figures would be increased as they apply to the situation today, 10 percent of the military force is engaged in training new recruits.

When one considers that by instituting an all-volunteer system, under the best calculations which have been given us, we would release a number of people today who are involved in a constant training program; and that is estimated at a 3-percent reduction in personnel for training purposes. If one considers a 2.65 training level, as the Cordinier report referred to at that time, that would mean 79,500 personnel could be released from the entire time they have to give to training, for other military assignments.

The Gates Commission states that when you take the present accession and other recruitment programs, we have about 250 million true recruits or enlistees; and on that basis, out of the 325,000 that go in as "new" each year we would have to have only 75,000 additional new enlistees to have an all-volunteer system.

When one considers the savings that could be made in manpower alone in an all-volunteer system in the area of training, it is obvious we would not have to pick up a great number more men than are voluntarily enlisting without the pressure of the draft.

The question has been raised this morning also as to the matter of whether all young men have a duty to perform to their country and whether that duty can only be performed through military service.

I would like to say that I speak as a combat veteran of World War II. I feel that the experience I had in the Navy was a very excellent experience. At the same time, I do not believe that, because I was privileged to serve in the Navy in World War II, fighting for my country, I should assume I have a higher degree of citizenship than any person who was not able to serve in the Armed Services, as many of my friends with whom I had attended the university were denied entrance into the military service, when they were seeking to serve. It was excellent for me, but, by the same token, I do not believe it gives me an extra badge of citizenship that is denied those who were not in the military service.

Furthermore, as I indicated yesterday, when we talk about serving our country, we should not restrict our thinking to believing that the only way to serve our country is through serving in a military uniform. I think that is one way of serving one's country, but I think there are many other ways one serves his country. I would hate to think that we would restrict our thinking, in discussing the amendment, to the thought that only young men in uniform are rendering a service that is looked upon as doing one's duty to his country.

Mr. KENNEDY. Mr. President, will the Senator yield for a brief observation, and then I should like to ask him some questions.

Mr. HATFIELD. I yield.

Mr. KENNEDY. Mr. President, I will support a volunteer Army in peacetime. But when, as now, battlefield casualties are high I do not believe a volunteer Army is either equitable or wise.

In my view, it is inequitable to permit the risks of battle to fall only on those less affluent Americans who are induced to join the Army by a pay raise. And it is unwise to insulate from the horrors of war middle- and upper-class Americans who might lead the protest against senseless foreign adventures.

I recognize that the present draft system has many of the defects of a voluntary system. But the draft can be made more equitable, as I have fought to do for years. The volunteer Army is inherently inequitable.

There are some who argue that we never would have become involved in a large scale war in Indochina, if it were not for the draft. This is sheer speculation. The one certain fact is that we are in Indochina now, and that the process for determining who will serve there should be a fair one.

Some suggest that if the draft were ended, American involvement in Indochina would have to come grinding to a halt. This, of course, directly contradicts the finding of the Gates Commission that our military manpower needs could be met by an all-volunteer force. In any event, if the Congress wishes to end the war, it can do so by legislation directly aimed at that goal.

Finally, I note that the cost of the Hatfield amendment for this year is at least $3.2 billion dollars. When we have such pressing budgetary problems and domestic needs, I sharply question whether a volunteer Army, even if desirable, should rank so high on our list of national priorities.

I would now like to ask the Senator from Oregon how his cost figures are related to the level of unemployment?

Mr. HATFIELD. In reply to my friend and colleague, the figures that I quoted included unemployment.

Mr. KENNEDY. What level of unemployment?

Mr. HATFIELD. Is the Senator referring to the Cordinier report?

Mr. KENNEDY. I am familiar with the figures in that report. I am referring to present estimates of the cost of a volunteer army under the Senator's amendment.

Mr. HATFIELD. The $3.2 billion under the Gates Commission finding?

Mr. KENNEDY. Yes. It has been some time since the Gates Commission report was made. Unemployment has increased

since that report. It has actually doubled. How does the Senator think that fact affects the cost of his proposed program?

Mr. HATFIELD. The Senator is quite correct in saying that the figures on unemployment are changing, but as far as the report is concerned, unemployment was approximately 5 percent at that time.

Mr. KENNEDY. So the cost of the Senator's proposed program is based on an unemployment figure of 5 percent?

Mr. HATFIELD. Yes.

Mr. KENNEDY. How does it vary as unemployment varies? Of course, this matter was developed quite completely in a Defense Department report and lead to extraordinary estimates on the cost of a volunteer Army, ranging from about $4 or $5 or $6 billion up to $17 billion, as I remember. The cost was very closely related to the unemployment question.

Has the Senator any information now which would suggest that, under his amendment, there would be a difference in cost if there were a reduction in the unemployment rate or a rise in the unemployment rate over the period of the next 2 years?

Mr. HATFIELD. The figures we are using at this time are on the basis of the finding in the Gates Commission report, which was based on an unemployment figure of approximately 5 percent, as I have said. As far as the total cost is concerned, we must realize that we are dealing here with certain variants—the size of the military force we are going to base it on, whether it be 2.5 million or 2.6 million, and the fact that we must include in this estimate anticipated savings, following the recommendations of the Gates Commission, which among other recommendations, would transfer certain present military duties to civilian jobs.

Mr. KENNEDY. That is being done at the present time, as I understand.

Mr. HATFIELD. That action has been taken in certain instances.

Mr. KENNEDY. Nothing currently prohibits the military from moving in that direction in a more extensive way, or even recruiting civilians for clerk and typist jobs, for example.

Mr. HATFIELD. There is no prohibition. The point is that we would be calling upon the military, by action of the Congress, to accelerate that program or policy.

We do go into other cost factors, for example, transportation. It is estimated by the Gates Commission that we would save a minimum of $68 million in transportation, on the basis of a lesser call for transporting recruits or inductees from one place to another.

In the field of training and administration, the estimated reduction in the cost of such programs is $675 million.

In the area of what they call civilianization, or the very point we were just discussing, moving further in the direction of providing civilian personnel with responsibilities now being performed by military personnel, the estimate is that there would be a saving in cost of $100 million.

Then, as far as the impact upon the general economy is concerned, there is a very interesting figure, which I am sure the Senator from Massachusetts is aware is an element in the cost calculation, and that is the loss of productivity to society by men trying to avoid the draft. We are losing a great resource in this country, as the Senator knows, as a result of a sizable number of people—it is up to 60,000—moving out of the country to escape the draft. And it is estimated that over 30,000 men have now refused induction. Others are in colleges and universities in an attempt to avoid the draft. This has resulted in an increased cost of education for people who are not really seeking an education or who are qualified to receive it, but are there for the single purpose of avoiding the draft. That is a difficult figure to state in specific terms, but it is estimated that the saving could reach as high as $3 billion, and that, of course, would have another great impact on our economy.

So I think all these factors must be considered when we consider the cost of a volunteer system versus a coercive system, and what it means in the long run.

As I indicated yesterday, I may add to my comments to the Senator from Massachusetts, the real cost of this program under a volunteer system would not be any more than the present cost. By that I mean that the present costs are being borne not just by the taxpayer, who should bear all the costs for the defense of this country, but by the requirement that we are placing upon the shoulders of our servicemen to subsidize their own military service because of the noncomparability of the pay scale they are receiving when contrasted to what they could earn in civilian life.

John Kenneth Galbraith called this "the patriotic tax," Dr. Oi called it "the hidden tax." Whatever you call it, it is still there.

Therefore, when we consider or talk about an all-volunteer system in terms of dollars, it really is not going to cost, in real dollars, more money. It means only that we are going to send the bill to the taxpayer, rather than requiring the young men to subsidize their own service.

Mr. KENNEDY. Those same savings in cost would have existed in Australia, when they instituted the volunteer army system, would they not?

Mr. HATFIELD. I am sure in some degree. Perhaps not to the same magnitude.

Mr. KENNEDY. But all the different cost-saving elements, lower administrative overhead and the others which the Senator has mentioned, were there perhaps, in some varying degree.

Mr. HATFIELD. Let me interrupt the Senator at that point. When the Australians moved from one type of system to another, they did not include any additional incentives, as we are doing, so we could not make quite the direct comparison the Senator is attempting to make between the two countries.

Mr. KENNEDY. They had some modification, did they not, in pay scales?

Mr. HATFIELD. No significant modification.

Mr. KENNEDY. Well, one can question whether the pay scales included in the Senator's amendment are going to be significant enough and sufficiently attractive to young people to induce them to participate in our involvement in Southeast Asia.

I understand that in the Australian experience, the principal consideration was the unemployment question. When they instituted the volunteer army, they had relatively high unemployment. As soon as that unemployment was met with economic expansion, the bottom, effectively, fell out of the whole volunteer army system in Australia. The Australian experience does not suggest that we should expect any savings from a volunteer army.

I wonder if the Senator would reveal to us any information he has about other industrial countries that have tried to introduce this system and tell what additional savings have been made with the institution of volunteer armies. Because I suspect the record of other countries that have attempted it has not been quite as sanguine as my colleague from Oregon suggests.

Mr. HATFIELD. I am happy to say to the Senator, in response, that I think he has posed at least two questions here. He attempts to draw an analogy to the Australian situation, and I think, upon reading the Gates Commission report, the Senator would find this is a most inappropriate analogy, and that it is not possible to draw a valid analogy between Australia and this country.

Let me quote from page 171 of the report, addressed to that very question:

> Some has cited the Australian decision to return to a draft as evidence that an all-volunteer force is not feasible for the United States. There are several reasons why this argument by analogy is inappropriate. First, the Australians have not made a concerted effort to attract additional recruits on a voluntary basis. Once the decision was made to use conscription to raise force levels, no serious effort was made to increase voluntary enlistments either by raising pay or redoubling recruiting efforts. Second, the Australian economy is heavily unionized and apprenticeship programs requiring four or more years deplete the pool of men available for military service. Third, Australia has enjoyed a rapid growth in its economy (the unemployment rate is about 1 percent) which makes civilian jobs relatively more attractive than military service. Finally, civilian earnings significantly exceed military pay rates. Civilians receive over-time and other supplementary compensation in excess of the common wage rates set by the government for both the military and the civilian economy.
>
> The Australians could have expanded the size of the Armed Forces on a voluntary basis by raising pay—

What we are planning to do here—

> and reorganizing recruiting.

Which we provide in this amendment:

> Given the important differences between the two countries, one cannot conclude that the Australian experience shows that the United States would be unable to attract enough recruits on a voluntary basis if energetic and efficient recruiting were combined with competitive rates of pay.

Let me add one further point as to the second question that I believe the Senator from Massachusetts raised, and that is, have we any other evidence of any other countries? Yes, we have. We have very outstanding evidence in both Can-

ada and Great Britain, where they have instituted this kind of system.

Mr. KENNEDY. How did the force levels in Britain change over a period of time after they adopted a voluntary army? Have they increased, remained the same, or been reduced?

Mr. HATFIELD. Let me respond to the Senator's question with a quotation of further facts from this report:

The Canadian Armed Forces have always been entirely voluntary except for the period from 1940 to early 1945. The Canadian forces presently number slightly less than 100,000 men—

Mr. KENNEDY. 100,000 men?

Mr. HATFIELD. 100,000 men—

supported by an annual inflow of about 12,000 men.

So that is the situation as far as Canada is concerned.

Mr. KENNEDY. The Senator is not suggesting that the fact that the Armed Forces of Canada have been able to raise 100,000 men demonstrates that we can have a voluntary army here with our much broader military obligations.

Mr. HATFIELD. That was not the question the Senator from Massachusetts asked.

Mr. KENNEDY. Well, I was talking about some kind of comparable experience. Because 100,000 men does not even meet the present demand for troops in Vietnam——

Mr. HATFIELD. Would the Senator care to suggest some country that is comparable, in terms of the obligations we maintain?

Mr. KENNEDY. No, but is there an industrialized society that has to any extent a force level, in terms of total population, which would be comparable to the United States? Canada, quite clearly, with 100,000 men, is not.

Mr. HATFIELD. I would say there is no country comparable to the United States as far as the requirements that we have for military forces. Perhaps the Senator would be willing to accept Great Britain. But he is not going to find any country that has the requirements we have today for the maintenance of a high manpower level in the armed services, because of our international commitments and our international involvements.

Mr. KENNEDY. All right.

Mr. HATFIELD. Consequently, the Senator is asking a question for which it is impossible to provide an answer.

Mr. KENNEDY. Well, I just questioned using the example of Canada as a possible response to my question. I think Great Britain may be a useful example if the Senator would indicate to us what their force levels were prior to the time that they went to the volunteer army, and what gradual reductions in force levels have been experienced since the transition to a volunteer army system.

Mr. HATFIELD. Yes.

Mr. KENNEDY. Because I do not think anyone has demonstrated on this floor, that we could get a volunteer army that would reach even 2 million men, with the kind of pay raise the Senator suggests. I am questioning that point.

Mr. HATFIELD. Let me make the record clear here, because I would not want the Senator's implication to stand as a fact. We have today a volunteer military force of more than 2 million.

Mr. KENNEDY. But that is not completely accurate. Surely the Senator does not mean to suggest that the 2 million who volunteered were not influenced by fear of the draft?

Mr. HATFIELD. The Senator was not here earlier to hear the very careful description we made, based upon these two reports. If the Senator has other studies, I shall be glad to study them, but these two, one prepared by the Defense Department and the other by the Gates commission, have both indicated very clearly that in our Armed Forces today there are between 2 million and 2.25 million true volunteers, of which 1.25 million are men beyond their first tour of duty.

Mr. KENNEDY. Well, the Senator has the figures. I do not have them handy. Does he have the Marshall Commission figures on this particular question?

Mr. HATFIELD. No. I have studies more recent than the Marshall Commission report. The Marshall report was in 1966.

Mr. KENNEDY. But did not the Defense Department study you refer to precede the Marshall Commission?

Mr. HATFIELD. 1966 was the Marshall report, and we are now dealing with the report of 1970. But I might say that the Gates Commission report is based upon the Defense Department's own study figures.

Mr. KENNEDY. All I mean to say is that the Marshall Commission looked into this very question as well; and, their report being one of the basic documents, I was wondering whether the Senator had the results of that report.

Mr. HATFIELD. I do not have the Marshall report here. I have later reports. I do not have the Marshall report in its total form, but I do have these figures from the Marshall Commission report. They set their base at 2.65 million men and estimate that it would cost between $4 and $7 billion. The Gates Commission concludes that $2.12 billion would be needed to expend annually for a stable force of 2.5 million.

So when we raise these reports, we have to determine the base we are starting from, because we have different bases from different studies.

Mr. KENNEDY. I am sure the Senator from Oregon will say that we are just as justified in relying upon the Marshall Commission report, with their estimates, as we are on the Gates Commission report.

Mr. HATFIELD. No, I would not say that; because the Gates Commission report is a more recent report. I think it probably represents a more thorough approach and study than does the Marshall report.

Mr. KENNEDY. That is really a question of personal subjective judgment, I am sure. As a matter of fact, it seems to me, in looking through the Gates Commission report, that there was a good deal of reliance upon many of the findings of the Marshall Commission report.

Mr. HATFIELD. I think it is quite obvious that all these commissions are required to use certain basic data that would be similar to all of them.

Mr. KENNEDY. That is correct.

But if the manpower level were going to be 2.6 million, does the Senator question the Marshall Commission report about the cost of a voluntary army?

Mr. HATFIELD. Yes. Let me just point out one or two things about the Marshall Commission. They did not estimate the recruitment short fall and the elasticity of supply correctly. Consequently, their pay projections, I believe, can be considered as less than totally accurate.

Using the $17 billion figure—let us take that as a point—a first-term enlistee would receive $13,045 annually.

Consequently, I think we are dealing here with quite a range of calculations that makes the Marshall report less reliable, in my opinion, than the Gates report, which sets a pretty clear base upon which they make their calculations.

Mr. KENNEDY. As I understand—I wish the Senator would correct me if I am wrong—this $17 billion figure was developed in the Defense Department study report. Am I not correct? It was developed by a distinguished citizen of the Senator's State, as I recall—Dr. Oi.

Mr. HATFIELD. Dr. Oi, from the State of Washington, the University of Washington.

Mr. KENNEDY. Those figures were propounded by the Defense Department, not the Marshall Commission report. But in any event, both studies run contrary to the recommendations that were made to the Gates Commission. The Senator would agree with me on that, would he not?

Mr. HATFIELD. The only thing I would agree with is that all these reports are using certain basic DOD data, and each commission, I suppose, has a certain approach to its assignment and perhaps certain preliminary or prior commitments or convictions.

I should like to take note of one interesting thing on this point. Within the knowledgment that the members who came together to serve on the commission came together with certain prior viewpoints. Yet, as they moved into the data and made their evaluations and studies, it was a unanimous report.

Consequently, I think that one has to say that any commission is going to start its assignment with certain prior commitments, convictions, or viewpoints. But the important thing is that as these commissions made their studies and came forth with their recommendations, there is the widest range of representation on the Gates Commission, that a far more in-depth program was undertaken by the Gates Commission. Therefore, I would say that because of its more recent date, 1970, we are dealing with much more current viewpoints as it relates to our national commitments and international commitments.

I am not saying that one has to pick one report over the other. They all have made their contribution. I am saying that I would like to pick the latest findings, the latest commission study, because I think it is far more current.

I should like to point out one thing further to the Senator from Massachusetts. The Marshall Commission was not

concentrating, was not focused, upon the issue of the voluntary military. The Gates Commission was specifically studying that particular issue.

Mr. KENNEDY. As the Senator pointed out earlier, the Gates Commission was appointed by the President and realized that the President had made certain statements during the course of the campaign on the desirability of a volunteer army. I am not prepared to suggest that the Gates Commission was either required or forced to come out with an endorsement of the volunteer Army; but, as the Senator pointed out quite clearly, these commissions started off from different points of view.

Mr. HATFIELD. I would point out to the Senator from Massachusetts that both the Marshall Commission and the Gates Commission did have some continuity or similarity of staff people, so there was some relationship between these commissions.

Mr. KENNEDY. I take the Senator's word for that. I was rather interested in the Senator's comments yesterday——

Mr. HATFIELD. Let me comment before that, if the Senator will permit me to interrupt, on the last implication, that the President had made certain statements in the campaign, the implication being that perhaps the commission might reflect those statements of the President.

I think it is amply clear that the President, Mr. Nixon, has appointed a number of commissions; and, as one reviews some of these commissions, it certainly has not followed that they have reflected the prior statements of the President. I would only cite one as an example this morning, and that is the commission studying pornography.

The preliminary—or at least, the announced—findings thus far of that commission certainly do not reflect the prior statements of the President of the United States. Therefore, I would not want the record to show that there was any implication here that the President's prior statements would have had that kind of effect upon a commission studying the voluntary military.

Mr. KENNEDY. As the Senator pointed out, the Gates Commission was established to get into the question of the volunteer army, its prospects, and was directed toward that particular question, as I recall, rather than toward making a broad and general survey of how to eliminate the inequities in the present draft system, including the question of a volunteer army, which was the charge of the Marshall Commission.

Mr. HATFIELD. Let me point out again that it was very clearly indicated that all those who had been appointed to this commission by President Nixon did not have common agreement as to their viewpoint at the time of their appointment, so it was not as though we had a stacked commission.

Mr. KENNEDY. I was interested in the Senator's comments yesterday about the ability to raise the armed forces that will be necessary through the volunteer system. The Senator quoted several military leaders as being authorities on this point.

I am wondering whether the Senator has had the kind of experience I have had in going around to colleges and universities and asking the young people how many of them would actually volunteer for the Armed Forces. I recall a comment by the distinguished Senator from South Carolina in which he said that he has done that at nine or 10 universities and has a volunteer army of about seven and a half. He said that at one college a fellow put up about half an arm.

I am wondering what the Senator could add to the consideration of this question from the impressions he has gathered from his travels to universities and colleges.

Mr. HATFIELD. I would be happy to share my experiences which now total close to 200 campuses I have visited in the past 2½ years discussing this subject, not in each and every instance, but on a goodly number of campuses.

I have found, one, that the young people of this country today overwhelmingly—I do not now include any minority, hard-core revolutionary groups—I am talking about the overwhelming number of university students today—have great, great desire to experience in their lifetime an opportunity to make a major contribution to their country.

In other words, I find no overwhelming desire to shrink from a responsibility to one's country among our student population.

I think they feel that service to one's country is not looked upon as being exclusively carried out or performed in a military uniform.

I find that students today are interpreting service to their country to mean people, not just geography, national boundaries, or a national state. They see it as their fellow man. There is a certain universality in their philosophy about their fellow man, in all parts of the world. This has proved true by their response to the Peace Corps, VISTA, and other such programs.

Two, I find that the students today evidence a growing concern about the coercive element in our society, the kind of regimentation, the kind of authoritarianism which they feel Government policy represents and in the civilian sector, meeting certain military requirements such as the draft represents.

I think, too, when we look at the attitude of the student toward the military today, we cannot divorce that from their attitude toward Southeast Asia and the war in which we find ourselves. That particular point is hard to distinguish because it is so interrelated. But I am saying that a number of young people today are indicating support for a volunteer military.

Let me give the Senator the range. We have men like Sam Brown and Dave Hawk who were active in organizing the moratorium program. They might be considered as being of a different philosophical persuasion than the YAF which is the Young Americans for Freedom. They have all endorsed this amendment. In other words, here is a broad range of what we would call, without labels, liberal to conservative, and we should also consider men like Roy Wilkins, and Ralph Abernathy who are certainly in touch with the members of the black community, and the YMCA, which is another representation of today's youth, all of whom endorse this proposal. So, if I were to respond in a general, one-sentence statement, I would say:

I find overwhelming support for a voluntary system.

I want to emphasize strongly, however, that I do not ascribe to our young people today any lack of patriotism or lack of desire to serve their country. I think there is great danger, when we say on the one hand that the young people do not want to join the military and, through implication, that they do not sense a responsibility to their country.

When we look at the ROTC programs on many of the campuses where I have visited, those programs are filled. I find that in the applications coming to my office for appointments to the Army, Navy, and the Air Force Academies, the young men from my State who are applying represent young men such as student body presidents, captains of football teams, and many top students academically. So that we will get the highest caliber of young men out of high school in Oregon today who are applying, through my office, to the service academies.

Thus, in every way that I can measure it, I believe that the young people of this country will perform their duty to their country at any time their country has a requirement for them. I have that kind of confidence in the students of today.

Mr. KENNEDY. I am wondering whether the Senator has had an opportunity to ask young people, when he goes to these college and university campuses, how many of them would volunteer.

I have yet to find even a small minority in the schools, colleges, and universities that I have had a chance to visit showing any enthusiasm. Everyone seems to be for a volunteer army, but I think the fundamental question is, how many young people who go to college will actually volunteer?

With all respect to the Gates Commission report, and to General Gruenther's experience in recruiting, the attitudes of students in the schools, colleges, and universities today, attitudes I know the Senator must be very much aware of, have led me to the very strong feeling that we would not be able to get many college students in a volunteer army.

Mr. HATFIELD. Mr. President, I should like to comment further on the question the Senator from Massachusetts poses to university students by asking them how many would volunteer. I do not really think one could expect to get much in the way of results from that kind of question. Of course, I accept the Senator's report this morning. But let me remind the Senator from Massachusetts that only 8 percent of the draft manpower pool are being conscripted. Thus, we are dealing with a hypothetical attitude. How could any young man answer that question if he is not looking forward to a career in the military?

Only 8 percent are being drafted. Therefore, there is no volunteer system

today as it relates to those in the draft manpower pool. That is, they are all subject to the draft. I do not think we can make this measurement, or give them an alternative, until there is a viable alternative to ask them that question.

Mr. KENNEDY. The Senator is assuming, correctly, that university students are sufficiently intelligent and aware of what a volunteer army is. They are probably better briefed on the question of a voluntary army than many Members of this body. They know that a voluntary army would mean in terms of payments, in terms of, perhaps, an increase in educational opportunity. But I really challenge the Senator to find out how many young people—especially those going to college—will volunteer. I had the opportunity to do so in my own State. It has been extraordinary to find such an unenthusiastic response. At first, when I asked the question, there was a sprinkling of hands of people who would volunteer, but today this is virtually nonexistent.

Mr. HATFIELD. Does the Senator purport to represent this as some kind of scientific poll?

Mr. KENNEDY. No. But I asked the question enough times to convince me that there was not much interest in the military. I think my experience would convince any open-minded Senator that volunteers for a volunteer army are just not there from any of the universities, colleges, vocational trade schools that he might mention. I do not question that, perhaps, in some of our urban areas, in Appalachia and other areas, or in Alaskan native villages, where the young people have never been beyond the fences of their own homes or reservations, one could talk to young people about the benefits of a voluntary army and there would be some volunteers. I do not question that at all. But that is one of my objections to a volunteer army in wartime. Its appeal will only be to less affluent Americans. The more fortunate young men will not have to serve.

Mr. HATFIELD. Does not the Senator realize that the average draftee is 19 years old and a high school graduate? I mean, the Senator is developing a conscription system primarily from the same basis of what we think about as student deferments.

Mr. KENNEDY. I am opposed to student deferments.

Mr. HATFIELD. Mr. President, the point is where are the draftees coming from today? Are they coming from the universities and colleges from which the Senator from Massachusetts has not been able to get much of a response concerning volunteering? Not at all. We are talking about the high schools. That is where the average draftees comes from.

Mr. KENNEDY. The draft system, which I support, reaches across the board.

Mr. HATFIELD. The Senator is correct.

Mr. KENNEDY. I find a paucity of people in the high schools or in the colleges or universities who say they will volunteer. Maybe the situation is different in the State of Oregon. But I seriously doubt it.

The thing that I do not doubt is that I can go to places in my own State, in the lowest income areas, and offer the kind of pay which is suggested in the amendment of the Senator and come up with some individuals who will volunteer because they are being denied an opportunity to participate in our society in a meaningful way. The armed forces, in their judgment, offers them the only opportunity to fulfill their desires. I do not question that.

Mr. HATFIELD. Mr. President, let me ask if the Senator will yield for a question. Is the Senator in support or in opposition to a comparable pay program for the military serviceman?

Does the Senator feel that we have a comparable pay situation today?

Mr. KENNEDY. I do not think we have a comparable pay situation.

Mr. HATFIELD. Would the Senator support a pay increase, particularly for enlisted people, at this time?

Mr. KENNEDY. A modest pay increase, yes; but not in the Senator's figures. I would support a modest pay increase. Probably it would not be comparable pay.

Mr. HATFIELD. The Senator is for a modest pay increase but not for comparable pay.

Mr. KENNEDY. A modest increase; that is correct.

Mr. HATFIELD. Is the Senator aware that we have at least 12,500 military personnel receiving welfare checks today because they qualify under welfare status?

Mr. KENNEDY. I was aware that there were some; yes.

Mr. HATFIELD. Does the Senator not agree that this is something that needs to be done?

Mr. KENNEDY. Yes. But it is a question of priorities with our budgetary problem and our pressing civilian needs, I do not think a $3.2 billion military pay raise has the highest priority.

Mr. HATFIELD. Mr. President, let me reiterate what I think is something that we should keep before us. This amendment does not repeal the draft.

I think the colloquy on the inequity of the draft this morning has been a good discussion. I have enjoyed it. But let us not lose sight of the fact that the colloquy this morning on the elements of the draft do not really concern us at this moment in this amendment.

This amendment simply adds to the pay scale of those serving in our military branches on the basis of affording comparable pay. It goes beyond the modest pay increase expressed by the Senator from Massachusetts.

From the standpoint of those who cosponsor the amendment, we believe that the young men serving in the military today ought to have comparable pay to that which they could otherwise earn in civilian life. We think this is equitable. We do not think a man serving in the military should be put on a basis of second-class citizenship. We do not think we should say to him, "You don't have the right to comparable pay."

We who sponsor this amendment do not believe that is fair or equitable. We do not believe that our ideals and our concepts of Government should perpetrate this upon our young people.

I want to make it very clear that this amendment will not decide the continuation or lack of continuation of the draft. If we agree to this amendment, we will have almost a year to answer some of the questions that the Senator has raised to his satisfaction and permit him then to support negative action or lack of action to permit the draft to expire.

This is the purpose of those of us who cosponsor the amendment. We will have almost a year in which to see whether we can recruit men and get a sufficient number on the basis of increased pay to have a volunteer army or military. But we cannot transfer from one system to another without a realistic transition period.

That is why we have offered the amendment today. I appreciate the comments from the Senator from Massachusetts, because he and I have discussed this matter before. I respect his viewpoint.

I feel that we are working for the same objectives. I feel that our differences perhaps are on the basis of procedures by which to accomplish those objectives.

Let me say again that this amendment in no way commits Congress to action either by extending the draft or by doing nothing and permitting it to expire.

Mr. KENNEDY. Mr. President, if we are talking about comparability or pay increases, this is something else again. I think all of us want to do justice to those who are being called to serve in the Armed Forces. But, as I said, I think we have to balance that against other kinds of economic needs.

I am not prepared at this point to debate that matter. But I am prepared to point out that on page 4, line 1 of the amendment, it states:

> The President, the Secretary of Defense, and the Secretaries of the military departments shall exercise the authority vested in them by law to provide for the military manpower needs of the nation through a voluntary program of enlistments.

And no matter how we say it, that is a volunteer army.

I do not question that we can get volunteers. But the kind of volunteers we will get are those in our society who have been disadvantaged in one way or another and who will look to the Army as being their only means of getting out of a more difficult and perhaps more hopeless situation.

I quite sincerely challenge my good friend, the Senator from Oregon, to inquire at the colleges and universities and the community colleges of his State or any State. He will find there, I am sure, that the young people are for the voluntary army.

If he asks how many are prepared to volunteer, I think the Senator will find a much better indication of the sentiment of these young people than the report of the Gates Commission, with all due respect, and the findings of General Gruenther. And he would perhaps understand more fully my concern about the inequities of an all-volunteer army.

Mr. HATFIELD. I thank the Senator from Massachusetts. I would restate that

I think we are dealing with a very unrealistic hypothesis when we try to take a poll or make some kind of a survey as to how many college or university students will volunteer for military service when that is not the source from which we derive our inductees and draftees. They are not coming from the colleges and universities. They are coming from the high schools.

Mr. KENNEDY. The Senator is not accurate in that statement. With the abolition of graduate student and occupational deferments the random selection system is more and more applying to all young men.

Mr. HATFIELD. Let me point out again that when the Senator speaks of random selection he is dealing with a manpower pool of 12 million.

Mr. KENNEDY. But the draft is beginning to assume that out of those 12 million, college students serve as well as others.

Mr. HATFIELD. I am sure the Senator from Massachusetts would agree that we are not drawing from college students proportionately in relation to the inductees we take into the draft each year. The fact remains we still have from that group of people he referred to rates of enlistment of true volunteers.

Mr. KENNEDY. But surely college students will not volunteer even nearly as much as men from the lower income groups.

Mr. HATFIELD. But let me remind the distinguished Senator from Massachusetts that when he talks about this group, we might take the blacks as one such disadvantaged group in this country. We have 11.7 percent in the Army through the draft program and enlistment program. At the same time——

Mr. KENNEDY. Would the Senator tell me the reenlistment rates for blacks in Vietnam?

Mr. HATFIELD. I have the overall reenlistment rates.

Mr. KENNEDY. Would my good friend tell me the reenlistment rates for blacks in combat divisions in Vietnam?

Mr. HATFIELD. First I would like to finish my thought. The ratio of blacks to the total population is about 12 percent; so we have comparability with those who are serving as volunteers, forced volunteers, or inductees. That is the point we should keep in mind.

Mr. KENNEDY. The point I would like to keep in mind is the rate of reenlistment in combat divisions in Vietnam. There are twice as many among the minority groups. In the 1st Cavalry I believe, 42 percent of the reenlistments were black. The reason is they get additional pay for jump pay or combat pay.

The question we have to decide is whether the volunteer army will be made up solely of the poor people in this country, the people who are denied the opportunity for economic or other reasons, of going to school or college and getting good jobs.

Mr. HATFIELD. I think the Senator has put his finger on probably the most fundamental point of all. The Senator pointed to the fact that in this country, outside the military, there have been conditions growing over a period of time which have denied certain people in this country the same rights to achieve and progress as other people. But must we put that responsibility upon the military procurement program we adopt in this country? I believe the Senator has been a leader in attempting to rectify this situation, and I have indicated my involvement in trying to change the condition in this country. We have made a commitment to the poor and the black in this country that we are going to provide them with equal opportunity.

Mr. KENNEDY. Mr. President, I will say to my dear friend from Oregon that I will be the first person to support the volunteer army when we rectify those inequitable conditions. When we eliminate these conditions, I will be the first to support the volunteer army.

Mr. HATFIELD. I hope the Senator does not forget that the enlistment rates for those below the poverty line and for blacks are approximately the same irrespective of the method of recruitment. In other words, what difference does it make at this point whether a black or a poor person thinks he has a better opportunity if he goes into the military to achieve greater status, income, and dignity under a draft system rather than a voluntary system?

Mr. KENNEDY. The question is whether under a volunteer army system all who serve will be poor. I think they will be and I object to the volunteer army for that reason.

Mr. HATFIELD. I suggest two things: Reenlistment rates of whites are substantial today under a draft system. Therefore, I think while we hope to establish a purely volunteer system, the reenlistment rates would be greater because there would be more adequate comparable pay. Second, because there has been a denial of lack of opportunity for those in our civilian society, let us not thrust on the military program the responsibility for that inequity in our society. We in Congress must move and do our job and maintain our responsibility to correct those inequities. But I do not think we should put the onus for those inequities upon the military and indicate it is their responsibility by some implication.

I would like to quote one other statement from the Gates Commission report. The Senator was concerned about whether we would be able to maintain our volunteer rates with the war and all that is going on now. Under the Department of Defense study, the Gates Commission, which drew from those studies, it is indicated we have the same number of volunteers today as before the Vietnam war.

ORDER OF BUSINESS

Mr. GRIFFIN. Mr. President, will the Senator from Oregon yield for a moment or two so that a colloquy may ensue at this point? I hate to bring this spirited debate to an end. It has been very interesting and helpful.

Mr. HATFIELD. I yield.

PROGRAM—UNANIMOUS-CONSENT AGREEMENT

Mr. GRIFFIN. Mr. President, the distinguished majority leader is in the Chamber and I would like to ask him if he would enlighten the membership concerning the program for the remainder of the day and the week, if possible.

Mr. MANSFIELD. Yes, indeed. I am glad to respond to the acting minority leader. I am delighted the chairman of the Committee on Armed Services is in the Chamber. This request has been agreed to by the distinguished Senator from Mississippi (Mr. STENNIS), the distinguished Senator from Arkansas (Mr. FULBRIGHT), and the distinguished minority leader (Mr. SCOTT).

Mr. President, I ask unanimous consent that on amendment 813 there be a time limitation of not to exceed 1 hour, the time to be equally divided between the Senator from Mississippi (Mr. STENNIS), the manager of the bill, and the Senator from Arkansas (Mr. FULBRIGHT), the sponsor of the amendment.

The ACTING PRESIDENT pro tempore. Is there objection?

Mr. STENNIS. Mr. President, I shall not object. I think we can get through with that amendment and dispose of it today.

Mr. MANSFIELD. I would imagine there will be a vote on that amendment, although what the outcome will be I do not know.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, there is a possibility that a second Fulbright amendment may be called up but we will have to wait to see what happens.

Tomorrow the distinguished Senator from Illinois (Mr. PERCY) will offer an amendment under a 1-hour time limitation, as, hopefully, will the Senator from Indiana (Mr. BAYH) and the Senator from Maryland (Mr. TYDINGS).

After those amendments have been disposed of it is the intention of the joint leadership to call up Calendar No. 1129, H.R. 18127, an act making appropriations for public works, and so forth. That is the public works appropriation bill and there will be time available in which to consider it. The leadership gave serious consideration to calling up that measure this afternoon but it could not because of developments over which there was no control and which came up overnight. Therefore, to the best of my knowledge, we will have at least one amendment to be voted on this afternoon, and maybe another one. There will be three tomorrow. When disposed of, the Senate will take up the public works appropriation bill.

Mr. GRIFFIN. I thank the majority leader.

Mr. MANSFIELD. I thank the Senator from Oregon for yielding.

The ACTING PRESIDENT pro tempore. Does the Senator from Mississippi ask that the unanimous consent be held up for the time being?

Mr. STENNIS. With respect to amendment 813? No, I do not.

The ACTING PRESIDENT pro tempore. Without objection, the request is agreed to.

ORDER FOR RECESS TO TOMORROW

Mr. MANSFIELD. Mr. President, if the Senator will yield further, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 9:30 a.m. tomorrow.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(Later in the day this order was modified to provide for a recess to 9 a.m. tomorrow.)

ORDER FOR RECOGNITION OF SENATOR JAVITS TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that after the Journal has been approved and the unobjected to items on the calendar have been disposed of, the distinguished Senator from New York (Mr. JAVITS) be recognized for not to exceed 20 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MANSFIELD. And that at the conclusion of his remarks the Senate then return to the pending business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE— ENROLLED BILL SIGNED

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the Speaker had affixed his signature to the enrolled bill (H.R. 1749) for the relief of Eagle Lake Timber Co., a partnership, of Susanville, Calif., and it was signed by the Acting President pro tempore (Mr. ALLEN).

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. The Chair recognizes again the Senator from Oregon (Mr. HATFIELD).

Mr. DOLE. Mr. President, will the Senator yield?

Mr. HATFIELD. I yield.

Mr. DOLE. First, as a cosponsor of the amendment, I wish to commend the distinguished Senator from Oregon for his continuing leadership with reference to the all-volunteer Army proposal. For my information, does the Senator from Oregon know at this time when the amendment might be considered.

Mr. HATFIELD. The chairman of the Armed Services Committee, the Senator from Mississippi, the majority leader, the minority leader, and I discussed this matter yesterday. We stood ready for a time agreement, and we are ready to move on a time agreement, but it was not satisfactory to the chairman of the Armed Services Committee.

So I can only give the Senator a general estimate, and that is that even though we stand ready now for a time limitation, it provides that the amendment will not be laid before the Senate before Monday, and a vote had not before Tuesday, or perhaps even Wednesday.

Mr. DOLE. If the Senator will yield further, one question raised in the colloquy yesterday between the distinguished Senator from Oregon and the distinguished Senator from Missisippi was with reference to the possible effective date and whether or not adoption of the amendment would amount to repeal of the Draft Act. Speculating with the Senator from Oregon on the possibility of arriving at a compromise, if the amendment of the Senator from Oregon were effective when the President determined it was in the national interest, could the apparent conflict he avoided between those opposed to an all-volunteer army for that reason and those of who now support the all-volunteer army proposal.

Mr. HATFIELD. In response to the Senator from Arkansas, at the present time, under the wording of the amendment, it would be implemented on the first calendar month following enactment as far as the pay increase is concerned. I would like to emphasize again, as the Senator from Arizona (Mr. GOLDWATER) emphasized this morning, the amendment in no way commits the Senate to action on the draft, which is due to expire June 30, 1971. It in no way commits the Senate to that question. It commits the Senate only to an implementation of a pay increase, which would be comparable pay to civilian employment, or an approximately 60 percent increase for the enlisted rates and an approximately 25 percent increase for junior officers.

Therefore, we do not really confront the question of the expiration or of action on the draft.

Second, let me point out that it is the very intention of those of us who have been cosponsoring this proposal that it is a step toward an all-volunteer military. The Senator from Kansas, who holds the Purple Heart and many other awards for distinguished military service, realizes that every program for recruitment cannot be cranked up 1 day after the expiration of an existing system on the previous day. Therefore, there must be some sort of transition period.

We feel that from this point until June 1971, almost a year from now, we would have ample time to make a judgment and an evaluation of whether or not recruitments and enlistments were increasing sufficiently to meet our needs, whatever those needs may be at that time. Therefore, we avoid the kind of problem that would occur if we tried to throw out one system one day and start another system the next day.

That is why we feel it so important to implement this new effort, to get that period of testing and experience, to see how people respond to it. That is why I think it is important to do it now.

Mr. DOLE. Let me say to the Senator from Oregon that I agree largely in his response. There appears to be a very serious question, however, whether there may be a gap between the effective date of this legislation and the expiration of the Selective Service Act, assuming that act were not extended.

I am only suggesting a possibility that might bring together some with differing views, whereby the amendment would be implemented, when determined by the President as Commander in Chief to be in the national interest.

The President, whoever he may be, is the Commander in Chief of the armed services and of course has a direct interest.

I would also point out, as the Senator from Oregon knows, that President Nixon, should he be the President, is a strong supporter of the all-volunteer-Army concept. We have a President who supports the concept, but who questions when it should be implemented.

I am simply raising that possibility in an effort to reach some accommodation.

Mr. HATFIELD. May I respond to the Senator from Kansas that I appreciate his idea of getting support for the basic commitment we have in common, which is an all-volunteer armed force. I would point out that the Senate is going to have to make a decision on the question of the draft before the next presidential election. In other words, I think we can pretty well depend, with God's protection and grace, that Mr. Nixon will make the decision on implementing this measure, if it is to be implemented, between now and June 1971. Otherwise, if it is not implemented at this point, we are going to be faced with the probability of having to extend the draft, come next June, for at least another year, and maybe two. Whatever the length of time, we will be faced with that reality.

That is why I feel the sooner we can implement this proposal, the sooner we can get perhaps a more accurate base on which to determine whether this Nation is ready at this moment for an all-volunteer armed force, based on whether we can get the needed manpower. We will have that amount of time and have that experience in order to make that kind of judgment in June. We will have alternatives. We will not be faced with only having to extend the draft for another year or another 2 years—which would be about the only alternative as I see it, at that time.

Mr. DOLE. There is a great deal of merit in bringing up the amendment at this time as we should move forward.

I understand there have not been full and complete hearings but I am realistic and knowing that hearings might be held, but that no bill would be reported to the Senate.

So this is an opportunity to present the amendment and at least discuss the pros and cons. If we can assure the American people, young and old, that there will be no gap, it will be a great step forward.

Mr. HATFIELD. I think that the Senator, here again, has raised a most valid

point, and one that the record should certainly show, clear and unencumbered by any confused language, and that is that we are doing this at this time in order to avoid a gap, and this is what I believe to be at least the best insurance we could get against just that one thing, the gap that the Senator refers to.

If we implement this at this time under this pay increase, the cost question has been raised, that the cost is such today that if we cranked the whole thing down to zero inductions, we would be saving about $3 billion, according to the best figures we can get from Gates Commission. This Commission has indicated about a $3.2 billion cost under the various components and the pay program, and rather than an added-on figure, I think it could be shown that, after a transition period, we would be trading one figure for another: that is, the $3 billion it would cost us for the draft as opposed to $3 billion for an all-volunteer system. But in addition, we would be getting far more for our money, because we are going to have less turnover than with our inductees today, and the military services are going to require fewer men for training programs and training stations, who can then be reassigned to other functions.

So I think there are many savings that could be effected by an all-volunteer system. The Senator from Arizona said this morning he believed we would actually save money, with less outlay than we have today under the conscription system.

Mr. DOLE. As I understand, only about 7 percent of the young men drafted now stay in the Armed Forces beyond their 2-year obligation. According to the Gates Commission there would be very little difference in the cost question, which would mean, with the lower turnover, as the Senator from Oregon has pointed out, less expenditures for training. You start with the same number, but they remain longer under the volunteer concept.

Perhaps the senior Senator from Massachusetts raised a valid question. I have asked a number of college students about the voluntary army, and find a great many are for it, because they do not plan to volunteer. But this is a fact of life. Many of these same young students are now in college because of a draft deferment, so they are in a sanctuary, in any event.

The idea is to get away from peacetime conscription, which may not be involuntary servitude, but something close to it. So the concept, so far as I am concerned, is sound. There will be inequities, but in an effort to answer some of the objections, I have prepared a list of a number of questions and then have tried to provide appropriate responses. I ask unanimous consent to have printed in the RECORD at this point some of the usual objections raised to the all-volunteer army concept, together with some of the responses to those arguments.

There being no objection, the objections and responses were ordered to be printed in the RECORD, as follows:

OBJECTIONS AND RESPONSES—VOLUNTEER ARMY

I. COST

One objection often registered against the all-volunteer army is that it is simply too expensive.

Responses

(1) The President's Commission On An All-Volunteer Armed Force (The Gates Commission) has estimated that the cost of the program, if it is initiated in fiscal 1971, would be $3.24 billion.

(2) But this figure does not take into account savings due to reductions in personnel turnover. As the Gates Commission Report noted: "When force levels are stabilized, the additional expenditures needed in the transition to a voluntary force will be partly offset by savings engendered through lower turnover and a reduction in the number of persons in training status."—page 8.

Other authorities have commented on these savings:

(a) "Lower turnover means that fewer recruits must be trained, producing considerable cost savings since at present there is nearly one trainer for each trainee."—Walter Y. Oi, professor of economics, College of Business Administration, University of Rochester in Current History, July, 1968.

(b) ". . . At the present time, only about 7 percent of the young men drafted stay in the Armed Forces beyond their 2-year obligation.

"This high turnover rate causes many of the services' most experienced personnel to be tied down in training new recruits. Today, seven out of every 10 men in the Army have less than 2 years military experience. As one Pentagon military official has noted:

" 'As soon as we are able to operate as a unit, the trained men leave and we have to start all over again.' "—Senator Hatfield on the Senate floor. Congressional Record, volume 115, part 2, page 1432.

(c) "The essential wisdom of the American scheme of allocating its resources through voluntary mechanisms rather than through government management needs to be extended to this important area of human resources where the costs of misallocation are measured in years, productive and important years, of hundreds of thousands of our citizens."—Scholars Committee on Selective Service Report to President K. S. Pitzer Stanford University, page 12.

(d) "Every young man who has served in our armed forces knows the incredible waste of our persent system of forced but short-term service. He knows the money that could be saved, the new efficiency that could result from a volunteer system which calls on young men not to endure two years of service because they have to, but to choose it for a longer period because it offers advantages that seem to them appealing."—Adlai E. Stevenson, speech at Youngstown, Ohio, October 18, 1956. In the Congressional Record, volume 115, part 2, page 1437.

II. FLEXIBILITY

Some opponents argue that an all-volunteer army would undermine our military flexibility.

(A) An all-volunteer army would not provide us sufficient military manpower. The volunteer concept simply cannot work.

(B) Given time the concept will work, but not under present circumstances. We need a more gradual phase-out of the draft.

Responses

(1) In case of a national emergency, the President will have authority under the Hatfield amendment to request a standby draft by a joint resolution of Congress. If the need is clear, Congress would respond. As the Gates Commission concluded: "The Commission has recommended a standby draft which can be put into effect promptly if circumstances require mobilization of large numbers of men. History shows that Congress has quickly granted the authority to draft when needed"—page 13.

(2) The volunteer system could certainly provide us the same number of men as we employed before our involvement in Vietnam. The Gates Commission program is based upon a force of 2.5 million men, roughly the same figure (2.48 million men) as we maintained in the force before Vietnam.

(3) In fact, the all-volunteer force would enhance, rather than undermine, the flexibility of our military. The guerrilla wars of the 1960's and 70's require well-trained compact units, as opposed to the large masses of men that conscription produced for our World War II commitments.

As Mr. Nixon pointed out in a speech of October 17, 1968:

"Conscription was an efficient mechanism for raising the massive land armies of past wars. Also, it is easier and cheaper simply to order men into uniform rather than recruiting them. But I believe our military needs in the future will place a special premium on the services of career soldiers." Congresional Record, volume 115, part 2, page 1434.

III. BLACK AND POOR PEOPLE

It has often been suggested that the all-volunteer army would attract a disproportionate number of poor people, especially blacks, thus leaving the burden of national defense primarily on them.

Responses—Poor people

(1) It is unfair to criticize the all-volunteer army because it might, in increasing salaries to improve the force, attract those who are presently unable to earn higher salaries elsewhere. It is not the all-volunteer army which is to be blamed; rather we should take further steps to insure that good paying jobs become available throughout society.

(2) There are some jobs in society which are often considered to be unattractive and often dangerous. But no one considers that employees to be exploited, since they take the job voluntarily and receive adequate remuneration.

Responses—Black people

(1) No matter where the poverty line is drawn, there will always be a greater number of whites than blacks who fall into that category. The Gates Commission provided some statistics: "The proportion of blacks below the poverty line in 1967 was 38 percent while only 11 percent of whites were in the same category. But, in absolute numbers more than twice as many whites (17.6 million) as blacks (8.3 million) were below the poverty line"—page 142.

(2) When we look at true volunteers under the present system, we do not find a disproportionate number of blacks. The Gates Commission commented: "Among true volunteers, blacks are now serving in the armed forces almost exactly in proportion to their numbers in the U.S. population"—page 144.

(3) It is physically impossible, just in terms of numbers, for blacks to compose the majority of the armed forces. Economist Milton Friedman, writing in The New Guard, noted: "It has been estimated that even if every qualified Negro who does not now serve were to serve, whites would still constitute a substantial majority of the Armed Forces."

(4) Two concluding remarks should be made concerning blacks serving in the all-volunteer army:

(a) Present advances that are being made in providing equality for blacks should mean that more jobs will open up in the civilian economy. This would reduce the likelihood that blacks would turn to the army in disproportionate numbers.

As Mark Hatfield commented: "As we expand the opportunities in the civilian job sector, fewer black men will find the military to be the most attractive road to higher economic and social status, and this will tend to place an effective ceiling on the proportion of blacks who enlist."—speech reprinted in CONGRESSIONAL RECORD, volume 115, part 7, page 8670.

(b) The Gates Commission made the following prediction on the number of blacks that would serve in the all-volunteer force:

"For the Army, we estimate that the proportion of blacks will be 17 percent for the mixed force and 19 percent for the voluntary force as compared to 12.8 percent in the Army today."—page 15.

IV. MILITARISM

Opponents to the all-volunteer army may argue that it would destroy the constitutional and traditional subordination of the military to the civilian sector. The expression often used in connection with this argument is "mercenary army," describing a bloodthirsty force that kills for cash.

RESPONSES

(1) It is unrealistic to suggest that employing only volunteers at higher pay would completely transform the military-civilian relationship or that it would make drastic changes in the motives of our men.

(a) "To suggest that men who enlist to serve their country do so only for pay is to demean the hundreds of thousands who voluntarily serve today. More than half of all the men in today's forces are true volunteers." The Gates Commission Report, page 136.

(b) "A mercenary is a soldier of fortune—one who fights for or against anyone for pay. What we're talking about now is American soldiers, serving under the American flag. We are talking about men who proudly wear our country's uniform in defense of its freedom. We're talking about the same kind of citizen armed force America has had ever since it began, excepting only the period when we have relied on the draft." Richard Nixon, campaign speech, October 17, 1968.

(2) It should be noted that the only real change in the composition of the army's personnel will be in the lower ranks. The higher echelons, which are composed of career men anyway, are the ones who determined the relationship of the military to the civilian sector.

(a) "The danger of military elitism comes primarily from the officers who are, and always have been, professionals. The civilian influence must be injected at the top—in the office of the Secretary of Defense and the Secretaries of the Army, Navy and Air Force, if we are to establish safeguards against the dangers of a military clique or class. The possible military threat to political stability is largely unrelated to the system used in recruiting enlisted men."—Senator Hatfield, Congressional Record, April 29, 1969.

(b) "To the extent that a military force endangers freedom and democracy, the danger comes from the higher ranks of commissioned officers, all of whom are volunteers, as are most of the lower ranks of officers and all of the higher ranks of noncommissioned officers. Using conscripts instead of volunteers in the lowest enlisted grades, and those are the only ranks in which we use appreciable proportions of conscripts, is no protection—as was illustrated by recent coups in Greece and South America."—W. Allen Wallis, University of Rochester in Science, March 28, 1969.

V. THERE ARE SOME LESSER WORKABILITY ARGUMENTS WHICH COULD BE ADVANCED

You should be aware of these:

(1) We, and specifically President Nixon, could be taking steps now to enhance the attractiveness of the military, short of adopting an all-volunteer system.

(a) Senator Scott alluded to this on the floor July 27, 1970:

He noted that President Nixon can and should be ". . . gradually replacing those draftees who are presently serving in Vietnam with volunteers . . . By sending only volunteers to Vietnam to replace those soldiers whose tours of duty in Vietnam have ended, the administration can take the lead. It can visibly demonstrate that the volunteer concept is a viable one."

(b) "The President would like to reduce the draft gradually and to improve the quality of the military services by increasing their appeal. He has asked Secretary of Defense Mel Laird to prepare new programs that will encourage men to re-enlist.

"Laird is ready to offer up to 10,000 new family units, educational opportunities for servicemen who would like to study, and various financial inducements. He is even willing to abolish KP and hire civilians to do the hated kitchen work."—Jack Anderson, "Volunteer Army is Far in Future," *The Washington Post*, March 27, 1970, page D–15.

(2) How can we possibly attract doctors and other high-skill people since they can no doubt always make better pay in the civilian economy?

(3) Will all branches of the armed forces receive the same pay? If so, won't everyone seek to serve in areas or branches (Navy or Air Force) which would entail the least direct risk?

(4) We could end the inequities of the present draft system by ending deferments and initiating a program of national service for everyone. This would obviate the need for the all-volunteer force.

Finally, we propose three reasons why the draft should be replaced with an all-volunteer system:

(Note that counter-proposals, such as the one above for National Service, would not answer all these points.)

I. Conscription is the greatest enfringement of personal freedom in America today.

"We should recognize that (the draft) is about the most odious form of Government control we have yet accepted. We should not forget that it is a basic violation of our traditions of freedom and individualism."—The Wall Street Journal, March 1967 editorial.

II. The present draft is unfair and inequitable.

(A) Even under the lottery system, with the risk supposedly spread equally, some young men are forced to serve while others are not.

"Any system which selects only some from a pool of many will inevitably have some elements of inequity."—President Nixon in his message to Congress, May 13, 1969.

(B) It is discriminatory within society as a whole since those who are forced to serve are burdened with a "hidden tax."

(1) "Whatever the extra amount, we are paying a larger sum in concealed form. Conscription is a tax in kind—forced labor exacted from the men who serve involuntarily . . ."—Milton Friedman, "A Volunteer Army," *Newsweek*, Dec. 19, 1966.

(2) "We shift the cost of military service from the well-to-do taxpayer, who benefits by lower taxes, to the impecunious young draftee."—John Kenneth Galbraith, "The Case for a Volunteer Army," *Time*, Jan. 10, 1969.

(3) "Men who are forced to serve in the military at artificially low pay are actually paying a form of tax which subsidizes those in the society who do not serve. Furthermore, the output of the civilian economy is reduced because more men serve in the military than would be required for an all-volunteer force of the same strength."—*The Gates Commission Report* page 9.

III. It is inefficient and real costs can be reduced. Drafted men lack the desire and intensive training that would exist under the all-volunteer system.

(A) "A volunteer army would be manned by people who had chosen a military career rather than at least partl by reluctant conscripts anxious only to serve out their term. Aside from the effect on fighting spirit this would produce a lower turnover in the armed services, saving precious man-hours that are now wasted in training or being trained. It would permit also intensive training and a higher average level of skill of the men in the service. And it would encourage the use of more and better equipment. A smaller, but more highly skilled, technically competent, and better armed force could provide the same or greater military strength."—Milton Friedman, The New Guard.

(B) The Association of the U.S. Army (AUSA), which does not advocate a volunteer army, concluded nonetheless that "an all-volunteer force should be a more efficient one."

Mr. DOLE. I thank the Senator for yielding.

Mr. HATFIELD. Mr. President, I should like to comment briefly on what the Senator from Kansas has said, because I believe he is putting his finger on a number of good points.

The idea that somehow the draft provides us with an across-the-board, more equitable system of recruitment than an all-volunteer system, merely because college and university students are not responding to a question as to whether they are going to volunteer, if we carried that logic to its conclusion, we would not accept any volunteers in the military.

Mr. DOLE. That is very true. And a great number of people would volunteer as generals, but not many want to volunteer as privates. The Senator from Oregon, the principal sponsor of the amendment, understands that one way to attract young men into the Army is through realistic pay scales. Perhaps some of those would be college students—perhaps not any great number, but, as the Senator knows, our induction rate is very low now. Our draft calls will be down to practically zero next year. In fact, as Secretary Laird has already announced, I do not recall in which month, but in one of the coming months the draft call will be zero, because of volunteers and deescalation in South Vietnam.

The Senator gave the figure; was it only 8 percent who are reenlisted, out of the drafted manpower pool?

Mr. HATFIELD. Yes.

Mr. DOLE. So we are not discussing any great departure. We are proposing a realistic proposal that would make it attractive for young men to enter the service and to have some comparability with those on the outside as far as pay scales are concerned. That is the primary thrust of the Senator's effort.

Mr. HATFIELD. That is correct.

Mr. DOLE. I do not believe it is a radical departure. It is not an effort to create some mercenary force; it is not an effort to create an all-black army; it is not an effort to create an army composed only of poor people. I agree with the Senator's earlier statement in that we are going to have pretty much the same black-white ratio we have now; maybe a slight increase of blacks, but a very slight increase.

The objections should be answered. This is a serious question. It is a departure in some sense, but not the radical departure many feel it is, because they fail to understand the volunteer concept. It has great merit, and I support it.

Mr. HATFIELD. I appreciate the comments of the able Senator from Kansas, because here again I think we have to realize, when the Senator speaks about this not being a radical departure or an innovative scheme that has not been tried, that for 170 years of this Nation's history, we relied completely, to provide military services for this country, on a volunteer system. For 170 years; this is the first time in the history of this Nation that we have tolerated peacetime conscription.

The Senator knows the history of conscription in this country; it has been used only in times of great emergency—the Civil War, World War I, World War II—and I think the fact is that we have come to accept it as a way of life because it is the easiest thing to do, and that we, therefore, have not really attempted to put into action a voluntary system, which would be far more in keeping with the history of this Nation than a conscription system.

I think when we look at Canada, Great Britain, Australia, and the other countries of the Western World which have relied upon a volunteer system and have done so successfully, that it is certainly a general indication; even though they are not comparable at all to our country's requirements and commitments, it certainly shows that other countries as well as the United States have been successful in the raising of armies and other military branches on a volunteer system, plus the fact that we, today, have a volunteer program providing the military manpower for the Marines, the Navy, and the Air Force, and it is only the Army for which we basically have to rely on the draft for manpower.

I do not think we would have to do that if we returned to the tradition of this country by providing equitable pay. I do not think it is fair for the men themselves to bear the cost of their own military service. The taxpayers should pay for the military requirements of this Nation, and that is all the amendment proposes.

One last word. President Nixon has made it very clear, both in his campaign and in the Republican Party platform of 1968, as well as the Republican Party platform of 1964, that this Nation, under his leadership, is committed to an all-volunteer army.

Let us not read more into what the President has said, or try to interpret the President, because he has stated it very clearly in a radio message he gave to the American people during the 1968 campaign. He predicated the timing of this change on a diminished manpower requirement in Vietnam. So I think it ought to be very clear that we are not claiming the President has endorsed this particular amendment at this time; but the President has stood very clearly and firmly in support of the concept, as well as both major political parties, Democrat and Republican, in their party platforms.

Lastly, I think this gives the President and Congress an opportunity to undertake this through a reasonable transition, in a very responsible way, to see if it will work; I for one believe it will, but it certainly will have at least almost a year to determine the validity of my belief.

Mr. DOLE. I have the exact comment that then candidate Nixon made on October 17, 1968. He addressed himself to the voluntary army concept and also the objection it would be a mercenary force. He said:

> A mercenary is a soldier of fortune—one who fights for or against anyone for pay. What we're talking about now is American soldiers, serving under the American flag. We are talking about men who proudly wear our country's uniform in defense of its freedom. We're talking about the same kind of citizen armed force America has had ever since it began, excepting only the period when we have relied on the draft.

I believe that is the statement that the Senator from Oregon had in mind.

Mr. HATFIELD. Yes.

Mr. DOLE. The President made clear without equivocation; that he supports the all-volunteer army concept.

Mr. HATFIELD. I would say further, in connection with the point about the number of draftees serving in Vietnam, which has been discussed this morning, that we have the figures which indicate that 88 percent of the infantry riflemen in Vietnam are draftees; but under President Nixon's withdrawal projections, they will have left by this time next year—that is, those who are being withdrawn—and we expect to have most of those draftees out of Vietnam. As of July 1, 1970, we find, computing the total armed force strength in Vietnam, that approximately 25 percent of them are draftees.

So that we have, again, the basis of a mixed force fighting in Vietnam. It is not a matter of having all our draftees there and our professionals or nondraftees elsewhere.

Mr. President, I look forward to the continuation of this discussion, and I am hopeful that the chairman of the Committee on Armed Services can——

Mr. EAGLETON. Mr. President, will the Senator yield, with the understanding that he will not lose his right to the floor?

Mr. HATFIELD. I yield.

Mr. EAGLETON. Mr. President, I will vote against the Hatfield amendment to create an all-volunteer Army.

The effects of this amendment would be so far reaching that I feel it is unwise to just tack it onto another bill without full and extensive Senate committee hearings.

I have several serious questions about a volunteer Army which should be answered in such hearings.

First, what will it cost? According to the Department of Defense, it would cost $4.3 billion, but some observers estimate it could cost far more. When the budget deficit for this fiscal year is currently estimated at over $10 billion—when there are desperate needs in such areas as education, health, housing, and the environment—I believe Congress must seriously study both the total cost of this proposal and its priority as it relates to other national needs.

Second, would a volunteer Army increase the already substantial power and influence of the military on American life?

Third, what effect would this amendment have on the war in Vietnam? Although I oppose the war in Vietnam, and am a cosponsor of the McGovern-Hatfield amendment to end the war, the effects of precipitately instituting an all-volunteer Army in the midst of a war need further and serious study.

Fourth, what are the alternatives? Although the Gates Commission which studied the volunteer Army concept released a report of over 200 pages, only four were devoted to "Alternatives to an All-Volunteer Force." I think possible alternatives deserve more consideration.

Fifth, is the push for an all-volunteer Army a reaction to the tragic involvement in Vietnam rather than a needed and practicable reform? After all, in peacetime we virtually have an all-volunteer Army and in times of war some type of draft will probably be necessary anyway. What is really gained?

I believe questions such as these should be explored in depth in legislative hearings and that it is not sufficient to adopt such a far-reaching program by the simple expedient of an amendment to a bill on the floor of the Senate.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. EAGLETON. I yield.

Mr. STENNIS. Mr. President, I am very much impressed, indeed, with the fine analysis of this problem—the points involved and the consequences of the adoption of this amendment—put forth by the Senator from Missouri. I think that with his fine, analytical mind, he has analyzed the matter clearly and has made an excellent contribution to the debate.

Mr. EAGLETON. I thank the Senator from Mississippi. And I thank the Senator from Oregon for yielding for this purpose.

Mr. HATFIELD. I am not so sure that I am glad I yielded at this point, but I am happy to say that I appreciate very much the questions raised by the Senator from Missouri; because I think he has raised not only valid questions but also questions that really go to the very heart of this amendment, and for which we certainly feel we have the material and the data to give response. I would like to have the privilege of a copy of the Senator's questions. They certainly deserve more than an off-the-cuff response at this point.

I think that by reading the colloquy that took place this morning, the Senator from Missouri will find that we did address ourselves to most of these questions, and I would be happy to go into greater depth on the points he raises.

Mr. President, I am about ready to yield the floor. Before I do so, I want to reiterate that the cosponsors of this amendment and I are and have been ready to reach an agreement on time. I am hopeful that the chairman of the Committee on Armed Services, together with his colleagues who oppose this amendment, can come to some kind of agreement so that we can look forward to a vote—not trying to hurry the debate but recognizing, as the Senator from Mississippi said yesterday, that the Senate is trying to clean up its work, trying

to move ahead, trying to accomplish its task here within a reasonable period of time. I want it understood that we who are the proponents of this amendment do not want to hold up the business of the Senate in any way. We feel that this is important business, but we are ready—have been and stand ready today—to reach an appropriate agreement on time.

On that basis, I am happy at this time to yield the floor.

Mr. STENNIS. Mr. President, I wholeheartedly agree with the Senator about his intention to move along on the bill. I know that is his position. It certainly is my position. As I said this morning, this matter is of such far-reaching import, so highly important, that I thought it could not be condensed into a few hours of debate. As soon as I get evidence that the facts have drifted through here, I will be willing to have some controlled time.

The PRESIDING OFFICER. The amendment has not yet been offered, the Chair would point out.

Mr. STENNIS. It is very much in debate, however.

CURBING THE BOMB THROWERS

Mr. FANNIN. Mr. President, senseless cowardly acts of violence continue to plague our Nation. A young police officer with five children is the latest innocent victim in the malicious pattern of bombings that has lasted all too long and appears to be growing even worse. What could be more despicable than to set a fatal trap for an unknown man answering a call to help someone in distress?

Yet, that is what happened to patrolman Larry Minard who was killed in a dynamite explosion at Omaha, Nebr.

And on the same day, an explosion in a Federal building at Minneapolis, Minn., caused a half-million dollars damage. To the South, in Atlanta, Ga., and in the Fort Lauderdale, Fla., area, there were firebombings of businesses and schools.

Mr. President, these shocking events come on the heels of Senate hearings which brought out some startling statistics on the extent of bombings.

Assistant Secretary of the Treasury Eugene T. Rossides reported that from January 1969, to April of this year there were 4,330 bombings, an additional 1,475 attempted bombings and, t reported 35,-129 threatened bombings.

Assistant Attorney General Will Wilson pointed out the FBI alone had investigated 776 bombings and arson attacks during a period of just over 18 months. Property damage in these attacks amounted to $24 million, 11 persons died, and more than 100 persons were injured. Wilson noted that the number of bomb threats to Federal buildings soared from 46 in fiscal 1969 to 383 in fiscal 1970. Actual arson or bombing incidents went up from 13 to 38 in a single year.

Mr. President, all of this makes it abundantly clear that we must proceed with all possible speed to take action to curb irresponsible and demented persons who perpetrate the bombings.

One step in this direction is the administration's proposal to beef up Federal law against bombing. The proposal would leave the primary responsibility for stopping bombings in the hand of local law enforcement, but would provide new authority for Federal action when it is needed.

The bill would expand the definition of explosives and broaden the provisions against transporting explosives or incendiary devices with knowledge they are intended to be used to kill, intimidate or injure persons or damage property.

Among other things, the bill also would provide severe penalties for bombings which cause injury or death. Several provisions in the bill are aimed at curbing the bombings of Federal buildings.

This bill introduced by the distinguished Senator from Nebraska (Mr. HRUSKA), currently is before a Judiciary subcommittee, which, I understand, is awaiting the report on the Government Operations Committee which held the hearings on bombings.

Mr. President, this legislation may not be a complete cure to the bombings, but it is a step in the right direction.

Recently there was an outcry when it was revealed Federal agents had in some instances checked library records to see who was reading books on how to make bombs. There was surprisingly little concern over the fact that books on bombmaking may be readily available to disillusioned or violently revolutionary individuals. In our society, libraries rightfully are free to choose the books they will stock and to distribute such books to those who want them. Bomb-making knowledge now apparently is widespread among the so-called revolutionaries and would be revolutionaries. It would be almost impossible, even if we tried to keep this information out of the hands of those who are violence-prone.

Many of the bomb-throwers and their supporters see their activities as a major step in an attempt to overthrow the traditional American form of government. Citizens of our Nation have not been confronted with a problem of this type or magnitude before.

Our recourse, it would appear, is to provide the tough penalties to deter those who would become involved in bomb-throwing incidents. And at the same time we must give law enforcement the tools so that bomb-throwers will know punishment will be swift and certain.

Legislation providing for closer control of explosive materials also would help deter the would-be bomb-thrower.

There is no justification for bombings.

No grievance is so great as to warrant use of a weapon which maliciously destroys property and kills innocent citizens. Bomb-throwers are cowards who are afraid to meet their problems—real or imagined—face-to-face.

In Wednesday's Washington Post I noted a story in which former Attorney General Ramsey Clark is quoted as praising radical dissenters and condemning calls for law and order. Clark reportedly told students meeting in St. Paul that calls for law and order are entirely emotional and to many ears they mean repression.

This is a strange comment coming from a man who not long ago was supposed to be the chief advocate of law and order in the United States.

I do not believe it is repression to demand that people with grievances use the many legitimate channels of peaceful and effective protest they have in this Nation rather than turning to violence.

I am not calling for repression.

I have not heard anyone in the administration call for repression.

But I will agree that if violence such as bombings and planned rioting are to become regular tools of the dissenters, there will in the future be calls for repression. Acts of terrorism eventually inhibit freedom.

Democracy in America has flourished because it has offered a maximum of both freedom and security for the individual.

When public safety wanes, when individuals no longer feel safe in their homes, on the streets or in public buildings, then the people are likely to turn to the very type of repression the so-called revolutionaries now imagine they are fighting.

Action on legislation to curb bombings is a step toward freedom—freedom for the mass of people threatened by unreasoned violence. More effective anti-bombing legislation would be a move to avoid the repression that worries Mr. Clark and others.

Mr. President, again, I urge the Senate to move as rapidly as possible in enacting legislation S. 3650 to curb bombings and arson.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. SCOTT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

NONVOTING DELEGATE TO THE HOUSE OF REPRESENTATIVES FROM THE DISTRICT OF COLUMBIA

Mr. SCOTT. Mr. President, I have reference to a Calendar matter which I, of course, have no intention of calling up, but I simply want to make a comment on it.

I refer to Calendar Order No. 1134, H.R. 18725, which would provide for a nonvoting delegate to the House of Representatives from the District of Columbia.

I take the time simply to point out that there is no hold on this side of the aisle on this bill. I would not make the statement except that statements have been made to District of Columbia officials to the effect that there exists a hold on the part of representatives on the nonvoting delegate matter.

This is not the case. There is no hold. We have no objection to the bill being called up on the call of the Calendar at

any time. We are prepared to proceed. I am prepared to support it. I would have no objection to a constitutional amendment being brought up.

I do not believe that any votes on the constitutional amendment would be affected adversely or otherwise by our action on the bill. This is a small step for the District of Columbia, but a great step for recognition of a lot of people. And I see no reason whatever why we should not be voting on a nonvoting Delegate for the District.

It makes no difference to me whether the delay in this matter comes from one person or another, from one Senator or another, from one section of the country or another. The delay is exactly the same if we are not acting upon it. Therefore, with full respect for the views of every other Senator, I think it should be made crystal clear—if I might use the expression—that there is no reason on our side of the aisle why we should not vote on the nonvoting Delegate bill on the next calendar call or as expeditiously as we can.

Mr. President, I hope this will put to rest any concern existing in the District to the effect that there is some objection. There is none. There has not been any objection to my knowledge since I have had cognizance of the bill being on the calendar. I have been informed of no objection.

If this matter is being held up, those who are holding it up will have to assume full responsibility for it. I will not assume any at all.

ORDER OF BUSINESS

Mr. SCOTT. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. RIBICOFF. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE SITUATION IN THE MIDEAST

Mr. RIBICOFF. Mr. President, I am saddened and perplexed by our Government's treatment of a stanch and trustworthy ally—Israel. While I cannot help but be impressed by the State Department's zeal in pursuing its present peace initiative, I am most distressed over its refusal to face the unpalatable, but undeniable fact of serious Soviet-Egyptian violations of the cease-fire along the Suez Canal. Either the Soviets and Egyptians have emplaced at least a dozen new missile batteries of six launchers each inside the ceasefire zone since August 8—or they have not. I am skeptical that our own intelligence sources cannot verify this after more than 11 full days. Israeli intelligence is acknowledged by our Government as being excellent—and its past reliability is not in doubt. Why then is it not considered reliable in this case?

But the State Department's reply yesterday to these grave charges is essentially one of "see no evil, hear no evil, speak no evil."

The rather remarkable statement by the Department spokesman yesterday begins with the following paragraph:

> We have concluded that there was forward deployment of surface-to-air missiles into and within the zone west of the Suez Canal around the time the ceasefire went into effect; there is some evidence that this continued beyond the ceasefire deadline, although our evidence of this is not conclusive.

What this says is that there are new surface-to-air missiles in this zone, but we still aren't sure this constitutes violations even though there is evidence this occurred after the deadline. But if there have been violations, the State Department feels they are not important anyway. Israel is in effect told—why worry, let us proceed with the talks, and not confront the violators with facts. Meanwhile, the Soviets and Egyptians are being permitted to do what the Israel Air Force prevented them from doing for 6 months.

This reply coming after the shameful incident of the U.S. transmission of Israel's acceptance of the cease-fire to Ambassador Jarring, must be treated seriously. This handling of Israel's charges could be a sad lesson in how to lose friends and alienate people, if it were not so frightening in its implications for Israel's survival and American interests.

Israel originally agreed to the latest U.S. initiative knowing full well how it could affect her most vital security interests. The Government of Israel in deference to our own President did not make public its grave doubts over the ultimate wisdom of Secretary Rogers' initiative. At the expense of splitting its coalition government she accepted our initiative. In doing so, Israel relied on our own country reassurances that it would guarantee the terms of the proposed limited cease-fire and insure that the military balance was not further tipped against Israel. Now Israel is being scolded for complaining about severe violations of this arrangement which have, in fact, drastically altered the balance along the canal.

State Department officials have been described in the press as being "irritated" over the fuss the Israelis are making. But the dispute here is not over a trivial matter—it is Israel's very existence. One cannot help but draw a parallel to a situation in which a victim of a criminal assault is charged by a policeman at the scene of the crime with disturbing the peace because she screamed, while her assailant goes free.

The drama which has unfolded in Israeli-American relations during the past few weeks could charitably be described as a sell-out. Actually, it is worse than that. A sell-out in international relations implies that in return for sacrificing another nation's interests, you gain something in return. I fail to see how the United States will benefit from her failure to provide Israel with a minimum of diplomatic and military support at this crucial juncture.

Will we really achieve "peace in our time" in the Middle East? Will we gain the admiration of the Russians for our self-induced myopia in overlooking her missiles? I think not. By now it should also be clear that we will not be able to woo the radical Arab states away from Russia by a gradual erosion of our support for Israel.

If war is too important to be left to the generals, the pursuit of a lasting peace in the Middle East is too vital to be left to the Arabists in the State Department. I wonder how "even-handed" these specialists can be after spending their foreign service careers almost exclusively in Arab countries. But in recent months, in the hope of finding a solution to a complex problem, they have been given their head. The results now unfolding reveal a disaster for both Israel's security, and the United States' strategic interests in the Middle East. I, too, favor quiet diplomacy—but not when it is used to quiet the truth.

The Russians are firmly entrenched—both literally and figuratively—in parts of the Middle East.

The Israelis have bled for 22 years to defend themselves from Arab aggressors seeking their destruction. All during this time, however, their first priority was to seek peace and reconciliation with their Arab neighbors. It still is today. But the issue is no longer the Arab-Israeli conflict. Israel is now facing the most up-to-date Soviet jet aircraft flown by Russian pilots and serviced by Russian technicians. All of Egypt bristles with the latest Soviet missiles manned and defended by Soviet personnel. Egypt alone has five times the number of supersonic aircraft Israel has—and the number of Russian-piloted planes alone exceeds Israel's small total.

By recklessly choosing to ignore the Soviet buildup in the Canal Zone during the cease-fire, the United States is forcing Israel into a corner. We are unwittingly encouraging Egypt to attempt a canal crossing under the cover of Russian missiles and planes whenever she feels she is ready militarily.

As a result of what the State Department prefers to term "inconclusive evidence," Soviet missiles now cover not only the Egyptian side of the canal, but portions of the Israeli-held side to a depth of over 10 miles. It is meaningless now to mouth the vague reassurance of not permitting a shift in the balance of military power. It has already shifted—due to Russian boldness and American timidity during the past year.

Stripped of her ability to provide air cover for her vastly outnumbered troops, Israel is being forced to make a choice between piecemeal surrender or new costly military action—with unforeseen consequences for all the parties involved. I have no doubt which course she must choose. The failure of the United States to impress upon the Soviet Union the necessity of honoring the current cease-fire is a clear signal to the Russians that the security of Israel is a secondary consideration, and that we will accept peace talks on Russian terms. But Israel is not prepared to stake her national existence on the good intentions and magnanimity of the Soviet Union.

Mr. President, I have watched events in the Middle East since the 6-day war in the hope of finding some signs of movement toward peace. But the Western powers have encouraged Arab intransigence and greater Soviet involvement by pursuing their own narrow in-

terests. There was the shameful episode of the French arms embargo, where France acted retroactively in denying Israel the Mirage jets for which she had already paid. There was the British refusal to sell Israel Chieftain tanks, tanks which Israel actually helped design. These policies were largely motivated by fears of disruptions in oil supplies.

By the same yardstick of national interests, one can explain Russian expansion into the Mediterranean area in terms of a desire to reopen the Suez Canal, and to gain warm water ports, and air bases. However, I fail to see what interests of the United States are served by the present actions of the administration in undermining Israel's position on the eve of the peace talks.

Mr. President, this administration has to date failed to supply a single jet aircraft to Israel except for those delivered under an agreement made by President Johnson. Not a single American tank has been added to Israel's increasingly obsolete armored forces—except those captured from Jordan in the 6-day war. True, we have permitted Israel to make restricted purchases of other equipment here for cash on the barrelhead. And we profit handsomely from these commercial sales.

As a result of these expenditures, Israel must now spend 30 percent of her gross national product on defense needs. The United States, with its worldwide commitments, spends only 9 percent. The threat to Israel posed by Russia's military might is immediate and real. Four attacking Russian Mig–21's were shot down by Israeli flyers shortly before the cease-fire. Perhaps Israeli pilots can teach the Soviet air force a thing or two—but they should not have to stand up to the Soviets without modern aircraft.

Mr. President, Israel's current conflict with the Soviet Union, and Israel's proven readiness to sacrifice her own blood and treasure, calls for the extension of the Nixon doctrine to the Middle East. This doctrine, first enunciated by the President at Guam, can serve as the basis for a rational American policy in the Middle East today. The doctrine, as explained in the President's State of the World message states:

> The United States will keep all its treaty commitments.
>
> We shall provide a shield if a nuclear power threatens the freedom of a nation allied with us, or of a nation whose survival we consider vital to our security and the security of the region as a whole.
>
> In cases involving other types of aggression we shall furnish military and economic assistance when requested and as appropriate. But we shall look to the nation directly threatened to assume the primary responsibility of providing the manpower for its defense.

In this message, the President further explained that—

> This approach requires our commitment to helping our partners develop their own strength. In doing so, we must strike a careful balance. If we do too little to help them—and erode their belief in our commitments—they may lose the necessary will to conduct their own self-defense or become disheartened about prospects of development. Yet, if we do too much, and the American forces do what local forces can and should be doing, we promote dependence rather than independence.

Israel has shown three times in 20 years how well she can fight to defend herself. She does not need American troops—nor does she want them. Israeli-American relations do not require a formal treaty commitment. The bonds between our two nations are too real and too deep to require this formality. But Israel does need our help and support now—not against her Arab foes—but against the Soviet Union.

Israel is proud to be in a position where she assists 26 developing nations in Africa. But it must be remembered, Israel is a country the size of New Jersey, poor in natural resources, and with a population of less than 3 million. If we can provide supporting assistance funds to a country like Haiti—surely Israel is as worthy a recipient. Why should U.S. military and economic assistance be lavished on corrupt dictatorships who devote more effort to repressing internal dissent than fighting external enemies?

Events are moving very quickly. Israel, for good reasons feels she has been seriously let down by the United States.

If our own Government finds it more convenient to force Israel to swallow serious truce violations than to insist on Soviet and Egyptian adherence to the agreement, then our own role as a peacemaker is underminded. And our credibility as a world power in this region is undercut.

Here in the Senate within the past 3 months, there have been two clear and overwhelming manifestations of support for Israel. At the end of May, some 76 Senators joined in a letter to Secretary Rogers urging the immediate dispatch of jet aircraft to Israel. During this past month, 72 Senators wrote to President Nixon affirming support for his forthright statements of July 1. These were expressions of the belief that Israel is a valuable material and spiritual asset to the United States, and is worthy of our support.

Mr. President, history will have to pass judgment on the actions of our Secretaries of State and Defense during this current troubled period. I must admit I have found their recent statements puzzling and disturbing. The deterioration today in United States-Israeli relations, and the growing Russian threat in the Middle East calls for the continuing personal attention of our President. Traditionally, Israel has been able to rely on the statesmanship, courage, and compassion of our Presidents. President Nixon, too, has these attributes of leadership.

For the good of our country, for the sake of a genuine peace in the Middle East, and for the benefit of mankind, I am confident that the President will pursue an honorable course for the United States at this critical juncture.

Mr. HUGHES. Mr. President, will the Senator yield?

Mr. RIBICOFF. I am pleased to yield to the distinguished Senator from Iowa.

Mr. HUGHES. Mr. President, I wish to commend the distinguished Senator from Connecticut for calling attention to the very critical problem in the world today in which our country is directly involved in trying to bring about a peaceful situation. Lord knows, we are all seeking peace. I would like to ask the distinguished Senator a few questions in relation to his address.

Does the Senator believe there is evidence that forward moving SAM sites have been, in fact, completed or installed since the cease-fire was called for?

Mr. RIBICOFF. There is no question in my mind that this took place. I believe the American intelligence community will assure the Senator concerning the accuracy and the superiority of Israel intelligence over these many years. As a matter of fact, Israel intelligence and American intelligence have often worked closely together, and the best intelligence on the Middle East comes from Israel sources.

The pictures that were shown yesterday, taken by Israel sources, are not controverted. It is interesting to note that neither Egypt nor the Soviet Union has denied the fact that these missile bases have been moved forward. What to me is so disturbing is the fact that the United States, unwilling to face up to this situation, has been unwilling up to yesterday, and then with mealymouthed language, failed to even acknowledge it has taken place. Now, as I read the press and understand the situation, the United States has forwarded a letter or a private complaint to Egypt and the Soviet Union, with a great degree of timidity.

Let me tell the Senator from Iowa what bothers me. The Russians are tough. The Russians are smart. The Russians are unsentimental. The Russians, beginning in February, have been pushing Israel and especially challenging the United States to see what the American response would be. And this effort has continued with a continued buildup of jet planes, jet supplies, and missile bases in Egypt, and the United States has basically remained silent.

As a matter of fact, last February the President of the United States forwarded a private letter of complaint to the Soviet Union concerning the situation, and it is my personal belief that the President of the United States was treated almost with contempt by the Soviet Union in its response to the President of the United States.

If the Soviet Union—and the Israelis are smart enough to realize this—get to feel that they can take any step they want without the United States calling the turn or even publicly calling the Soviet Union and the Egyptians for their activities, it spells out a disaster for Israel because it means that Israel will go into peace negotiations under the aegis of the United Nations and the four big powers. France is against Israel. England does not count very much in international affairs and will not do anything. The Russians stand four-square with an all-out commitment to the Egyptians. If the United States does not take a strong position in those negotiations, what it spells out to the Russians and Egypt is that they can make any demands they want and Israel will be forced against the wall and forced to take

a dictated peace against her interest, and the United States, which is supposed to be and to remain her ally, will not exert her great power against the Soviet Union. This is a potential tragedy to the American interest in the Middle East, and also is a question of life and death for Israel.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. RIBICOFF. I yield.

Mr. STENNIS. I am compelled to leave the floor on an urgent matter. I am very much impressed by the remarks made here by the Senator from Connecticut. I respect his judgment. I know his fine summary is correct on the facts. He points up a very serious situation. I was one of those who signed the letters that he mentioned. I am glad the Senator has spoken. I think he has made a contribution here and elsewhere on this subject.

Mr. RIBICOFF. I thank the Senator. May I say, while the Senator is present, because he is chairman of the Armed Services Committee, and may I say for the benefit of other Senators, that some of the historical facts which appear are very important in America's relations with Israel. The Senator, who is chairman of the Armed Services Committee, has a right to take pride in his continuous appraisal of the Joint Chiefs of Staff and the Military Establishment. The Joint Chiefs of Staff and practically every military man in this country who has had the responsibility has recognized the problem of America's basic interest in the Mediterranean area, NATO, the Indian Ocean, and the Persian Gulf. The Defense Department has usually been sympathetic to the problem of Israel in relation to the U.S. interests.

The same cannot be said of the State Department. Historically, the State Department has always been pro-Arab, and against Israel. If it had been for the State Department, there would not have been an Israel, and Israel would not have survived.

Every President of the United States has had a distinct understanding of this problem. It is only because Presidents of the United States have repudiated our own State Department time and time again, that America's interests have been retained in the Middle East, and Israel has survived.

That is why it is so important today that President Nixon follow his predecessors in office, whether it be President Roosevelt, President Truman, President Eisenhower, President Kennedy, or President Johnson, in this realization, because the President of the United States understands the world picture and understands the interests of the United States.

That is why there is so much dismay in the hearts of the Israelis, and those who understand the situation, because they know that the Arabists in the State Department, whose training has been basically in Arab countries, whose sympathies are with Arab countries, are continually trying to sell the interests of Israel down the river to the different Arab dictatorships.

Mr. STENNIS. I thank the Senator. I must leave.

Mr. HUGHES. Mr. President, will the Senator yield further?

Mr. RIBICOFF. I yield.

Mr. HUGHES. I believe the Senator indicated, and I will ask him in order to clarify the matter, that the State Department had indicated that there was substantial evidence that there may have been construction of SAM sites over and above the completion of those already begun, though they felt the evidence was not conclusive. Am I right in that?

Mr. RIBICOFF. I will read a portion of the Department's statement again. The statement is as follows, and I quote the State Department:

> We have concluded that there was forward deployment of surface-to-air missiles into and within the zone west of the Suez Canal around the time the ceasefire went into effect; there is some evidence that this continued beyond the ceasefire deadline, although our evidence of this is not conclusive.

In my opinion, that is doubletalk. I think the State Department's conversations—and different members of the press have reported this—that the State Department is angry that the Israelis had the consummate gall to call attention to these violations of the cease-fire, and to do it publicly.

I think the Israelis would have had to be absolutely insane if they kept quiet when this was going on in violation of the understanding and agreement. The Israel Government was close to breaking up over the question. The coalition government split up because there was a big body of opinion in the Israel Government and among the population that believed there should not have been only a limited cease-fire. I think the Israeli Government was correct in agreeing to the cease-fire, and the Israelis put their trust in the U.S. Government. I can understand the dismay in the hearts of the Israelis today when they see what has taken place in the past week.

Mr. HUGHES. Did the Senator further say that these forward SAM sites are being manned by Soviet personnel, or is there evidence of that?

Mr. RIBICOFF. No; I do not have proof that they are being manned by Russian personnel. My understanding is that the SAM–2's that have been put in the forward sites are being manned by Egyptians. There are reports that Russian supervisors at these sites have been killed in Israeli raids.

But basically, they are Soviet SAM sites. They use Russian missiles, the Egyptians do not manufacture them. The Egyptians have been completely trained by the Russians, and, while I do not know about the particular ones that have been moved into the so-called neutral zone, basically there has been Soviet supervision of the SAM missiles. The feeling is that, while there is no proof that the Russians actually fired them, they are so complicated and sophisticated that the Russians have been supervising and giving the directions at the most localized level.

Mr. HUGHES. Would the Senator be kind enough to refresh my memory on what President Nixon's pledge was to the Israelis, in return for the cease-fire?

Mr. RIBICOFF. The President assured the Israelis the United States would continue to maintain a balance of power. He assured the Israelis that they would have secure and agreed-upon borders before withdrawal, and that the vital interests of the Israelis would not be sacrificed if they accepted the cease-fire.

It was with these assurances from the President of the United States that the Israelis accepted the cease-fire.

Mr. HUGHES. Does the Senator feel that there has been some substantial slipping of this pledge during the following days?

Mr. RIBICOFF. I would say that without question there has been slippage in the pledge. It took place in two ways. First, when the Israelis accepted the cease-fire, they transmited to the United States their acceptance, emphasizing that they would accept the principle of withdrawal only to secure and recognized boundaries, as stated in the U.N. Security Council resolution of November 1967.

When the Secretary of State forwarded the Israel acceptance to Ambassador Jarring at the United Nations, for transmission to Secretary General U Thant this condition was deleted. This vitally impairs the Israel position, and came as a great shock to them because it changed the frame of reference of the Israel understanding.

There is an article in today's Washington Post, which I ask unanimous consent to have printed in the RECORD at this point, by Columnist Joseph Kraft in which he details what took place during this period.

There being no objection, the article was ordered to be printed in the RECORD as follows:

ISRAEL IN DANGER

(By Joseph Kraft)

On Thursday, Aug. 6, Prime Minister Golda Meir of Israel picked up the phone and put through a call to Washington's chief action officer for the Near East, Assistant Secretary of State Joseph Sisco. She wanted to draw urgent attention to a point in the frame of reference for the negotiations that would follow a cease-fire.

Next day Ambassador Itzhak Rabin was summoned to a 10 o'clock meeting with Secretary of State William P. Rogers on what he assumed would be the point raised by the Prime Minister. The Secretary, it developed, was not available, and so the Ambassador went back to his office. He was summoned again for another meeting at 2:30 that afternoon.

This time the Ambassador cooled his heels for half-an-hour while the Secretary finished his lunch. Then he was called in and told that in one hour the cease-fire would be announced from United Nations headquarters in New York. No allowance would be made for the point raised by Mrs. Meir.

That little episode, told here for the first time I think, has poisoned subsequent relations between this country and Israel. It explains the recent public spitting match about violations of the truce on the Egyptian side. For the Israelis feel they have been taken in by the cheap lawyer's trick of ducking issues with documents.

But whatever the provocation, the debate now going on is harmful. The issue is not whether the Secretary of State is a knave or a fool, or whether the cease-fire was violated in the spirit or the letter. The issue is the security of Israel.

For one thing, there took place in the hours around the commencement of the

cease-fire, a massive forward movement of Soviet surface-to-air missiles along the Suez Canal. These weapons can now hit incoming Israeli planes over Israeli territory.

Unchecked artillery fire would endanger the present Israeli fortifications along the Canal—the so-called Bar-Lev line. Once those were shattered, the Israelis would be vulnerable to a cross-canal operation by Egyptian forces and a rollback across Sinai.

Moreover, questions have been raised about American assurances to Israel. At a press conference in Los Angeles President Nixon had assured the Israelis they could "agree to negotiate without fear" that their "position may be compromised or jeopardized." Much the same message was conveyed to Mrs. Meir in a letter from the President.

But with the Israeli position endangered, the United States seems to be walking away from these assurances. This country has not, as it easily could, expressed outrage with what is a clear break in the spirit of the cease-fire; nor, as it easily could, has the United States increased the flow of military equipment to Israel. Thus what the Israelis took to be a guarantee is now vanishing to nothingness before their eyes.

Finally, the frame of reference for the peace negotiations yet to come is distinctly adverse to the Israelis. The Israelis have always insisted that in return for withdrawal from territories seized since the six-day war, there be acceptance of "secure and recognized boundaries," as set forth in the United Nations Security Council resolution of Nov. 2, 1967.

A chief point of Mrs. Meir's call to Sisco was to get that wording into the cease-fire announcement. That is the precise issue on which she was fobbed off. The cease-fire announcement issued at the U.N. on Aug. 7 makes reference to "Israeli withdrawal from territories occupied in the 1967 conflict." It says no word about "secure and recognized boundaries."

Maybe the Russians intend to push for a peace settlement in the end. Maybe they are only building up positions of strength to facilitate compromise.

But it is at least possible, that the Russians really intend to crack the Israelis, the better to penetrate the Near East. If so, they are in fine position. For they have the Israelis now backing down a slippery slope with the massive steamroller of Soviet power poised above them.

In these circumstances, there is no point in trading insults, in petty intrigues, or in the casuistry of lawyers. There is point only in one thing. And that is to assert the Israeli peril, once again, in a way that engages the conscience of serious men.

Mr. RIBICOFF. It is my understanding that the facts related in the Kraft article are entirely correct. This did take place, and the columnist, Mr. Kraft, has the facts as to what took place between the Secretary of State and Ambassador Rabin. This caused deep dismay in the Israel Government, and has increased Israel's fear of U.S. intentions.

When the Israelis later confronted the United States with solid evidence of serious Egyptian and Soviet violations of the cease-fire agreement, the United States became very angry at the Israelis for calling it to the attention of the world.

Here again, the Israelis, who depend on the good faith and assurances of the United States, are understandably uncertain whether the United States will act in good faith or not. Now they must prepare for the peace talks with great fear in their hearts. The Egyptians have a steadfast friend in the Soviet Union, but Israel apparently does not even have the trust of the United States. Without American diplomatic support, Israel is one tiny nation against all the major powers, all by herself.

Mr. HUGHES. Is it not true that the substantial evidence of the last 20 years indicates that the small nation of Israel, with the small population, the heavy commitment of manpower and percentage of their gross economic capabilities invested in their defense, their survival has been more or less guaranteed by the United States in this ongoing policy, and that if Israel were to wait, for example, for Soviet armaments to be placed or their borders to be crossed, with the imbalance in manpower and the capability of the Russian nation of supplying armaments to the Arab nations, obviously they would never have been able to wait until the last moment?

Mr. RIBICOFF. The Senator is correct. I think the Israelis feel, and the events have proved, that the Israelis alone can defend themselves against 100 million Arabs. Less than 3 million Israelis are willing to face 100 million Arabs; but I think it would be foolhardy to think Israel could take on the military might of the Soviet Union.

As for the Soviet Union's deepening military involvement, there is the puzzle of why it committed its own aircraft in face-to-face combat with the Israelis shortly before the cease-fire. This is the first time since World War II that the Soviet Union has ever committed its forces outside of Eastern Europe. Perhaps the Soviets were testing out their own ability to be able to handle the tiny Israel Air Force in an air war.

The Israelis downed four late model Soviet Mig–21's, with Russian pilots. The Russians have apparently made an out-and-out commitment to support Egypt's war of attrition against Israel. I do not know what the Soviet Union's ultimate intentions are. I do not think anyone knows. But there is little question in anyone's mind that after many years of trying all the dreams and ambitions of the czars to control warm water ports and become a Mediterranean power have finally been achieved. Today the Mediterranean is rapidly becoming a Russian lake.

With their control of the Suez Canal and the Mediterranean area, they are free to seek control of the Persian Gulf and the Indian Ocean. This opens up the prospects of Soviet domination of that whole area of the world.

What it would be doing would be outflanking the United States and its NATO allies. It would jeopardize Greece, Turkey, Italy, Iran, and all of Europe. It is too bad that the European nations, which should realize this, still put almost the entire burden of Mediterranean defense on the shoulders of the United States. But France has followed its own narrow policies under De Gaulle, and England, with its oil interests, has sat quietly by.

Mr. HUGHES. Mr. President, I again commend the distinguished Senator from Connecticut for what has been a really enlightened outline of the problems as they now exist in the Middle East and the difficulties the little nation of Israel is facing. I am sure the Senator would join me in commending the President of the United States and the Secretary of State for their initiatives for peace, and the steps they have taken in trying to bring these parties to the bargaining table for the solution of their differences by peaceful means.

I am sure also, as the Senator has so capably pointed out, that the little nation of Israel has almost torn itself asunder and approaches these negotiations with great fear and trepidation, and that the commitment of the United States to this small nation could indeed be jeopardized without support in terms of the needed evidence that we have today.

I think the speech today by the distinguished Senator from Connecticut, at a very critical point in the history of the Middle East, can again focus the attention of the American people not only on our hopes for peace, but on our responsibility to work for peace by keeping our commitments to maintain the delicate balance in that area.

Mr. RIBICOFF. I thank the Senator for his remarks. History is going to have to judge the cynicism displayed in the past few weeks of the present Secretaries of Defense and State. I hope that history will not judge the President of the United States by the same yardstick. I have confidence in the grasp of world affairs of every President of the United States, and I cannot help but feel that the present President of the United States must be unhappy over the events of the past week. July 1, in his television interview in California, the President indicated his desire for maintaining the balance of power in the Middle East. He stated his desire that Israel be secure, and cited the motives of the radical Arab States to drive Israel into the sea.

The President deserves high marks—very high marks for this statement. He should be commended for trying to bring this long struggle between the Arabs and the Israelis to a peaceful and just conclusion. But I would hope the President would continue to recognize the importance for peace of these commitments he has made publicly to Israel. No President of the United States should do less.

Mr. KENNEDY. Mr. President, will the Senator be kind enough to yield?

Mr. RIBICOFF. I am pleased to yield to the Senator from Massachusetts.

Mr. KENNEDY. I join my colleague from Iowa in commending the Senator from Connecticut for bringing this matter so clearly and forcefully to the attention of the Senate today. I think he has presented a balanced and thoughtful commentary on the Middle East. I think he has stated, not only in his prepared text, but also in his subsequent comments, that he commended the President for trying to initiate the recent peace initiatives in the Middle East. But I think that the most important point in the most reasonable and balanced presentation of the Senator from Connecticut is his feeling that the United States ought to be prepared to identify and specify and seek to correct any violations of the cease-fire agree-

ment on either side, that the United States, as one of the principals in trying to bring about the peaceful negotiations, should be willing, as the Senator suggested, to state the facts clearly and forcefully when violations have occurred so that no party is taken advantage of.

I think that the kind of standard the Senator is prescribing in terms of our conduct in the Middle East, as I understand it, is one of balance and one of equal treatment for both sides. He has properly recognized that one of the key requirements for any kind of negotiation would be observance of the full terms of the cease-fire. Thus it is disturbing to many of us that, in spite of the protestations and evidence offered by Israel, the United States still has failed to face up to the question of infringements of the agreements. Therefore, the United States is, whether we like it or not, reflecting to the world, as well as to our adversaries, that we are not really interested in the balanced approach which I think underlay the President's initial efforts to try to bring this difficult and trying and perplexing situation to an end by peaceful negotiation.

Mr. RIBICOFF. I thank the Senator for his contribution.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. RIBICOFF. I yield.

Mr. BYRD of West Virginia. Mr. President, I want to congratulate the able Senator from Connecticut on his very well reasoned speech. He expresses an extremely grave concern which I share, about the dangerous situation that is continuing to develop in the Middle East. He and I and other Senators have discussed this developing situation many times, and I have joined with other Senators in signing letters which the able Senator has addressed to various personages in the executive branch. I think the situation in the Middle East is perhaps a part of the price we have to pay for an overriding preoccupation with our involvement in Vietnam, to the exclusion of adequate attention and concern with respect to our interests in the Middle East.

I believe that the Senator performs a great service in taking the floor today. He spoke of history's judgment of the Secretary of Defense and the Secretary of State and his hope that it would not also render an adverse judgment against the President. I hope additionally that it will not render a judgment against those of us who sit in the legislative branch.

The able Senator from Connecticut has spoken at a timely moment to express concern. I know that he wishes the peace talks to go forward expeditiously. We pray fervently not only that they will go forward but also that they will produce results that are fruitful, and beneficial, and lasting, and that a just and workable peace will come to that troubled part of the world.

At the same time, I think it is incumbent upon us, not only as an ally of Israel, but, also if for no other reason, out of pure selfish self-interest, to express a strong protest, and in no uncertain terms, to the Soviet Union and to the Arab powers with respect to reports that forward movements of SAM missiles have taken place during the cease-fire.

The Senator has rightly spoken.

The Senator's speech, as usual, has been well thought out, excellently presented, and, as I have said, very well reasoned. I shared his viewpoint. I trust that our country will take a stand, and that it will be firm, while there is yet time; because the Soviets are not among those who are slow to sense timidity and hesitancy on the part of an adversary. They also recognize determination and firmness especially when it is manifested by a power which is in a position to act with firmness.

I thank the Senator.

Mr. RIBICOFF. The Senator's comments are absolutely correct. The Soviet Union appreciates power, and is never afraid to use its power, when it is in its interest. They are exercising their power in the Middle East today.

I thank the Senator very much for his valuable contribution.

Mr. ALLOTT. Mr. President, I think that the speech of the Senator from Connecticut has been helpful. I must say that I cannot agree with all his conclusions, particularly with respect to the question of whether the State Department has always been pro-Arab and anti-Israel. I have two observations to make in respect to this.

During the course of the years, as a member of the Subcommittee on Defense for Appropriations I have had many, many occasions to talk with the former Secretary of State Dean Rusk, for whom I have great respect. If there were time this afternoon—and there is not—I could detail some of the specific instances in which he took action which was very much in Israel's interests rather than in the Arabs' interest. Of course, I do not say that the Arab desks are not trying to look out for the friendship of the Arabs. But I could not go along with the conclusion that the State Department has always been pro-Arab.

Second, I think it should be said here that, after several years now—in fact, since the last war, which the Arabs commenced—it was the President who finally took the lead in the initiative to get the Near East situation off dead center. But I think that anyone who writes off the State Department and Secretary Rogers in the negotiations that have gone on behind the scenes is making a very grave error in judgment of history. Further, it is possible that such statements will confuse rather than elucidate the situation with respect to the Near East, about which all of us are very concerned.

S. 4273—INTRODUCTION OF A BILL TO MODIFY THE BOUNDARIES OF CERTAIN NATIONAL FORESTS IN THE STATE OF IDAHO

Mr. ALLOTT. Mr. President, by request, I introduce to the desk, for appropriate reference, for myself and on behalf of the chairman of the Committee on the Interior (Mr. JACKSON), a bill to modify the boundaries of the Coeur d'Alene, Nezperce, Payette, Boise, Sawtooth, and Targhee National Forests in the State of Idaho, and for other purposes.

This proposal was submitted and recommended by the Department of Agriculture, and I ask unanimous consent that the executive communication accompanying this draft legislation be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER (Mr. JORDAN of Idaho). Without objection, it is so ordered.

(See exhibit 1.)

Mr. ALLOTT. Mr. President, I apologize to the present occupant of the Chair. He may wish to join in sponsoring this bill. I did not realize that I had it with me until I took out my file.

The PRESIDING OFFICER (Mr. JORDAN of Idaho). The bill will be received and appropriately referred.

The bill (S. 4273) to modify the boundaries of the Coeur d'Alene, Nezperce, Payette, Boise, Sawtooth, and Targhee National Forests in the State of Idaho, and for other purposes, introduced by Mr. ALLOTT (for himself and Mr. JACKSON), by request, was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

EXHIBIT 1

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D.C., April 27, 1970.

HON. SPIRO T. AGNEW,
President of the Senate.

DEAR MR. PRESIDENT: Transmitted here with, for consideration of the Congress, is draft bill "To modify the boundaries of th Coeur d'Alene, Nezperce, Payette, Bois Sawtooth, and Targhee National Forests i the State of Idaho, and for other purposes

The Department recommends enactmen of the draft bill.

The proposed legislation would add areas of small to moderate acreage to the s National Forests within which they are situ ated, and additionally, two areas that a adjacent to boundaries of certain of the Forests. Most of these tracts are interior e clusions within the exterior boundaries of t National Forests in which they are locate

Presumably, the described areas were n included within the respective National Fo ests at the time the Forests were esta lished because of expected mining activit mining settlements, or because they we thought valuable for agriculture use. T value and use of these lands for these pu poses has not materialized. Resource ma agement values and needs are similar to a intimately related with those occurring adjacent National Forest lands.

Upon inclusion of the areas in the spective National Forests, the public doma within them would be transferred from t administration of the Bureau of Land Ma agement in the Department of the In rior to the administration of the Forest Se ice in this Department. On certain parc from this unreserved public domain, as scribed in Sec. 2, the United States co consider applications from the State of Ida for indemnity school land selection, fo period of one year from enactment of t bill in the same manner as before. The tra fer would eliminate duplication of progra by two agencies in the same localities a reduce administrative costs.

Timber, grazing, watershed and recreat resources within the areas covered by t proposed legislation are logical parts of larger complexes of the surrounding Natio Forest lands. Unified planning and devel ment of such complexes would result more economical and planwise improvem and management and in better correlat of recreational uses.

In addition to about 52,000 acres of reserved public domain and the 6,000 a of National Forest, the areas proposed addition to the designated National For

include about 57,000 acres of private land and 17,000 acres belonging to the State of Idaho. Status and use of the non-Federal lands would not be affected by their inclusion within National Forest boundaries. However, the lands would thereby qualify under existing authorities for exchange transactions involving National Forest land.

The transfer of administrative jurisdiction which would be effected by this proposal would be in accord with recommendations made following joint studies by the agencies concerned. The Department of the Interior has reviewed this proposal and concurs in its submission to the Congress for enactment.

The Bureau of the Budget advises that there is no objection to presentation of this proposed legislation from the standpoint of the Administration's program.

A similar letter is being sent to the Speaker of the House of Representatives.

Sincerely,

J. PHIL CAMPBELL,
Under Secretary.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. ALLOTT. Mr. President, no task is so unpleasant as opposing legislation which aims to achieve a goal one wants, but which is an inappropriate means for achieving that goal. This is the situation many of us face with regard to the pending Hatfield-Goldwater amendment.

I want to say, by way of preface, that I recall back in 1958 and 1959 when the distinguished Senator from Arizona (Mr. GOLDWATER) was interested in trying to upgrade the pay of the various branches of the service upon the basis of their capability and the tasks they were performing. Very few paid any attention to him. I did pay attention to him. I joined him in those efforts time and time again, and never during those last years of the 1950's and the first 2 or 3 years of the 1960's were we able to make any progress in that. So what I have to say is made from the context of my own record in the Senate with respect to this matter and the way I have expressed myself generally in the past with respect to the military.

Mr. President, in my remarks today, I want to explain why I think the Hatfield-Goldwater amendment is not the right vehicle for bringing about the goal which many of us share with the Nixon administration—the goal of establishing an all-volunteer armed force. In doing this I want to explain some of the complex questions which need the sort of investigation that can only properly be done through Senate hearings.

I will confine my remarks on the amendment itself to the first three sections.

The first section begins with the words "The Congress hereby finds" and lists six findings. Three of these are true and can be acted upon without establishing an all-volunteer army. These are findings one, five, and six pertaining to the desirabilty of elevating the status of the military, the desirability of promoting the success of voluntarism as a source of military manpower and the desirability of improved training and equipment for Reserve forces.

The remaining three "findings" are more complex and contentious. Finding No. 2 involves a description of conscription which I do not think does justice to that practice which has served us well at various dangerous moments in our eventful history as a nation.

This "finding" says that—

> Involuntary service in the Armed Forces is a discriminatory tax-in-kind upon those persons required to serve because it falls upon a relatively small number of the total population.

My objection to this description is twofold, involving matters of logic and of moral judgment.

First, the word "because" in that sentence suggests a logical entailment that does not in fact exist, or at least does not exist without several important planted premises. I do not think it is self-evident—unless one accepts a somewhat eccentric semantic fiat—that any civic duty that does not fall evenly on the general population shall be called a discriminatory tax-in-kind.

Second, this description implies—vaguely but ascertainably—a moral judgment about the propriety of the practice of a Government instituting duties that are not universal. I do not think there is support for this moral judgment in the great texts of political philosophy, or in the proven practices of this Nation which has an altogether honorable record of respect for private rights.

Finding No. 3 concerns a question of fact and is, I think, false. It says that Congress has found that—

> The military manpower requirements of the Nation can be adequately met through the effective administration of a voluntary system.

My objection to this is threefold, concerning matters of literal interpretation, good legislative practice, and verbal ambiguity.

First, the statement, taken literally, is false. Neither Congress nor a committee thereof has reported any such finding. A commission appointed by and reporting to the executive branch has asserted that this proposition is true. But that is all. Congress has not.

Second, this is precisely the kind of pivotal proposition which must be investigated in the Congress if we are to function as a thorough and careful legislative body rendering independent judgments. This is not the sort of matter on which we should allow another branch of Government to substitute its assertions for our judgments.

Third, the meaning of finding No. 3 is obscured by the ambiguous meaning of the word "effective" in the statement that—

> The military manpower requirements of the Nation can be adequately met through the effective administration of a voluntary system.

On the one hand, if the word "effective" is supposed to mean "successful in generating the required manpower," then the statement is true but not significant. On the other hand, if the word "effective" does not have all that meaning packed into it, then, as I have said, the proposition simply asserts an important and contingent conclusion that should be the subject of extensive hearings in this body.

Finding No. 4 leaves its meaning unclear. It says that—

> A voluntary system should be instituted and given a fair test as soon as practicable while providing necessary safeguards in the event that unforeseen circumstances create a need for additional military manpower.

My puzzlement about this stricture is twofold.

First, what criteria of practicality are to be controlling? Second, what duration of testing will constitute a "fair test"?

These questions are particularly urgent in light of the subsequent two sections of the proposed amendment.

The second section of the amendment deals with continued registration of young men. It provides that—

> Notwithstanding the delimiting date specified in section 17(c) of the Military Selective Service Act of 1967, the President shall provide for the continued registration under such Act of all male persons in the United States between the ages of eighteen and twenty-six years in order that the involuntary induction of persons under such Act may be reinstituted without serious delay in the event the President determines pursuant to section 4 of this Act that such action is necessary and legislation authorizing conscription is enacted pursuant to such determination.

The third section of the amendment provides for "reinstituting conscription." It says this:

> If at any time after the termination of induction of persons into the Armed Forces under the Military Selective Service Act of 1967 the President determines that the military manpower needs of the nation are not being adequately met through a voluntary system and that conscription is necessary for the national security, he shall promptly notify the Congress of such determination, and of the facts upon which such determination is based, and submit to the Congress such recommendations for legislation as he deems necessary and desirable to provide for the involuntary induction of persons into the Armed Forces.

Mr. President, it seems clear that this amendment presupposes that the draft law will be allowed to expire in 1971 and that no comparable law will be passed in its place. I should have thought that this would be the object of detailed scrutiny next year, and that this legislative decision would be made other than by indirection, as it is in this bill.

However that might be, these two sections of the proposed amendment do shed some light on the practical implications of the terms used in finding No. 4 in the first section.

That is, I would assume that if the President deemed the transition to complete voluntarism to be impractical in 1971, he would ask the concurrence of Congress in a new draft law. But it is

not unlikely that this will be the case. Thus, this amendment holds out a promise—the end of conscription—by next year that probably cannot be met.

After all, what is contemplated here is a vast experiment with the market mechanism. We are not dealing with a seminar in price theory. We are dealing with the sinews of national security, and any fair and practicable test is going to have to be intensive and prolonged.

Such a fair and practical test will have to take account of any peculiarities in the Nation's general manpower situation. For example, there has been some increased unemployment among young people as a result of the very necessary cooling of our inflationary economy. This has meant that during the months of June and July this summer, unemployment among young people between the ages of 16 and 21 rose to 15.7 percent.

This was the highest rate in 6 years and represents an increase of nearly 3 percent over the 12.8 percent unemployment among this same age group last summer. It is obvious that changes in the employment picture would have important influences upon the effectiveness of particular programs designed to increase the military's competitiveness in attracting voluntary manpower.

We must face the fact that there are dramatically different estimates as to the probable cost of an all-volunteer armed force.

The Gates Commission estimated a first-year cost of $2.7 billion, with decreases in subsequent years. But the Defense Department has estimated that the cost could be $17 billion a year.

I do not know which of these estimates is correct, or even the most correct. But one thing is clear. Sincere and learned and experienced men and women can and do disagree about very significant and important aspects of this problem.

What is needed is for hearings to be held for the purposes of allowing these opposing parties to deploy their arguments and their facts and explain their premises and compete for the favorable judgment of the Senate's proven experts on the Armed Services Committee and, of course, eventually the U.S. Senate itself.

There can be no blinking at the many budgetary factors which can further complicate consideration of the economic picture as it relates to the prospects for an all-volunteer armed force. I will give just two examples. One concerns the widespread desire to continue the Nixon administration's policy of reducing the percentage of the Federal budget devoted to defense expenditures. The second concerns possible new burdens on the budget.

If we are going to continue to reduce military expenditures, in real terms and as a percentage of the budget, then it becomes all the more imperative that we make sure that our finite funds are spent so as to maximize defense capability.

Thus we should be very careful about building into future defense budgets a new expense that, given the prevailing mood of Congress, may have to be matched by cuts in other portions of the defense budgets and may have to be matched, Mr. President, even with other important parts of our overall budget. We should not build any such future expenditures into the budgets without careful prior deliberations by the Congress, and especially by those Senators who, by their committee responsibilities, are charged with evaluating the proper mixture of American military capabilities, from manpower through weapons systems.

In addition, Mr. President, before we build any such new expense into future budgets, we should take the long view with regard to all aspects of the Federal budget. For example, the Nixon administration is currently advocating a vast overhaul of the Nation's welfare programs.

The Finance Committee is currently giving this proposal the kind of scrupulous scrutiny which all major legislative proposals deserve. If this overhaul is adopted—and I do not know whether it will be or should be—it will build a very large expenditure into future Federal budgets. Is it not possible that adoption of the proposed welfare program would be an important datum in any careful consideration of the fiscal feasibility of an all-volunteer armed force?

Mr. President, is it not clear that the budgetary implications of this major program deserve careful and comprehensive consideration by the Congress, and most especially by those Senators whose committee responsibilities give them a special concern about the infinite demands competing for satisfaction from our finite revenues?

Thus far I have dealt with some of the economic complexities which will make any experiment with voluntarism a difficult experiment from which to extract the sort of conclusions one needs to gage the long-run effectiveness of voluntarism.

There is another kind of complexity that involves matters which are, if anything, more imponderable than the vicissitudes of our economic life. This is the international situation.

Obviously, any fair and practicable test of voluntarism will be one which establishes that the military, operating within realistic budgetary restraints, will be able to compete with civilian employment for voluntary manpower under various conceivable economic conditions and will be able to attract the necessary number of men. But various complex judgments must be made before we can know what constitutes the "necessary" number of men.

There is considerable disagreement among learned and sincere American men and women concerning the nature of the current threat to national security, and the likely future of that threat. This is not a subject which preoccupied the Gates Commission. But it is a subject which must receive the intense study of this body before we legislate on the matter of an all-volunteer armed force.

I admit I am distressed by some of the premises on which some supporters of an all-volunteer army appear to be relying. In my judgment, some are underestimating the scale and the durability of the threat to our national security.

Others, Mr. President—and I do not include any Senators in this category—seem to favor quick transition to an all-volunteer armed force because they expect that it will mean a significant reduction in available manpower. These persons favor such a sharp reduction because they want to diminish America's capacity for foreign commitments. They are content to see our capacity for flexible response evaporate. They are content to see us faced with a stark alternative in every kind of foreign crisis—the choice between absolute impotence or the use of a high-level force.

Mr. President, whatever one thinks of the moral and strategic wisdom of such thinking, one must agree that such thinking should be advanced overtly, and not covertly, through the medium of support for voluntarism in military manpower selection.

There is one other important international consideration that is relevant to the provisions of this proposed amendment. It is all very well for the second and third sections of this amendment to provide for a mechanism whereby the President, in conjunction with Congress, can reinstitute conscription in the event of a grave national crisis. But is it not likely that there would be dangerous and destabilizing ramifications of such an act in a period of high tension?

Such periods of high tension are just the sort of periods in which, on the one hand, we might want to have access to conscription, but which, on the other hand, could be badly aggravated by such an important act as reinstituting conscription. In fact, is it not likely that in times of high international tension the act of reinstituting conscription might be interpreted by a nervous antagonist as an act tantamount to a declaration of war? Again we find ourselves confronted with a scenario of the gravest sort, and one which deserves the careful consideration of the Senate.

Finally, Mr. President, before we can have a fair and practicable test of voluntarism—indeed, before we can have a clear understanding of what would constitute a fair and practicable test—we must consider one additional kind of complexity. Beyond the problem of varying economic conditions and budgetary restraints, and beyond the problem of gaging international developments, there is the problem of the shifting attitudes of our citizens toward the military and toward the idea of national service.

I do not think it is accurate to say that this generation of young people is hostile to the military. Nor do I think that those who disdain service to America are representative of this generation. Nevertheless, it would be unwise to ignore the fact that there is abroad in the land, among members of all generations, and not insignificant among proponents of an all-volunteer armed force, the belief that conscription is inherently iniquitous and a violation of the 13th amendment, and that any service in the Armed Forces of the United States is morally reprehensible.

Being cognizant of the existence of this minority doctrine which is so vociferously expressed—which I abhor personally to the greatest extent it is possible to do so—we must take two precautions.

First, we must try to gage the extent to which this doctrine is spreading

and might become capable to jeopardizing voluntarism in the long run.

Second, we must recognize that the reasons for supporting something are sometimes as important as the fact of supporting it. In this case, we must recognize and make clear that our support for voluntarism does not stem from the notion that military service is dishonorable in America, or that conscription is always wicked.

We can best make these judgments clear through the sort of full hearings and debates that a major legislative act deserves. This reinforces my belief that the next step on the orderly route to an all-volunteer armed force must be hearings before the appropriate committee.

Mr. President, I hope three things will happen with regard to the problem of the draft.

First, I hope that the Armed Services Committee will hold comprehensive hearings on an all-volunteer army at the earliest possible moment.

Second, I hope that these hearings will be guided by the questions raised by the Gates Commission report. That is, I would hope they would give critical examination to the presuppositions—economic, political, and moral—that underlie that report.

Third, I hope that the hearings will devote special attention to the area which is the most in need of careful scrutiny. This is the problem of devising a safe and certain mechanism to see us through the transition from conscription to voluntarism.

This last is especially important, Mr. President, because this mechanism will go a long way toward determining the long-term success of voluntarism as applied to military service.

Fortunately the Senate has at hand the people who should undertake such an investigation. The Armed Services Committee and only the Armed Services Committee is equipped by commission and experience to consider this matter, and to make its recommendations to the Senate.

No Member of this body is more competent at taking the comprehensive view of the Nation's military needs than is the distinguished junior Senator from Mississippi (Mr. STENNIS). I think all of us would feel more confident of the ultimate wisdom of our action in establishing an all-volunteer military if we were able to proceed on the basis of findings gathered by those Senators who have a special commission to make encompassing considerations of military needs—the able members of the Armed Services Committee.

At this point, Mr. President, I would like to respectfully direct an inquiry to the distinguished chairman of that committee.

I would like to know if we can expect hearings to be held on this matter in the next session of Congress. I know how burdened this able committee is, and how diligent all the members of that committee are in dispatching the many chores which a grateful Nation entrusts to them. Particularly do I know and understand how diligent and burdened with work the distinguished chairman of the committee is. I also know that it is impossible at this point to talk in terms of specific dates for such occurrences.

Nevertheless, it is certain that the Military Selective Service Act of 1967 expires next year, and conscription—and alternatives to it—will be a matter of congressional concern at that time. That would be an appropriate time for hearings to be held concerning the problems and prospects of an all-volunteer armed force. I would like to inquire of the distinguished chairman of the Armed Services Committee if I am correct in interpreting a recent statement of his—2 days ago, as a matter of fact—as a notice that such hearings will be held as part of the comprehensive review of military manpower policies that must take place next year before the draft law expires?

Mr. STENNIS. Mr. President, first I wish to say to the Senator that I think he has made one of the finest presentations of this problem and one of the best analyses that I have heard. He brought us also a very timely speech representing his thoughts on what to do and what not to do. I think he has correctly sized up this amendment. We do not condemn the idea of the amendment; we accept the motives of the sponsors. But the Senator's address sizes the amendment up by saying it is premature to bring it into being now; that there has to be a transition, at best; and that we have to maintain our own security. I think the Senator made a very fine and well reasoned speech. I know the Senator's speech will have influence on those who are making this decision. I want to thank him for taking the time to do this work and to make his address.

Mr. President, the Senator's question about the hearings is very appropriate. I went into some detail this morning about what had developed with respect to this problem as to the question of starting hearings on the Selective Service Act which expires automatically next June 30, and also on the matter of the volunteer army. As a matter of fact, we started last November or December to make special arrangements with the Selective Service to assemble material for a hearing. I will not go into detail again, but we have not had any of the records of Selective Service here for sometime.

I said today we have very definite plans that when this bill leaves the floor, subject only to the conference it will have to go through, this very definitely is the next order of business. The question to be considered in the hearings will be renewal of the Selective Service Act and also the volunteer army concept, because they come along together.

I have never doubted for one moment that we have to have a continuation of selective service beyond June 30. I have never doubted for 1 minute that we have a rather sticky subject to deal with in connection with the hearings. So when we start we must be well prepared. I contemplate now it may be possible for us to get into it some this calendar year.

We will get some of the preliminary parts of the hearing. If we come back into session following the November elections, I am sure we will get into a part of it. Certainly we will be geared to consider it as the first order of business in January. I know it must be done because of the expiration of the Selective Service Act. It should be done as soon as our committee is able to. We will be ready. We will have our staff ready and the Selective Service staff ready.

The administration has not yet sent us a bill calling for it, although the President said the act would have to be extended. The administration has not put a bill together for the continuation of selective service beyond June 30, although I am sure it will do so.

So the matter will have the top priority of all our hearings, beginning in 1971, if not before. As far as time is concerned, the pending bill will have to start moving soon. I am mindful that we must get started in 1970, and that we must get a bill to the floor early in 1971, so there will be plenty of time. When we have hearings, they are going to encompass the voluntary army, for one thing, deferments for another, and all the other changes that the report has suggested. Then we must consider the practical side of a volunteer army. That is just part of the bill. The money item is involved. The lowest estimate of cost we have for a voluntary army is $4.3 billion per year. The estimates run as high as $17 billion. So it could actually be from $6 to $8 billion. So more than one change is involved in that measure, and they all must be gone into.

The President has never varied in his position on this question. He has never recommended that we not renew the Selective Service Act. He knows now it must be renewed. He said so in his statement.

The Senator may have heard me say this morning that I had to know the position of the White House before the debate started. Very clearly and succinctly, this amendment is not favored. The idea of a volunteer army should come not before the Selective Service Act is renewed, but after. There must be a transition. There must be consideration of the whole matter.

I feel I have completely answered the Senator's question. If he wants to ask some other phase of it, I shall be glad to answer further.

Mr. ALLOTT. I thank the Senator for his answer, but I must say it does not get entirely to the matter I want to discuss.

Let me say first I have no empathy with those people who want a volunteer army because they know they are not going to volunteer; they are going to leave the burden to somebody else. I saw plenty of them when I was in the Army myself.

I am convinced, also, that there is a great feeling in this country—and I am in sympathy with it—that we should move toward a volunteer army.

I construe the Senator's remarks as meaning that we will consider the draft bill next year, and it looks now as if it will have to be extended in some way or another, but that the matter of a voluntary army would not be a matter of prime hearings and a determination before the Armed Services Committee It occurs to me——

Mr. STENNIS. Mr. President, may I interrupt the Senator there?

Mr. ALLOTT. Yes.

Mr. STENNIS. I intend to give full hearing and full consideration to the

volunteer army concept at those hearings.

Mr. ALLOTT. In conjunction with the draft?

Mr. STENNIS. Yes, in conjunction with the draft. To that extent there will be hearings on each, because they are interwoven. The issue has been drawn. The proposal is up. The President of the United States has made recommendations on it. I would not attempt to ignore it.

I do not know how the voting in the committee will come out or what the recommendations will be. As far as I am concerned, I can say we must renew the Selective Service Act, as I see it, as long as this war is going on, and perhaps for some time after. That is the way I see it.

Second, as an individual Member of the Senate, I might see it strongly enough to put some provisions in the bill about a volunteer army, to be implemented or put into use as the President may determine, or something of that kind, because, as I understand, he is in favor of a transition period and knows it is necessary. That is the way we will get to it, as I see it, and I think there is sentiment for it.

If I may just enlarge on this point a little, a Senator said to me, "Well, we are going to have to try it. I do not think it will work but, at the proper time, it has got to be tried." That was his version.

I think if we jumped up and enacted a half-baked plan here for a volunteer army, so-called, and there was an increased cost of $4 billion a year, all of it would fail and we would have to junk all of it except the pay increase, and we would be left with that.

I favor an increase. I like the idea especially that the lower grade men should get more pay. But I think it must be worked in and tied down. It will not be an incidental matter to the volunteer army. There will be mutual hearings.

Mr. ALLOTT. That is the assurance I wanted to hear from the distinguished Senator, because I believe that, either through the administration or through interested Members of the Senate, there will be a bill or bills on the voluntary service offered next year. I think it is absolutely imperative that we consider it.

I am inclined to agree with the opinion of my friend—in fact, I do agree with it—that probably we are going to have to continue the conscription law next year. To me, the key to this question and to the achievement of the possibility of a volunteer army is study, work, and testimony that will come out of the Senator's committee. This is what will permit us to make an orderly and successful transition after we have instituted the voluntary system.

In other words, we cannot just say, "All right, next May we are starting a voluntary army. As of the 1st of July, we are through with conscription." I just cannnot imagine anything that could possibly leave this country in a worse situation.

At the same time, it seems to me that with the great capability of the chairman and the members of this committee—and no committee of the Senate has a more capable membership—we could work out a plan which would institute the voluntary system, lapping it over with the conscription system. Then we could be sure that the voluntary plan is workable and will work, and in that event, we will not be leaving our country barehanded in its defense posture in the eyes of the world.

Mr. STENNIS. I think the Senator has expressed it well. Incidentally, my idea of due process of law would be to give this voluntary Army plan a real hearing, and have its day in court, and let the committee actually pass on its merits. That is what will happen, as far as I am concerned.

Second, as to the Senator's speech, I liked very much that part wherein he said others have had their say, and the Gates Commission has done its work, but until now the ones who have the real responsibility of passing legislation have not had a chance to dig into this thing, to weigh it the best they can, and render a judgment that they owe to the people.

That can only be done with hearings, as the Senator pointed out, a report, competent staff work, and then competent debate. I could not agree, here, to encompass this thing within 4 or 6 hours of debate. I knew that was not the way to get at the heart of it.

Mr. ALLOTT. I thank the distinguished Senator for his remarks. His remarks prompt one comment about commissions in general.

The Chairman of that particular Commission has been a friend of mine for many years. I have only the highest respect for him, as I did when he was Secretary of the Navy.

But also, in my speech, I pointed out that that Commission did not primarily concern itself with the uncertainties and vagaries of our international situation.

In addition, another significant factor which people are often prone to forget about commissions is that they are responsible to no one. They are responsible only for filing a report which evidences their best judgment. They do not have to go back and be responsible to people who elected them, as do Members of Congress.

I thank the distinguished Senator.

Mr. STENNIS. Mr. President, that is a wonderful point the Senator has made. Their mission is completed when they file their report. They have no responsibility thereafter.

Mr. ALLOTT. That is correct.

Mr. STENNIS. We appreciate what they have done. Mr. Gates was Secretary of the Navy, as the Senator has stated. I remember he also served as Secretary of Defense for a while.

Mr. ALLOTT. And Secretary of Defense, yes.

Mr. STENNIS. I thank the Senator again.

Mr. ALLOTT. When the distinguished chairman of the Armed Services Committee spoke to the Senate on August 18 to explain his opposition to this amendment, he noted—page 29268 in the RECORD—that there has not been "one iota of a recommendation or approval of this matter from the Bureau of the Budget" and that there are many questions which must be the subject of committee hearings. He also said this:

I think everyone realizes that there must be a consideration of the all-volunteer Army proposal at the time we consider the extension of the draft, the Selective Service.

But the distinguished junior Senator from Mississippi also warned that any action undertaken before these planned hearings would constitute "an abrogation of our legislative responsibility and would be legislating in the dark." He declared that he has an open mind on the question of an all-volunteer armed force and that he was anticipating "extensive hearings" that would involve "hearing witnesses from various sources."

Mr. President, the idea of an all-volunteer armed force is an idea whose time is coming. It has not come yet. I will cooperate with every effort to bring this universally desired institution into being in a way that is consistent with the needs of naional security and the great interest we have in making the new approach to national service a success.

Mr. President, I yield the floor.

THE HOUSE-PASSED EQUAL RIGHTS AMENDMENT MAY END THE PROTECTION OF WOMEN

Mr. ERVIN. Mr. President, on August 14, 1970, the Washington Star carried a column by one of the Nation's most impartial and intelligent commentators, Richard Wilson, which asserts that in approving the House-passed equal rights amendment "the House of Representatives went on record in favor of a constitutional amendment without a clear idea of what it will mean" and that "when unnumbered millions of women find out that they will lose privileged status so that their militant sisters may claim rights—and responsibilities—equal to men, they may not be very pleased."

Mr. Wilson's column makes highly pertinent observations concerning this potentially destructive amendment which ought to be read by every Member of the U.S. Senate. For this reason, I ask unanimous consent that his article be printed at this point in the body of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD as follows:

WOMEN'S RIGHTS AMENDMENT MAY END PROTECTION

(By Richard Wilson)

Reading in the Congressional Record the hour of debate devoted to the so-called women's rights amendment is hard going but worth it for one reason.

The House of Representatives went on record in favor of a constitutional amendment without a very clear idea of what it will mean. When unnumbered millions of women find out that they will lose privileged status so that their militant sisters may claim rights—and responsibilities—equal to men, they may not be very pleased.

The woman who thinks that making a home and raising a family is the greatest career to which she aspires, and wishes to be protected in what she considers to be her noble and natural role, may quite conceivably find that she has lost some of the protection.

Let us take, for example, a young woman of 20 who wishes to marry and settle for a long, rewarding life with children in a comfortable home. First, she may be subject to the draft, although the women in Congress assure us that she will not have

to fight if she is not fitted for it. Some girls of 20 are, of course, quite equal to the ardors of military campaigning as they so ably demonstrate in the sports arena, and some of them can shoot straight, too.

Once married, and if things go awry, some young women may find themselves liable to pay alimony to a wronged husband. The responsibility for the financial support of children may lie equally upon her instead of solely upon a wayward husband.

These details are mentioned with hesitancy and deference because we have the assurance of Mrs. Martha Griffiths, the able congresswoman who accomplished the amazing one-hour feat of putting across an amendment pending for 47 years, that 30 million women are at work nowadays and desire equality more than protection.

In practical effect, as under the social security program, this equality will extend to men such privileges as are accorded women. But Mrs. Griffiths has a little different twist on it. She wishes to reserve for women some existing privileges based upon physiological differences. She asserted in the debate that separation of the sexes by law would be forbidden under the amendment except in situations shown to be necessary because of an overriding and compelling public interest. "For example, in our present culture," she said, "the recognition of the right of privacy would justify separate rest room facilities in public buildings."

However, it seems to be admitted on all sides that the equal rights amendment raises hundreds of other questions in many states concerning family relationships, divorce, separation, alimony, age of consent, military service, child custody, bastardy. The contention cannot be dismissed lightly that the equal rights amendment releases men from sole family and public responsibilities that society has traditionally imposed upon them and not upon women.

An overwhelming majority of the House of Representatives set aside these doubts, raised incidentally by orthodox liberals, largely out of the conviction that women are discriminated against in employment. This is demonstrably true and women are unjustly discriminated against in other ways.

Mrs. Griffiths dismisses the idea that any real protection will be lost to women but her opposition raised a great many telling points, which were not explored in debate nor were they the subject of prior hearings in the House of Representatives.

The amendment was passed over Judiciary Chairman Emanuel Celler's plea to wait until after hearings he had scheduled in September. It can readily be understood that the women's rights advocates placed no trust in Celler's plea since in all the years he has been chairman of the Judiciary Committee he has been unmoved by continuous pressure for adoption of the amendment.

The House acted, and presumably the Senate will act also under heavy pressure from women's organizations who desired this "Magna Charta" in tribute to the 50th anniversary of women's suffrage.

But much more seems to be expected from this simple amendment than it actually promises. Other enactments "liberate" women without sacrificing their protection. The prudent woman will wish her state legislature to take a long look at this deceptive amendment when the ratifying process begins. It was designed by men to get women's votes nearly a half century ago.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

AMENDMENT NO. 813

Mr. FULBRIGHT. Mr. President, what is the pending business?

The PRESIDING OFFICER. There is no amendment pending at the present time.

Mr. FULBRIGHT. Mr. President, I call up Amendment No. 813.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 19, after the period in line 8, insert the following: "None of the funds appropriated to or for the use of the Armed Forces of the United States may be used for the purpose of paying any overseas allowance, per diem allowance, or any other addition to the regular base pay of any person serving with the free world forces in South Vietnam if the amount of such payment would be greater than the amount of special pay authorized to be paid, for an equivalent period of service, to members of the Armed Forces of the United States (under section 310 of title 37, United States Code) serving in Vietnam or in any other hostile fire area."

The PRESIDING OFFICER. The Chair understands that there is a 1-hour limitation as to the time on this amendment, to be equally divided between the Senator from Arkansas and the Senator from Mississippi.

Mr. FULBRIGHT. Mr. President, I yield myself 10 minutes.

The purpose of this amendment is to give fair and equal treatment to American servicemen in Vietnam. It would prohibit the payment of special overseas allowances to Thai or other foreign forces in Vietnam, financed through the Department of Defense budget, at a rate greater than the combat pay allowed American servicemen fighting there. When the Griffin amendment to the military sales bill was being considered in the Senate, I stated that I intended to introduce such an amendment to the first appropriate bill.

The record of the Symington subcommittee makes clear that neither South Korea, Thailand or the Philippines would have sent troops to South Vietnam if there had not been assurance that the United States would provide funds so that individual soldiers could get double or more their regular salaries—plus American-style PX privileges—if they "volunteered" to go. Whether, in the case of the Philippines, the soldiers got that extra money is questionable.

It is not by chance that the State Department has required key portions of the negotiations with these countries to be kept secret by insisting that this information be deleted from the RECORD cleared for publication. The real story of the use of mercenary forces in South Vietnam is a dubious practice in our already blotted record of policymaking in this war. The argument which the executive branch has used for keeping the details of these special payments secret—a secrecy which the Symington subcommittee has not been able to get reversed—is that if the forces of one allied nation knew what the United States was paying the forces of another allied nation, there would be jealousy and bickering. Before I had studied the tables of the allowances paid these soldiers by our taxpayers, I was inclined to accept that argument. But after I compared the results with the combat pay we give our own brave men in Vietnam, I now wonder if the secrecy on these figures was not imposed to keep these facts from our own GI's.

How many of our citizens know that for American troops sent to Vietnam the highest monthly special combat allowance is $65 no matter what their rank? Yet, at the same time, the United States pays twice as much combat pay, or more, to Thai and Korean officers in Vietnam as it pays to our own men, who actually do most of the heavy fighting. I also point out, for example, that a Thai lieutenant serving in Vietnam gets $120 a month from the United States and only $50 a month in base pay from his own country.

Senators should realize that the United States pays an annual overseas allowance to a Thai lieutenant general nearly seven times larger than the allowance it pays to an American general of equivalent rank—$5,400 as compared to $780 for the American. The Thai lieutenant general's annual allowance, paid by the United States is 41 times the $130 annual per capita GNP of Thailand. If an American lieutenant general were to receive an overseas allowance 41 times as large as the annual per capita GNP of the United States, $3,670, his annual overseas allowance would be $150,470. I have never heard a satisfactory answer as to why these extra large allowances should be paid by the United States when it is the security of Thailand and South Korea that is more directly affected. They are paid, of course, because that was the only way we could get these soldiers to Vietnam—thus providing "proof" to the world, of a sort, that this was not really an American, but an Asian, war.

This system leads to distortion of both the recipients and our own values. The American people for years—unaware of the existence of these bonuses—were continually told by their leaders that the free world forces in Vietnam represented recognition that all Asian nations had a stake in the outcome in Vietnam. That stake—it now turns out—was in good part money. I believe such special treatment should be stopped now and prevented in the future.

But beyond these facts there is massive self-deception of seeking to fool ourselves that these allowances only permit countries such as Thailand, South Korea and the Philippines to do what they otherwise might not be able to do. Our policymakers have forgotten that it was money that brought them into the battle in the first place and they look upon their presence as a voluntary allied effort to defeat communism. This kind of misconception colors all our thinking and inhibits the making of policies which are

truly in the interest of the American people.

Mr. President, I believe it is time that we stop making mercenaries out of allies and allies out of mercenaries. The time has come to stop the practice of making it profitable for countries to send troops to fight wars we believe should be fought in order to protect their countries. We must prevent our money from distorting the ability of countries to determine their own national interests. We must stop deceiving ourselves as to what our own interests are in Southeast Asia.

The first step in this process should be to treat these U.S.-financed forces no better than we treat our own GI's for purposes of combat pay. I hope that Senators will vote to end this kind of discrimination against our servicemen and that the amendment will be adopted by the Senate.

Mr. President, by coincidence, I received a letter on August 14 to the Committee on Foreign Relations, addressed to me, from an American serviceman in Vietnam. It happens to pertain to this subject, although the writer mentions some other matters. I will read part of it. I may say that I have the complete letter here, with the writer's name. I will omit his name, but if any Senator wishes to see his name, it is available. He writes:

> The exorbitant salaries paid to civilians, the black market, and the military preoccupation with kill ratios are all well known hypocrisies. It is not unusual for U.S. Government agencies to pay $3,000 per month for a 4 bedroom house in Saigon, and so on . . . I thought I'd heard it all . . . but this is a land of incredible happenings. I recently learned that the 50,000 Korean soldiers stationed in Vietnam are on full salary parity with U.S. troops. That a Korean Major, for example, receives the same salary as a U.S. Major. However, there is one exception, and that is—the Koreans do not have to pay for their food at an organized mess, whereas we do. I find this almost beyond belief in that the U.S. and Korean economies are on such vastly different levels. And then we wonder why the Koreans, with all this extra cash are so heavily engaged in the black market. The Thais are equally involved in the black market . . . the standing joke over here is "the only way you'll get the Thais to fight is to put a PX between the VC and them."
>
> Anyone who has read the history of Southeast Asia must certainly know that it is pure folly to expect these traditional enemies to rescue each other . . . however no doubt they will do it if the price is right!

Mr. President, there are many other aspects of this matter. I had thought that perhaps the chairman of the committee would see the wisdom of this amendment. I wish to put one or two other things in the RECORD.

I asked the Department of State whether congressional approval was sought or received for the rates agreed upon with either or both countries—that is, Thailand or Korea. Their reply stated that congressional approval for the specific allowance rates was neither sought nor given, which again highlights the freedom which the Executive believes it has to make agreements committing this country to the expenditure of very large sums of money in payment to other countries, either for base rights, as in some other countries, or, as in this case, for the hire of their soldiers to fight in Vietnam.

I think, Mr. President, that this deception was originally imposed upon the American people and the world primarily because of an effort by the preceding administration—and I may say that all these agreements to which I refer were made by the previous administration and not by the present administration—to persuade the American people and others that these Asian countries were so devoted to our interests, and so committed to our objectives in Southeast Asia, that they voluntarily offered their services. From the record itself, this does not appear to be the case.

So I hope that this matter can now be resolved by the adoption of this amendment, which would simply say that American combat soldiers should receive as much as foreign combat soldiers; or, the reverse, that we should not continue to pay any foreign soldiers a higher combat allowance than we pay our own soldiers.

Mr. President, I ask unanimous consent to have printed in the RECORD a table I used in a former statement which outlines in detail the monthly base pay and quarters allowance pay by the Philippines, the monthly per diem and overseas allowances paid by the United States to Philippine soldiers, the same for Thailand, and the same for U.S. soldiers, as well as a table comparing the annual overseas allowances paid to U.S. soldiers and to Thai soldiers in terms of the respective annual per capita gross national product.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

PHILIPPINE FORCES SENT TO VIETNAM [1]

	Monthly base pay and quarters allowances paid by Philippines	Monthly per diem and overseas allowances paid by United States	Monthly Total
Brigadier general	$305	$210	$515
Colonel	235	195	430
Lieutenant colonel	195	180	375
Major	153	165	318
Captain	125	150	275
1st lieutenant	102	135	237
2d lieutenant	90	120	210
Master sergeant	53	76	129
Sergeant 1st class	53	45	98
Corporal	43	36	79
Private 1st class/private	43	33	76

[1] The average monthly per capita Philippine income is $16.67.

THAI FORCES IN VIETNAM [1]

	Monthly base pay paid by Thailand	Monthly overseas allowance paid by United States	Monthly total
Lieutenant general	$370	$450	$820
Major general	330	390	720
Special colonel	240	330	570
Colonel	190	300	490
Lieutenant colonel	140	240	380
Major	98	180	278
Captain	70	150	220
Lieutenant	50	120	170
Master sergeant	48	69	117
Sergeant	38	60	98
Corporal	33	50	83
Lance corporal	30	45	75
Private	26	39	65

[1] The average monthly per capita Thai income is $13.92.

Note: Quarters and rations paid by United States for both Thai and Philippine forces.

Source: Department of Defense.

U.S. PAY AND OVERSEAS ALLOWANCES [1]

	Monthly average base pay [2]	Monthly overseas allowances [3]	Monthly total
Lieutenant general	$2,426.70	$65.00	$2,491.70
Major general	2,180.20	65.00	2,245.20
Colonel	1,425.30	65.00	1,490.30
Lieutenant colonel	1,209.30	65.00	1,274.30
Major	962.40	65.00	1,027.40
Captain	870.00	65.00	935.00
1st lieutenant	731.40	65.00	796.40
Master sergeant (E-9)	903.60	22.50	926.10
Sergeant (E-5)	395.40	16.00	411.40
Corporal (E-4)	330.60	13.00	343.60
Private (E-1)	124.50	8.00	132.50

[1] The average monthly per capita U.S. income is $285.08.

[2] U.S. Armed Forces are paid according to the number of years of service they have accumulated. Thus there is a varying pay scale within each rank. The above figures were supplied by the Department of Defense based on the average number of years a person has served when he attains the given rank.

[3] In addition to the above amounts, which represent an allowance for "combat pay," the salaries of enlisted men serving in Vietnam are exempt from income tax and officers' salaries are exempt up to $500.

Rank	Thai forces in Vietnam: Annual overseas allowances paid by United States	Thai forces in Vietnam: Exceeds the annual per capita GNP of Thailand ($130) (times)	U.S. forces in Vietnam: Annual overseas allowances paid by United States [1]	U.S. forces in Vietnam: Annual overseas allowances U.S. forces would receive [2]
Lieutenant General	$5,400	41	$780	$150,470
Major General	4,680	36	780	132,120
Colonel	3,600	27½	780	100,925
Lieutenant Colonel	2,880	22	780	80,740
Major	2,160	16½	780	60,550
Captain	1,800	14	780	51,380
Lieutenant	1,440	11	780	40,370
Master Sergeant	828	6	270	22,020
Sergeant	720	5	192	18,350
Corporal	600	4½	156	16,515
Private	468	3½	96	12,845

[1] In addition to the above amounts which represent an allowance for "combat pay," the salaries of enlisted men serving in Vietnam are exempt from income tax and officers' salaries are exempt up to $500.

[2] If paid in same ratio to annual per capita GNP of the United States ($3,670) as Thais are paid.

Note.—Figures in columns 1 and 3 are from Defense Department. Figures in columns 2 and 4 are arrived at by relating the Defense Department figures to the annual per capita gross national product of the United States and Thailand. The GNP figures used are from the World Bank Atlas 1969 and are for the year 1967, the most recent year for which accurate figures are available.

The PRESIDING OFFICER. The 10 minutes of the Senator have expired.

Mr. STENNIS. Mr. President, I yield myself 10 minutes, and I should like to ask the Senator some questions during that time.

As I understand it, the Senator from Arkansas has related—I ask him whether this is a correct statement of the facts—that certain military men of these Asiatic countries are fighting with us and the South Vietnamese; that we are paying the compensation to which this amendment relates, the additional pay they get for fighting away from home and hostile pay; and that we are footing the bill under an agreement that was made by the State Department. Is that correct?

Mr. FULBRIGHT. They were made by the previous administration, and I think negotiated by the State Department with military advice, I assume.

Mr. STENNIS. I state, further, that it is a fact, as the Senator has found it to be and as we have found it to be, that some members of the military in this special kind of pay receive a greater allowance than our own men receive for what we call hostile pay.

Mr. FULBRIGHT. That is correct. Sometimes it is called hostile, combat, or overseas pay. They all mean the same thing.

Mr. STENNIS. There is overseas pay, and there is hostile pay, also. In some instances, however, it is not greater but less. I mean that some of the troops from other countries do not receive more than our men, as I understand it.

Mr. FULBRIGHT. I do not know to which ones the Senator refers.

Mr. STENNIS. Some of the difference in the ranks. I think that is a fact. The Senator's amendment just relates to those who receive more than our men receive.

Mr. FULBRIGHT. That is correct. In effect, it says that more overseas or combat pay should not be paid to a foreign soldier than is paid to an American soldier. That is the simple substance of it.

Mr. STENNIS. If I may relate myself, it is true, though, that we have considerable numbers over that, who are carrying on and fighting our part of the battle in South Vietnam. Of course, I personally think it is as much their problem as it is ours. But we are the ones in there and we induced them to come in.

Of course, the United States of America must always redeem its promises and live up to its word. I do not know just what we will run into in trying to get some adjustment of this matter, but I am impressed with it and if some adjustment can be made consistent with our honor and our promise, I should like to see it done. We do not want to abrogate a contract or a firm agreement. In conference, we might be able to work something out that would take care of the present and certainly control any new arrangement. With that understanding, I accept the Senator's amendment in its full impact. I would be willing to take it to conference and make a real effort to get an adjustment of it and see what the House's viewpoint of it is.

The Department of Defense opposes the amendment. We have the Vietnamization program going, as well as the withdrawal of our troops program going on. We do not want to curtail that or drastically interfere with it, but I think within the limits of the discretion we have in this matter, that we should do something about it and I am willing to take this matter to conference and make a real effort to get some kind of adjustment on it.

Mr. President, I see the Senator from Arizona (Mr. GOLDWATER) in the Chamber, and other members from our committee, including the distinguished Senator from South Carolina (Mr. THURMOND).

Mr. GOLDWATER. As a member of the Armed Services Committee, I certainly find nothing wrong with the amendment. In fact, I should like to propose a question or two to either the chairman of the Foreign Relations Committee or the Armed Services Committee, which they could answer.

Would it be improper to ask either the State Department or the Department of Defense to make reports regularly on payments to foreign troops?

I was in Bangkok the night the Thais decided to send some troops over there and we had a long discussion about it. But this never entered into it. It has come as a complete surprise to me. I feel that the Senate and the Congress should be entitled to receive such reports, but I do not know whether it is proper or not to ask.

Mr. FULBRIGHT. Could I respond to that? The Symington subcommittee had a difficult time getting this information even in executive session. At first, the State Department refused to produce what we call the Brown letter, which is the basic agreement, the secret agreement, on Korea. We had a terrible hassle with the U.S. Ambassador to Thailand because he said that it would embarrass the Thais if he even talked to the committee in secret session. When he said that, we adjourned the committee meeting. I took the matter up with the Secretary of State and finally they came and most reluctantly gave us this information. This information about what we pay the Thais to go to Vietnam is taken from those hearings.

The Senator says should we receive periodic reports. My goodness, it took 6 months to get this one report. I would like to see my amendment applied to existing agreements, but the press reports that we are presently negotiating, if we have not already agreed, to pay an additional 5,000 Thai troops to fight in Cambodia. I assume—they do not tell us—that this is probably under a similar arrangement. It makes it much more profitable for the Thais to go to Vietnam than to stay at home. It has been a matter of concern to people in Thailand as to who is allowed to go to Vietnam in order to enjoy this high pay. We allowed the Koreans to come down with nothing but one duffle bag and to take away one ton—that is right—one ton—here is the actual phraseology:

Each Korean military person returning from his tour of duty in Vietnam is granted a whole package allowance of one measurement ton, 40 cubic feet of cargo.

Then they list what they get to bring back: TV sets; American beer; American cigarettes; C rations; phonographs; and American electronics.

This Vietnam service is very profitable for them. We know when we hear that these people want us to fight on to victory, and so forth, that their judgment has been distorted because we pay them so well. It is a commonsense matter that these excessive payments should not be continued. The relationship between what we pay them and their own standard of living is out of all proportion. If we paid our lieutenant generals the same percentage of our annual per capita GNP that we pay the Thais in terms of their GNP, our generals would receive something like $150,000 a year additional payment for combat duty.

Mr. GOLDWATER. Let me propose another question——

Mr. STENNIS. Let me answer briefly that question——

Mr. GOLDWATER. I had another one to ask.

Mr. STENNIS. Go ahead.

Mr. GOLDWATER. Commenting on this pay business, I was reading some history the other night, that Roman soldiers were paid the equivalent of $10,000 in 1946 dollars. Thus, high pay for troops is not confined to our period.

I wanted to ask the Senator from Arkansas, what was the reason the State Department gave him, that this material had to be classified, and if so, why should it be classified?

Mr. FULBRIGHT. The main reason was, they agreed with Thailand at the time that they would keep it secret. That was the main reason. They have used this secrecy agreement several times on matters of this kind. One statement about it—I am not sure they made it—but in the course of discussion, I asked them about it; was it not a fact that they did not want to reveal the Brown letter because it would make the Philippines jealous of what we were paying the Korean forces, because it was more than was paid to the Philippines, and therefore could not enter into it? The Philippine case is different, because the GAO reported it had been unable to trace the money or to learn whether the troops actually received it. Our understanding was that they would receive it, but the GAO says they do not know whether they received it or not.

Mr. GOLDWATER. They are faced with the same problem that we Senators and Congressmen are faced with, through the required publishing of the pay we give to each of our Members, which makes it almost impossible to control pay. Maybe that is the reason they do not want to bring the reports out.

Mr. FULBRIGHT. It is public. But the foreign governments did not want these agreements to be public. Furthermore, they like to have us imagine that they are doing this out of their allegiance to this country, being good friends of ours. Not only do they get this combat pay, but other pay as well, for the military and economic assistance in addition. Korea has been getting $200 to $250

million a year. These allowances are only part of it. Of course, we also transport them, set up special communication systems for them, and do a lot of other things in addition to paying their allowances. However, my amendment goes only to the pay of the soldiers.

Mr. STENNIS. Further to answer the Senator's question, the Armed Services Committee does get a report quarterly on the expenditures of money in this bill, including what is spent in the different countries, but there is no itemization or anything of that kind.

Yes; we could require a report on that item.

Mr. GOLDWATER. This matter does not come under the surveillance of the Armed Services Committee. The State Department does it?

Mr. STENNIS. No. This money comes out of the bill, as I understand it. Yes; the State Department was negotiator and they made the arrangements, but it is money that is authorized in this bill for military aid to Southeast Asia.

Mr. GOLDWATER. Might I ask, how is it itemized?

Mr. STENNIS. It is $2.5 billion. It was not itemized at all as to items of this kind. They give us a report quarterly for the sum in each country. But it is not itemized as being so much for military pay.

I want to do something about this. But I want to make it clear that we have agreements here and that we are withdrawing. I do not feel that we should go in there with a meat ax and just go to chopping things up. The agreements have already been made.

I think the Senator agrees wholeheartedly with that.

Mr. FULBRIGHT. Mr. President, I have already mentioned that there apparently is a new agreement with Thailand. The Senator agrees. The Senator from Arizona, I am quite sure, could stop that.

Mr. STENNIS. Absolutely.

Mr. FULBRIGHT. Mr. President, these past agreements were secret. Certainly we did not approve of them. The practice is anything but in the spirit of the national commitments, resolutions. I point out that not only did Congress not receive these agreements, but not even the committee received them. I think the report from the GAO makes it very clear that the reports the Armed Services Committee received were not complete.

Mr. STENNIS. They were not itemized.

Mr. FULBRIGHT. They were not complete. If the Senator would allow me to continue, with regard to the Philippines, I will read a part of the GAO report on the Philippines which has been declassified. It says:

> In accordance with section 401(b) of Public Law 89-367 and section 640(b) of Public Law 89-687, which authorized the support of the Free World Military Assistance Forces in Vietnam with military appropriation funds, DOD submitted quarterly reports to the Congress on the estimated value, by country, of such support based on actual or estimated obligations for material contracts and services. The total cost for this support reported for the Philippines from fiscal year 1966 through the second quarter of fiscal year 1970, when PHILCAG redeployed from Vietnam, was $17 million, or less than 50 percent of the support costs incurred. This variance appeared to be caused by the fact that DOD reports apparently included only personnel and operations and maintenance costs associated with PHILCAG but excluded the cost of equipment.

In other words, it was not complete. I continue to read:

> A recapitulation of PHILCAG-related cost data, by source, follows:

	Million
DOD budget data	$40.8
Reported by DOD to the Congress	17.3

There is quite a discrepancy in the amount reported.

I do not think anybody was aware of this. I know we never heard of it.

Mr. THURMOND. Mr. President, will the distinguished Senator from Mississippi yield?

Mr. STENNIS. How much time does the Senator from South Carolina want?

Mr. THURMOND. Five minutes.

Mr. STENNIS. Mr. President, I yield 5 minutes on the bill to the Senator from South Carolina.

Mr. THURMOND. Mr. President, I would like to call the attention of the Senate to the fact that President Nixon's Vietnamese program is progressing nicely. We have withdrawn 100,000 troops. The announcement has been made of the withdrawal of 150,000 additional troops.

I am very concerned that if our Government reneges on its agreements with these free world countries whether they will allow their troops to remain.

If they do not allow their troops to remain, then we, the United States, may be forced to cancel the withdrawal of some of our troops which we now have on schedule.

I realize that the amounts in what are called monthly per diem overseas allowance are what we might really call supplementary pay. That is what it amounts to. But I would also remind the Senate that these troops from the free world countries, even with the supplementary amounts provided by the United States, will still be receiving far less than our troops are paid. For instance, I will give an example.

A colonel in the Philippine Army is getting this supplementary allowance from us in the amount of $195 a month. That makes his total pay $430.

A colonel in the Thai Army is getting $300 supplementary pay which makes his total pay $490.

A colonel in the U.S. Army is receiving only $65 overseas pay, but his total pay is $1,490. In other words, the pay of a colonel in our Army is almost four times as much as that of a colonel in the Philippine or Thai armies.

Mr. President, this may sound high for overseas pay. If we put it on the basis purely of overseas pay, it is high. It is much more than we allow for overseas pay. However, these people are there helping us. We induced them to come in to help us. They are helping to bail us out.

We are bringing our troops home. Their troops are staying there and fighting the battle.

It seems to me that we had better think well before we try to renege on an agreement that may cause us to have to keep our troops there longer.

It is my thinking that it would be better for the chairman of the Armed Services Committee to take this matter up with the Defense Department and see what can be worked out rather than pass an amendment here today which would indicate to the Thais and to the Filipinos and others that we are cutting off their pay.

It may excite them and cause them immediately to withdraw their troops, in which event we, the American people, would suffer. I believe that the American people would rather pay this supplemental amount to the Thais and the Filipinos and to the soldiers of other free countries than to keep the American troops over there.

I think it is a simple matter. It is a matter that concerns not just our troops alone, but also the American people.

It is my hope that we will not take hasty action on this amendment which could have very serious repercussions.

Mr. STENNIS. Mr. President, I think that the Senator from South Carolina has made a very fine point. I stated that if there is talk about reneging on anything we have done, we have to bear in mind our Vietnamization program.

I think that something ought to be done about this. I believe that the thing to do is to preserve this matter, take it on to conference with the promise that we would try to work out something.

I have in mind calling on the Department of Defense to really give us the schedule of operations there. If they want to, they can bring in the Department of State, too.

I do not know what the attitude of the House would be. But it was in that spirit that I spoke when I said that we would take it to conference.

Mr. THURMOND. Mr. President, I should be pleased to cooperate with the distinguished chairman in this matter. Possibly some step can be taken to effect some reduction in the supplementary pay which is called overseas pay.

But I do hope nothing will be done to cause these 69,000 troops of these other free world countries to be withdrawn and put a greater burden on the United States, disrupt our Vietnamization program, and cause us to stop withdrawing American troops.

Mr. PERCY. Mr. President, will the Senator yield for just an observation on this point?

Mr. THURMOND. I think my time has expired.

Mr. STENNIS. I yield 2 minutes to the Senator from Illinois.

Mr. PERCY. Mr. President, I think a very good point has been raised today. I would be very disturbed if anything would happen to interfere with Asian nations participating actively in their own defense of Asia.

I feel the statement made by the distinguished Senator from South Carolina might be modified when he said Asian forces are in Vietnam helping us. As I understand the whole theory of our involvement, we are there helping them and they are there protecting themselves.

One of the greatest disappointments I have ever had was to find that we were over there in Vietnam virtually alone in

this effort, unless we are willing to pay all the expenses to other nations in Asia, leaving the burden on us entirely of defending them.

Our shores are not endangered. Our own vital national security is not imperiled here.

Early in my Senate career when I introduced a resolution suggesting Asian nations offer more help in Vietnam to protect their own interests and security themselves, 25 Senators cosponsored that measure. Secretary of Defense Clark Clifford subsequently went on a mission to call on Asian countries, and one of the bitterest disappointments I have had was when he came back and revealed that not one single country had offered one single soldier.

I hope the Senator would not mind my pointing out that in connection with his statement I feel certain he meant to say we are there helping them and they are not just helping us. On the other hand, I would not want to see the rug pulled out from under agreements already made, but I am pleased that the chairman of the Armed Services Committee has indicated his intention to correct inequities in the future as suggested by the proposed amendment.

Mr. THURMOND. Mr. President, will the Senator yield 2 minutes to me?

Mr. STENNIS. I yield 2 minutes to the Senator from South Carolina.

Mr. THURMOND. Mr. President, I agree we are helping the Asian nations over there to maintain their freedom, but I remind the distinguished Senator from Illinois that we got involved first, before these other free nations came into this conflict, and that we have induced these other free nations to come in now and assume some of their responsibility. To that extent they are helping us because they are remaining while we bring our troops home.

I believe it is in our national security for us to be there. I know this is a controversial point, but, in my judgment, if South Vietnam goes down the drain, the whole of Southeast Asia will go down the drain and next may be Malaysia, and maybe the Philippines, and maybe other countries over there; and then, aggression will continue until we will be more endangered than we are now.

Mr. PASTORE. Mr. President, will the Senator yield to me for 1 minute?

Mr. FULBRIGHT. I yield.

Mr. PASTORE. Is that not the point being made by the Senator from Illinois? If they are going to go down the drain, it means they are still fighting for themselves. That is the point. Here we are giving them premium pay.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. THURMOND. My time is limited.

Mr. PASTORE. I will get time later.

Mr. THURMOND. Mr. President, if I may finish my thought, I agree they are helping themselves, and they should. They should have come into the conflict sooner. President Johnson was unable to get them in to any extent. I am glad the Nixon administration has been able to get them in to a greater extent.

It is my judgment it would be a great mistake now not to support them because American troops would have to bear the burden.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield 1 minute to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I wish to recall something I experienced in Bangkok. I was at the home of Premier Kittikachorn the night he was sending a battalion of Thai troops into Vietnam.

I said, "I want to thank you for helping us." He did not call me "Senator"; I was not a Senator then. He called me "General." He said:

> We are not sending them to help you, but to help ourselves. We realize the danger of communism, and I do not think you do.

Mr. PASTORE. Mr. President, will the Senator yield to me for 2 minutes?

Mr. FULBRIGHT. I yield 2 minutes to the Senator from Rhode Island.

Mr. PASTORE. Mr. President, I think we have chewed this bone dry and that we have heard all sides of the question, but somehow it irks me to have it said that they are helping us rather than that we are helping them. I think it is an injustice to American soldiers to give a foreign soldier premium pay in excess of his own for foreign duty. That is one thing we should consider.

This idea that when we add to their pay and it adds up to less than is paid an American colonel does not impress me because their standard of living is lower than ours. For instance, we pay our plumbers more than they pay their plumbers; and we pay our soldiers more than they pay their soldiers.

I am saying we should not have to pay anybody any more than we pay an American soldier.

Mr. THURMOND. I would say to the Senator that plumbers are not subject to being killed and soldiers are.

Mr. PASTORE. Yes. Our boys are being killed—and for whom?

It is said we are going to slow the withdrawal of American troops. Why should we? Why should we not tell them, "We are going to take our troops out and it is about time that you do your own fighting, without premium pay"?

Mr. THURMOND. That is what we are doing. We are taking out our troops, and the other troops are assuming the burden, and we are paying dollars instead of boys over there.

Mr. PASTORE. The withdrawal of American troops has only been a token withdrawal so far. We should take them out faster. We have been there for 6 years, and we are no better off today in Vietnam than we were 6 years ago. The time has come when the President—not the Congress but the President—should stand up and say to the South Vietnamese, the North Vietnamese, the Thais, and the Cambodians, "This is your war and we are going to get out and you had better start fighting your own war."

Mr. THURMOND. We have withdrawn 100,000 troops and President Nixon has announced the withdrawal of 150,000 more troops. He has kept his word so far and I believe he will keep it in the future. There is certainly evidence that he will.

The PRESIDING OFFICER. Who yields time?

Mr. PASTORE. Mr. President, will the Senator yield to me for 1 additional minute?

Mr. FULBRIGHT. I yield 1 minute to the Senator from Rhode Island.

Mr. PASTORE. Mr. President, I conclude by saying I applaud the President for the troop withdrawals. It should be accelerated, it should come faster, and we should withdraw all of our combat forces as soon as possible. I realize we have withdrawn 100,000 American troops but we still have more than 400,000 American troops there and the time has come when we should speedily bring them all home.

Mr. THURMOND. All of these men are not combat troops.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. PASTORE. I have no more time to yield.

Mr. FULBRIGHT. Mr. President, in view of this colloquy, I wish to ask a question of the distinguished Senator from Mississippi. As I understand it, the Senator from Arizona and the Senator from Mississippi are very sympathetic to this problem.

It should be possible for the Senator and the committee, to stop new arrangements of this kind with Thailand such as that being spoken of in the newspaper.

Mr. STENNIS. Yes.

Mr. FULBRIGHT. I realize there is a problem about the existing arrangement, even though it was secret.

The other thing I would like the Senator to commit himself to is that from here on all arrangements be regularly reported, so we know what they are all about. I strongly object to secret agreements involving millions of dollars. I think I saw where over $200 million was paid to Korean troops, not to mention the PX privileges and other privileges, which are worth as much as the other payments.

I hope the Senator could commit himself, if he feels embarrassment about undoing the Brown letter on Korea, by doing two things: To prevent a renewal agreement and to make public future agreements. Everybody is entitled to know how and where we spend taxpayers' money, especially when it is as difficult to get as it is.

Mr. STENNIS. We have the responsibility to follow up any money that comes through this bill. I favor the idea of calling for reports that are more in detail, especially on something like this that is unusual; but most of this money is used for paying battle costs in actual war, and we have not required reports in detail so much. They make these quarterly reports to us, and, according to their notion, they are classified. We could get some of that material unclassified. I have never claimed they had final responsibility for saying what is classified. We will follow up on future agreements.

Mr. FULBRIGHT. The trouble is that the executive branch can jockey this back and forth between the Department of Defense and the State Department. First the Department of Defense says, "This was made by the State Depart-

ment." The State Department then says, "Well, we agreed with the foreign government not to make it public."

We had a difficult time ourselves in finding out about this agreement, even in executive session. It never should have been in executive session. I think they were improvident agreements.

With all deference to the Senator from South Carolina, it was not the fighting quality of these troops that Secretary Rusk and President Johnson were interested in. They merely were interested in a gesture to try to convince the American people that these Asian nations were very interested in this matter and wanted to defend themselves. The Asians had to be persuaded to do it and they had to be paid large amounts relative to their own standard of living, and they are very large amounts relative to their own standard of living.

Mr. STENNIS. I wanted to get them in and, frankly, keep them in.

Mr. FULBRIGHT. The reason was the psychological aspect. The soldiers from the Philippines, for example, did not do one iota of fighting. That was the agreement. We paid them very well to go down there and sit on their behinds because it was supposed to show some solidarity between the Philippines and ourselves. They did not agree to do any fighting. Some of the "Tiger" divisions of the Koreans fight very well, but from letters I have there are different reports about the Thai soldiers.

I have great confidence in the Senator from Mississippi. He is willing to take it to conference to do two things: To keep us advised, so that Congress knows about it, and also to make no agreements in the future.

I would like him to use his persuasion to rework the existing agreements. Because of the way they were made, they never were really commitments of this country.

Mr. STENNIS. That was in a war, and it was already passed. I want to be frank about it. The agreement was made.

Mr. FULBRIGHT. In answer to my specific request, the Secretary of State, in a letter dated August 2, said congressional approval for the specific allowances rates was neither sought nor given by the Congress. They did not ask the Senator's committee.

Mr. STENNIS. We knew nothing about it.

Mr. FULBRIGHT. I know it did not. The State Department negotiated them, although there were military personnel present who cooperated with it.

Mr. STENNIS. Mr. President, I am willing to yield back my time.

Mr. FULBRIGHT. Mr. President, while the Senator is on his feet, is he willing to take up the next amendment now and dispose of it?

Mr. STENNIS. I am willing to take it up. I do not know about disposing of it.

Mr. FULBRIGHT. I understood that the Senator was kindly disposed toward it, too.

Mr. STENNIS. Let us dispose of this first one.

Mr. FULBRIGHT. I am willing to yield back my time.

Mr. STENNIS. I do, too.

The PRESIDING OFFICER. All time on the amendment has been yielded back. The question is on agreeing to the amendment.

The amendment was agreed to.

ORDER FOR RECESS TO 9 A.M., TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 9 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATORS JAVITS, ERVIN, AND DOLE TOMORROW MORNING

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, immediately upon the disposition of the unobjected-to items on the calendar tomorrow morning, the able Senator from New York (Mr. JAVITS) be recognized for not to exceed 30 minutes; that he be followed by the able Senator from North Carolina (Mr. ERVIN) for not to exceed 45 minutes; that he be followed by the able Senator from Kansas (Mr. DOLE) for not to exceed 20 minutes, whereupon the unfinished business be laid before the Senate and at 11 o'clock tomorrow morning the able Senator from Illinois (Mr. PERCY) be recognized to call up an amendment, which I understand to be numbered 818, and that there be a time limitation on that amendment of 1 hour, the time to be equally divided between the offerer of the amendment and the manager of the bill, and that a vote occur on the amendment at 12 o'clock noon.

I have discussed this request with the offerer of the amendment and the manager of the bill and the assistant minority leader. All are agreeable to the request.

The PRESIDING OFFICER (Mr. SAXBE). Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR YOUNG OF OHIO TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on tomorrow, at the conclusion of the remarks by the able Senator from Kansas (Mr. DOLE) and prior to the laying before the Senate of the unfinished business and recognition of the Senator from Illinois (Mr. PERCY) to call up his amendment No. 818, the distinguished Senator from Ohio (Mr. YOUNG) be recognized for not to exceed 20 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

AMENDMENT NO. 812

Mr. FULBRIGHT. Mr. President, I call up my amendment No. 812.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read the amendment (No. 812) as follows:

On page 19, after the period in line 8, insert the following: "Nothing in clause (A) of the first sentence of this paragraph shall be construed as authorizing the use of any such funds to support Vietnamese or other free world forces in actions designed to provide military support and assistance to the Government of Cambodia or Laos."

The PRESIDING OFFICER. There is no unanimous-consent agreement on this amendment.

Mr. FULBRIGHT. There is no agreement on this amendment. After conferring with the Senator from Mississippi, we are not prepared at this time to make an agreement, but I would like to make a statement, and then we will either arrive at a time later or go to a vote.

Mr. PASTORE. Mr. President, do we expect to vote on this amendment tonight?

Mr. STENNIS. Mr. President, if the Senator will yield, I really do not believe that we can dispose of the amendment this evening. It is too late. There is a complication about it. I think we ought to open the debate and perhaps, tomorrow, agree on a time to vote on it, somewhere around 12 o'clock. This is the way I see it now. I do not think we ought to agree now.

Mr. PERCY. Mr. President, if the Senator will yield, we have a unanimous-consent agreement for a vote at 12 o'clock.

Mr. STENNIS. We can arrange it tomorrow. I would like the debate to start.

Mr. FULBRIGHT. Mr. President, I shall make my statement on the amendment now.

The amendment would carry out the intent of the Armed Services Committee by prohibiting the use of Department of Defense funds to finance Vietnamese or Thai military operations in support of the Cambodian Government. In addition, it would go one step further and prohibit use of Defense Department funds for military actions by these countries in support of the Laotian Government.

The Armed Services Committee's report states:

There is no intent to permit the use of DOD appropriations under this authority to support Vietnamese and other free world forces in actions designed to provide military support and assistance to the Cambodian Government.

The committee is to be commended for drawing the line on use of U.S. tax dollars to finance a war by proxy in Cambodia. Recent events prove that its concern over growing U.S. involvement in propping up the Lon Nol government, through third countries, is well justified.

According to press reports a de facto military alliance exists between South Vietnam and Cambodia. Nearly 2 months after all U.S. ground forces were taken

out of Cambodia, 20,000 Vietnamese troops are still spread throughout much of the country, fighting side by side with Cambodian units. Apparently, it is now standard practice for U.S. aircraft to provide close air support for Cambodian units in the thin guise of "interdiction" operations.

The extent of Thailand's current involvement is not yet clear. But the State Department has admitted that tentative agreement—I repeat, tentative—has been reached with Thailand for sending 5,000 "volunteer" troops to Cambodia. That was the report I referred to in connection with the former amendment.

The State Department spokesman said on August 14:

> The nature and extent of whatever support we may provide will depend in part on arrangements worked out between the Thai and Cambodian governments, including the training and disposition of the troops involved.

I interpret this as meaning, in plain English, that we will foot the bill for whatever deal the Cambodians and the Thais decide to make among themselves. Unless the Congress acts it is likely that the American taxpayers will again find themselves the hapless victims of a fait accompli by the executive branch which sucks the United States ever deeper into the quagmire of Cambodia.

The history of the U.S. relations with the Asian nations that, at our urging, send troops to Vietnam is replete with deception and coverup by executive branch officials. Both the Congress and the public have been victimized by a conscious policy to hide the facts about the nature of the agreements with South Korea, Thailand, and the Philippines. If it were not for the diligent work of Senator SYMINGTON's subcommittee the public would still be in the dark about the price exacted from us by those countries. I am sure that the Thais would welcome a United States promise to make Cambodia a profitable operation for their troops, as we did for them in Vietnam.

In any debate over paying other countries to fight a war in Cambodia for us, which is what this amendment is all about, we should not lose sight of a fundamental lesson from our experience in Vietnam; wherever American tax dollars for waging a war go, the American flag inevitably follows. There will be no winning of the war in Cambodia on the cheap, by paying foreign forces to do the fighting. Once the decision is made to try to save Cambodia with foreign troops the die will be cast and our involvement—and our unwritten commitment to save Cambodia—escalated. What will the President do, for example, if Communist forces threaten Thailand in response to a Thai move into Cambodia? Will he be likely to refuse to answer Thailand's call for help under the SEATO Treaty? The possible consequences of encouraging the Thais to go into Cambodia are far more serious than the tens of milions of dollars it is likely to cost us. The cost may very well be a far wider war.

T. D. Allman, the experienced and perceptive reporter who was banished by the Cambodian Government several days ago, had an article in the July 23 issue of the Far Eastern Economic Review describing the growing U.S. involvement in the war. He ended by quoting a neutralist ambassador in Phnom Penh, who said:

> From the very beginning Lon Nol and Sirik Matak were absolutely confident that the United States would rescue them. They seem to have been completely right.

It appears that only through action by the Congress can they be proven to have been wrong.

My amendment goes a step beyond the committee's position by prohibiting U.S. funding of Vietnamese military operations in support of the Laotian Government. It is, I believe, a logical extension of the committee's intent, and but another step in the Senate's attempt to establish outer limits on American involvement in what has become a general war in Southeast Asia. The Senate has now gone on record twice as saying to the executive branch that it cannot go beyond certain bounds in prosecuting the war. It has said, in effect, that "although we may be up to our neck in the quagmire, we are not going to march in over our head." This amendment builds on the Senate's action of last December in prohibiting the sending of U.S. ground troops to Laos or Thailand, and on the Cooper-Church amendment prohibiting further U.S. involvement in the war in Cambodia. Thus far the executive branch has chosen to ignore the Senate's intent in passing the Cooper-Church amendment. By providing U.S. air support to Cambodia forces and in agreeing to pay Thai forces to fight in Cambodia, it has emphasized the danger of delaying further in drawing the line to deeper involvement in either Cambodia or Laos.

My amendment is also consistent with the administration's policy on Laos, as I understand it. On May 18, Secretary Laird when questioned before a subcommittee of the Foreign Relations Committee concerning possible incursions by United States or Vietnamese forces into Laos said:

> The important thing . . . to bear in mind is that a force engaged in combat or carrying out an operation in the border area quite possibly could have crossed the border when it was engaged in combat. It is necessary, from time to time, as far as the South Vietnamese are concerned, to do that, but I want it made very clear that there has been no change. Their mission is not a ground combat mission or a search-and-destroy mission or anything like that. Their activities are in connection with either a battle that is being carried on at a particular time or the air interdiction campaign or rescue operations that may be carried out on the Ho Chi Minh Trail.

Later, when asked specifically by Senator GORE if the "rules of engagement" applicable to U.S. forces applied to Vietnamese forces as well, he said:

> The rules of engagement so far as South Vietnamese and U.S. forces located along the border with Laos are concerned are still the same . . .

Yet, pressures have been at work to send the Vietnamese Army into Laos. Two days before Secretary Laird assured the Foreign Relations Committee that the United States did not support a Vietnamese invasion of Laos, a Laotian Defense Ministry spokesman, according to the New York Times, "suggested that, from a military point of view, it was necessary that South Vietnamese forces intervene to help 'clean up' Laos." And news reports periodically appear stating that the Vietnamese are preparing to do just that.

On July 25 the Washington Star cited reports—

> Vietnamese army commanders are eager to obtain political permission for a major strike into Southern Laos.

The same story reported:

> Lao Communists have accused the United States of "preparing a dangerous military adventure" with U.S., South Vietnamese, Thai, and Lao troops in the panhandle of southern Laos.

In recent days, the Pathet Lao have charged that the United States has sent Vietnamese army units into Laos. Such charges by the enemy have often proved to be very close to the mark in the past.

The possible consequences of a Vietnamese move into Laos are grave. The Chinese-owned Hong Kong Standard has warned that an escalation of the war into Laos "will inevitably bring in the Communist giants" and reminded its readers of China's intervention in Korea. I do not believe that the Congress should leave any opening for the Vietnamese to escalate the war in Laos or risk provoking China into intervening. The only way to lock the door to Vietnamese adventurism in Laos is to cut off the money. That is the purpose of the second part of my amendment.

I feel confident that members of the Armed Services Committee had no desire to authorize U.S. financing of Vietnamese support for either the Cambodian or the Laotian Governments. But the change in the existing law, proposed by the committee, opens the door to financing Vietnamese troops wherever they may be. Existing law authorizes Department of Defense funds to be used to support "Vietnamese and other free world forces in Vietnam." The committee proposes to change that to read:

> Vietnamese and other free world forces *in support of Vietnamese forces.*

Although the committee's stated intent was to make it clear that U.S. funds can be used to support Vietnamese operations in the Cambodian sanctuary area and for "protective reaction strikes in these locations" the change in language permits the executive branch to foot the bill for any operations the Vietnamese choose to undertake, including an invasion of Laos or China. And it would also permit the financing of any Thai operation in Laos or Cambodia as long as it is claimed that the action is to aid Vietnamese forces in these countries.

There is certainly no assurance that the executive branch will follow the committee's restricted intent when the language in the statute is far more broad. And, the Senate has no assurance that the House conference report will not seize upon a generous—and quite different—interpretation of the new wording, superseding the effect which the Senate committee hoped to achieve. If the legislative history is confused, we can be sure that the executive branch officials who will be implementing this authority

will choose the broadest interpretation possible. The only practical way to insure that the language is not used to finance Vietnamese military adventures in Cambodia and Laos is to say so in the statute.

The Senate is slowly but surely imposing effective limits on U.S. involvement in this tragic war. To approve the language in the bill, as now written, would reverse that process and invite a further expansion of the war by the Vietnamese and the Thais, using an American proxy. I hope that the Senate will continue to build on the record of the past and adopt this amendment by an overwhelming margin.

Mr. President, as I conceive this amendment, it is, as I said, a further step in the same direction taken by the Cooper-Church amendment, which was passed by this body only recently. It is also consistent with the amendments offered by the Senator from Kentucky and others last December in an appropriation bill, forbidding the sending of American ground combat troops to Laos and Thailand.

All we are saying now is that money in this bill shall not be used to finance Vietnamese troops to go into Cambodia or into Laos.

There is an article in today's newspaper, supplementing what I have just read from other newspapers, indicating that the Vietnamese are preparing and anxious to go into Laos.

I ask unanimous consent to have printed in the RECORD an article by Murrey Marder, published in this morning's Washington Post, and other articles on the same subject.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

ALLIED ROLE SEEN BASIS OF LAO CHARGES

(By Murrey Marder)

Allied sources acknowledged yesterday that clandestine reconnaissance units operating in Laos may be the target of the latest Communist charges of war escalation.

For years there has been secret penetration of the Laotian border from the South Vietnamese side by allied patrols, air spotters, and sometimes raiding parties, hitting the Ho Chi Minh infiltration trail area. It was not determinable yesterday, however, if these covert actions suddenly have been intensified or not.

The latest public charge by the pro-Communist Pathet Lao that the United States introduced Saigon "army units" into Laos could be an attempt to forestall an anticipated South Vietnamese bordercrossing attack in force, U.S. sources noted, or it could be for psychological warfare purposes.

Washington and Saigon sources concede that their military planners are urgently pressing for sizeable border crossings into Laos. But these sources say both capitals still regard such operations as too hazardous in domestic and international political terms for the Nixon administration to risk at this time.

The Defense and State Departments in Washington and official sources in Saigon yesterday reiterated their carefully phrased standard disclaimers concerning operations in Laos. These statements are designed to sound like sweeping denials; however, they contain semantic loopholes to circumvent official acknowledgment of clandestine operations.

American spokesmen, in answer to questions, again denied there are any "U.S. ground combat troops in Laos." The Defense spokesman noted that United States aircraft, including helicopters, engage in "air interdiction" against the Ho Chi Minh trail and in "rescue operations which contribute to the safety and security of U.S. and allied personnel," and that the South Vietnamese government has denied sending its "troops" into Laos.

Neither this statement nor one by a State Department spokesman, however, faced the question of whether U.S. helicopters are dropping South Vietnamese patrols into Laos.

"PROTECTIVE REACTION"

A State spokesman went a bit further but still stopped considerably short of the question. He noted that in the past it has been stated that: "Small groups of South Vietnamese have had to cross the border in 'protective reaction' operations; those forces may or may not have been accompanied by American advisers."

A new variation on what the Pathet Lao charges is going on was broadcast late Tuesday night. It claimed the United States is sending "Saigon puppet units" into the Dak Lang area of Saravane province "so as to coordinate action with the Lao puppet (anti-Communist) troops there."

From Saigon the Associated Press reported that despite official denials there, sources said most of the reconnaissance patrols going into Laos "are landed by U.S. helicopters along the 200-mile Ho Chi Minh trail in the lower panhandle of Laos to spot targets for American bombers."

THAIS GETTING UNITED STATES INVOLVED?

(By William J. Coughlin)

BANGKOK, THAILAND.—Thailand's growing participation in the Cambodian conflict has widened U.S. involvement there, according to diplomatic sources.

Both Thai and U.S. officers here said last week that the U.S. appears to have a clear obligation to come to the aid of Thailand if Bangkok's efforts to support the Lon Nol government provoke attack by North Vietnamese and Viet Cong forces.

A high American official said he believes the U.S. would act under such circumstances.

SEATO OBLIGATIONS

Unlike its position in regard to Cambodia itself, the U.S. under the SEATO pact is pledged to defend Thailand in the event it is attacked by Communist aggressors. In the view of both Thai and U.S. diplomatic sources here, that covers any North Vietnamese counterattack which might be touched off by Thai actions in Cambodia.

Thus, the U.S. might be even more deeply committed in the Cambodian conflict than the Administration's Congressional critics have charged.

Thai police forces already have crossed the Cambodian border in actions against the Viet Cong and sources here report that Cambodian government troops have gone over the boundary to seek sanctuary in Thailand. But, thus far, no Thai regular ground forces are believed to have been committed to Cambodia.

Thai Foreign Minister Thanat Khoman said last week that his country would send regular Thai forces into action in Cambodia if the Thai border is threatened or if the overthrow of the Cambodian government appears imminent.

CITES ASSURANCES

Asked whether the U.S. then, would still have an obligation under the SEATO pact to defend Thailand against outside attack, the foreign minister expressed the belief it would.

* * * * *

Thanat is aware, however, that the pertinent article of the SEATO treaty calls for action in accordance "with Constitutional processes," which possibly could bring the Senate into the act.

There has been some question whether there is a requirement for unilateral American action under the treaty.

But former U. S. ambassador to Thailand Graham A. Martin was asked by Sen. Stuart Symington (D-Mo.) during hearings in November on U. S. commitments.

"Do you believe that under the SEATO treaty, we were and are committed to defend Thailand against Communist aggression and that if we did not go to their defense if they were attacked by a Communist country, we would be violating the treaty?"

Martin replied, "Yes, I do." Later, he named North Vietnam as one of the possible aggressors.

[From the Washington Post, Aug. 15, 1970]

THAI AID ACCORD CONFIRMED BY UNITED STATES

(By Murrey Marder)

The State Department confirmed yesterday "tentative" agreement for American military aid to send Cambodia about 5,000 "volunteer" troops recruited or trained in Thailand.

State Department Press Officer Robert J. McCloskey said "the United States has made it clear that we look with favor" on such "Thai-Cambodian cooperation."

"The nature and extent of whatever support we may provide," he said, "will depend in part on arrangements worked out between the Thai and Cambodian governments, including the training and disposition of the troops involved." McCloskey reiterated that "no final overall agreement on U.S. support for troops recruited or trained in Thailand" has yet been reached.

It was under newsmen's questioning that McCloskey acknowledged that what has been decided so far could be described as a "tentative" agreement for U.S. aid for 3,000 Thai troops described as "ethnic Cambodians" and about 2,000 Cambodians now being trained in Thailand. Labeling these troops as Cambodians and "volunteers" enables Thailand to contend it is sending no Royal Thai government forces into Cambodia.

Sen. Frank Church (D-Idaho) charged yesterday that the reported U.S.-aid intentions, if carried out, "would represent the second violation of the Senate-approved Church-Cooper amendment within a week's time."

The "first" violation, said Church, "was the disclosure that direct American air support is now being extended to Cambodian troops."

Officially, the Nixon administration denies it is engaged in direct air support; it claims this is "air interdiction" of Communist forces in Cambodia to prevent them from remounting a challenge to U.S. troops in South Vietnam. Senate critics counter that this is semantic trickery.

After intense debate, the Senate on June 30 passed an amendment to the Foreign Military Sales Act sponsored by Sens. John Sherman Cooper (R-Ky.) and Church. It would forbid retaining any U.S. forces in Cambodia, using U.S. funds for other nations' combat forces in Cambodia or providing U.S. combat air support for Cambodian troops.

Church said yesterday that "each passing week reaffirms the wisdom of the Senate" in prohibiting the use of "mercenaries" in Cambodia, and rejecting opponents' contentions that the Cooper-Church amendment was "moot" because all U.S. troops were being withdrawn from Cambodia by June 30.

He said he was "dismayed" to hear of "another instance of the abuse that flows from unchecked executive power."

The Cooper-Church amendment was tabled by the House on July 9 on a 237-to-153 vote, without debate, and sent to Senate-House conference where the foreign military

sales bill now languishes. Administration sources indicate they hope to circumvent the Cooper-Church barrier on money to support third-country forces in Cambodia by drawing on funds for direct U.S. aid to Cambodia.

GROUND ATTACK INTO LAOS WEIGHED

(By Orr Kelly)

Ground operations by non-Americans to cut the Ho Chi Minh Trail in Laos are under serious consideration at the Pentagon, but no decision to recommend such an operation is imminent.

One official who keeps a close watch on the situation in Southeast Asia was asked about periodic reports that a major military operation against the North Vietnamese and Viet Cong in southern Laos and northern Cambodia might be mounted by South Vietnamese, Thai, Cambodian and possibly Laotian troops.

"We are constantly assessing our air effort to stop men and supplies moving down the trail," he said, "and trying to determine if the job might be better done with people on the ground. But nothing along those lines is close to a decision."

Such an operation probably would be a relatively quick in-and-out attack similar to the South Vietnamese penetration deep into northeastern Cambodia in the latter stages of the operation against the sanctuary areas.

The major force in such an operation almost certainly would be contributed by the South Vietnamese.

The Cambodians and the Laotians both have plenty of trouble without going looking for more.

The Thais probably are capable of carrying out such an operation, but as one official said, "the Thais have a very low risk-taking propensity."

American forces are specifically barred from taking part in any such operation on the ground by a congressional restriction which prohibits spending money for ground combat operations in Laos or Thailand.

Although this restriction is frequently overlooked by those who fear an expansion of the American involvement in the war in Southeast Asia, defense officials are very much aware of the limit.

While the restriction woud not prohibit the use of South Vietnamese troops in Laos, it would restrict the use of American helicopters to carry them into battle and American artillery to support them.

Even if such an operation across the border into southeastern Laos should be carried out, it likely would be limited in scope and duration because of the lack of American assistance.

"The dollar is the driving force there," one official said, "and there just aren't many dollars for operations not connected with getting Americans out of Vietnam."

This restriction also makes it unlikely that any of our allies in Southeast Asia will embark on any other, more ambitious military operations that have a certain appeal to the Pentagon from a strictly military textbook standpoint.

If forces were available, there probably would be a considerable military advantage to placing a blocking force in the north central section of Cambodia, close to the borders of Thailand, Laos and South Vietnam where two major rivers, the Mekong and the Sekong, join.

Although their efforts are hampered by the monsoons, the North Vietnamese are attempting to establish a firm supply line through that area, using the two rivers as the basis for their transportation system.

At this point, the Sekong is the key river, because it flows southwest from the Laotian town of Attopeu, now in North Vietnamese hands. The river joins the Mekong below the impassable Khone Falls.

A sizable ground force in that area could either block the enemy supply line or force the North Vietnamese to fight in that relatively uninhabited area far from their home bases.

But the likelihood of anything but relatively limited in-and-out attacks in the near future is virtually nil.

CAMBODIA: INTO AN ICEBERG WAR

(By T. D. Allman)

One reason the Cambodian government is increasingly optimistic about its chances for military survival is that the United States and South Vietnam, with US-supplied funds, are on the way to adding approximately three divisions of trained and equipped troops to the National Khmer Armed Forces.

According to well-informed sources here, American and South Vietnamese officers and soldiers have begun training the first elements of two divisions of Cambodian troops at installations in South Vietnam. Another 10,000 or so South Vietnamese troops of Cambodian ancestry are being trained, and will be stationed permanently in Cambodia.

The programme, which began soon after US ground troops left Cambodia on April 29, apparently is being funded with a mixture of US-supplied South Vietnamese funds, American funds originally allocated for South Vietnamese military assistance, and direct US aid to the Cambodian government. The cost of the programme apparently surpasses publicly announced American aid commitments to Cambodia, which so far total only US $9.9 million.

Elements of the first division to be trained in South Vietnam, according to Phnom Penh sources, are being trucked and flown across the border to South Vietnam in company-sized groups. Sources familiar with the training programme leave little doubt that the US is bearing the major financial and training responsibility, even though the programme technically is part of a bilateral South Vietnamese-Cambodian accord. "The American in charge is on his fourth tour in Vietnam," said one of the sources. "In Korea one time, he killed 29 communists with a shovel. Those Khmers may be going in gentle Buddhists but they are coming out tigers."

According to other sources, US personnel already have trained several battalions which have moved into Cambodia recently. They are Khmer Krom units—forces made up of members of South Vietnam's Cambodian minority. According to these sources, Khmer Krom troops in Cambodia soon will total about 10,000. About 4,000 belong to the American-trained and financed Mike-force, which long served as an elite mercenary force in South Vietnam. The rest are composed of Khmer Krom troops drawn from regular South Vietnamese units, given intensive training and sent to Cambodia.

Two of these newly-formed battalions arrived here several weeks ago aboard a convoy of US donated transport trucks. According to one source more Khmer Krom are coming. They will continue to be paid with US funds sent through South Vietnamese channels.

The Khmer Krom soldiers are equipped with American weapons, and have been accompanied by two US-paid Australian mercenary officers. US embassy sources here, asked to comment on the financing of the Khmer Krom units, said, they had "no knowledge" that they were being paid by Washington. But Khmer Krom officers say that "we are being paid through US aid."

The mass training programme for Cambodian soldiers was announced here last week. According to official sources, an initial 10,000 troops will be trained, and government sources say they will be followed by an equal number of trainees before the end of the year.

A decline in the level of communist military activity, a protective ring of US air strikes and South Vietnamese ground operations, and the psychological effect of what Cambodian officials here regard as an unequivocal American commitment to the survival of their regime, have combined to produce a semblance of euphoria in this isolated capital.

Only three weeks ago, when communist troops cut most of Phnom Penh's overland links with the outside world, imminent communist attack was expected here. Now, Cambodian Premier Lon Nol feels optimistic enough to predict "victory in the near future."

The optimism reflects significant evolution in the Cambodian situation. Fluidity has given way to a more stabilised situation in which the communists control most of the less densely populated areas, the government, with foreign help, holds the capital and several of the major provincial capitals, and a less dramatic but very debilitating struggle continues in the in-between areas.

The US air force has begun to fly around-the-clock sorties, in Cambodia, not only against enemy sanctuaries but in tactical support of the Cambodian forces. Evaluations of the Cambodian situation have adjusted to the realities of war. What three months ago would have been considered a major communist attack is now interpreted as a government success if it does not result in a further dramatic erosion of the situation. By absolute standards, communist attacks have not declined greatly.

Many sources here believe that the partial lull is the result of a North Vietnamese decision to continuing to give priority to the war in South Vietnam. "A lot was destroyed in the sanctuaries," said one intelligence source. "But a lot is still out there. We assume the Vietcong now are infiltrating back in to retrieve their caches and re-establish bases near the South Vietnam border."

If the Cambodian government's optimism that the communists have been checked in Cambodia is therefore unfounded, its confidence in a fundamental American commitment to their cause seems increasingly justified.

"From the very beginning," commented one neutralist ambassador in Phnom Penh last week, "Lon Nol and Sirik Matak were absolutely confident that the United States would rescue them. They seem to have been completely right."

[From the Far Eastern Economic Review, July 23, 1970]

SOUTH VIETNAM: ARVN-HALF

SAIGON. Some clutched the booty of war. Others played nervously with their ancient weapons. Some, too sick or tired to stand, lay on the parade ground in the hot sun. And others dressed in the tattered remnants of uniforms three decades old, squinted at the neatly-dressed throng of South Vietnamese soldiers who had come to stare at the survivors of the Cambodian Army's Northeast Regional Command.

"This is just like 1964," said one Saigon officer who could not believe his eyes. In front of him were several Khmer soldiers wearing aluminum cooking pots as helmets, brightly-colored woolen scarves securing the pots to their swarthy heads. A nine-year-old boy with double bandoliers of machine gun ammunition across his chest stood at attention, holding a machine gun. NCOs wearing muddy shower shoes and French battle jackets from the other Indochina War barked instructions in guttural Khmer. And an unidentified Cambodian major, resplendent in new olive fatigues and American jungle combat boots, dashed fowl-like around, spluttering incoherent French, English and Vietnamese.

But looking at what was left of Cambodia's 54th Battalion it was difficult to accept the Vietnamese officer's comment that the Khmers looked like ARVN back in its blackest days. The Cambodians looked far worse.

And now, ostensibly at least, it was up to

ARVN to straighten up these troops, dress them in modern army uniforms, and teach them contemporary military tactics. After five weeks of "refresher" training at Lam Son National Training Centre in the mountains near Nha Trang they will be sent back to Cambodia to replace some of the 18,000 South Vietnamese troops fighting across the border and Cambodianise the war.

Yet despite Saigon's boast that it will be the Vietnamese who will be training the 54th—and four other battalions numbering 577 men each evacuated from Ratanakiri last month by ARVN—it will be the Americans who will be providing the cash and the real meat of the advice and refitting. Washington has not acknowledged this, of course, but then, as it does in Laos, it has its reasons.

Training began simultaneously at Lam Son for some of the 10,000 Cambodian Army recruits scheduled to receive instruction in South Vietnam. Although on the surface it looked as if the ARVN sergeants rounding up the green young men from Phnom Penh were firmly in charge the US was footing the bill. Moreover the large American advisory teams at Lam Son and at two other camps are also actively involved in their training.

Plans for the scheme were drawn up by the Americans at the Military Assistance Command in Saigon and the training began with the South Vietnamese acting as the perfect front for what is in reality a new American investment, and involvement, in the Indochina War.

The United States first showed interest in training Cambodian troops in May when the Lon Nol government, recognising that it could never train, equip and arm enough men in time to meet attacks from its enemies, appealed to Washington again for military aid.

The United States agreed to provide small arms, ammunition, trucks, high military equipment, and serving for Cambodian Air Force planes as part of a $7 million publicly-acknowledged package deal. The plan to train Phaom Penb's troops also was included in the agreement but because it was thought this might be too large a pill for the American public to swallow it was decided to "allow" the South Vietnamese to do the training, a source close to the project said.

When the five battalions, plus about 4,000 dependents were snatched out of Bo Kheo and Labansiek after fighting off the North Vietnamese for several weeks (some of the battalions had lost as many as 200 men), it was also decided to extend the training agreement and for the US to support them too. Transported in US Air Force planes they will undergo extensive schooling and rearming under the training extension.

How much the training of the recruits and the troops is costing the American taxpayer is a closely guarded secret. But more important is the fact that the US agreed to do it secretly, using ARVN as a front, to further disguise its growing involvement in the Cambodian fighting.

Said one American officer, concerned about possible over-expansion of the U.S. military effort in Indochina: "I am afraid we are on the road to involvement at the worst in another Vietnam, at the best another Laos. Despite what the president says there is a tacit agreement here that we are not going to allow Cambodia to go under. And we are already involved in that. You know how we are 'now involved' militarily in Laos. That's the way we are nearly 'not involved' in Cambodia."

The eight weeks instruction adds up to a crash course. ARVN recruits get twice that and even ARVN's training is considered hurried by America standards. They will drill with old World War II US carbines and light machineguns in company-sized arms (about 100 men each) and then will be shipped back to Cambodia as complete companies with their carbines. At the moment, the Americans are concerned about the Khmers having to face up to the North Vietnamese fully automatic AK-47s with their outdated American equipment. "The feeling here is that they should all get M-16s or at least captured AKs," said one adviser. "We are trying to do something about it."

SOUTHERN-FRIED CHICKEN

South Vietnam three months ago sent 40,000 of its American-trained, American-equipped and American-paid troops hurtling into Cambodia in a series of invasions under the codename "Operation Total Victory". The South Vietnamese forces may have persuaded many Cambodians that the Vietcong were the lesser of two evils, as they tore up the previously placid Cambodian countryside with orgies of firepower which even their American advisers found impressive.

South Vietnamese senior officers, notably General Do Cao Tri, a former ambassador to Taiwan, made pronouncements reminiscent of early American statements on Vietnam. A score of South Vietnamese military planners noisily took over the general headquarters here, in the process displacing a number of Cambodian counterparts—including the prime minister's brother—from their offices. Initial tension between the Cambodians and their newfound South Vietnamese friends was exacerbated by Cambodian massacres of Vietnamese civilians and the South Vietnamese habit of looting every village they liberated on behalf of the Lon Nol government.

Now all that is changed, officially at least. Like the Americans, the South Vietnamese are engaged in the difficult business of doing a great deal for the Cambodians while trying to appear to be doing very little.

In Phnom Penh, the South Vietnamese low profile is most evident.

The embassy and residence occupy two small villas. Charge d'Affaires Tran Van Phuoc keeps to himself—when not engaged in frequent conferences on policy matters with Lon Nol and Vice Premier Sirik Matak.

Phuoc, indeed, was specifically chosen to blend into the Phnom Penh scene. He was born in 1918 in the south Cambodia provincial capital of Takeo, attended Phnom Penh's exclusive Lycee Sisowath, and speaks Cambodian so fluently that most of his meetings with Cambodian officials are conducted in that language.

The South Vietnamese officer corps, which works on a counterpart basis with the Cambodian general staff, also affects a low posture. "We are simply here for liaison," insists a South Vietnamese colonel. "If you need any information you should go through Saigon. Or better yet," he grinned, "contact the Cambodians. They are in charge here."

In fact, the South Vietnamese army corps plays as central a role in Cambodia as similarly placed American officers do in Saigon. They have the final say on all Cambodian military plans, provide transport, logistics and munitions for the Cambodian forces, and on many occasions have overruled the entire Cambodian general staff on matters of strategy and tactics.

But no South Vietnamese flag flies at the South Vietnamese military headquarters in Phnom Penh, and no South Vietnamese soldiers or officers can enter the capital without specific permission. "Even General Tri and General Dzu [the two South Vietnamese generals responsible for Saigon operations in Cambodia] must have permission to come here," says a South Vietnamese source, "and they aren't going to get it very often. They've also been told to give up press conferences on Cambodian soil." By whom? "President Thieu has taken a personal interest in this affair."

The low profile extends, less strongly, into the Cambodian countryside. In principle, South Vietnamese troops no longer occupy the territory they secure for the Cambodian authorities. They have orders to stay away from densely populated areas and to turn over to Cambodian troops towns they have taken from the communists.

The South Vietnamese involvement in Cambodia, despite the low profile, amounts to a relationship similar to that of a power over a protectorate. As of last week:

Khmer Krom troops of South Vietnamese citizenship assured the defense of Phnom Penh, and occupied surrounding villages.

12,000 to 40,000 South Vietnamese troops, depending on the needs of the moment, assumed the major responsibility for patrolling most of the countryside which remains nominally under the Cambodia government's control. Every major battle in Cambodia during the past two months has pitted South Vietnamese troops against the Vietcong and North Vietnamese. The Cambodians have not won a major battle since the South Vietnamese expeditionary force arrived.

Several thousand South Vietnamese logistics and staff personnel provided all logistics and most planning for the Cambodia forces. The logistics range from flying in guns and ammunition in transport planes to Phnom Penh to providing helicopters and advisers for Cambodian assault missions.

South Vietnamese helicopter gunships and artillery provided fire support for Cambodian troops on a regular basis.

An unknown number of South Vietnamese troops were moved into the border sanctuaries to continue the task of replacing US troops.

South Vietnam, serving as a funnel for US funds, was providing an undisclosed amount of material and direct financial support for the Cambodian government, according to sources here.

The South Vietnamese presence in Cambodia, therefore, despite its low profile, has become the major Cambodian defense. "This is only temporary," said one South Vietnamese commander, who spoke with an American accent picked up in the US. "It's their war." But the Cambodians, in any real sense of the word, have stopped fighting their own war. A typical episode of the Cambodian war occurred just north of Phnom Penh recently.

An air and water-borne South Vietnamese force of 5,000 men launched a search-and-destroy operation in a densely populated area on the peninsula formed by the Tonle Sap and the Mekong River. Cambodian villagers told reporters that the Vietcong had evacuated the area several days before. But there was no Cambodian liaison officer present, let alone any Cambodian troops. The soldiers spread through the countryside nonetheless and from the bank of the Mekong, smoke could be seen rising from the burning villages. A South Vietnamese artillery battery at 30-second intervals fired random "harassment and interdiction" fire into the Cambodian countryside, despite the fact that there was no longer anyone there to harass or interdict Cambodian villagers.

A dozen South Vietnamese river craft were spread along the river front; eight American-provided helicopters were parked in a nearby field.

A South Vietnamese helicopter pilot sat in the shade with a basket of chickens at his side. He dressed and talked like an American.

"I didn't steal this chicken," he said anticipating the question. "I paid for it." He then went on to explain the search-and-destroy action in the Texas accent he had learned at flight school in the US. "So you see," he concluded, "this is just like an American operation."

Indeed, the South Vietnamese presence in Cambodia, complete with low profile, an excess of firepower and a built-in callousness toward the villagers, seems all too surely to

resemble the first days of the American involvement in South Vietnam.

[From the Washington Star, July 25, 1970]

REDS WARN U.S. ON LAOS

(By Henry S. Bradsher)

HONG KONG.—Lao Communists have accused the United States of "preparing a dangerous military adventure" with U.S., South Vietnamese, Thai and Lao troops in the panhandle of southern Laos.

In a small-scale forerunner of this, the "Lao Patriotic Front" has charged South Vietnamese and Thai troops are already fighting alongside Lao government troops in the area.

The accusations follow reports in Saigon that Vietnamese army commanders are eager to obtain political permission for a major strike into southern Laos.

AIM HO CHI MINH TRAIL

The goal would be the cutting of the complex of routes from North Vietnam through the panhandle which are collectively known as the Ho Chi Minh Trail.

If they could be cut west of the northern part of South Vietnam the benefits of cutting off Communist supplies now being claimed for the southern part of the country as a result of attacks on Cambodian sanctuaries might be obtained for almost all of South Vietnam and for Cambodia, too.

It is, however, a very big "if."

The ruggedness of the terrain and the probable determination of Hanoi not to lose overland access to South Vietnam and Cambodia could turn any attempt to pinch off the trail in Laos into a major new theater of indefinite warfare.

PERIL TO NEUTRALITY

A major military move into Laos, as distinct from the current semi-secret operations there of U.S., Thai and possibly also—as the Communists charge—South Vietnamese forces would create political problems.

It would endanger the grayed remains of Prince Souvanna Phouma's claim to neutrality for Laos, as established in theory by the 1962 Geneva agreements.

In an apparent effort to bolster the appearances of neutrality and thus try to stave off a military move into the panhandle, Lao Communists have been making new efforts to open talks with the prince's government in Vientiane.

Prince Souphanouvong, leader of the Pathet Lao which forms the Communist core of the "Lao Patriotic Front," has announced that he is sending a messenger to his half-brother Souvanna Phouma.

SEEKS BOMB HALT

The messenger also will seek to arrange for the two sides to meet and discuss "the cessation of U.S. bombing so as to ensure safety" for broader political talks.

Souvanna rejected in March a proposal for political talks which was tied to his telling the Americans to stop bombing. His military position in northern Laos depends upon U.S. airpower, and the U.S. position in Vietnam depends upon bombing of the trail in the panhandle.

Souphanouvong, who is assumed by Vientiane observers to be under Hanoi's influence, is believed in Vientiane to be more concerned with getting the panhandle bombing stopped than in advancing positions in the northern Laos of his North Vietnamese-led forces.

His sending a messenger now suggests eagerness to get talks started despite Souvanna's position.

WIDE PLAN POSSIBLE

That he is acting as part of a wider plan was suggested by an announcement that the International Control Commission is prepared to police any political arrangements which can be reached.

This was announced in the name of all three ICC members. Canada has long been willing, but Poland has shown such willingness only when it gets the word from Hanoi via Moscow. The ICC chairman, India, also has sought Soviet clearance before doing anything.

This political maneuvering comes, as the Lao Communist accusations indicated, at a time of intensifying military and diplomatic activities.

The "Lao Patriotic Front" issued its statement in Sam Neua, the Pathet Lao capital, Monday and it was broadcast in sections concluding Thursday. It marked the eighth anniversary of the 1962 Geneva agreements.

LENGTHY SUMMARY

The statement contained a lengthy summary of U.S. activities in Laos which it contended violated the agreements. The summary was culled from American congressional reports, press reports and other sources.

It said that when U.S. troops went into Cambodia, many Thai army battalions "were sent by the United States" to the Lao panhandle. At the same time, "the United States ordered the Saigon puppet army to launch operations in southern Laos."

South Vietnamese commando units are operating in the panhandle, the statement said. It added, "On May 19, a U.S. Defense department spokesman said: 'United States advisers are authorized to accompany South Vietnamese forces' during operation in Laos."

"The joint operations by Lao and Thai troops and the intrusions of Saigon puppet troops into southern Laos show that the United States is preparing a dangerous military adventure in this area in the face of new developments in Cambodia," the statement said.

FOUR-PARTY AXIS

It referred to "busy diplomatic activities (which) have taken place among Vientiane, Bangkok and Phnom Penh" lately, with Saigon also involved.

On May 28, it said, the Lao army commander secretly visited Bangkok. On June 8, the head of Lao military intelligence and others visited Phnom Penh, it said, and on June 15 the head of Cambodian intelligence was in Vientiane.

"Thus, a four-party axis among the anti-Indochina Indochinese and the anti-Asia Asians has been formed to put into practice the 'Nixon Doctrine,'" the statement said.

In this situation, it added, "the United States and the ultra-reactionaries in Laos are pressing Souvanna Phouma to 'reshuffle his cabinet' in Vientiane. They have threatened to stage a coup d'etat in order to cow Souvanna Phouma into implementing their plans strictly and actively."

It is this danger of Souvanna's being pushed into agreeing that South Vietnamese and Thai troops could openly enter his country that Souphanouvong is believed to want to head off by his new attempt to get talks started.

U.S. GROUND ATTACK URGED BY LAOTIANS

(By Tammy Arbuckle)

PAK SE, LAOS.—Laotian rightist leaders here said the United States should hit the Ho Chi Minh trail in south Laos at the same time it is attacking Cambodian sanctuaries.

They said as long as the Communist Vietnamese are using the Ho Chi Minh trail in eastern Laos to send reinforcements and material to Cambodia and South Vietnam, the U.S. effort in Cambodia cannot be fully effective.

The Lao military criticized President Nixon for setting time and territorial limits on American actions in Cambodia. "The North Vietnamese will withdraw to the west then return and rebuild the base areas when the Americans leave," a Lao general said.

Laotians said they expect the Communists to become active in northern Cambodia and to try and build up the Red Cambodian indigenous movement in these areas, supplied from new sanctuaries in Laos, Cambodia border areas.

The Lao military reaction was sparked by enemy moves in military region IV, the southern half of the Laos panhandle. Pak Se is military region IV headquarters.

Heavy fighting is going on now at Phou Luan, the highest point of the rice-rich Bolovens Plateau, 30 miles north of the Lao-Cambodian border.

"If they get the Bolovens they can hide and feed five divisions," the south Laos commander, Gen. Bounphone Mahaparak, said. North Vietnamese forces are grouping west of Saravane, which is the best access route to the plateau.

The Laos lost the province capital of Attopeu last month, opening the Sekhong River Route into Cambodia.

Current U.S. military help to Laos in this area is confined to Army advisers, Air Force forward air controllers, air logistics and Central Intelligence Agency operatives who lead tribal guerrillas from small airstrips on the eastern edge of the Bolovens Plateau.

LAOTIAN AIDE SEES NEED FOR SAIGON ARMY'S HELP

VIENTIANE, LAOS, May 15.—A Laotian Defense Ministry spokesman expressed today the growing concern of the military command over the situation in southern Laos and suggested that, from a military point of view, it was necessary that South Vietnamese forces intervene to help "clean up" Laos.

The spokesman, Col. Thong Phanh Knosky, said during a news conference that the North Vietnamese on May 9 had seized the large village of Tang Vay, 57 miles from the town of Savanaket, and today were encircling the Nong Boua Government post 19 miles from Tang Vay. He suggested that the North Vietnamese wanted to open new communications links in Laos to increase their supplies from North Vietnam to South Vietnam and Cambodia.

"From a strictly military point of view a South Vietnamese intervention to cut the Ho Chi Minh trail would be a necessity," the colonel said.

The North Vietnamese were today increasing their threat to the city of Saravane northeast of the Bolovens Plateau in southern Laos where 2,400 civilians have been evacuated in the last few days, Colonel Knosky said.

KY URGES ALLIES TO KEEP REDS OUT OF SANCTUARIES

SAIGON.—South Vietnamese Vice President Nguyen Cao Ky returned here today from a two-day official visit to Cambodia, warning that the allies' Cambodian operation could become a "failure in the future" if the enemy is allowed to return to its former border sanctuaries.

"If we are just satisfied with the results we have gotten until now and we stop our move and go back and sleep and discuss politics, then the enemy will come back in a few months," Ky told newsmen.

"If we do nothing and then the enemy comes back, the success of today will be the failure in the future," he said after his arrival at Tan Son Nhut airport.

He said the future intentions of the allies were more important than the North Vietnamese and Viet Cong ability to fight.

The vice president, met at the airport by U.S. Ambassador Ellsworth Bunker and other ranking U.S. and South Vietnamese officials, conferred with Cambodian Premier Lon Nol during his Phnom Penh visit.

Ky said he had gone to Cambodia to discuss closer cooperation between the Cambodian and South Vietnamese armed forces.

He said he was "very pleased" with the results of the talks.

But Ky, who has stated there is no deadline for the withdrawal of South Vietnamese troops from Cambodia, said he could not elaborate on the military aspects of his Cambodian talks. The United States plans to withdraws its forces from Cambodia by the end of this month.

Ky announced that South Vietnam plans to train 4,000 Cambodian residents of South Vietnam and send them to buttress the Cambodian army.

"What we are doing now is to protect our common interest," Ky said. "They've helped us, they kicked Sihanouk out and now in return we are helping them."

In response to a newsman's question, the vice president said that if the Laotian government asks for assistance in fighting Communist forces, "we would do our maximum to help them." But he did not elaborate.

Ky said he expected "no real hard problems in the future" concerning Cambodia's Vietnamese residents, thousands of whom were placed in detention or refugee camps following the Cambodian coup that ousted Prince Norodom Sihanouk as chief of state in March.

The vice president said he had negotiated the abolition of the afternoon curfew that had been imposed on Vietnamese in Phnom Penh, Cambodia's capital.

Vietnamese in "remote and insecure provinces" will be moved into Phnom Penh until security is restored, Ky said. He added that the South Vietnamese government would repatriate those who wished to leave Cambodia.

KY RIDICULES JOINT PULLOUT TALK AS SILLY

(By Robert G. Kaiser)

SAIGON, May 21.—Vice President Nguyen Cao Ky this morning ridiculed the notion that South Vietnamese troops would withdraw from Cambodia when American forces do as "a silly argument of silly people."

Ky declared that "we will not let anybody tie our hands" to prevent continued prosecution by South Vietnam of the war in Cambodia. He said the South Vietnamese forces had the capabilities to fight on the Cambodian front and in Vietnam simultaneously.

Ky's remarks, delivered at graduation ceremonies of the Vietnamese War College in Saigon, were the toughest yet heard from a senior Vietnamese official on the increasingly sensitive subject of South Vietnamese operations in Cambodia after June 30.

It appears that the South Vietnamese government is determined to continue those operations after President Nixon's deadline for the withdrawal of American troops from the Cambodian front.

NIXON'S STATEMENT

[When President Nixon announced May 9 that "all Americans of all kinds, including advisers, will be out of Cambodia by the end of June," he was asked whether the South Vietnamese would abide by the same deadline. He answered: "No, they do not. I would expect that the South Vietnamese would come out approximately at the same time that we do because when we come out, our logistical support and air support will also come out with them."

[Last Saturday, White House officials in Key Biscayne said they had every reason to believe the South Vietnamese forces would withdraw from Cambodia on approximately the same timetable as U.S. forces.]

Such determination to flout the wishes of the United States has been seen here before, but this time it appears to be more serious than previously.

* * * * *

Whether President Thieu would use such harsh language as Ky's "silly people" remark in this context is doubtful. But the Thieu-Ky relationship sometimes resembles the Nixon-Agnew relationship: the vice president here, as in the United States often does the President's tough talking, though Thieu's language on the issue has been more restrained, he has also said there is "no deadline" for his forces in Cambodia.

[Wednesday, Lt. Gen. Do Cao Tri, commander of South Vietnamese troops operating east of the Mekong River in Cambodia, was asked about reports from Washington that a South Vietnamese withdrawal would be linked with the U.S. pullout, according to news dispatches.

["I have not heard that from the Vietnamese side," he said, adding that the Saigon troops "are not under any restrictions, like U.S. forces, unless President Thieu orders us back to our territory."

[Asked how long South Vietnamese troops might remain in Cambodia, Tri replied: "That depends on the enemy. * * *"

[From the New York Times, May 9, 1970]

THIEU ASSERTS LON NOL AGREES ON TROOPS

(By Terence Smith)

SAIGON, SOUTH VIETNAM, May 8.—President Nguyen Van Thieu said tonight that he and Premier Lon Nol of Cambodia had worked out "agreements in principle" for South Vietnamese troops to conduct continuing military operations in eastern Cambodia.

In addition, Mr. Thieu said the two Governments had discussed the feasibility of a South Vietnamese naval blockade of the Cambodian coast line and principal port—Kompong Son, formerly called Sihanoukville—to prevent the North Vietnamese from bringing in military supplies by sea.

"Our navy is capable of guarding the whole coast," Mr. Thieu said. "We have the ships and we think it would be a good idea."

Mr. Thieu made it clear that South Vietnamese troops would not be bound by the restrictions President Nixon has placed on the United States forces operating in Cambodia.

Mr. Nixon promised Congressional leaders last Tuesday that American troops would withdraw from Cambodia by the end of June and would penetrate no deeper than about 20 miles without Congressional approval.

Mr. Thieu said: "We have no deadline, no limits. We will move on intelligence. When there is a target, we will strike it."

Mr. Thieu discussed the Cambodian situation and other topics at a small dinner at the Presidential Palace. Eight foreign correspondents—seven Americans and one European—sat with him at a table under the elm trees on the palace grounds while the President talked for four hours about the situation in Indochina.

Relaxed and expansive in an open-necked blue sportshirt, Mr. Thieu said he was in daily contact with the new Cambodian Premier through the South Vietnamese delegation established last week in Pnompenh. The two countries have had no formal diplomatic relations since 1963.

"I have a friend," he said, laughing, when he was asked about his earlier contacts with the Cambodian regime, "We keep in touch."

The President said he and General Lon Nol had come to their "agreement in principle" about South Vietnamese operations in eastern Cambodia two or three days before President Nixon announced on April 30 that United States troops would cross the Cambodian border to clear out North Vietnamese and Vietcong sanctuaries.

He said Premier Lon Nol had requested support from South Vietnamese forces for the general defense of Cambodia east of the Mekong River.

In the short term, Mr. Thieu said, the agreement would involve direct South Vietnamese military assistance and probably the naval blockade. He said he had already supplied some 4,000 American-trained ethnic Cambodian troops from the South Vietnamese forces, but he expected that more would have to be sent to Pnompenh to bolster the position of the Lon Nol Government.

In the long term, he said, the South Vietnamese would take on the job of training the Cambodian Army, which Mr. Thieu described as weak and poorly equipped. "But they have the manpower," he said, "and we can provide the advice."

Mr. Thieu said he believed that the next six months would be critical for the war as well as for political leaders.

"If Lon Nol and Cambodia stand for the next six months," he said, "then I think Mr. Nixon will win the Congressional elections this year and be re-elected in 1972, because then the operations will have proven a success."

"Also," he said, "if we keep up the pressure on the Communists for the next six months, then I think they will have no choice but to negotiate a settlement or fade away."

[From the Christian Science Monitor Aug. 3, 1970]

OPPOSITION SEEN ON EFFORTS TO WIDEN VIET WAR—JOINT CHIEFS OF STAFF PROPOSALS SAID TO OFFER THREE OPTIONS

(By George W. Ashworth)

WASHINGTON.—The Joint Chiefs of Staff are proposing a significant expansion of the allied war effort in Indo-China.

According to well-informed sources, papers prepared for the chiefs by the joint staff and now being circulated support:

The coordinated use of Thai and South Vietnamese forces to move against enemy troops in northern Cambodia and southern Laos.

Use of allied troops for operations within the demilitarized zone that separates North and South Vietnam.

The proposals already have run into opposition within the Pentagon. According to a dictate of Secretary of Defense Melvin R. Laird, all proposals of the joint chiefs concerning Indo-China must be given a thorough review by his civilian staff before they reach the secretary for final consideration.

Under the new review system, instituted by Mr. Laird after the decision was made in April to launch allied attacks inside Cambodia, defense review of proposals would be formally finished before reaching the White House.

According to sources, however, the White House already has received at least informal indications of what the chiefs now are seeking.

NEW CHAIRMAN FUNCTIONING

The proposals are among the first major papers prepared under the new chairmanship of Adm. Thomas H. Moorer, who replaced retired Gen. Earle G. Wheeler in early July as chairman of the joint chiefs.

Some officials believe the proposals may reflect the beginnings of a somewhat harder line on major defense issues under the new chairman, who is deeply interested in the war.

According to sources, the proposals are essentially grounded in the belief that the allied effort in Cambodia caused the enemy forces deep distress and that much could be gained by applying continued pressure.

There is feeling among many military men that continued hitting at the enemy, wherever concentrated, could keep Hanoi off-balance, thus saving American lives and preventing buildups that could threaten allied forces in the several theaters of the war zone.

The proposals pertaining to Laos and Cambodia would call for substantial United States logistical backing and the use of American airpower to bolster Thailand and Vietnamese forces on the ground.

According to sources, Admiral Moorer told

the defense civilian hierarchy that the Thais and Vietnamese could fight with American support as proposed with no necessity to increase war expenditures during the current fiscal year.

That point is heatedly disputed by officials in other Pentagon offices. Certainly, it would be harder now than before to take such actions since the budgetary allowances for the war have been cut drastically.

Expenditures for the war peaked at about $29 billion annually in 1968. They began falling as American disengagement got under way in 1969. Current estimates put the war expenditures at about half of the peak level.

As the administration budget is predicated on fairly steady drops in war costs, it might be difficult to finance anything that would keep expenditures level over a long span, much less rising.

The chiefs present three options in the paper on Laos and Cambodia now being circulated.

The first is to continue doing what is now being done, i.e. support the Vietnamese with limited activities in the sanctuary areas, but not deeper into Cambodian territory now being occupied by the enemy.

The second calls for use of Thai and Cambodian forces in portions of northern Cambodia and southern Laos now occupied by North Vietnamese and their allies.

The third option is the same as the second, with the addition of U.S. ground forces.

According to administration sources who have seen the paper, the third option is discounted, largely because of congressional feelings toward use of U.S. forces outside Vietnam and because of the present mood of the public.

The first option; essentially what is being done now, is described, as one source put it, "with a lot of bad words" that make it seem less attractive.

That leaves the middle-road option, and that is what the chiefs now are pushing.

Opposition here largely revolves around a deeply held belief that such activities as the chiefs now are proposing increase instability and spread allied forces thinly without any guarantees of success.

While there is little doubt that the Thais and the Vietnamese could batter the opposition—given heavy American help—the opposition response would be uncertain, as would results, and dangers could be posed for Vietnamization, which many officials continue to view as the Indo-Chinese concern of greatest magnitude at this point.

DEEP CONCERN EVIDENCED

While the views of Gen. Creighton W. Abrams are not known on these new proposals, he has evidenced deep concerns in the past, particularly toward the close of the allied operations in Cambodia, lest Vietnamese and American attentions be allowed to wander too far from the business at hand in Vietnam.

The administration is steadily becoming more deeply involved in Cambodian military affairs, but the President and his closest advisers apparently still adhere to the view that the United States should help Cambodia as it can, short of U.S. troop involvement. That, they believe, must not come.

If the North Vietnamese are indeed preparing to take over Phnom Penh and destroy the Lon Nol government, then disruptive attacks against them in present gathering points and strongholds should disrupt that. But few believe the North Vietnamese are willing now to indulge in such a risky venture. If this is the case, then allied activities could not prevent anything that is not going to happen anyway.

The proposals relating to the DMZ are quite another matter. The chiefs would be interested in receiving approval for allied operations inside the DMZ.

This will be opposed by those who see no threat justifying such a change and would not like to complicate the situation at the DMZ or cause deterioration of the situation created by the "understandings" that preceded the bombing halt over the north.

Mr. FULBRIGHT. This quotation is from one of the most recent articles:

Allied sources acknowledged yesterday that clandestine reconnaissance units operating in Laos may be the target of the latest Communist charges of war escalation. . . .

Washington and Saigon sources concede that their military planners are urgently pressing for sizable border crossings into Laos. But these sources say both capitals still regard such operations as too hazardous in domestic and international political terms for the Nixon administration to risk at this time. . . .

From Saigon the Associated Press reported that despite official denials there, sources said most of the reconnaissance patrols going into Laos "are landed by U.S. helicopters along the 200-mile Ho Chi Minh trail in the lower panhandle of Laos to spot targets for American bombers."

All these articles raise this question, and suggest that preparations for such ventures are being made and that the expectation is that the Vietnamese forces will move into Laos.

So I submit that if we meant what we said when we adopted the Cooper-Church amendment and the other amendments which were adopted last year, this amendment is entirely consistent with that action.

I am very much afraid that if we do not adopt this amendment, with the changed language in the existing law, even in spite of the fact that the committee in its report said this is not intended to finance Vietnamese forces, the House probably would not agree with that, and the administration, the executive department, in connection with preparations being made, would choose to say that the legislative record is fuzzy and not precise and they should go ahead, because the law, it seems to me, could easily be construed to authorize it.

So I do hope that the Senate will accept this further step, consistent with what we did in the previous steps, to restrict our involvement in the war in Cambodia and in Laos.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. GOLDWATER. Mr. President, I am very glad that the distinguished Senator from Arkansas and the distinguished Senator from Mississippi have decided that we would not vote on this matter tonight, because I think we have to give it some thought.

I understand perfectly what the Senator's amendment intends to do. At the outset, I have some reservations about two points: First, whether this would involve the United States in the governmental decisions of another country; and, second, if we decide that this is all right, how we control this money when we give it in a lump sum. We do not know which dollar is being used for which purpose.

These are the two questions that come immediately to my mind, and I appreciate the time to think them over tonight. I certainly understand the Senator's concern, and I might even reach the point of agreeing with him in that concern. But I would like to hear the amendment debated a little further, so that we can understand what we do, for example, if, under this lump sum of money that we appropriate for Southeast Asian use, in separating the dollars that might be used by the South Vietnamese for sending South Vietnamese forces into Laos from the money they use to send troops into Cambodia or use to fight their own portion of the war.

I would hope that during the course of the debate tomorrow, the distinguished chairman of the Committee on Foreign Relations would give us his thoughts on those two subjects.

The question of our involvement in telling another government what to do does not present such a big problem with the Senator from Arizona as how we control the funds when we know they are not identified. We have just gone through an amendment in which we discussed this, in which the funds are asked of us in a lump sum. No report is made that says that one, two, three, four, and five, "We spent the money in these particular ways."

I hope that some time during the debate we can get some thought as to how this can be controlled, so that if the amendment is adopted, it will be effective and not just be another exercise in semantics on the floor of the Senate that the State Department could get around easily.

Those are my concerns, and I look forward to tomorrow and an opportunity to hear more about it.

Mr. FULBRIGHT. I appreciate the Senator's comments, and I would not minimize the difficulty in sustaining the kind of relationship we have with the government of South Vietnam.

As a matter of fact, practically all their funds do come from us, directly or indirectly; and if we wish to encourage them to invade Laos or Cambodia with their forces, of course they will do it. If we wish to discourage them, I think we can have great effect upon them.

What bothers me most of all is that I think the idea has grown up in Saigon that the United States is their captives. As evidenced, I submit the statement made by the Senator from South Carolina that they are helping us. This is an attitude of many people—that the Saigon government is helping us. It is our war, seems to be the view, and they are coming in very graciously to help us—that is if we pay them to help.

However, not too long ago, most Americans were under the impression that we were helping them. But we get these different points of view. If I understand the Senator from South Carolina, he really believes that this is primarily our fight, because he views this fight as one directed against a worldwide international Communist conspiracy and he believes it is our responsibility to fight that conspiracy, wherever it is. Apparently it is purely incidental that this particular fight is in South Vietnam, but primarily it is our fight, and the Vietnamese and others have been gracious enough, with enough pay, to help us. I think that is the way he views it, and I am sure other people view it that way, also. It all de-

pends on the way one looks at these fights, whether they are taking place in South Vietnam or in the Middle East or in Berlin.

Of course, I do not agree with his analysis, and I do not believe that was the justification that President Johnson originally gave us—whose basis for intervention in Vietnam changed almost daily, according to the criticism.

It reminds me a little of the ABM. About every 2 weeks there is a different justification for it. Secretary Rusk and President Johnson had the same flexibility of justification as to why we were fighting in Vietnam.

I say to the Senator that I appreciate the difficulty, but I do think that, in view of our investment—the cost to his country, and so forth—we, the Congress and the Nation, ought to have something to say about where our money is used and whether or not our money should be used to finance the Vietnamese in Laos or Cambodia.

The Armed Services Committee, itself, has changed this language. I pointed out that they have changed the existing language "would not appear to authorize." Now why did the committee change the language? I think it was to make way for attacks on the sanctuary, just the sanctuary. I say to the Senator from Mississippi, is that not what he——

Mr. STENNIS. If the Senator would yield to me now——

Mr. FULBRIGHT. Yes; I yield.

Mr. STENNIS. I appreciate that, and I would like to get the floor to give a chronological development on that point.

Mr. FULBRIGHT. I am perfectly willing to yield the floor because I think it is that change in language, together with the committee report, which precipitated the amendment. I immediately began to wonder what was the purpose. All I am trying to do is to implement what the committee said was its intention. I should like it to be put in the law, because I have seen often how these interpretations in committee reports, if they do not suit the executive branch, are ignored in practice.

Mr. President, I yield the floor.

Mr. STENNIS. I thank the Senator from Arkansas.

Mr. President, it is well for us to come to this point, to state the committee's position as we understand it. I call attention here, and I think this is an historical development, step by step, which is important and is a part of the legislative history that we draw in here together, and it may well have a bearing.

I have before me, first, title 4 of the general provisions of the bill as it came to our committee from the House, in connection with these funds, which is really what we have been calling all these years: foreign military aid. That ordinarily came through the Foreign Relations Committee.

Until a few years ago, when the war thickened, by common consent, it was sent to our committee, under rather broad language, because of the proximity of things there. Some of this foreign aid was granted to pay the Philippine Army, and the Korean Army, some was for equipment, and some was for this and that. They had given us a report on these items, but it never has been defined with great particularity. For most of it, there is good reason for that, because it is more or less picking up and paying the cost of a battle. The Army moves on. Over the years, though, they have given us an accounting, of a kind. Last year, we put this at a $2.5 billion ceiling. The language read as follows—in the House bill—which was a rescript of the language last year:

> Funds authorized for appropriation for the use of the Armed Forces of the United States under this or any other Act are authorized to be made available for their stated purposes in support—

And here comes the foreign aid, military aid—

> Vietnamese and other free world forces in Vietnam.

I emphasize those last words, "in Vietnam."

When this bill passed the House, the sanctuary in Cambodia had not arisen. When the bill was before us, this battle of the sanctuary was going on, full tilt. So we struck out the words, "in Vietnam." The battle had moved beyond Vietnam. That was, though, consistent with the argument made here that this was not an invasion of Cambodia. It was an extension of the battlefield. So we took out the words "in Vietnam" as being too limited. Our purpose was to cover the sanctuary battle and things that had happened in connection with it. We did not know, then, how far it would go. It was not our purpose, though, to launch into a broad authorization here of unlimited support with military aid to sustain, to guarantee, or to underwrite the Government of Cambodia. We looked upon that as another war. I did. And I think that was the prevailing sentiment in the committee.

After striking out those words, "in Vietnam", we wrote the language this way:

> To support (a) Vietnamese and other free world forces in support of Vietnamese forces.

I go over that again:

(a) on line 4 of page — of the Senate——

Mr. FULBRIGHT. Nineteen.

Mr. STENNIS. Page 19, right. I thank the Senator.

It reads now:

> To support Vietnamese and other free world forces in support of Vietnamese forces.

Now, at that time, Vietnamese forces were over in Cambodia. There was a battle going on over the sanctuary. Understand now, that none of this money goes to U.S. soldiers or to their cost in any way. This is all foreign military aid. Then that was the way we covered in the body of the bill support of these forces over in Cambodia who were supporting the Vietnamese forces. They were supporting us, too, in a way.

But that is the way we covered the area of the sanctuary and we did not know how far that was going to extend. In the report, we spell out here now, further, what was meant. I refer to page 106 and read briefly from the middle of that page:

> The committee is of the opinion that the phrase 'in Vietnam"—
>
> Meaning in the House bill—
>
> should be the subject of clarification and therefore has substituted the words "in support of Vietnamese forces". The reason for the substitution is to make clear the use of the authority for the purpose of supporting non-U.S. free world forces with respect to the border sanctuary and related area operations in Cambodia, and the protective reaction strikes in these locations. This clarification is for the purpose of protecting U.S. troops and the acceleration of the Vietnamization program.

In other words, at that time, this battle was still going on, the extent of it was not known, and it was our idea not to stop in the middle of the battle or to put on any restrictions, however far this went, as long as it was protecting U.S. troops or accelerating the Vietnamization programs that would be legal.

Then, on the top of page 107, the language covers the point—part of the point, in a way—I read from page 107—when I say report, I mean the official report of the Senate committee on the bill filed July 14, 1970:

> In making this clarification it must be clearly understood that there is no intent to broaden the authorization beyond the support of participation in border sanctuary and related operations in order to protect U.S. forces in Vietnam or to accomplish protective reaction strikes. The purpose of the clarification is to make clear that the use of Defense funds is authorized for support in those areas of Cambodia where for the purposes of Vietnamization or the protection of U.S. troops military action becomes necessary.

Now that is broad enough, and we intend it to be broad enough to include areas of Cambodia as long and as far as it was connected with the sanctuary or any program that the President was carrying out. That paragraph on page 107 is as clear as language can make it. We made it broad enough to cover anything connected with our activity there, our Vietnamization, and, that our troops could go back in in another sanctuary under like circumstances. That is what it was intended to cover, going back in for the same purpose.

Then they put the negative here:

> There is no intent to permit the use of DOD appropriations under this authority to support Vietnamese and other free world forces in actions designed to provide military support and assistance to the Cambodian government.

That means the Cambodian Government as such in a movement beyond the reasonable limits of what we had already described. That is the way the bill is before the Senate and the way it explains it is, I think, clear.

I do not think there is any ambiguity dealing with the vague situation we had to deal with which changed from day to day.

I want to make it clear that we intended then to cover the authority of the President if there arose again the need to clear out sanctuaries so that he could do it so far as this was concerned and could pay for military aid to help those that were fighting with the Vietnamese and us, although we used the word "Vietnamese."

I lay that down as a part of the history and part of the situation that led up to the amendment that the Senator has offered.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. STENNIS. Let me cite right there the part of the Senator's amendment. I think it ought to come in the RECORD at this point.

The language of the Senator's amendment provides:

On page 19, after the period in line 8, insert the following: "Nothing in clause (A) of the first sentence of this paragraph shall be construed as authorizing the use of any such funds to support Vietnamese or other free world forces in actions designed to provide military support and assistance to the Government of Cambodia or Laos."

Let us leave out the words "or Laos" for just a minute. I think it does complicate it. It reads "to provide military support and assistance to the Government of Cambodia." That is apart from or in addition to what has already been described. That is my interpretation of it.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. FULBRIGHT. Mr. President, with respect to the language the Senator has just read, I sought to use the language of the Armed Services Committee report as nearly as I could.

There are a couple of questions I would like to ask the Senator. I think my amendment would put into the statute what the Senator described just now as what he intended to achieve by this change in language. That is the way I and my staff interpreted the amendment, that it would put into the statute what we believe the Senator intended by his statement in the report. If that is so our only difference is as to whether it ought to be in the statute or not.

I suppose this reflects our relative trust as to whether the Executive will follow the committee report rather than the statute. Maybe the Senator has great confidence that the Executive will follow the report. However, I think it is better to put the language in the statute. We do not seem to differ.

Mr. STENNIS. Mr. President, may I ask the Senator a question at that point, because he has raised a point there. Is it the Senator's interpretation of the bill, as written now, and the report that there is no prohibition in any way on the battle of the sanctuaries, so-called? Then, my next question would be whether there would be any prohibition on additional sanctuaries.

Mr. FULBRIGHT. Mr. President, I was going to raise that very point. What is a sanctuary? After all, that has already taken place.

If the Senator is concerned that this same situation of the sanctuary matter might arise again, that does not bother me too much.

What I am trying to avoid is becoming really involved in a close-scale operation in support of the Government of Cambodia and the Government of Laos.

I say that is the language of the Senator's own report. It denies military assistance to the Cambodian Government from these funds.

Two things occur to me about the sanctuaries.

First, is their definition. The President described them, as the Senator well knows, and set a limit of 21½ miles, I believe, and said that he did not propose to go beyond that point with our troops.

It was generally conceded that was the limit of the sanctuaries as of that given date.

The President also made the argument—and I do not wish to misquote him, but I will describe what he said—that he regarded that incursion, as they use the word, into Cambodia as simply part of the war in Vietnam and not an invasion of another country.

I believe that is a fair way to state it. He said, therefore, that he did not need any additional authority, that the attack on sanctuaries was not a violation of the sovereignty of Cambodia.

The Senator has described the chronological development of this matter. If that is true, either the Senator is saying that the President went in there without authority or that he is trying to rectify that matter now.

If he did not have authority, I do not see why we need to change the language.

If his action then was authorized, then it is still authorized. I do not object to that, if that is it. So why not leave the language like it was.

Mr. STENNIS. In the House bill?

Mr. FULBRIGHT. Yes. I do not know how the Senator can get away from the fact that by insisting on this language in order to give the President authority to operate in the sanctuaries, he must be saying the President did not have this when he invaded the sanctuaries before.

Mr. STENNIS. I think it is purely academic for us to argue about the battle of the sanctuaries now. That is over.

Mr. FULBRIGHT. I agree with that statement.

Mr. STENNIS. What is done is done. At the time we wrote this language, the battle was still going on, so far as that is concerned. We were not in favor of bringing a bill to the floor that someone could jump on and say, "This bill limits what the President is now doing."

So we intended to enlarge it and did enlarge it and also added language that says that as long as the Vietnamization program—and that is a little indefinite—is protecting our men—and that is a little indefinite, but those are the general terms that are used—this money could be used for these foreign troops.

If the Senator agrees that the President did have authority to use this money, talking about military aid, in a recurrence of this kind in the future, why it seems to me that that would end the argument. It is a clear-cut agreement. And I do not see any use for the amendment, leaving Laos out for the time being.

But I want to be frank. I believe we are almost together, and we just want to make a record of it.

Mr. FULBRIGHT. My intention in offering the amendment was to express my explicit agreement with the Senator's statement in the report. That was my purpose; to show I agree with the Senator's sentiment expressed in the report. My difficulty is that I was afraid the language in the bill itself did not accurately and forcefully enough reflect the Senator's intention. My intention is the same as his. I do not want us to get involved in all-out support of the Government of Cambodia—and that is what the report said—or of the Government of Laos.

Then, the only question is, how to tie that down so that the administration would be in agreement with the Senator and me. It is not that I disagree with the Senator but we might find ourselves in disagreement with future administrations.

Mr. STENNIS. You cannot control the administration in these words. Let us stay away from that, if we may. I will be frank with the Senator.

If the Senator agrees the situation would be clear for these purposes I have stated—Vietnamization, and that includes withdrawal and for the protection of our troops; and that another sanctuary would be permitted, I think that ends the argument about the Senator's amendment.

Mr. FULBRIGHT. It seems to me it ends the argument, I agree, the Senator agrees, and the Senator from Arizona agrees. If there is any need for new language, and the House has that language, and we say that language means this, they would have no reason to say otherwise, and that would end it because we do not need new language. Why do you not revert to the House language and say that all agree it will allow the President to do what he has already done? Otherwise, you are bound to have to say, "If you do not agree with that, he did it without authority to go in there in the first place."

Mr. STENNIS. No; we could go back to the House language; it could be argued again that the President exceeded his authority.

Mr. FULBRIGHT. I do not make any argument. The Senator and I agree he did not. We accepted that.

Mr. STENNIS. But there are others.

Mr. FULBRIGHT. Who would dare do that?

Mr. STENNIS. I yield to the Senator from Arizona. I see now why we did not agree to a time limitation. This is a difficult matter.

Mr. GOLDWATER. I think we are much closer to agreement than it would seem.

I would like to ask the Senator from Arkansas if his amendment would cover the type help we have been giving; and I refer to two parts. Would it prevent tactical air support in Laos?

Mr. FULBRIGHT. This only deals with funds for foreign forces. This does not deal with funds for our forces. This is only foreign aid which the Senator was talking about.

Mr. GOLDWATER. I wanted to make that clear.

Mr. FULBRIGHT. It does not deal with our own forces.

Mr. GOLDWATER. Would it prevent the use of helicopters by the South Vietnamese in support of Laotian troops, say, in the Plaines des Jarres?

Mr. FULBRIGHT. It might. The Senator refers to South Vietnamese troops

in support of Laotian troops in the Plaines des Jarres.

Mr. GOLDWATER. Yes.

Mr. FULBRIGHT. I think it would. We are trying to avoid becoming involved by our associates, whatever it is, and drawn into an overt war in Laos. It would not make any difference if it were in Laos or Cambodia. We are trying to apply the same principle. The only difference might be there are more sanctuaries in Cambodia. I am perfectly willing to agree with the Senator's idea about sanctuaries.

I think it would prevent paying South Vietnamese forces to go to the support of Laotian forces in helicopters, on foot, or in trucks, or in any other way.

Mr. STENNIS. I wanted to propose that we leave Laos out of this amendment.

Mr. FULBRIGHT. The Senator posed the question.

Mr. GOLDWATER. I asked about Laos because I think this is the thrust of the Senator's amendment.

Mr. FULBRIGHT. That is correct.

Mr. GOLDWATER. I am referring now to the border between Laos and that portion of South Vietnam that is close to North Vietnam. If South Vietnamese forces were used to upset any sanctuaries that might develop in that area, would this run contrary to the Senator's amendment?

Mr. FULBRIGHT. No; to be consistent, I think there are some sanctuaries right on the border. To be consistent I do not know how I could distinguish between them.

Senators will remember the theory of the President in explaining the incursion; that it was not an extension of the war; that it was not an incursion into a foreign country. That is about the way he put it.

Mr. GOLDWATER. Yes.

Mr. FULBRIGHT. Then, he had to have whatever authority he had with respect to the war.

That is why I think there is a logical inconsistency in saying now he must have this change to make it legal. The reverse has to be that it was not legal before. You cannot have it both ways. I would rather have it the old way and commit myself to accept his theory that he was entitled to go into the sanctuaries to protect our own troops and our program in Vietnam.

What we are really after is expansion of the war into two other countries, and I think that is what the committee said—support of the Government of Cambodia; it is almost a replay of the Vietnam war. That is what the Senator from Kentucky was saying, and I thought the committee agreed.

Mr. GOLDWATER. I can assure the Senator this was not the intention of the committee. We at no time proposed any language to support a new government.

Mr. FULBRIGHT. That is correct.

Mr. GOLDWATER. What we want to make sure of in our language is that we do not prevent the South Vietnamese from taking care of situations that are similar to the one the President had to decide on in connection wih Cambodia.

Mr. FULBRIGHT. The sanctuaries.

Mr. GOLDWATER. Yes. I would hate to see us accept language that would prevent that.

Mr. FULBRIGHT. We do not seek that, but we do seek to prevent the South Vietnamese or the Thais, with our money, from going in there and building a full-fledged partnership with the Government of Cambodia and drawing us in.

Mr. GOLDWATER. My interpretation of the committee language is that it does that. I think it spells out plainly that we are not supporting the governments of these other countries.

Mr. STENNIS. The Senator is correct.

Mr. FULBRIGHT. But the change in language—if you will leave the language as it has been without this change, and with this legislative history, I would be satisfied. People will say, "Why did you change that language? It must mean something. The House did not have it." People assume that it means something.

Mr. STENNIS. May I answer the Senator?

Mr. FULBRIGHT. I think it would be better to take it out and we would agree what it means.

Mr. STENNIS. It means to cover the sanctuary situation as it was going on when that language was written, or as it may recur. It means nothing more.

The Senator agrees he would approve that, so we are at home base.

Mr. FULBRIGHT. I approve it. The only trouble is, will the administration approve it? The administration has not approved it. I agree on that and we should get the language into the bill.

Mr. STENNIS. Let me suggest this. This matter goes to conference. The language of the House bill will be in conference. The language of the Senate bill will be in conference, and so far as it relates thereto, the report language will be before the conferees. What the Senator from Arkansas has said will be before the conferees. That is true of the Senator from Arizona, the Senator from Mississippi, and other Senators who may have discussed this matter here. If we leave Laos out, are we not together on this problem?

Mr. FULBRIGHT. I do not quite see why, if we agree to this rather broad interpretation that the Senator from Arizona mentioned, we should leave Laos out. What is "bugging" the Senator on Laos? I do not understand it.

Mr. STENNIS. Leave it out of this amendment because it is an altogether different situation.

Mr. FULBRIGHT. Well, not altogether.

Mr. STENNIS. The Ho Chi Minh Trail is there.

Mr. FULBRIGHT. We are not going to bother the Ho Chi Minh Trail. We had that out on the Cooper-Church amendment. I am not trying to bother the Ho Chi Minh Trail. What I am trying to to do is to avoid becoming involved in support of these countries against internal civil wars they may get into. That is how we get dragged in behind them.

Mr. STENNIS. The Senator asked me why I want to leave Laos out. If I may finish my answer now, the question is, Why does the Senator from Mississippi suggest that we strike the words "or Laos" out of the amendment? An altogether different situation is involved. We have been in there a long time. We went into Cambodia just for the sanctuary battle.

Mr. FULBRIGHT. What does the Senator mean when he says "We have been in there a long time"?

Mr. STENNIS. The Senator knows we have been in there for a long time. The Ho Chi Minh Trail is there. We bomb it constantly.

Mr. FULBRIGHT. Oh, yes; but I am not talking about that.

Mr. STENNIS. Let me finish. We have all the complications that go with that. We provide some military aid to the Laotians. The Senator is familiar with that. It is in the bill. Cambodia has been left out, as the Senator knows. The situation in Laos is known. It is stabilized. The language in the Senate bill is exactly as it is in the House bill. The language that says we can still aid the local forces is still in the bill. We have no such language for Cambodia.

So, like it or not, good or bad, Laos has a status, and it is a part of our battleground, just as the sanctuary was.

I think we could agree on something if the Senator would leave Laos out of the amendment.

Mr. FULBRIGHT. As I have said, I am not bothering what we ourselves do. The amendment will not bother what we give to the Laotians. It is simply saying, "Look, we do not want our so-called allies from Thailand and Vietnam to go up and get us further involved. We have some degree of control over what we are doing."

It will not disturb what has been the past practice in Laos. The Senator says that Cambodia is not provided for, but the administration right now, according to word that we have—and this is an additional reason why the amendment is important and it is coming up here to brief us on it—is in the process of negotiating a very substantial aid program for Cambodia. I think that is a very dubious proposition, but they are in the process of doing it.

The Senator says that they were left out of the bill, but it is not left out of the planning of the administration, although no presentation has been made to our committee on this matter. Of course, the President has discretion, up to $50 million, to take funds designated for one country and give them to Cambodia; but no aid was contemplated for Cambodia at the time we considered the bill. This is a new deal.

That fact makes it all the more important that we make it explicit that we do not want to get bogged down in another war like Vietnam or Cambodia or Laos. I do not expect the amendment to affect what has been going on in Laos—that is, the bombing of the trail, our assistance to Laos, or what our people are doing

there—because it does not affect that. It is to keep the Vietnamese or the Thais from dragging us into another war. In a word, that is the purpose of the amendment.

Mr. STENNIS. So the Senator from Arkansas is saying that anything we have going on in Laos now is not to be affected in any way by the amendment he offers?

Mr. FULBRIGHT. Not that I know of. The reports in the newspapers as of today—I know it officially—indicate that the South Vietnamese are getting ready to mount an invasion. I hope that is not true; but in my opinion that is not acceptable. What I was referring to was what has been the traditional operation; what was going on 2 or 3 months ago, such as the bombing. Recent actions are what I would exclude. If they have been doing something else in the last day or 2, that is what I would object to.

Mr. STENNIS. The Senator would exclude anything such as might have happened in the last 2 or 3 days.

Mr. FULBRIGHT. Exactly; anything such as has been published in the newspapers as having taken place quite recently.

Mr. STENNIS. The Senator would exclude anything that has been taking place in recent days. He does not intend by his amendment to exclude——

Mr. FULBRIGHT. To exclude what we call the traditional operations——

Mr. STENNIS. In Laos?

Mr. FULBRIGHT. Yes. That was the whole thrust of the amendment of the Senator from Kentucky. He did not want to have us become further involved in Laos. But his amendment related to Laos and Thailand. He did not include Cambodia; we got into that later. This is entirely consistent.

Mr. COOPER. Mr. President, I hesitate to get into the debate because I think the Senator from Arkansas has made his point clear. I merely repeat—we have talked it over so many times—that his purpose is to prevent these funds from being used to get the United States involved in support of Cambodia through the use of Vietnamese troops.

Mr. FULBRIGHT. That is correct. It is not intended to be a rollback. I do not intend it to be a rollback, but to stop the operations from going further.

Mr. STENNIS. May I ask the Senator from Kentucky a question out of order? The Senator has heard what I have said concerning the situation as I see it. Does he agree that it is correct?

Mr. COOPER. I agree that what the Senator from Mississippi and the Senator from Arkansas have agreed on is correct, yes. I favor the language that the Senator from Arkansas has proposed, because it makes so clear that the activities on the Ho Chi Minh Trail would not be curtailed.

Mr. STENNIS. I think we have had a most helpful exchange and a very fine presentation. I do not think we can dispose of the amendment tonight. There are other amendments from our committee that I would like to have a chance to speak to or to have colloquy on with any Senator who wishes to speak to them.

Mr. FULBRIGHT. I wish to compliment the Senator from Mississippi for his contribution and for making it very clear that he does not approve of expanding the war by proxy into U.S. support of the Cambodian-Laotian action. There is confusion about this, and there is considerable concern that it might be expanded if we do not take real, positive steps to prevent it. I am very much pleased that the Senator from Mississippi thinks as he has just expressed himself.

Mr. STENNIS. I have told the Senator from Arkansas everything that is on my mind. I want to make it clear that I am a "sanctuary man," and the Senator from Arkansas agrees to that.

Mr. FULBRIGHT. I accept that. I am not trying to roll back anything; I am trying to prevent any advance.

Mr. STENNIS. I thank the Senator from Arkansas for yielding. I believe the debate has been profitable.

I understand that other Senators desire recognition, so I do not claim the floor any longer.

Mr. PERCY. Mr. President, it had been my intention to call up my amendment No. 818 to H.R. 17123 some time early next week. However, to facilitate the work of the Senate, and in accordance with the suggestion made by the majority leader and the assistant minority leader, I have agreed to a unanimous-consent arrangement whereby we shall begin debate on this amendment at 11 o'clock tomorrow morning and will vote at 12 noon.

Because of the shortness of time, I am delivering tonight to each Senator a copy of the statement that I shall give tomorrow, so that Senators may have adequate time tonight or tomorrow morning to study this matter.

In addition, I have just come across a piece of additional information that I should like to have printed in the RECORD tonight, so that it may also be studied by Senators, because there is not time for me to reproduce it and deliver it to their offices this evening.

The material to which I refer is a portion of the Fitzhugh report, which is technically known as the Blue Ribbon Defense Panel Report, dated July 1, 1970. Under section III, entitled "Military Personnel," subsection b, "Rotation," on pages 137 and 138, the report concerns itself with the overdone practice of transferring officers. It agrees with the basic thrust of the amendment that I have put forward. This section entitled "Rotation" states very clearly:

Officers and enlisted men are rotated among assignments at much too frequent intervals.

It is clear from the evidence that the rotation practices which have been followed result in (a) excessive and wasteful cost, (b) inefficiencies in management, and (c) difficulty in fixing responsibility.

A staff study of Army, Navy and Air Force promotions to General Officer and Flag rank in 1969 revealed this situation: there were 174 officers in the group and their average service was 24 years; these officers had been given 3,695 assignments, or an average of 21 per man; the average duration per assignment was 14 months. Looked at another way, the average officer had spent: 8 years in Operational assignments, 5 years in Service Schools and other educational assignments, and 11 years in Staff assignments.

Although this is a relatively small sample, there is no reason to believe that it is not reasonably typical of the prevailing career pattern of all military officers.

It is recognized that some assignments must be of limited duration: for example, operational assignments to hardship or combat duty. School assignments also are of limited duration as these are determined by the length of the course. However, in the case of the other assignments, there are no such inherent limitations.

The driving force in almost all of these assignments (combat assignments excepted) is to give the officer a wide variety of exposure as an aid in his training and development. The problem is that the requirements of the job seem to be secondary to the career pattern which has been mapped out for the officer.

This system of rotation of officers leads inevitably to deficiencies in management. Officers assigned for such limited periods simply cannot acquire a knowledge of the work, become familiar with the qualifications of the people, make plans, set goals and push the work ahead.

This system of rotation not only fails to provide management and leadership needed on the job, but also has deficiencies in accomplishing its stated purpose—the development of the officer himself. Men are not developed by being observers; they must have responsibility to assure growth.

From the point of view of the position to be filled, as well as in the best interests of the officer himself, his job assignments should be of sufficient duration so that he can become thoroughly involved in the work and be fully responsible for results.

There is merit in giving to officers opportunities in a broad spectrum of military responsibilities. Nevertheless, under existing conditions in which technical or professional training in areas other than commanding men have become of increasing importance, the Services' current rotation policies and rates are counter-productive.

In the technical and professional areas, the rotation rules often call for rotation of an officer out of an assignment at a very critical point in the job he is performing. In addition, when an officer is rotated out of a technically complicated job, his replacement often either comes at the time of rotation or later, and therefore, does not have an adequate opportunity to acquire the necessary background before his predecessor leaves.

In other words, this practice that has been observed for so many years by the military services actually destroys what they are trying to do. It does not add to the training of the men; it detracts from the training of the men. It does not add to the morale; it detracts from the morale of the families.

It is the very reason that my own administrative assistant, after 14 years in the U.S. Navy, a Naval Academy graduate, a man who was executive officer of a nuclear submarine, a man whom the Navy had put years of experience into training, and who finally left the service so that he could be with his family more frequently, helped in the preparation of this amendment. He, like many others in the military service, simply had to put being a father ahead of being a military officer.

This same situation exists with many military personnel I have worked with, and the amendment is based on my own experience as a naval officer and my working relationship with the military service over a period of 28 years.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. PERCY. I am happy to yield to the Senator from Wisconsin.

Mr. PROXMIRE. I commend the Senator on his amendment. As I understand, it would save a certain amount of money. The cost on this——

Mr. PERCY. The cost on this is $1.3 billion, for that particular section. By excluding all combat areas, for instance——

Mr. PROXMIRE. That is what I wanted to bring out. The amendment would exclude Vietnam?

Mr. PERCY. It excludes Vietnam. It also excludes $300 million for the training of personnel, and I have taken that whole amount out, even though I recognize that the training cost would be less if they did not rotate the men so frequently.

By taking out those two sections, we have remaining $560 million, and I have only asked for a reduction of 25 percent from that amount.

We have given DOD 11 months for planning the program before putting the plan into operation, because this does not take effect until July 1, 1971.

In other words, we have made it an absolute amount, and the size of the Armed Forces presumably will be substantially lower 18 to 24 months from now, so that the $420 million allowance should certainly provide plenty of money for them; but it should cause them to take a good, hard look and discard some of these old procedures and practices that have been carried on for so long, which I think it is about time to discard. Without detracting in any way from the efficiency and the modern approach and procedures used by many of our military services, in my opinion some officers and some enlisted personnel cling to their old procedures and practices, and I believe it is about time we guide them, even kicking and screaming, into the 20th century, and relate them to the new circumstances and the new cost-effectiveness we must have in all these programs.

Mr. PROXMIRE. The reason I asked the Senator to yield is that I think that many people will think primarily on the manpower question, of men sent to Vietnam.

Mr. PERCY. We have totally excluded that.

Mr. PROXMIRE. And I think we would both agree that is extremely important, of course, and that anything that would endanger that rotation would be extremely hard for us to accept. But the Senator exempts combat zones entirely, so that rotation would not be affected by his amendment in any way; is that correct?

Mr. PERCY. That is correct. With those remarks, I apologize to my colleagues for not preparing the material early enough to present it to them and allow adequate time for study; but I think that by making this insertion in the RECORD at this time, it will enable them to properly prepare for the vote tomorrow.

I know that $140 million is not an earth-shaking amount in a bill of this size, but I think when we are trying to reduce in every conceivable way unnecessary and wasteful expenditure, we should take every opportunity that we can to identify and clearly focus on areas which I think have too long been overlooked, and that this area should now be reappraised and analyzed. Let us ask whether or not we can now establish the principle that we are going to rotate personnel less frequently, and perhaps the Department of Defense itself can come up with an even larger reduction in the next fiscal year.

Mr. President, I yield the floor.

AMENDMENT NO. 853

PROXMIRE-SCHWEIKER C–5A AMENDMENT

Mr. PROXMIRE. Mr. President, I am honored to submit an amendment with the distinguished junior Senator from Pennsylvania (Mr. SCHWEIKER). Senator SCHWEIKER and I have worked hard and long to try to achieve an amendment that is fair to the taxpayer as well as, in our view, assuring that we will obtain production on these C–5A planes.

On behalf of Senator SCHWEIKER and myself, as well as the Senator from Texas (Mr. YARBOROUGH), the Senator from Massachusetts (Mr. BROOKE), the Senator from Ohio (Mr. YOUNG), the Senator from Missouri (Mr. EAGLETON), and the Senator from Alaska (Mr. GRAVEL), I offer the amendment, and ask that it be printed and lie on the table.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

Mr. SCHWEIKER. Mr. President, it is a pleasure and a privilege to join with my colleague from Wisconsin in sponsoring this amendment. I do so in the very firm belief that there is something wrong—terribly wrong—with a defense procurement system which allows the conditions which have been so widely publicized on this contract. But I hold an even stronger belief that if we merely rubberstamp the Defense Department's request for money they firmly maintain they do not even owe, we shall be setting the worst kind of precedent.

In my view, particularly with all of our needs for money for so many important domestic programs, the Air Force's request for an additional $200 million for the C–5A program is one of the most important defense procurement issues facing this Congress, or, indeed, that has faced any prior Congress. This can be our opportunity to make a landmark decision, whether to bring our military procurement policies out of the "horse and buggy" era, and begin to exercise control over our inefficient and grossly wasteful defense procurement practices, or whether we will again approve another Government giveaway, a practice that could not flourish in the private sector of our economy.

If we choose the latter course, then I believe that the taxpayers of this country will have every right to believe that we are running away from our constitutional responsibilities of legislative oversight.

So much has been written and said about the unfortunate state of affairs that surrounds the C–5A contract, and the huge cost growth estimates associated with it, that I will not take the time to go ino all the sad details. As nearly as one can determine, the original Air Force estimate for 81 planes was approximately $2.67 billion. The latest estimate, as contained in the committee's report on the bill, is approximately $4.6 billion.

No one really knows at this time what the eventual cost of these 81 planes will be. Unfortunately, we can only deal in estimates at this time. But the Air Force originally wanted to buy 120 planes, and their estimate for those aircraft, at the time the contract was signed, was substantially below the $4.6 billion they are now estimating what only 81 planes will cost.

In addition, the Department of Defense has come to Congress this year and asked for more than $600 million for this program. The $200 million of this amount the Air Force says they do not owe to Lockheed. But in the next breath, they tell us that Lockheed will have to stop building planes shortly after December 31, 1970, if they do not get the $200 million we do not owe.

I ask my colleagues: What kind of procurement system do we have? What kind of procurement system do we have in which the buyer says, on one hand, says: "I don't owe him this money," and, on the other hand, says, "but I have to pay it to him if he is going to keep producing the product for me." Mr. President, as a former businessman, I cannot for the life of me understand how this body can allow such a system to operate in this foolish way any longer.

As a member of the Armed Services Committee, I proposed an amendment to the bill, in committee, which would have simply deleted the $200 million dollar amount from the Defense Department's request.

Although that amendment lost, by an 11 to 5 vote, and I am very grateful for the support of those who supported my view in committee, I am aware of the reasons why our country has a need for these planes. I do not quarrel with the rationale for that need. I believe the Government should have these planes, and at the least possible cost.

Our amendment has been drafted with a basic purpose in mind: To assure that the Congress would no longer have to take on faith the information provided by the Government and by the contractor. Senator PROXMIRE and I agree that the only way that the Government and the people who pay the bills will acquire these planes at the most reasonable cost possible is to insure that we have some independent judgment in the process, that somebody other than DOD or the Air Force makes an assessment about the cost of these planes to the taxpayers. This is why we stipulate that part or all of this $200 million contingency fund can be authorized or spent only after such a determination by the Armed Services Board of Contract Appeals, or at the direction of a court appointed trustee, under a voluntary or involuntary bankruptcy or corporate reorganization proceeding.

Earlier this year, the Defense Department stated its position on Lockheed's financial problems in a fact sheet, in which it said, in part:

The Department of Defense has repeatedly emphasized to Lockheed management . . . that it is not the intent of the department

to preserve the corporate entity or its present management. To the contrary, the efforts by the Department have been directed toward protecting the public investment in those vital national security programs which the company has in development and production.

I believe I speak for my colleague, the Senator from Wisconsin, and I certainly speak for myself, when I say that we agree with the objective. So does our amendment.

We have no intention of arguing that the Government does not need these planes. We have no intention of putting 20,000 people out of work.

But we also have no intention of letting the Government pay any more for these airplanes than is absolutely necessary, and we have no intention of allowing the outdated procurement practices, so evident in this instance, to be followed indefinitely.

Last year, as Senators will recall, I felt so strongly about this kind of problem—the problem we are facing now—that I offered an amendment to the military procurement bill calling for quarterly audits of major defense contracts. I was grateful then, and I am grateful today, for all those who supported my efforts, and if we did not win the war at that time, at least we won the battle. Today, my concern has not lessened. It has grown. If we had a system such as I proposed last year, we would know a great deal more about the immediate crisis financially in Lockheed and where the Government stands.

A Presidential commission has recently advocated substantial reforms in defense procurement practices. Many of those reforms can be implemented administratively. But, if this body does not take steps now, as I believe we must, to put the Pentagon and its contractors on notice, then I believe we will have lost a golden opportunity.

I ask Senators to support this amendment, whether they believe that the C–5A is needed or not, in the hope that we can give the clear indication to the Defense Department, the defense industry, and, most important, the people who pay the bills, that we are unwilling to sit back and give a blank check to these requests, without asking "How much?" "How many?" "When?" and "Why?"

Mr. President, before concluding, I ask unanimous consent that the following material be included in the RECORD at the conclusion of my remarks: The text of my additional views, included in the Armed Services Committee report on the military procurement bill for fiscal year 1971; an article published in the Washington Sunday Star of June 7, 1970, entitled "C–5A Money Troubles Obscured Over Years"; and an article published in the Wall Street Journal of May 28, 1970, entitled "Ailing Lockheed Urged by Pentagon To Seek Bank Aid, Merger, as Well as Federal Help."

There being no objection, the material was ordered to be printed in the RECORD, as follows:

ADDITIONAL VIEWS OF SENATOR RICHARD S. SCHWEIKER

The Fiscal Year 1971 Military Procurement Authorization Bill contains an unprecedented $200 million request over and above our contracted obligations for the controversial C5A transport plane.

In my view, this request is one of the most important defense procurement issues Congress will face this year. This can be our opportunity to make a landmark decision—whether to bring our military procurement policies out of the horse and buggy era. The issue is whether we will turn down the $200 million request and begin to exercise control over extravagant and wasteful defense procurement practices, or whether we will approve another government give-away and broadcast to all defense contractors that a blank check military spending policy remains in effect.

My amendment in committee to delete this $200 million from the bill was rejected by an 11–5 vote, and I will soon bring the issue before the full Senate. Thus it is imperative that all Senators be aware of the enormous, and in my view, unwarranted and unwise precedent Congress will be setting if the money is authorized.

This is a classic case of a corporation bidding in low to get a contract, and then handing the final inflated bill to the government and the taxpayers to pay when the contract price and performance cannot be met by the successful bidder.

Lockheed corporation won the contract with a bid in 1965 of $1.8 billion, nearly a quarter-billion dollars less than the bid of the Boeing Company whose design was recommended by the Air Force. A recent report by the Securities and Exchange Commission dealing with Lockheed and the C5A concluded that Lockheed purposely lowered its bid unrealistically to insure it would get the contract.

Many of the facts and figures are a matter of public record, and do not need detailed exposition here. Even though the total buy has been estimated at more than $2 billion above the original contract price. And if the wing design should have to be re-done, as scientific reports indicate may be required, the cost could easily escalate by many millions more.

Lockheed is in financial trouble, and on March 2, 1970, wrote Deputy Defense Secretary David Packard to request approximately $641 million as a "contingency fund" for contract disputes on four major projects, including the C5A. Not long afterwards, the Defense Department admitted that the $200 million request in this bill was not just the first increment of the "contingency fund," to enable Lockheed to continue production under their existing C5A contract. This, I think, is worse.

I am against spending one cent above the contract price merely to subsidize corporate inefficiency or contract mismanagement. I believe Congress must use this issue to draw the line. Denial of this request for $200 million will serve notice loud and clear that although both government and industry have been sloppy in the past, we are going to demand efficient performance by contractors and strict adherence to contract prices and specifications in the future.

An historical perspective is helpful to understand why this $200 million bail-out request is such a symbolic issue, and why this line must be drawn.

Ever since World War II, military procurement policies have fundamentally not changed. A blank check has been given to military spending without the careful scrutiny and cost accounting demanded of other foreign and domestic expenditures. Until recently, military appropriations have breezed through Congress with little debate, and have received, at best, only routine analysis within the Executive's Budget Bureau.

Weapons system technology has leapfrogged, and the military procurement process hasn't caught up. With the growing sophistication and complexity of military systems today, costs have skyrocketed, which means we can no longer afford haphazard buying practices for the systems we want, and we can no longer afford to buy systems that may not work or that may not be needed.

Another antiquated and wasteful practice which cannot be permitted with today's costs is allowing production to commence before research and development is completed. If production equipment must be changed to incorporate the results of the final stages of R&D, it is obvious that original contract prices will jump dramatically. But, too often, Congress initially authorizes development of a defense system at a moderate price, when, if the final price tag had been known, such initial authorization would not have been given. Then, once millions are already expended, we have to either approve the cost overruns, or throw the initial money down the drain. More often than not, we yield to this financial blackmail, and pour millions more into the project to "protect" our initial investment. Only the contractors who bid in low in the first place gain, and ethical and responsible bidders are punished.

Congress can no longer allow itself to be lured by defense contractors into approving systems at low prices, and the taxpayers can no longer afford to pick up the tab for cost overruns.

Deletion of the $200 million item, and official Congressional refusal of Lockheed's and the Defense Department's request for this new kind of government subsidy can set the proper tone for military procurement policy for some time to come. The "buy-in" and government "bail-out" that has occurred with the C5A is perhaps the most glaring example of the inadequacy of our military procurement system. But, there are many other contracts with similar drawbacks. Holding the line at this time can have a healthy influence on all other existing contracts, and serve as a deterrent against unrealistically low bids on all future contracts.

Only if Congress is willing to take this step now can the public have any real confidence in our commitment to protect their pocketbooks. And only if Congress is willing to draw the line at this time will other contractors be on notice the buy-in bids over-optimism, and poor management will no longer be rewarded, or winked at, but will be subject to the most searching and thorough investigation, and will be paid for by the company and its own stockholders, instead of by the government and its taxpayers.

This amendment does not affect the $344.4 million in the bill requested by the Department of Defense for as yet unfunded obligations under contract. It does signal a halt to government rewards for inefficient production, and the beginning of the government use of sound business practices in its defense procurement. It urges the setting of an important precedent which will benefit all taxpayers.

To pass this amendment is to take the first real step toward reversing our World War II military procurement climate that so strangles our national budget and our weapons systems selection process today.

C–5A MONEY TROUBLES OBSCURED OVER YEARS

(By Stephen M. Aug)

Despite growing financial and technical problems designing and building the controversial C5A jet transport plane, Lockheed Aircraft Corp. continued issuing mostly rosy reports to its shareholders, a two-volume Securities and Exchange Commission staff investigative report indicates.

The 198-page report, the product of more than a year of intensive investigation, strongly hints also that the Air Force in at least two instances kept quiet about problems it had uncovered in the C5A program in order to protect Lockheed's financial situation—and in particular the price of Lockheed stock.

In one case, after the Pentagon had issued

a "cure notice" on Feb. 1, 1967—in effect advising the company to cure deficiencies in the plane or the contract would be cancelled—the Air Force prepared, but never made public, two press releases on the matter.

And in spring 1968, the Air Force ordered kept out of widely circulated reports on the C5A its own estimates that Lockheed "will over-run the ceiling price of the contract by a significant margin, that is, they will encounter large monetary losses on the program."

ACTION EXPLAINED

The Air Force said it never made its estimates public because they were estimates only—and if they eventually proved wrong after wide publicity, the Air Force would be accused of acting irresponsibly. The study which produced the estimates bore the notation they were considered "extremely sensitive in view of adverse publicity and stock market implications."

The investigative report is the basis on which the SEC has decided to conduct a wide-ranging proceeding into questions concerning the adequacy of disclosures made to share holders and other investors with respect to costs incurred on major defense contracts.

The report details transactions by 16 corporate insiders in Lockheed stock—but the staff has made no conclusions that these transactions were made in violation of SEC insider rules. The commission itself has found no such violation.

A section of the report on "disclosure," however, details the publicity Lockheed gave to the C5A as the years wore on and as the company began to suffer from the effects of what was a radically new concept of aircraft procurement contract. The report does not say the company violated any SEC rules.

Lockheed won the contract in September 1965 to design and build 58 jet transports. The contract was to extend six years, and the Air Force had the option of buying an additional 57 aircraft between January 1969 and March 1972.

Lockheed won the contract on the basis of its substantially lower bid than either of two competitors: $1,714 million. Boeing Aircraft Co. had bid $2,014 million and Douglas $1,793 million. The Air Force said Boeing's entry was a better design.

"Lockheed wanted this contract badly and apparently knew they had to come in with a low bid to get it," the SEC report says. As a result, they cut estimates sharply—but figured the firm still would make a profit of 3 percent of costs.

In the year following, problems arose and costs soared from the original $1.3 billion projected to more than $2.4 billion by mid-1968, and far more later. This not only wiped out the anticipated profit, but imposed on Lockheed the possibility of very significant losses.

In early 1969 the estimated loss was reduced after the Air Force decided to buy some additional planes, but the SEC says "there is sitll potential for incurring a substantial deficit on the program." Estimates of the deficit ranged from $500 million to $640 million

STATEMENTS TRACED

The SEC investigative report traces Lockheed's public statements chronologically.

In the 1965 annual report, Lockheed noted it had won the largest single military transport contract ever awarded. It was the first of its kind, and made Lockheed wholly responsible for technical, schedule and price performance. In fact, Lockheed had to meet specifications 100 percent, compared with the long-standing practice of meeting more generalized goals.

In the 1965 report, the SEC noted there was no mention of early technical or inflationary problems "which had surfaced at that time, but the impact of these was probably unclear so early." Lockheed did not disclose the anticipated rate of profit.

In mid-1966 Lockheed announced unveiling of the first full-scale mockups—but made no mention of substantial redesigning activity, other than that the size had been increased slightly.

The 1966 annual report—being put together after the company had been threatened with contract termination—contained a notation in the financial statements that it had been notified that action must be taken to assure there would be no default on performance. It noted that lead-time problems had increased.

THREAT ISSUED

In March 1967 Lockheed filed with the SEC a registration statement to issue $125 million in debentures. The Air Force threat had been issued Feb. 1, 1967. The underwriter was notified of it Feb. 17.

The prospectus included two brief mentions of the C5A which gave some indications that problems had arisen. The SEC staff questioned whether the two brief paragraphs adequately described the Air Force notice.

In addition there was no mention of technical problems and related cost over-runs "which had been experienced to date, of cost increases . . . caused by economic factors in the industry and in the economy as a whole, of increases in labor and overhead rates . . . of schedule uncertainties . . . of the fact not only had the engineering task been uncertainties . . . of the fact not only had the engineering task been underestimated" but there were problems in tooling and concern over production. Nor was indication given of financial problems.

Reports to shareholders in mid-1967 included information on progress, but "there was no indication of production cost problems having arisen."

The 1967 annual report was dated March 15, 1968, a few days before Air Force officials briefed Lockheed that according to their estimates the company "was in a substantial loss position" and three weeks before the company told the Air Force it was estimating a small loss.

The cover of the report showed the roll-out of the first C5A, the report included praise by some of those present at the ceremony; the plane was reported on schedule: first sales in 1967 were $117 million; sales for 1968 would be nearly $500 million.

SILENCE ON COSTS

In May 1968 an interim report to shareholders made "no mention of any cost problems."

In July 1968 a semiannual report to shareholders included a picture of the first flight and quotes by outsiders at the first flight. "No mention was made that by this time Lockheed was projecting a substantial loss if it did not" get an additional order for planes, and that even if it did get the additional order, "considerable loss might be incurred." The same report said five C5A's were scheduled for 1968 delivery, and second half sales would increase substantially. "No mention was made of the fact that the company was planning on booking these sales at zero profit because of cost increases," the SEC said.

By the time the 1968 annual report was issued, a note in the financial statements indicated the company might not realize a profit. The note said that in January 1969 the Air Force had exercised its option to buy an additional 57 planes—a total of 115—and on that basis "no loss is anticipated."

But in 1968 the Air Force was projecting a $285-million loss on the 115 planes. The SEC report said: "The Air Force was projecting a loss of $500 million on the 83-aircraft program. Lockheed was still predicting break-even." The Air Force now says it needs only 81 of the planes.

The SEC staff said the 1969 statements of the company "include a much more complete picture of the real level of the contingencies involved." The 1969 report, while still contending the company will break even, reflects a possible pre-tax loss of $500 million to $640 million based on the C5A program only, while no potential loss was given for 1968.

[From the Wall Street Journal, May 28, 1970]

AILING LOCKHEED URGED BY PENTAGON TO SEEK BANK AID, MERGER AS WELL AS FEDERAL HELP

WASHINGTON.—The Pentagon told Congress that it hasn't yet found a solution to Lockheed Aircraft Corp.'s tough financial problems.

But Deputy Defense Secretary David Packard stressed that it will require private as well as Federal assistance to enable the defense contractor to get back on its feet and continue major military projects.

Testifying before the Senate Armed Services Committee, the Pentagon's No. 2 man declared, "It isn't my intent today to present to you a resolution for the Lockheed financial predicament as much as I would like to do so." But, he added, "I recognize the necessity to segregate (Lockheed's) commercial from Government business, and I am convinced that no resolution can be achieved short of bankruptcy and reorganization under Chapter 10 of the Bankruptcy Act, without financial support from the private sector."

Therefore, Mr. Packard said he had urged Lockheed's management "to seek financial assistance from the banks and even through merger in order to preserve their capability."

"Even with the most favorable resolution of the Government contract problems that I could consider at this time," Mr. Packard said, the company would find itself short of cash unless it also got private help.

MERGER ALTERNATIVE LISTED

"The most desirable course, therefore, is for the company to seek additional financial strength through commercial channels," the Pentagon official said. "The alternatives would include a merger with a strong partner, substantial additional underwriting of their financial requirements by commercial banks or investment bankers."

Lockheed is currently "in the process of exploring" these alternatives, Mr. Packard told the Senators. He said, "It will take a month or two, at least, for them to cover the possibilities which might be available."

On March 2, Lockheed told the Pentagon that it would have to halt work on four major defense programs within one year unless it received more than $600 million of interim financing. The programs are the C5A cargo jet for the Air Force, engines for the SRAM missile for the Air Force, the Cheyenne helicopter for the Army and several shipbuilding projects for the Navy.

In Burbank, Calif., a Lockheed spokesman said the company has been and is continuing to explore possibilities of securing additional financing from the private sector. The company said it was pleased that "Under Secretary Packard underscored the critical importance of continued Government financing of the C5A and specifically that he stressed the absolute necessity of the $200 million contingency in the military authorization bill for C5A progress payments in the 1971 fiscal year."

Mr. Packard asserted that Lockheed's "financial crisis" is complicated by the fact that it is having problems with its commercial "air bus" as well as with its military programs—a point that was made last week by Sen. Proxmire (D. Wis.), a frequent critic of the defense contractors. Lockheed has denied problems with the air bus.

In yesterday's testimony, Mr. Packard said he has stressed to Lockheed's creditors that "no Government funds can be allowed to flow

into the air bus program and that this and other commercial programs must be financially supported from private sources."

C–5A PROGRAM

Discussing the C–5A program, which is at the heart of the company's problems, Mr. Packard said that unless Congress approves the Administration's request for $544.4 million for the year starting July 1 it "would, in effect, be curtailing the C–5A program." Of this amount, $344.4 million is required for prior-year unfunded production obligations (with $296 million going to Lockheed) and the $200 million is for "contingencies," according to the Pentagon.

"Under any possible solution to the Lockheed problem which I can now see, the $200 million will be required for work which must be done" in fiscal 1971, Mr. Packard said. "I can assure you that there is no possible solution in which these funds wouldn't be required except that involving the termination of the C–5A program."

However, Mr. Packard promised the Senators that "actual use of the $200 million will occur only after the Lockheed problem has been defined and the proposed solution reviewed with the appropriate Congressional committees."

Noting that the Government already has over $2 billion invested in the C5A program, Mr. Packard said that a cancellation at this point would mean that "we would have about 20 planes for that money." Abandonment of the program now, he suggested, "would appear illogical in light" of the fact that so much of the early money went for research and development rather than the planes themselves. And the Deputy Defense Secretary said the Air Force needs the "airlift capacity" the C5A will provide for the rapid deployment of Army divisions.

CRITICIZE DESIGN, COST

At the same time, however, Mr. Packard offered the most critical assessment of the C5A by a Pentagon official to date—declaring that "a better design and a lower cost should have been possible."

In its latest annual report, Lockheed asserted that the C5A "is meeting or exceeding performance guarantees." Yet Mr. Packard said the Pentagon has "encountered technical problems in three areas"—structures, landing gear and electronic systems. Pending completion of testing, the defense official said that the C5A's maximum gross weight will be restricted to 712,500 pounds (compared with the anticipated 728,000) and the payload to 174,000 pounds (compared with 220,000).

"We may decide to accept some modification of the operational requirements," Mr. Packard said. "The decisions in this area must be made with a strong emphasis on cost." He added that it probably won't be possible "to hold the contractor responsible to meet all of the contract specifications" because "he doesn't have the financial capability to do so with his own resources."

If the Government decided to pay for additional development work, Mr. Packard said, "I am sure we will find" that some of the electronic systems requirements "in hindsight weren't needed."

Nevertheless, Mr. Packard expressed confidence that these problems can be corrected without compromising the basic mission of the aircraft."

Turning to other Lockheed projects, Mr. Packard made these points:

—Development should be continued on the Cheyenne helicopter, which ran into rotor problems, to enable the Pentagon "to make cost and performance analyses with helicopter systems already in our inventory."

—Lockheed's claims for extra money for its shipbuilding programs should be processed through established procedures and "not treated in an unusual manner" because of the company's financial troubles. In the past two weeks, claims for $46 million were settled for $17.9 million; others are still outstanding.

—Claims under the SRAM missile program, for which Lockheed Propulsion Co. is a subcontractor for the motor, will be resolved through established procedures by the Armed Services Board of Contract Appeals. The Pentagon won't deal directly with Lockheed to avoid undermining its relationship with the price contractor, Boeing Co.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. SCHWEIKER. I yield.

Mr. PROXMIRE. I congratulate the Senator from Pennsylvania on his very forceful and effective statement about the amendment.

I was especially impressed with the great emphasis he put at the beginning of his speech on the fact that, on the basis of the judgment of the Air Force, we do not owe this $200 million to Lockheed at all. There is no legal basis for providing these funds except as a grant. Is that not correct?

Mr. SCHWEIKER. The Senator is correct. The Air Force has admitted this time and again before our committee, and that is the irony of the situation.

Mr. PROXMIRE. So what we are doing here is giving them $200 million of the taxpayers' money—giving it to them. This is in spite of the fact that this was a contract that had a target price. It had a ceiling price far above the target price. In addition, it was revealed this morning in the Washington Post—and I am going to discuss this in some detail in my speech—that there was a further adjustment even above the ceiling price of more than $200 million. On top of that, the committee would propose that we give this defense contractor an additional $200 million, and, furthermore, that this is just the beginning—that they are going to get $800 million above the contract, even as the contract fattened and generously interpreted by the Air Force, before we get the 81 planes. Is that correct?

Mr. SCHWEIKER. I think that is a very important point; because, actually, the $200 million is only a starter—it is only an ante up the ladder—because DOD now says, "Even though we owe them nothing more, we are going to have to pay them at least $800 million more to keep them solvent"—$800 million. That still could be in dispute, because Lockheed says that they need something like $600 million.

So we are really going to raise the contract perhaps another billion dollars. No one seems to be concerned about it.

I want to say to the Senator from Wisconsin that he has expended a great amount of effort and pioneer work and factfinding, and conscience searching as well, on this whole problem. I congratulate him on his efforts and am pleased to join him today in what I hope will be a mutual effort to alert the people of this country as to what is happening in the procurement system. I highly commend the Senator from Wisconsin for his leadership in this area.

Mr. PROXMIRE. I thank the distinguished Senator from Pennsylvania. I think that all of us here were surprised when we found Congress was about to go along with the administration to give $200 million to Penn Central. After it was given more consideration by Representative Patman and others, the administration backed down and decided it was better to let Penn Central go into bankruptcy.

People then said, would the trains run on time, or even be able to operate, or would people be thrown out of work?

What happened?

The $200 million was not given to Penn Central. It did go into bankruptcy. The trains have not been interrupted even by one single hour, let alone a week, a day, or a month. No jobs have been destroyed. It has been handled according to law and without government largess—and, most important, it has been handled without precedent, a precedent that would have haunted this body and Congress as a whole for years.

Now, if we are going to give $800 million or $1 billion to the biggest defense contractor in the country, because they say their costs run too high, where do we draw the line?

THE SAGA OF THE C–5A—WHY THE PROXMIRE-SCHWEIKER AMENDMENT SHOULD BE PASSED

Mr. President, the conditions tied to the $200 million contingency fund for the C–5A in the military procurement bill do not protect the public interest.

This is especially true if Lockheed Aircraft Corp. carries out its threat to default on its contract with the Air Force.

The lack of tough conditions on the $200 million fund is just another example of the Pentagon's penchant to roll over and play dead in the face of complaints from Lockheed.

Let me summarize the current situation. The Government has paid Lockheed everything it has coming under the contract. The Air Force claims that it owes Lockheed no more. But the Pentagon proposes in this bill to pay them $200 million anyway. Lockheed claims the Government owes them the money on the C–5A but refuses to make public their cash flow and other financial data so that a reasonable judgment can be made The least the Senate should ask is to know that that money is necessary, or are we going to give them the $200 million on their word?

Lockheed threatens to default on the contract if the money is refused, in which case, the company says, subcontractors would go under, employees would be fired, and the company would fold.

The amendment which my cosponsors and I are offering would see to it that, first, the planes were finished and delivered; the subcontractors kept whole, and, finally, the workmen kept at their jobs building the C–5A's. We say, if Lockheed deserves the money, give it to them if they have it coming. Right now the Armed Forces Board of Contract Appeals has the Lockheed claim before it. The appeal has been there since early this year, and it should be decided quickly since this is an administrative board. If the board determines that Lockheed does not have the money coming to it, then two events could occur. The company would still be able to finish the contract—and we have no hard evidence they could not—or the company would default on their contract. In the event of a default, our amendment would keep

the plant open and get the 42 planes built.

As matters stand now, the bill proposes to give Lockheed $200 million, which the Air Force says it does not owe. Our amendment attaches conditions to the money to insure that the interest of the Government, the taxpayers, and the men in the plant are protected before this huge amount of money is paid out.

I think this must be done if our stewardship responsibilities are to be discharged. This is a watershed decision, a precedent which will affect the Government's dealings with contractors for years to come. In view of the importance of the decision facing us, I believe it would be worthwhile to review the history of this program to put our current problem in proper context.

Mr. President, the history of the C–5A has been marked by concealment and attempts by the Pentagon and its principal contractor to mislead the Congress and the taxpayers. On November 13, 1968, the previously concealed $2 billion overrun was revealed in the course of hearings before my Subcommittee on Economy in Government. Since that time, we have persisted in our attempts to get the full facts on this disastrous program. We have had a difficult time.

FIRING OF FITZGERALD

The Air Force witness who confirmed our staff's initial estimate of the huge C–5A overrun was isolated, stripped of his major responsibilities, harassed, and finally fired for his testimony. The Air Force tried frantically to repudiate the testimony and to discredit the witness. However, subsequent events proved that the testimony of this witness, Ernest Fitzgerald, was accurate and conservative.

We learned that a party line was concocted in the Air Force to minimize the C–5A difficulties in order to avoid jeopardizing Lockheed's $125 million bond issue. It was revealed that the Air Force's own internal cost reports were falsified in order to protect Lockheed's stock market position.

STRUCTURAL DEFECTS

In the course of our inquiries, we learned that the structural integrity of the C–5A had been suspect since late 1966. That is the bill itself. Meanwhile, the Pentagon had been claiming, indeed boasting, that the aircraft exceeded all specifications. We learned that they were able to make this claim only by reason of the fact that the specifications had been reduced to match the expected lower performance of the contractor's product. Our requests for full disclosure of the technical status of the aircraft were evaded by the Pentagon. Later my colleague on the Subcommittee on Economy in Government, Congressman WILLIAM MOORHEAD, learned that even the reduced specifications were not being met by the aircraft when they were accepted by the Air Force.

OUTCOME PREDICTED LAST YEAR

Last year, I introduced an amendment to the Defense Procurement Authorization bill aimed at requiring factual analyses of the C–5A program. I thought that we should do this before authorizing the first installment of what appeared to be a blank check for further purchases of this extremely suspect airplane. During the debate on my amendment, I presented what I thought were compelling arguments for delaying the ruinously expensive pig-in-a-poke commitment proposed by the Pentagon. I have no desire to embarrass the Senators who argued against me at that time, but I invite them to reread last year's debate. I argued that by the end of 1970, all the funds owed to the company would be used up; that the planes would not be built; and that they would be back for added money. Of course, that is exactly what happened.

The record is clear. Anyone can make a mistake. The Senate made a mistake on the C–5 issue last year. Not only were hundreds of millions of dollars wasted in the unhappy decision, but to make matters worse, we appeared to be rewarding the perpetrators of deception and poor stewardship.

It is clear that we have been and are dealing with a highly organized and deliberate concealment and evasion of facts by the Pentagon. In fact, documentation of this situation is now so overwhelming that the purpose of the Pentagon's evasion and deception is showing through. Clearly, they are putting the immediate financial welfare of a giant, favored contractor ahead of the interests of the hard-pressed taxpayers. In my opinion, they are putting the welfare of existing contractor management groups ahead of true defense capability. Every attempt by conscientious civil servants and military officers to bring the runaway C–5A costs under control has been blocked by top officials at the Pentagon. For an excellent account of this shabby affair, I call attention to the article entitled "The Lockheed Scandal," by James G. Phillips, in the August 1, 1970, issued of the New Republic.

Mr. President, I ask unanimous consent to have this article printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER (Mr. HUGHES). Without objection, it is so ordered.

THE FREIGHT TRAIN IN THE SKY

Mr. PROXMIRE. Mr. President, Senators opposing my amendment last year predicted dire consequences would result if we held up additional planes until making the cautious and factual review I have proposed. In place of the orderly, systematic review so clearly dictated by the facts at that time, we had instead a largely rhetorical and emotional defense of the "Great Freight Train of the Sky." On this basis, the opponents organized the overwhelming defeat of my amendment.

Only a few months later, the disastrous cost increases so accurately predicted by my staff forced the Pentagon to reduce the planned quantity of C–5A's from 115 to 81. Bit by bit, news of the severe technical difficulties in the program sifted through the Pentagon's elaborate information barrier. Slowly but surely, the Congress and the hard-pressed taxpayers realized that they had been conned again. The miracle of military procurement was another disaster.

LOCKHEED THREATENS DEFAULT

Early this year, my staff learned that Lockheed was threatening bankruptcy as a means of enforcing their demands in negotiations with the Pentagon. On February 27, I wrote to the Air Force to ask them to stand firm against this tactic. On March 4, the Air Force denied knowledge of the bankruptcy threat. On March 5, the next day, Mr. Packard, the Undersecretary of Defense, essentially confirmed the situation, disclosing that Lockheed had threatened suspension of work on vital military programs if their demands were not met.

Once again, my staff and I were suspicious. Despite the obvious and growing financial catastrophy for the taxpayers, we could see no reason in the military programs for an immediate cash problem, given the Pentagon's generous practice of paying giant contractors progress payments based not on their progress, but rather on costs incurred.

The Senator from Virginia (Mr. BYRD) brought out on the floor that we paid them, not, as I suspected, 90 percent progress payments, but 100 percent. Therefore, on March 10, I wrote the Comptroller General, asking him, among other things, to provide me an analysis of Lockheed's cash flow on all their major programs, military and commercial. It seemed clear that programs other than military projects were contributing to Lockheed's current cash bind.

Again, the Pentagon stalled. They pleaded ignorance. They pretended not to know what we were talking about when we asked for this most elementary of financial analyses, one required by every prudent smalltown banker as a precondition for a business loan. Any smalltown banker would require a cash flow before making a modest loan. I have learned that this form of evasion is standard practice in the Pentagon, and is known as the idiot treatment in their colorful jargon.

After weeks of delay we were told that, although the Pentagon did not have a cash flow analysis for Lockheed's programs, one would be provided. Incidentally, we were shocked to find that they did not have a cash flow on their biggest contract, one of the big firms that does most of its business with the Defense Department. Yet the Defense Department did not know the cash flow of this firm, on which they depend for so many weapons, although it was so critical that we would follow through. The promised delivery date came and went, and still no cash flow. After further delay, we were informed through the GAO that the cash flow was available but that we could not see it. When I pressed for an explanation, Mr. Packard sent two Assistant Secretaries of Defense to explain the situation to my staff and me.

PUBLIC DENIED CASH FLOW DATA

The discussion with these two gentlemen, Mr. Moot and Mr. Shillito, was most revealing. Why were we denied the cash flow? Simple. Lockheed did not want us to have it. Apparently, the U.S. Congress is expected to cough up money as directed—never mind what for. Mr. Moot did tell us that the Pentagon would guard against diversion of the military

bailout money to commercial programs, but he could not explain how this protection could be accomplished. Finally, Mr. Moot acknowledged that the immediate cause of Lockheed's cash difficulty was their commercial program, the L–1011 airbus. The Air Force conceded that the commercial program was the cause of their difficulty. Our worst suspicions were confirmed.

Once again, the Congress was made to appear foolish. Once again the taxpayers were to be asked to pony up. And what for? Although there are vague military overtones to the latest request, it is crystal clear that the overriding consideration is the fact that Lockheed said it needs the money.

I have no particular antipathy toward Lockheed. As a matter of fact, I suspect that the proposed public bailout of Lockheed is often repeated in the Pentagon's obscure and convoluted dealings with other giant suppliers. We simply know more about the Lockheed disaster than most other similar situations due to the wholesome effect of systematic and persistent congressional inquiry. Moreover, I have only sympathy for the employees and stockholders who would suffer if their management's mistakes are not made good by the Government. I would even favor sensible measures to soften the blow for innocent victims of this and similar management disasters.

MEANINGLESS CONTRACTS?

On the other hand, where do we draw the line? Are contracts with giant firms meaningless? Are they the new royalty, immune from the consequences of their actions? Must we deprive other segments of our population in order that pets of the Pentagon may be protected from the realities of our American business system?

If we subsidize Lockheed's commercial programs or its mistakes on military programs, even indirectly, how can we deny others? I am told that more than 400 contractors requested bailouts soon after the Pentagon's sympathetic reception of Lockheed's plea. There are dozens of firms, large and small, in my home State of Wisconsin who are having a difficult time, some losing large amounts of money. Are they less deserving or less important than Lockheed? Should the Government make good their losses?

I intend to do all I can to see that we retain at least a semblance of free-market motivation in our dealings with giant military contractors.

Any attempt to make substantial reductions in the funds for giant contractors will be strongly opposed not only by the Pentagon, but also by immensely powerful and influential business interests, who in turn have demonstrated their influence over the Congress. There has already been the disastrous decision to approve blindly the funding for Run B, the second buy of C–5A's. Political support for continued handouts to giant firms is very strong.

Nonetheless, on behalf of Senator SCHWEIKER and myself and the following cosponsors, Mr. YARBOROUGH, Mr. BROOKE, Mr. YOUNG of Ohio, Mr. EAGLETON, and Mr. GRAVEL, we are proposing what we believe is the minimum protection which the Senate can, in good conscience, give the taxpayers. Our amendment takes no money at all from the bill. The $344,400,000 to pay for past deliberately concealed overruns is left intact. The $200 million Lockheed slush fund which the Air Force says it does not owe is still in the bill.

NO NEW PLANES PROVIDED IN BILL

Unhappily, the $622,200,000 of C–5A funds in the bill does not authorize a single additional plane. Speaking bluntly, it is simply this year's payment on the enormous but as yet undefined total bill for bungling on this disastrous program.

The first major provision of our amendment is intended to protect the taxpayer in the event the Pentagon decides to take a dive, or throw the game, in negotiations with Lockheed. This may appear to be an overly harsh and suspicious view, but the record proves it is justified.

HISTORY OF AIR FORCE LENIENCY WITH LOCKHEED

We now know that the Pentagon relaxed many technical aspects of the C–5A contract. We now know that the Air Force initiated the proposal to convert Lockheed's C–5A contract to cost-plus, a move which would remove contractual restraints on Lockheed's free-spending habits. According to reports in trade and financial journals, Mr. Houghton, Lockheed's Board Chairman, and Mr. Kotchian, its President, have expressed confidence in their ability to negotiate cost-plus arrangements with the Pentagon on both the C–5A and the Cheyenne helicopter. Their confidence is well justified, given the Pentagon's generous and permissive attitude toward this giant firm.

Moreover, new evidence keeps surfacing which further confirms the Pentagon's willingness to shave points in the legal game with big firms. Recently, another example was brought to my attention by several young men who have spent the summer studying military contracts. These young men are Vince Darago, Larry Burgess, and Bob Creecy, all engineering students at MIT, and David Taxin and Alan Schwartz, law students at George Washington. They uncovered documentation which proved that the Air Force had generously revised the C–5A contractual language in such a way as to give Lockheed a legal advantage which, on the basis of 115 planes, would have amounted to hundreds of millions of dollars.

This obscure, complicated, and hitherto undisclosed change affected the C–5A repricing formula which proved so unwise. As a matter of fact, it compounded the folly and did so after the full and highly expensive implications of the golden handshake formula were well known, at least in the Pentagon. For those interested in the legal details, I ask unanimous consent that both the original and revised contractual language be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

CHANGE NETS $295 MILLION ON ORIGINAL ORDER

Mr. PROXMIRE. This change, which apparently was made voluntarily by the Air Force on January 18, 1969, cost the Government $295 million for the 115-plane program, according to the Air Force's own analysis, which was uncovered by my staff. Based on this analysis, Lockheed would have lost $580 million prior to the approval of supplemental agreement No. 235 on January 18, 1969. Subsequent to the Air Force's generous sweetening of the golden handshake formula, their own analysis showed the then-estimated loss reduced to $285 million, a difference of $295 million.

Mr. President, I ask unanimous consent that a copy of the Air Force cost analysis also be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered. (See exhibit 3.)

Mr. PROXMIRE. Mr. President, I also ask unanimous consent that an article by Bernard Nossiter in this morning's Washington Post on this matter be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered. (See exhibit 4.)

GIFT OF $240 MILLION FOR 81-PLANE ORDER

Mr. PROXMIRE. How does this supplementary change affect the present 81-plane program? According to the calculations the supplementary change will mean at least $214 million to the company which they otherwise would not have coming to them.

Put the other way around, the Government's liability to build 81 planes would be at least $214 million less than the Government now agrees it owes under the contract.

If it had not been for this supplementary change, instead of the Government now owing $344.4 million under the contract and providing additional funds of $800 million which it does not owe, the Government would owe only $130 million under the contract and we would be asked for $1.014 billion over and above any amounts owed by the Government in order to produce 81 planes.

In other words, in addition to the $800 million, which the committee in its report calls on Congress to give Lockheed above the contract, we would be asked to provide an additional $214 million above the contract or $1.014 billion.

The second major provision of our amendment would facilitate continued production of C–5A's in the event of bankruptcy proceedings cost the Nation the services of Lockheed's present management. This provision should also allay the fears of those who are concerned about the unplanned adverse employment aspects of bringing C–5A costs under control.

Lockheed has threatened to default on its contract. Our amendment makes certain that if the company does that, that the employees and the taxpayers will not suffer from that act of the present management. We direct the Secretary of Defense to take actions to build the planes and to protect the Government's interests.

Finally, our amendment provides for

a GAO study of the financial capability of the C–5A's prime contractor to meet his contractual obligations.

Opponents of our amendment have charged that it is a deliberate attempt to force Lockheed into bankruptcy and thereby throw thousands out of work.

LOCKHEED THREATENS DEFAULT

Nothing could be farther from the truth. It is Lockheed that threatens to default. That was disclosed in a letter from Lockheed to Secretary Packard on March 2, 1970. Under our amendment, Lockheed should have no trouble whatsoever getting all the money due them if they have a sound legal case. The case does not have to be considered by courts of law. Our amendment provides that they can get their money if the Armed Services Board of Contract Appeals—ASBCA—rules they are right. Now, the ASBCA has had the Lockheed case for months, since January 9, 1970. The ASBCA is staffed by DOD personnel and is under the administrative control of the Pentagon. Mr. Packard, the Deputy Secretary of Defense, has said that the Lockheed case would receive top priority. Under these circumstances, I see no legitimate reason for further stalling on the ASBCA decision.

Far from forcing thousands of people into the ranks of the unemployed, our amendment would clear the way for rapid relief measures in the event ASBCA decides against Lockheed and Lockheed's financial condition does prove as desperate as has been pictured for us.

I should reemphasize that we do not really know what Lockheed's financial outlook is. We have been told by them, they are in dire financial straits and that we must now begin making payments on the bailout bill. At the same time, Members of the U.S. Senate are brazenly told that they cannot see the really pertinent cash flow analysis. Why? Can any Senator tell me why the Senate is being asked to authorize hundreds of millions of dollars in bailout money, and at the same time is denied public access to the elementary financial justification?

$200 MILLION ON A WHIM

The situation is outrageous, particularly in light of the record of systematic deception on this scandalous program.

Finally, some opponents of our amendment have tried to stampede the Senate into blind approval of the Lockheed bailout fund by picturing Lockheed's threat to go bankrupt in the blackest possible terms. This is a scare tactic. It was tried, unsuccessfully, I am pleased to say, in the case of the Penn Central bankruptcy.

It is true that Lockheed's Board of Directors could choose to liquidate the company if they decided to file for bankruptcy. It is true that they could choose to lay off all their employees and stop production on the C–5. The important point, however, is that these dire actions would be Lockheed's choice. That is their threat, not ours. They are the ones threatening to default.

They could also file for reorganization under the bankruptcy procedures. This is the option available for those who wish to try to continue business operations under the protection of the bankruptcy procedures. Under this option, it is doubtful that anyone other than a handful of top management people would be subject to undue risk of losing his job.

REORGANIZATION IS REAL OPTION

In any event, if Lockheed's board of directors should decide—and it would be their decision—to reorganize under the protection of the bankruptcy procedures, the great bulk of their employees would carry on as usual. As you know, this was true in the case of Penn Central, where such dire effects were described by those who tried to panic the Congress. Production of the C–5A could continue. To the extent that more money would facilitate this process, our amendment would help, not hinder. Our opponents are dead wrong here. This is true because our amendment would specifically approve the use of these funds in advance by a trustee in the event the company carries out its threat to go bankrupt. The pending bill does not do this.

Moreover, we are not at the mercy of Lockheed's decision as to whether or not production of C–5A continues. If continued production of the C–5A is threatened by bankruptcy or default, the Secretary of Defense can assure continued production under the very considerable powers he already has and the provision of our amendment stating that the Secretary of Defense shall take all appropriate measures to insure that first, the financial interests of the United States are fully protected, and second, priority is given to the expeditious completion of the C–5A aircraft contract, in the event the contractor carries out the threat to default and to go bankrupt.

The Secretary will have the power if he chooses to use it. It is a matter of choice. The Secretary of Defense can choose to let a disastrous situation get worse, or he can choose to bring order out of the chaos. It is up to him. Our amendment leaves him all the money he has requested to finance the decision he makes, if a trustee states that the funds are needed to build the 42 planes and keep the men at work.

I cannot leave the subject of misleading statements without commenting on the discussion of the effect of additional numbers of aircraft on unit costs of C–5's. This discussion is summarized on page 18 of the Armed Services Committee's report on this year's military procurement bill. In addition to the tenuous assumption that all the costs of future procurement of C–5's are now revealed, the computation ignores the value of work in process in computing the cost of completed aircraft and incremental costs of additional aircraft. Clearly, even if the administration were to decide to cut off production of C–5's short of the 81 airplanes now ordered, it would not be necessary to allow uncompleted airplanes to corrode and gather cobwebs where they stand. If the Air Force knows the status of the work in process, it should not be an overwhelming problem to negotiate a reasonable completion cost with either Lockheed or a successor tenant of the Government-owned C–5A assembly plant. Moreover, the detail fabricated parts not needed to complete partly assembled aircraft would be diverted for spares, thereby reducing this amorphous but enormous requirement.

I am certain that this analysis was provided by the Air Force and I would hope they would provide a supplementary analysis which recognizes the important factor of work in process.

Whatever the final decision on quantities of C–5's finally bought, it appears that the average price for each of the 42 airplanes will approximate the cost of the Rayburn Building. I cannot help but wonder how Senators would justify to their constituents the acquisition of two new Rayburn buildings each month.

MODEST AMENDMENT

In conclusion, I wish to point out once again the modest nature and reasonable conditions provided by the amendment we are offering. It does not seek to rectify last year's blunder which will result in blowing more than a billion dollars of the taxpayers' money. It does not deny this year's installment of $622,200,000 get-well money. It in no way impedes—indeed it facilitates—continued production if the company carries out its threat to default. This is true even though the Pentagon has never furnished the factual, objective, military justifications for the quantities of the aircraft ordered.

The fact is, as our colleagues in the House of Representatives have pointed out, the bill this year authorizes no new airplanes at all for the enormous amount of money. By and large we are buying "overruns" this year—not airplanes.

The amendment does provide minimal protection against a repetition of the Pentagon's ingrained habit of caving in when negotiating with a giant contractor. It does facilitate continued production in the event Lockheed's long-threatened bankruptcy takes place. It asks the GAO to make a review of Lockheed's financial ability to produce C–5A's, hopefully to provide the Congress with basic financial facts we should have had long ago.

PRESERVE GOVERNMENT INTEGRITY

Perhaps, most importantly, I believe adoption of our amendment will help restore the integrity and independence to the U.S. Government. Increasing numbers of our citizens believe that by our unwillingness to act, the U.S. Congress becomes a party to the concealment, deception, and rank disregard for our national resources that have marked the C–5 and other Pentagon procurement scandals. Our amendment offers Senators a chance to demonstrate to our citizens and taxpayers that we intend to carry out our constitutional functions when the purse strings of the U.S. Treasury are involved.

EXHIBIT 1

WHAT REALLY HAPPENED—THE LOCKHEED SCANDAL

(By James G. Phillips)

Air Force Colonel Joe Warren, a crusty cost-efficiency expert, was unmoved by Lockheed Aircraft's attempt to snow him over its C–5A jet transport program. Lockheed's briefing, he wrote Air Force headquarters almost four years ago, was "like seeing the rerun of an old movie—the plot still has drama and suspense, the script was excellent, the acting superb, but the outcome will be the same as it was the first, second or tenth time it was

shown. The contract costs will be exceeded." Warren was right. With the Air Force refusing to impose tough cost discipline on a favored aerospace contractor, Lockheed has run up one of the most whopping cost overruns ever experienced on a weapons procurement program. Worse still, there's been no change in the inner workings of the military-industrial complex, which precipitated the C–5 disaster.

New evidence I have obtained indicates that at least $1.5 billion of the $2-billion C–5A overrun was clearly avoidable. In the first place, the Air Force gave Lockheed the contract (probably for the sole reason of keeping the company in business) despite known deficiencies in its design proposal that were sure to lead—and did—to expensive redesign work. Even then, much of the overrun might have been salvaged if the Air Force had clamped down on excessive plant overhead rates and blatant inefficiency on the production line. But despite the early warnings by Col. Warren and other cost experts, top Air Force brass and bureaucrats swept these problems under the rug. At every stage, the Air Force's primary interest was in concealing the problem, not solving it.

The C–5 program was destined for trouble from the beginning, and here's why: the contract, signed in October, 1965, contained a novel provision permitting Lockheed to come in with a low bid to land the program, with the virtual assurance of getting bailed out later by the government in the event of trouble. This provision was called the "repricing formula" by the Air Force and later the "golden handshake" by critics. It allowed the company to offset at least part of its losses on Production Run A of 58 aircraft by recomputing the price agreed on earlier for Run B of 57 planes. Although the second run would be undertaken at the option of the government, it appeared almost certain that the Air Force would want the extra planes and more. Air Force long-range airlift plans called for a 120-plane, six-squadron program. The other five planes would be procured from Run C—another option for the purchase of up to 85 planes at a price to be negotiated later.

The "handshake" clause, based on an extremely complicated mathematical formula, provided essentially that if actual costs of Run A exceeded the original contract "target cost" (contract price less profits) by more than 40 percent, target cost of Run B (set at $490 million in 1965) would be increased by approximately $1.25 for every additional dollar spent on Run A above the 40-percent cost growth mark. Cost increases of less than 40 percent would be financed as follows: for increases of 30 percent or less, Lockheed and the government would share responsibility, with the government paying 70 percent. Lockheed's share would be applied against its projected Run A profits of $128 million, which would be evaporated once costs rose by more than 30 percent. If the Run B option weren't exercised, Lockheed would bear full responsibility for all cost growth over 30 percent. But if the Air Force bought Run B, the "golden handshake" would go into effect once growth passed that mark. For cost increases of 30 to 40 percent, the handshake would reimburse Lockheed 87 cents on every additional dollar it spent, and above 40 percent Lockheed would get back $1.25. (Both the 87-cents and $1.25 formulas, however, were pegged to the number of aircraft ordered under Run B, and lesser amounts than those would be paid if the government bought less than 32 of the Run B planes.)

Once a 40-percent cost increase appeared likely, the handshake loomed as a reverse incentive encouraging Lockheed to be less efficient. At this point, it would be in the company's interest to run up even greater costs on the initial production run in order to make 25 cents profit on every additional dollar it spent. Because of the sharing formula on the first 40 percent of extra costs, the cost growth would have to be astronomical before the handshake could turn Run A losses into an overall profit on the program. (The original target profit agreed to for the Run B option was only $49 million.) But at the same time, catastrophic losses would be impossible unless the Air Force decided not to buy Run B or the company actually lost money on its Run B operation—a prospect that appeared unlikely because aircraft costs per unit characteristically decline as a contractor gains experience with a program. Undoubtedly, this protection against big losses was an important factor in Lockheed's decision to cut corners on its bid.

Desperate for new business, Lockheed's management in early 1965 ordered its staff's lowest cost estimate reduced by 10 percent in order to undercut its competitors—Douglas Aircraft (now McDonnell-Douglas) and the Boeing Co. Lockheed's bid of $1.9 billion for research and production, including Run B if ordered, was $79 million less than Douglas' and $300 million less than Boeing's. The Lockheed proposal expressed a high degree of technical optimism that was unfounded under the circumstances. It also made little allowance for inflation though the Air Force had warned all three contractors to take that factor into account as a normal business risk over the first two years of the contract (after that, the contract provided that inflationary increases would be covered largely by the government). Nor did the Lockheed proposal make allowance for the fact that the C–5 award was the first of a new type of contract called "Total Package Procurement," under which the contractor would commit himself to a fixed price ahead of time for both research and production—a risky proposition that might have given Lockheed pause had it not been for the protection afforded by the golden handshake provision. Although an Air Force Source Selection Board found Boeing's proposal superior in its technical aspects, Lockheed won the contract on the basis of its low cost bid. The entire program was to cost $3.4 billion, including the airframe, engines and spare parts.

In a move to narrow the technical edge held by Boeing, Lockheed had hurriedly adopted certain design changes suggested by the Air Force just before submitting its bid. It had vastly underpriced the cost of these changes, increasing its bid by only $48 million. At least one high-ranking Air Force official told company management that its allowance for the changes was far too low, but Lockheed ignored his advice.

Almost from the start of development work in early 1966, Air Force cost experts assigned to a top-level headquarters management group began citing evidence of a big cost overrun in the making. A. E. Fitzgerald, the deputy for management systems who later was to lose his job after testifying to Congress on the C–5's problems, noted early in the year that overhead rates at the company's production facility in Marietta, Ga., were vastly exceeding target, Col. Larry M. Killpack, chief of the Air Force's Cost and Economic Information Bureau, found by year's end that several key parts of the program were overrun by more than 100 percent. On Dec. 8, Killpack concluded in a memo to Air Force Headquarters that "Lockheed is in serious difficulty on the C–5A." Five days later, Col. Warren penned his memo. All these reports fell on deaf ears.

As Lockheed admitted later, the reason for its early overspending was a massive redesign effort related partly to the last-minute technical changes the company had squeezed into its contract proposal. The most significant of these changes had been enlargement of the wing to meet Air Force requirements for the plane's short-field landing capability. But reconfiguration of the wing brought on weight problems, which required a new round of redesign work. After Fitzgerald learned of the extent of the redesign effort, he reported that these engineering problems almost certainly would mean a heavy cost impact when the plane moved from research to production.

By late 1966, the C–5's Systems Program Office (SPO), the office charged with day-to-day monitoring of the C–5 contract, joined the efficiency experts in their concern over the C–5's mounting costs. The SPO had become alarmed at indications from Lockheed management that the company did not intend to make good on the full contract performance specifications. One of the developments that bothered the SPO was Lockheed's proposal for a "tradeoff," as the company described it, relaxing the weight requirements in exchange for increased engine thrust, to be provided at government expense. The proposal was rejected.

In an extraordinary move, the SPO on Feb. 1, 1967, sent Lockheed a "cure notice" indicating the contract would be cancelled unless Lockheed presented a satisfactory plan for improvement within the next 30 days. It was the first such action ever taken by the Air Force on a major weapons program. Although Air Force Headquarters questioned the advisability of the action, the SPO prevailed. Standby press releases announcing the move were prepared both at Wright-Patterson Air Force Base, Ohio, where the SPO is located, and at Air Force Headquarters in Washington. But both were marked for use only in the event of press inquiry, and when press questions failed to develop, neither was ever released. This was one of the most blatant of all the Air Force's cover-ups and one of the most costly in terms of the public interest. Since the plane had not yet moved into production, disclosure of its problems at this stage might have led to enough pressure to induce the Air Force to switch the contract to Boeing or at least bear down on costs.

The cure notice evoked tremendous concern at Lockheed, which was then preparing a public offering of $125 million in convertible debentures. Within the next three weeks, Lockheed met repeatedly with the SPO but to no avail. With time running out, Lockheed finally swayed the SPO on Feb. 21, by promising to dispatch a top-level technical team from corporate headquarters in California to help the foundering Lockheed-Georgia management resolve the plane's technical problems. The cure notice was rescinded.

Despite the presence of the headquarters technical team, it was business as usual on the production line. Col. Jack W. Tooley, a former Army airlift expert working as a civilian adviser to Lockheed, reported that he observed incredible inefficiency in the plant. "From time to time," he recalled recently, "since I had nothing better to do, I would walk through the main plant, observing what was going on. The number of workers loafing on the job was absolutely unbelievable. In fact, my major contributions to Lockheed probably were these trips through the production line, since workers seeing me without a badge and in a suit and white shirt went back to work, as they were not sure of who I was."

Tooley added that he talked at some length with one of the supervisors on the production line, who told him that he had "40 more men in his department than he needed; that he was getting about six hours' work out of eight hours; that when he went to ten hours and over, the production dropped to five hours." Tooley also said he knew "personally of two cases where the individual was making $10 an hour, did not have a degree, was not doing anything, and yet spent 60 hours a week doing it because that is what the contract called for. This can be multiplied by many hundreds of times."

The situation was not much better at

General Electric's plant in Evendale, Ohio, where the C–5's engines were under production. Here Fitzgerald also found excessive overhead rates and a large part of the work force loafing. After one trip to the facility in early 1967, Fitzgerald wrote Air Force Headquarters: "I observed a total of 134 people, of whom 35, or 26 percent, appeared to be working. The modal pace of work was quite low, approximately 70 percent of normal. Machine utilization appeared to be about 50 percent on the day shift and lower still on the swing shift." Fitzgerald later told Congress that at least $1 billion of the C–5 overrun could have been saved if the Air Force had required reasonable efficiency and economy of work forces at the Lockheed and GE plants.

Annoyed by the continuous appearance of cost analysts, Lockheed and their sympathizers in the Pentagon began seeking their systematic exclusion from the program. Orders were cut sending Warren to Addis Ababa as Air Attaché. Fitzgerald and other friends of Warren at Air Force Headquarters were able to block that appointment, but Warren was still removed from the program and assigned to a Pentagon computer manager job. Kilpack was transferred to Vietnam, and Tooley quit Lockheed-Georgia in disgust.

With its technical problems mounting, Lockheed turned to costly and exotic materials such as titanium to help pare down the excess weight. By now the company had found it was useless to try to wiggle out of contract specifications. Despite some expressions of unhappiness at higher levels, the SPO refused to budge.

Without doubt, the SPO's adherence to the contract dealt Lockheed a stunning blow. When the company had run into production problems on earlier programs, the Air Force would often waive specifications or provide enough contract change orders (sometimes called "contract nourishment" in the trade) to ensure that the company came out well. Lockheed's chief development engineer, on the program later told Securities and Exchange Commission investigators that he never suspected the C–5 contract would be enforced: "As is so frequently the case with multi-layer management," he said, "someone at the top can say do it this way to avoid this, that and another, and these people down below say here's the contract, but that's just a lot of boiler plate and we'll work together." In its 1969 report to stockholders, the company said the Air Force's strict insistence on performance specifications and delivery dates "resulted in expenses by contractor far beyond the original estimate to avoid ever-present threats of cancellation for default. . . . Contract terms were regarded as sacrosanct even though a relaxation of specifications and delivery dates could have greatly lessened costs."

In May 1967, Lockheed moved from research to the production phase of the program with the plane's technical problems far from resolved. At a meeting of the top-level Air Force management group, at least one official complained that more time should have been spent on development. "This is the first major aircraft system," he said, "to begin operational systems development after completing an extensive contract definition phase. The central idea of contract definition is to define achievable performance and to develop realistic schedules and credible cost estimates in relation thereto. Clearly, Lockheed flunks the course on this basis."

Despite continuing SPO concern over the technical difficulties, Lockheed characterized the problems as nonrecurring and refused to acknowledge their potential impact on costs. Late in 1967, Lockheed-Georgia notified corporate headquarters that "the bulk of the program remains before us, giving us ample opportunity for cost savings. . . ." Although Lockheed added a $90 million contingency fund to its cost estimates by the end of 1967, it explained to its auditor, Arthur Young Co., that it was merely being conservative and that the funds would not be needed. Arthur Young's notes indicate unbounded optimism on Lockheed's part. The first indication of a really disastrous overrun on the Lockheed program came in April 1968, when the SPO estimated costs of $2.9 billion through Run B, a $1 billion overrun. The SPO figured Lockheed had known about the cost situation since the early part of the year, since the company at that time had "intensified their efforts to maneuver within the contract framework to get the Air Force to pay for work we contend is already on contract. In addition, they started attempting to limit our visibility on program cost."

Nonetheless, Lockheed insisted the SPO projections were far too high, and it pressured the SPO to change them. SEC investigators found later that Lockheed had threatened to follow the SPO briefing team wherever it went, to shoot down their figures.

But with a decision soon due on the Run B option, Lockheed decided to adopt a low profile and hope that, as before, Air Force Headquarters would not become unduly alarmed at another pessimistic SPO estimate. As the SEC staff put it, the rebuttal package was ready if needed "to help protect Lockheed's position in this respect, but would not be used unless necessary because of the danger of focusing attention on the cost increase." The SPO apparently recognized this same motive in June when it wrote that it was definitely in Lockheed's favor to keep the Air Force "in the dark" on the costs of Run A, because of their potentially adverse impact on a decision to exercise the Run B option.

At this point, however, even the SPO, which had been relatively tough on Lockheed, became concerned over the effect that disclosure of its cost projections might have on the company's liquidity position. Its reports to higher headquarters contained the following notation: "Security considerations. You will see we are estimating that Lockheed will overrun the ceiling price of the contract by a significant margin, that is, they will incur large monetary losses on the program. The SPO has treated this information as extremely sensitive in view of the adverse publicity and stock market implications." SPO said there was no pressure from Lockheed or higher headquarters to insert this warning in its report. It said the suggestion was made "purely and simply because the cost figures . . . were estimates and were not concurred in by the contractor. There was a wide variation between the estimate contained in this report and the contractor's estimate. It was felt that should the Air Force prove to be inaccurate subsequent to wide public disclosure, the Air Force would be accused of acting irresponsibly."

Instead, the SPO decided to err on the side of the contractor and let the public be damned. Air Force Headquarters moved quickly to close off possible leaks by directing that the information be limited to top-level reports and be excluded from any document receiving wide circulation. Although Congress had been notified of the SPO's August 1967 estimate of a $331 million overrun, it was not informed of the new projection. Neither was it told of a follow-up study in October, which placed the overrun on the entire program at $2 billion, including $1.5 billion on the Lockheed program. The SEC staff revealed that the Air Force considered rewriting performance specifications at this point to give Lockheed a better break. (Some of the performance specifications were relaxed later, and the Air Force now is planning significant further relaxation in order to avoid another costly redesign of the wing.)

The next episode came in early November, when Richard Kaufman, staff economist for the Joint Congressional Economic Committee's Economy in Government Subcommittee was setting up a subcommittee hearing on "The Economics of Military Procurement." Kaufman had followed the C–5 program closely and knew of the latest overrun estimate. Although no subcommittee member or staffer had yet contacted Fitzgerald, several Pentagon associates recommended him.

When Kaufman invited Fitzgerald to testify, bedlam broke loose in the Pentagon. Defense Department Comptroller Robert Moot, the Pentagon's top financial officer, warned Fitzgerald that his testimony "would leave blood on the floor." The Pentagon sought to substitute a more manageable witness, but the subcommittee chairman, Sen. William Proxmire (D, Wis.), insisted that Fitzgerald appear. Finally, the Pentagon agreed to let Fitzgerald attend as a backup witness. At the hearing Nov. 13, Proxmire ignored the Pentagon's hand-picked witness and called Fitzgerald immediately to the stand. Fitzgerald confirmed Proxmire's estimate of the $2-billion overrun, leading to his immediate removal from the program and eventual dismissal from his job.

With Congress and the public enraged about the overrun, the Pentagon flatly repudiated Proxmire's figures. Its Public Affairs Office put out a release contending that current estimates for the program were only $4.3 billion instead of the $5.3 billion Proxmire had revealed. Supplementary material requested of Fitzgerald for the hearing record was altered by the Pentagon to show the lower figure. The difference turned out to be the Air Force's omission of some $900 million for spare parts—another item that was badly overrun. The spares were mostly engines and ground equipment—items the Air Force classifies as an operating cost and not as original investment. The Pentagon news release failed to make this distinction, however, thus conveying the impression that Proxmire was overstating costs.

Despite opposition from the Defense Department's Systems Analysis Office, which sought to limit the C–5 program to three squadrons, the Air Force on Jan. 14, 1969, exercised the Run B option, but instructed Lockheed for the time being to limit production to long-leadtime items for only 23 more planes. On grounds of budgetary restraints, the Air Force announced last October that it would curtail the program after completion of 81 planes. With the effect of the golden handshake formula now blunted (because the Air Force was ordering less than 90 planes), Lockheed stood to lose more than $500 million. Contending the Pentagon's exercise of the Run B option required purchase of all 57 Run B planes, Lockheed sued the government for default. (Lockheed now figures it would have broken even on the full 115-plane program.)

The cozy relationships of the military-industrial complex came to light again this spring when Lockheed requested $640 million in emergency financing and Pentagon officials, backed by military enthusiasts in Congress, sought to expedite the company's claim. Even when the Pentagon learned that Lockheed's immediate cash program had resulted from its commercial program—the L–1011 "airbus"—it still maintained its support of the proposed bailout money. Lockheed was a national asset like the redwood tree.

Even the Securities and Exchange Commission (but not its tough-minded staff) has shown sympathy for the embattled contractor. At the completion of the SEC staff's year-long investigation of Lockheed's cost disclosures on the C–5 program and alleged illegal dumping of company stock by corporate insiders, the Commission announced June 2 that the investigation "did not disclose evidence of unlawful insider trading." The Commission's terse announcement seemed at odds with the findings of the staff's report. Citing specific instances of heavy selling by top corporate officers at

critical junctures in the program, the staff raised the "possibility that this was done on the basis of inside information." Rumors abounded that the staff had recommended indictments; the SEC denied it.

Although the SEC release announced the Commission's decision to study cost disclosures on a number of weapon contracts, including the C-5A, it gave no indication of the staff's considerable misgivings over Lockheed's disclosure policy on the C-5 program. In its report, the staff raised the question of "the adequacy of disclosure in annual and interim filings with the Commission and with the [New York Stock] Exchange, as well as information prepared for public distribution." The staff also raised questions as to the adequacy of Lockheed's description of the cure notice in a registration statement it filed with the SEC in March 1967, covering the $125 million debenture issue. The Commission at first put the staff report under wraps but later made it public under stiff pressure from Congress.

As I said earlier, much of the C-5 overrun could have been avoided if the Air Force had really cracked down. Of the $2-billion overrun, less than $200 million can be attributed to inflation. The rest is due entirely to Lockheed's redesign effort and pure inefficiency on the Lockheed and GE production lines. Even if Lockheed had charged an extra $200-$250 million in the beginning to get its design up to a par with Boeing's (or by that same token if the contract had gone to Boeing), the whole program should have cost no more than $3.8 billion, given reasonable efficiency. Thus about $1.5 billion of the overrun should have been saved. As it is, the Air Force estimates that even the 8-plane program is going to cost $4.6 billion—$1.2 billion more than the original contract estimate for 115 planes. Thus far the Air Force has spent $2.5 billion on the program and has received one operable plane!

Defense Secretary Melvin R. Laird has sought to prevent recurrence of C-5 type fiascos by setting "milestones" which a contractor must reach before he moves on to the next phase of a weapons program. This policy means little, however, unless Pentagon bureaucrats clamp down on contractor boondoggling. Signs are thus far that they haven't. Pentagon studies already are predicting a $1-billion overrun on Lockheed's S-3A antisubmarine aircraft program, the first major weapons purchase initiated by Laird. Deputy Secretary of Defense David Packard recently succeeded in preempting headlines about that overrun by issuing a non-story that he had warned the Navy to keep close tabs on program costs. Packard acknowledged only a $100-million overrun on the current portion of the contract and did not reveal the present estimate for total cost at completion.

It is too much to expect that Pentagon bureaucrats will move voluntarily to shape up military procurement. That would involve harsh measures against favored contractors and, for the less efficient among them, a bankruptcy or two. The ties that bind Pentagon bureaucrats and the giant contractors—the mutual interest in huge defense budgets, the promise of lucrative jobs in industry for former military and civilian officials, and the feeling that they must stand four-square against an unappreciative public—are simply too strong for that.

Perhaps the only answer is a series of taxpayer suits against government officials who breach the public trust, particularly with respect to concealment of cost problems that could lead to gigantic expenditures later if not brought under control. Not too long ago, the public wouldn't have stood for the C-5 affairs. In 1956, T. Lamar Caudle, an assistant attorney general under President Truman, was convicted and sentenced to two years in prison for failing to prosecute tax fraud cases that came under his jurisdiction. The charge on which he was convicted was conspiracy to deprive the government "of the fair services of Caudle." That law ought to be applied to Pentagon bureaucrats.

EXHIBIT 2

ORIGINAL AND REVISED CONTRACT LANGUAGE

The original contract October 1965 clauses read as follows:

"(iv) Multiply each unit target cost for aircraft and associated equipment in Production Run B by (iii) and add the product to each unit target cost in Production Run B.

"(v) Establish a new ceiling price on each aircraft or item of associated equipment in Production Run B, at 130% of the unit target cost as adjusted in (iv)."

Supplemental Agreement 235 (effective Jan. 14, 1969, signed Jan. 17, approved and likely to figure in a Senate debate next week. The lawmakers are then expected to vote on a Pentagon proposal to give Lockheed still another $200 million as a down payment on its claims against the government.

Sen. William Proxmire (D-Wis.), whose inquiries disclosed the huge cost overruns, will introduce today an amendment limiting the conditions under which this down-payment can be granted.

Appraised of the C-5A contract change, Proxmire said yesterday:

"This remarkable discovery demonstrates the Air Force's lack of concern for the taxpayers and its willingness to serve as a cornucopia for Lockheed. It is incredible that a government agency should rewrite an agreement to give a supplier, for no apparent reason, a handout of several hundred million dollars."

"It is one additional reason for placing strict curbs on further advances to Lockheed. That is precisely the purpose of my amendment."

Proxmire's amendment would permit the $200 million advance to Lockheed only under either one of two conditions. The Pentagon's board of contract appeals must find there is some merit in Lockheed's claims; or if the company goes through with its threat to default on the contract, a trustee must find that Lockheed needs the money to fulfill its obligation to produce C-5A's.

The newly discovered contract revision affects the repricing or "golden handshake" formula in the C-5A contract. The original version of the "golden handshake" compels the government to pay premium prices for the second batch of C-5A's. These prices rise by a multiple of the costs that Lockheed incurs on the first batch of 58 planes. The revised agreement extends the premium formula to cover the first as well as the second batch.

The company disputes the Air Force calculation that this change is worth several hundred million dollars. According to Lockheed, the new language simply divides up the money yielded by the repricing formula between the first and second batches and does not add a new sum to the first batch.

Officials familiar with the C-5A negotiations said yesterday that the revision was ordered by Robert H. Charles. A former aerospace executive, he was the Air Force assistant secretary in charge of procurement in the Johnson administration and has publicly claimed credit for the C-5A contract.

The revision was inserted in a supplemental agreement made by the Air Force to bring the number of planes purchased up to 115. However, Congress has authorized only 81 and the Pentagon has cut back its program to this number.

The Air Force originally expected to pay $3.4 billion for 120 planes or $27 million each. The current estimate is $4.6 billion for 81 planes or $57 million each.

The discovery that the C-5A contract was changed more than three years after its original signing was made by two local area law school students and three undergraduates from the Massachusetts Institute of Technology.

The five are working here this summer on a volunteer project to examine military contracts. In the course of their study, they noted the two versions of the re-pricing formula.

EXHIBIT 3

AIR FORCE COST ANALYSIS—POSSIBLE CEILING INTERPRETATION

[In millions of dollars]

Combined ceiling—After change	Amount	Separate ceiling—Before change	Amount
R.D.T. & E.	468	R.D.T. & E. cost	468
Run A cost	811	Run A cost	811
Run B cost	[1] 1,013		
Target cost	2,292	Total	1,279
Escalation	190	Escalation	101
Target cost	2,482	Target cost	1,380
Ceiling	3,169	Ceiling	1,764
Total estimated cost (Air Force)	3,454	Air Force estimate	2,436
Lockheed loss	285	Lockheed loss	672
Profit of $177,000,000 absorbed at a 70 (Government)/30 (LGC) rate from 2482 to 3169.		$128,000,000 profit absorbed at 70/30 rate from 1380 to 1764.	
		Run B	[1] 1,013
		Escalation	89
		Target cost	1,102
		Ceiling	1,405
		Air Force estimate cost	1,018
		Profit $49,000,000 plus 50 percent of difference between actual cost and target cost or $42,000,000 Lockheed loss	672
		Run B recovery	91
		Total loss	580

EXHIBIT 4

[From the Washington Post, Aug. 20, 1970]

C-5A CONTRACT REVISION SAID TO COST $200 MILLION

(By Bernard D. Nossiter)

In the dying moments of the Johnson administration, the Air Force rewrote its C-5A contract in a way that appears to give Lockheed Aircraft an extra sum of more than $200 million for the costly cargo plane.

Documents made available to The Washington Post yesterday describe the hitherto unrevealed change. The original Air Force-Lockheed contract was signed in October,

1965. The $20 million-plus amendment was written in on Jan. 17, 1969.

Last year, the Air Force office of financial management privately estimated that the contract change would cost the government $295 million. Since then, however, the multi-billion cost overruns on the plane have led the Pentagon to trim back its purchases. As a result the amendment is now unofficially estimated to have increased Lockheed's take by slightly more than $200 million.

Last night, the company denied that the revision had increased its payments. Lockheed spokesman said:

"There is no financial effect from this supplemental agreement change that is different than the one provided for in the original contract."

The revision, he said, was merely designed to clear up an ambiguity.

The discovery of the revised agreement is distributed on Jan. 18) to the original contract reads as follows:

"(c) Paragraph C.(1)(a)(iv) is revised to read:

'(iv) Multiply each original unit target cost (as specified in Contractor's Document 4–12, dated 69–01–10) for aircraft and associated equipment in Production Run B by (iii). The total of the increase will be added to the total target cost of the contract, and will also be added in appropriate increments to the unit billing price of any or all of the 110 production aircraft.'

(d) Paragraph C.(1)(a)(v) is deleted and the following submitted in lieu thereof:

'(v) A new ceiling price will be established by multiplying the total increase established above by 130% and adding that product to the then current ceiling price of the contract.'"

Mr. TALMADGE. Mr. President, I wish to comment briefly at this time about the remarks made today by the distinguished Senator from Wisconsin (Mr. PROXMIRE) as he and the distinguished Senator from Pennsylvania (Mr. SCHWEIKER) submitted their new amendment dealing with the C–5A. I will wish to comment in much greater depth when the amendment is before the Senate for debate and vote.

First, I would like to introduce at this point in the RECORD a statement by the Lockheed Aircraft Corp. in response to the press release issued by Senator PROXMIRE in advance of his Senate speech. The statement reads as follows:

There are many statements in Senator Proxmire's press release today which are misleading and inaccurate. One example is the statement that the Proxmire-Schweiker C–5A amendment would see to it that the planes are finished and delivered. The amendment, as we understand it, in fact might have quite a different result, and in any event, would create a whole series of uncertainties.

His statement that Lockheed has virtually nothing invested in the C–5 program and facilities is a severe distortion of the truth.

It is gratuitous and totally inaccurate for Senator Proxmire to say that Lockheed has threatened to file for bankruptcy. As we have said before, we do not believe bankruptcy is either necessary or likely in this case, and it certainly would not be in anyone's best interests. This includes the Government, Lockheed employees, Lockheed stockholders, and our sub-contractors and suppliers.

Next, I wish to reiterate quickly what I said on the Senate floor on August 12 about this new C–5 amendment. I noted then that the amendment provides only two conditions under which the $200 million contingency fund can be paid to assure continuing production of the C–5A.

The first condition is impossible to meet, and the second condition is bankruptcy for Lockheed, the C–5 prime contractor.

Conspicuous by its absence, I said then, is a condition which would allow the contingency fund to be spent following a negotiated settlement of the legal dispute between the DOD and Lockheed. The fact that this condition is absent, and the fact that the first condition of the Proxmire-Schweiker amendment is impossible, can only lead to the conclusion that the amendment is deliberately designed to force the contractor to bankruptcy.

In his press release issued today, the distinguished Senator from Wisconsin refers to the first condition in the new amendment. This is the one which says the money could be spent if the Armed Services Board of Contract Appeals has made a decision as to the amount, if any, owed to the contractor from the contingency fund, and if a judicial review, or appeal, has also been completed. Senator PROXMIRE's press release says that the Lockheed claim has been before the ASBCA since early this year, and it should be decided quickly since this is an administrative board.

However, the estimates I have received indicate that an ASBCA decision could not be reached before mid-1971 at the earliest—some 6 months after the $200 million would have been required for the uninterrupted production of the C–5A. Then if the time required for an appeal decision by the Court of Claims is added, the final decision could not come before mid-1973.

Also contained in the press release from the distinguished senior Senator from Wisconsin is a statement about the "Pentagon's penchant to roll over and play dead in the face of complaints from Lockheed." This implication about the Pentagon certainly is not borne out by the facts as we know them today.

Lockheed already has had to declare losses of $290 million on the four military contracts where it has had problems—hardly an inconsequential result for a corporation that has a net worth of about $325 million. And it is hardly an indication that the Pentagon has been excessively permissive in its treatment of Lockheed or that it is overlooking its responsibility in guarding the public interest.

My last comment on this subject for the moment deals with yet another C–5 "news" story written by Bernard Nossiter, which appeared in the Washington Post this morning and where the distinguished Senator from Wisconsin has placed in the RECORD. It is strange indeed that this story should appear on the eve of the introduction of a new C–5 amendment and just prior to the Senate debate and vote. It is particularly strange when one considers that the circumstances this story describes occurred 19 months ago, and then was described and discussed in the well publicized Whittaker report 13 months ago.

But suddenly, reporter Nossiter, with superb timing, discovered this horrible situation just yesterday.

Had he taken the time to read the July 1969 C–5 report from Assistant Air Force Secretary Philip Whittaker, he would not have found it necessary to wait until now to write about it.

Then Mr. Nossiter claims that an "Air Force calculation" indicates a contract wording change made in January of 1969 would have a favorable effect to Lockheed of $295 million under a 115-airplane order. He did have the courtesy to say that Lockheed disputes this, but I am still waiting to hear who in the Air Force made such a calculation. I just learned this afternoon of an Air Force statement which also denies any favorable financial effect for Lockheed.

Mr. President, I read the Air Force statement:

AIR FORCE STATEMENT RELEASED AUGUST 20 BY DEPARTMENT OF DEFENSE

Any allegation that a contract change covering the C–5 has been previously undisclosed is totally false. It was addressed in the Whittaker Report of July 1969 on page 20 and page 2–7 and even before that the effect of the supplemental agreement on the repricing formula was addressed in detail before Congress during April, May and June of 1969. The contract documents themselves have been made available on request to anyone who asked to see them so you can see that it is far from a new issue.

Supplemental Agreement 235 is the agreement executed in January, 1969, in which Air Force funded advance buys for 23 Run B aircraft. That agreement, as has been available to the Congress and the press for many months, changed the wording of the contract as it affects the repricing formula to insure that the contract language actually and accurately reflected the intent of the contract. The word change in no way altered the amount of money to which Lockheed would be entitled under the repricing formula.

It did provide for spreading the repricing adjustment over the total production buy. In other words, it changed the timing of repricing and it has allowed the payment of interim repricing adjustments.

I should remind Senators at this time that reporter Nossiter is the same reporter who wrote two stories for the Washington Post last year in which he said the Air Force had provided a special agreement for Lockheed. This was a reference to the inclusion of the repricing clause in the C–5 contract, and it led to the often repeated allegations of a "golden handshake" and a "sweetheart contract," with all their innuendos of connivance and sly agreements.

The only trouble with this "special agreement" claim by Mr. Nossiter is that it is totally untrue. For we had repeated statements from both the Air Force and Lockheed that the repricing clause was offered identically to all three competitor companies prior to the C–5 contract award—hardly a special agreement for Lockheed. But the Air Force and Lockheed have had to live for more than a year with the constant repetition of the "golden handshake" allegation—all based on complete falsehood. Fortunately, most reporting on the C–5 of late has been balanced and objective, and has avoided severe distortions and untruths. I hope we will not have another round of biased criticism of the C–5 from Mr. Nossiter or from any other source as we prepare for Senate debate on the latest C–5 contract.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. TALMADGE. Yes; I am delighted to yield to my friend from Wisconsin.

Mr. PROXMIRE. Mr. President, with respect to the Senator's last point—there are a number of points here I would like to go into at a little later time, but with respect to the last point, in connection with the story in the Washington Post this morning, the Senator indicated, as I understood him, that this was something that had been disclosed a long time ago, with the Whittaker report.

I have studied the Whittaker report and discussed it with Mr. Whittaker at length, and while it is true that the report discussed the repricing formula, there was no analysis of what this interpretation would mean in dollars and cents.

I put a report into the RECORD today showing that under the initial interpretation of the program, the Lockheed loss would have been $580 million, and then, under the combined ceiling which they agreed to, it would have been $295 million.

As I say, it is true they did let us know there was this repricing formula, and so forth, but the dollars-and-cents significance of this new interpretation was not disclosed at that point.

The change in language proposed by the Senator from Georgia was for more than what he has just called merely a more accurate reflection of the intent of the contract. It was exactly a $295 million change. I repeat, a $295 million change, and that is a lot of taxpayers' dollars.

Mr. TALMADGE. I point out to the Senator that on May 16, 1969, the Senator himself made a speech on the floor of the U.S. Senate in which he addressed himself to that particular repricing formula. So apparently the Senator from Wisconsin himself was aware of it more than a year ago.

Mr. PROXMIRE. Oh yes, we knew all about the formula. As I say, we were well aware of the repricing formula. We complained about it often and consistently, on the Senate floor, in committee, and elsewhere.

What I am talking about is this particular dollars-and-cents interpretation of that repricing formula, the supplemental agreement. That is something that was just disclosed, and is new as far as I am concerned.

Mr. TALMADGE. The Whittaker report itself, on page 20, the third paragraph, reads:

> A number of other ambiguities exist in relation to the price adjustment clause. Examples include: (1) intended sequential or substitutional use of the formula factors of 1.5 and 2.0 (see attachment for formula), and (2) the extent to which exercising the Run B option in January 1969 triggered the repricing. The Supplemental Agreement which exercised the Run B option resolved an earlier ambiguity in Lockheed's favor by specifying that the price adjustment clause would adjust a single contract target/ceiling for RDT&E. Run A and Run B rather than adjusting only the Run B target/ceiling.

Mr. PROXMIRE. That is a general description of it, of course, but without the implications, without the analysis, without letting us know the significance of it in terms of dollars and cents.

Mr. TALMADGE. That is, without the law student's analysis of it that was suddenly drafted. It was disclosed more than a year ago.

Mr. PROXMIRE. No; that is the Air Force's own analysis. I do not have any law student's analysis here; I hold in my hand the Air Force's own analysis, which, as I say, shows a $295 million difference.

Mr. TALMADGE. Who in the Air Force made that analysis? I just quoted a statement from the Air Force released just today that contradicts that analysis, and put in in the RECORD.

Mr. PROXMIRE. Well, as I say, I put in the RECORD earlier today this document which comes from the Air Force, and I identified it.

Mr. TALMADGE. The Senator did not disclose his source. Mine presumably was released by the Secretary of Defense, or the Secretary of the Air Force. Is it a former Air Force employee that the Senator is quoting from, who is no longer employed by the Air Force?

Mr. PROXMIRE. This was an analysis, which we shall do our best to identify further, but at the present moment let me say it has been given to me on the basis of its being an official Air Force cost analysis. It is identified as chart 14, SAFFMS, June 1969. That means it was Colonel Pewitt's chart. It was included in a report from Mr. Thomas H. Nielsen to Mr. Whittaker. But the dollars and cents were not disclosed.

Mr. TALMADGE. I do not know what source the Senator is quoting from, but the statement I read was issued by the Department of Defense today, and I assume a release from the Department of Defense carries the integrity of the Secretary of Defense with it. He is the highest authority in the Defense Department.

Mr. PROXMIRE. Does the Senator deny that this change in language amounted to a $295 million change for the benefit of Lockheed?

Mr. TALMADGE. I quoted the Secretary of Defense in denying it, and I presume he knows what he is talking about.

Mr. President, the Senator from Wisconsin finds himself in a position that is contrary to the President of the United States, contrary to the Secretary of Defense, contrary to the Deputy Secretary of Defense, contrary to the Armed Services Committee of the House of Representatives, contrary to the views of the House of Representatives, and contrary to the views of the Armed Services Committee of the U.S. Senate.

Mr. PROXMIRE. May I say to the Senator——

Mr. TALMADGE. The Senator has a right to his views, but apparently this overwhelming group of experts in the field who deal with military affairs think the Senator is in error.

Mr. PROXMIRE. Why does not the Senator throw in the Appropriations Committee, the Supreme Court, and the Georgia Legislature?

Mr. TALMADGE. Because they had nothing to do with it, they did not consider it.

Mr. PROXMIRE. Of course they did not. What did the President of the United States have to do with this?

Mr. TALMADGE. The President of the United States, is the boss of the Defense Department.

Mr. PROXMIRE. That may well be, but the President of the United States has made no study of this matter.

Mr. TALMADGE. I presume the President of the United States knows what the Defense Department is doing, and if he was dissatisfied he would remove the Secretary of Defense.

Mr. PROXMIRE. There is certainly no presumption that the President of the United States makes a study of this kind of detail.

Mr. TALMADGE. I presume the Secretary of Defense is appointed by the President of the United States, and holds office at the pleasure of the President of the United States, and if he makes a statement, he is speaking in behalf of the President of the United States.

Mr. PROXMIRE. I do not deny that. I simply say that the President of the United States undoubtedly, as we all know, had no personal knowledge of this kind of detail. President Nixon is a very competent man, but——

Mr. TALMADGE. I do not know about that, but I assume if he disagreed, the present Secretary of Defense would no longer be Secretary of Defense.

Mr. PROXMIRE. Then I suppose we should hold the President of the United States responsible for the $2 billion overrun. We were told by the Air Force there was no overrun at all. The Appropriations Committee was assured there would be no overrun on the C–5A in March of 1968, when they knew there would be. Is the President of the United States responsible for that? Can we say that President Johnson, at that time, was not telling the truth? Can he be held personally responsible for that? Of course not.

Mr. TALMADGE. The President of the United States has had made a study of all the overruns in the military. Unfortunately, there have been too many. The overruns of Lockheed have not been too many, however. I am sure the Senator from Wisconsin has studied Lockheed's history of overruns for the past 50 years. They have had the fewest overruns of any defense contractor in America.

Mr. PROXMIRE. The Senator can make that kind of a statement, but the fact remains that this is not a modest overrun.

Mr. TALMADGE. I agree. The Senator from Wisconsin is opposed to inflation, and so am I. But this was a new and novel contract that was dictated by the Secretary of Defense, and it had never been tried before. Fortunately, this administration has abandoned it. I think it was a bad contract for the Government and it was a bad contract for Lockheed. Certainly, if they have lost $290 million on it, it was a bad contract for them.

Mr. PROXMIRE. May I say to the Senator that I was the first one to call attention to the overrun on this contract. Furthermore, I was one of the first to call upon the administration to aban-

don the contract, which they finally have abandoned. The Air Force had maintained it was an excellent type of contract.

Nevertheless, the fact is that under this contract there was a target price that has been exceeded; there was—far above the target price—a ceiling price that has been exceeded. There is now this readjustment, which the Senator and I have been discussing, which adds another $214 million; and in addition to all this, they want $800 million. If that is not a big overrun, I would like to know what is.

Mr. TALMADGE. I commend the Senator from Wisconsin for his work in this field. Even though he is not a member of the Armed Services Committee, which has jurisdiction in matters of this kind, he has explored this activity with much tenacity for several years, and I compliment him for it.

But what I part company with the Senator from Wisconsin about is the fact that he wants to set himself up—and to set the U.S. Senate up—as judge and jury of a disputed claim between Lockheed and the U.S. Air Force.

Mr. PROXMIRE. Quite the contrary. The position of the Senator from Wisconsin is that this should be decided by the Defense Department's own board, and on the basis of that decision——

Mr. TALMADGE. But the Senator from Wisconsin put conditions in his amendment that are absolutely unattainable in this fiscal year, and the Senator should know it.

Mr. PROXMIRE. I certainly do not know that. The fact is that this has been before the board since January 9 of this year. They have had ample time to work on it. Secretary Packard has given it top priority. This is an administrative board. It is true that it is a complex problem, but it certainly should be able to be resolved in 6, 7, or 8 months.

Mr. TALMADGE. The Senator from Wisconsin, of course, is aware that the contract officer's decision was made in December 1969. The complaint appealing the decision was filed before ASBCA in January of 1970. The answer to the complaint was filed in March 1970.

I read from a schedule of proceedings of the ASBCA:

Rule 4 process: Air Force files on C5A compiled, transferred to Lockheed, documents and files studied by Lockheed, April to July of this year.

Discovery motions prepared and filed by both parties. Probable date of submission, September to October 1970.

Compliance with discovery requests will take about 60 days.

Study of discovery data and preparation for trial, about 60 days. The trial will take about 2 weeks to one month. Preparation of briefs will take about 60 days. Preparation of reply briefs, about 30 days.

Board deliberates and writes its opinion, about 60 days.

Time required, under the most optimum conditions, from date that discovery motions are filed, 10 months.

That takes us beyond this fiscal year, beyond the time of the authorization being considered here. It will have expired. And that does not even include any appeals to any court in the land. That precludes any right for judicial determination.

Mr. PROXMIRE. I disagree with the Senator on two points.

No. 1 is that it would take anything like this long if it is given real priority. It is true that they can make the charge that it would take many months, but when it is given top priority, they can do it faster.

The other point, the principal point, is that what the Senator is saying is that since it is in dispute, give them the $200 million; give them $200 million above and beyond what they have coming under the contract; give it away.

Mr. TALMADGE. I am saying that this is a dispute between Lockheed, on one hand, and the Air Force, on the other. I do not know who is right. There may be some errors on both sides. But it gives them an opportunity to determine it by negotiation.

The Senator says that the Board can complete action on this matter very quickly. I quote from notes on a conversation with Mr. Richard C. Solibakke, chairman of the Armed Services Board of Contract Appeals.

The first item discussed was the question of whether both parties to a case before the ASBCA has the right to appeal to the Court of Claims. The answer is that both parties do have such a right, but a Government appeal almost never occurs. In effect, the ASBCA is acting for the Secretary of Defense, and therefore an appeal by the Department of Defense would be in this sense an appeal from the Department of Defense's own decision. However, the Department of Defense does occasionally appeal the decision, sometimes for the purpose of having the decision reviewed by a higher judicial body, for the sake of appearances as well as for the purpose of having a stronger position.

Mr. Solibakke estimated that less than one percent of ASBCA cases are appealed by the DOD.

Mr. PROXMIRE. Mr. President, will the Senator yield at that point?

Mr. TALMADGE. Let me finish my statement.

The next question discussed was the average length of time required by the ASBCA to reach a decision. Mr. Solibakke indicated that this, of course, depended on the complexity of the case and the volume of material that had to be reviewed. He said he had known of cases that were decided by the ASBCA in less than one and a half years from the date of the case being docketed, but the average time required would be over two years.

In the C–5A case now before the ASBCA, he stated that his opinion is that the minimum time required for an ASBCA decision would be approximately eight months from this date, and that could only occur if extremely expeditious handling were given to the case. He felt that the urgency and the importance of the C–5A case is such that all parties would give expeditious handling to the procedures, but that the procedures would still require, in his opinion, a minimum of another eight months.

I yield.

Mr. PROXMIRE. The first part of what the Senator is telling us reenforces the argument I have made, that in the event that the board finds in favor of Lockheed, that is the end of it. There is no further appeal; there is no further delay. The Defense Department, as he pointed out, rarely—in 1 percent of the cases——

Mr. TALMADGE. But both parties do have the right of appeal. The Senator wants to close the door not only on the time element but also on the right of either party to appeal his case.

Mr. PROXMIRE. We are not closing the door.

Mr. TALMADGE. The Senator certainly is. The Senator is setting up a condition that is impossible to achieve.

Mr. PROXMIRE. Lockheed does not have any right to that money.

Mr. TALMADGE. The Senator says so, but others say otherwise.

We are setting up conditions under the committee bill the Armed Services Committee of the U.S. Senate and the Armed Services Committee of the House of Representatives must approve the expenditure of the $200 million. Very firm conditions are written into the act, as the Senator knows.

Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the committee report, beginning on page 15, "C–5A Aircraft Program," extending through pages 16 and 17, down to "Safeguard Antiballistic Missile System."

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

C–5A AIRCRAFT PROGRAM

FUNDING REQUEST

The fiscal year 1971 budget request in this legislation for the C–5A aircraft totals $622.2 million constituting the following elements:

(1) $344.4 million for unfunded prior year production commitments;

(2) $200 million in contingency funds. This amount represents a sum in excess of the amount required to fund the contract to ceiling price as interpreted by the Air Force. This interpretation is not agreed to by the contractor. The Committee takes no position on the merits of the contractual disagreement;

(3) $66.2 million for initial spares and $11.6 for research and development. It might be noted that the fiscal year 1971 request for the C–5A also includes an item of $1.4 million for military construction not contained in this bill.

COMMITTEE RECOMMENDATION

The Committee recommends approval of all the budget items relating to the C–5A in the fiscal year 1971 request totaling $622.2 million, subject to the condition, as explained below, that the $200 million will not be obligated until the Secretary of Defense has presented a plan for the use of $200 million to the House and Senate Committees on Armed Services and these bodies have approved such a plan.

The basic issue for the Committee was whether the need for the C–5A aircraft beyond the number of about 30 (which would be delivered by December 31, 1970 under the present contract funding as interpreted by the Department of Defense) was sufficiently great to justify the "contingency" funding of $200 million. It was the view of the majority of the Committee that despite the financial problems of the contractor and the necessary extraordinary contracting procedures this program should not be allowed to cease shortly after December 31, 1970. The fact is that additional C–5As are essential for national defense purposes. The basis for the Committee's decision therefore is the essential need of this aircraft.

RESTRICTIVE COMMITTEE LANGUAGE

The Committee adopted two highly significant language provisions not contained in the House version of the bill concerning the C–5A funds for fiscal year 1971. The first restriction relates to the use of the $200 million in contingency funds until their use

has been approved by the Senate and House Committees on Armed Services.

Except for approximately $82 million which will be requested in fiscal year 1972 for the C–5A program, the remaining required funding will be in excess of the contract obligation as interpreted by the Air Force. As previously indicated the contractor does not agree with the Departmental interpretation.

In this connection it should be noted that the funding for the C–5A program up to fiscal year 1971 (fiscal year 1970 and prior) totals approximately $3.4 billion. The Department of Defense estimates the cost of completing the remainder of the 81 plane program will be approximately an additional $800 million over and above all funds approved prior to fiscal year 1970 and the $344.4 million in this bill. The $200 million in this bill therefore represents only a portion of the anticipated costs of completing the program.

The Committee in Section 504(a) provides that the $200 million will not be obligated until the Secretary of Defense has presented a plan that has been approved by the House and Senate Committees on Armed Services. In effect this means that the proposed contractual arrangement both for the use of the $200 million and the completion of the entire C–5A program will require approval of the two Committees. Through this method there will be the opportunity of a complete review by the Committees on this problem.

The second Committee language provision provides for strict statutory guidelines which will insure that the $200 million in contingency funding will be used only for the C–5A program insofar as the contractor is concerned and not possibly intermingled or diverted to other uses among the various other programs of the company. The bill in section 504(b) expressly excludes other uses for the $200 million.

DISCUSSION OF COMMITTEE POSITION

The basic premise of the Committee position is the fact that the C–5A aircraft is needed as an essential element of our national defense because of its unique role in any deployment plans.

The original C–5A program formulated in the early 1960's contemplated six squadrons totaling 120 planes. Subsequently this program, as a result of increased cost and other factors, was reduced to four squadrons or 81 planes which is the present program. In November 1969 the Secretary of Defense announced the program would be held to 81.

The C–5A was designed for the specific role of carrying the outsized equipment of combat divisions that no other aircraft can transport. These include such items as tanks, self-propelled Howitzers, and other equipment of mechanized or armored divisions. The items which will be transported by the C–5A constitute about 75 percent of the heavy firepower of the armored divisions. The C–5A will be used as a complement to other types of aircraft which will transport the troops and lighter equipment of the fighting units.

The C–5A is the largest aircraft ever built. As an example of a typical deployment sortie to Europe, each C–5A would carry 75 tons of outsized equipment, an additional 6 tons of bulk cargo, with 81 men.

The number of about 81 aircraft is considered the minimum number essential to constitute a meaningful military capability.

POSSIBLE ALTERNATIVES

The Department of Defense has made it clear the funding request of $344.4 million would finance the C–5A program for only approximately the first 6 months of fiscal year 1971. Without additional funding beyond the $344.4 million, the C–5A program would substantially cease about December 31, 1970, because of the severe financial condition of the company. The $200 million in contingency funds would be sufficient to finance the C–5A program for the latter 6 months of fiscal year 1971. Under these circumstances the following alternatives present themselves insofar as the fiscal year 1971 request is concerned:

(1) If no funding is authorized for fiscal year 1971, the Air Force would receive only 17 aircraft for appropriated funds of about $3.4 billion;

(2) The Air Force estimates that the fiscal year 1971 fund request of $344.4 million for prior year unfunded deficiencies will allow continuation of the program through December 1970 and allow the completion of 13 additional aircraft for a total of 30. It should be noted that the Committee voted on the matter of funding only the $344.4 million and deleting the $200 million in contingency funds. This proposed amendment was not adopted by the Committee;

(3) The $200 million in contingency funds would be required for funding during the remaining 6 months of fiscal year 1971 and would allow scheduled completion of 12 additional aircraft for a total of 42 aircraft scheduled to be completed by the end of fiscal year 1971;

(4) The Committee also considered the alternative of another aircraft program in view of the cost of the C–5A. Testimony was received indicating that no other aircraft could perform the unique role of the C–5A. Moreover, the cost of initiating or reopening new production lines would be financially impractical as compared to the ongoing C–5A program.

The crucial decision of the Committee therefore is the recognition of the need for the aircraft and the necessity for continuing the program if a reasonable solution can be found to provide the additional financial resources to complete the program.

EFFECT ON UNIT COST OF ADDITIONAL NUMBERS

The following figures are persuasive for continuing the C–5A program with respect to the unit cost per aircraft under the various funding alternatives:

(1) If no additional funding is authorized we will have 17 aircraft at a cost of about $3.4 billion or approximately $200 million per aircraft;

(2) If additional funding of only $334.4 million is authorized, for fiscal year 1971 approximately 30 aircraft will be delivered at a cost of approximately $3.75 billion or $125 million per aircraft;

(3) If the entire $544.4 million in the fiscal year 1971 request is approved for a total of $3.95 billion, it will result in 42 planes with the cost per plane approximately $94 million;

(4) If a total of 81 aircraft are procured, the total cost is estimated to be approximately $4.585 billion or a unit cost of approximately $56 million each. These totals include an amount for spares, support, and R. & D. for this program.

In other words, after the $344.4 million owned under the contract is authorized, additional funds of $800 million will be required for 50 additional planes resulting in an average cost of about $16 million each for the remaining planes.

TECHNICAL PROBLEMS

The Committee recognized the current technical problems with this aircraft and considered the potential cost and performance impact. The Committee will continue to maintain the program under careful scrutiny as further testing is conducted.

The Deputy Secretary of Defense anticipates that the various technical problems that have arisen in connection with the plane can be satisfactorily resolved.

Mr. TALMADGE. Those are the conditions under which the money could be paid, and only those conditions. They are very stringent, much more stringent than those adopted by the House.

Mr. PROXMIRE. Regardless of the condition, what the committee said is that they were going to get it—under those conditions it is true, but whether they have a right to it or not.

Mr. TALMADGE. This involves two parties who have dealt before in contracts—Lockheed and the Defense Department—for 50 years. There is an argument. The Senator has had arguments; so have I. We contend one thing; the opposing party contends something else. Frequently, we can get together and adjust those arguments. It is possible that that can be done here. But the Senator does not want that sort of settlement. He sets up two conditions, neither of which Lockheed can achieve.

Mr. PROXMIRE. The answer is that Lockheed just does not have a right to the money.

Mr. TALMADGE. Of course, that is the Senator's opinion. He has made it clear.

Mr. PROXMIRE. That is the Air Force's opinion.

Mr. TALMADGE. He has made it clear this year, last year, and in previous years.

Mr. PROXMIRE. That is the Air Force's opinion.

Mr. TALMADGE. But other Members of the Senate think otherwise.

Mr. PROXMIRE. And that is the committee's opinion.

Mr. TALMADGE. No; it is not the committee's opinion. The committee sets up the conditions.

Mr. PROXMIRE. I refer the Senator to page 18. It indicates clearer the $800 million will be required over and above the contract.

Mr. TALMADGE. The Senator is seeking to change what the Senate committee did.

Mr. PROXMIRE. That is exactly right. We are going to add additional conditions to protect the taxpayers so that they do not get it unless they have it coming, or it is necessary in order to keep the planes in production, to keep the assembly lines going, and to keep people at work.

What could be fairer than that?

Mr TALMADGE. The Senator has made his views quite clear on previous evenings, on previous days, and in previous years.

Mr. PROXMIRE. I thank the Senator. As I say, he has made his case. The Senator from Pennsylvania (Mr. SCHWEIKER) and I will respond in some detail later. This colloquy has been most helpful. The Senator has been able to make his rebuttal to our speeches tonight. I believe that we can have a clearer and more useful debate on this subject at a later time.

I thank the Senator from Georgia very much

Mr. TALMADGE. I thank the Senator from Wisconsin.

Mr. President, I yield the floor.

TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that there be a period for the transaction routine morning business, with statements therein limited to 3 minutes.

The PRESIDING OFFICER (Mr.

ALLEN). Without objection, it is so ordered.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following communication and letters, which were referred as indicated:

PROPOSED AMENDMENT TO THE BUDGET, 1971, FOR THE DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE (S. DOC. NO. 91–97)

A communication from the President of the United States, transmitting a proposed amendment to the budget for the fiscal year 1971, in the amount of $5,140,000, for the Department of Health, Education, and Welfare (with an accompanying paper); to the Committee on Appropriations, and ordered to be printed.

REPORT ON DEPARTMENT OF ARMY RESEARCH AND DEVELOPMENT CONTRACTS

A letter from the Deputy Assistant Secretary of the Army, Research and Development, transmitting, pursuant to law, a report on Army research and development contracts for $50,000 or more awarded during the period January 1, 1970, through June 1970 (with an accompanying report); to the Committee on Armed Services.

REPORT OF COMMISSION ON CIVIL RIGHTS

A letter from the Chairman, U.S. Commission on Civil Rights, transmitting, pursuant to law, a report of the Commission on the ethnic isolation of Mexican Americans in the public schools of the Southwest, dated August 1970 (with an accompanying report); to the Committee on the Judiciary.

PETITION

A petition was laid before the Senate and referred as indicated:

By the ACTING PRESIDENT pro tempore (Mr. ALLEN):

The petition of James A. Tavolarri, of Youngstown, Ohio, praying for the enactment of legislation relating to revenue sharing; to the Committee on Finance.

ENROLLED BILLS SIGNED

The ACTING PRESIDENT pro tempore (Mr. ALLEN) announced that on today, August 20, 1970, he signed the following enrolled bills, which had previously been signed by the Speaker of the House of Representatives:

H.R. 2849. An act for the relief of Anan Eldredge;

H.R. 6265. An act to provide that a headstone or marker be furnished at Government expense for the unmarked grave of any Medal of Honor recipient;

H.R. 8662. An act to authorize command of the USS *Constitution* (IX–21) by retired officers of the U.S. Navy;

H.R. 9052. An act to amend section 716 of title 10, United States Code, to authorize the interservice transfers of officers of the Coast Guard;

H.R. 12959. An act for the relief of Gloria Jara Haase;

H.R. 13195. An act to amend title 10 of the United States Code to provide that U.S. flags may be presented to parents of deceased servicemen;

H.R. 13383. An act for the relief of Mrs. Marcella Coslovich Fabretto;

H.R. 13712. An act for the relief of Vincenzo Pellicano; and

H.R. 15374. An act to amend section 355 of the Revised Statutes, as amended, concerning approval by the Attorney General of the title to lands acquired for or on behalf of the United States, and for other purposes.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. SPARKMAN, from the Committee on Banking and Currency, with an amendment:

S. 3330 A bill to authorize rural housing loans to lessees of nonfarm rural land, and for other purposes (Rept. No. 91–1129); and

S. 3775. A bill to amend section 1811 of title 38, United States Code, to authorize the Veterans' Administration to make direct loans to any veteran who is determined to be eligible for assistance in acquiring specially adapted housing under chapter 21 of title 38, United States Code (Rept. No. 91–1130).

By Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, without amendment:

H R. 15351. An act to authorize additional funds for the operation of the Franklin Delano Roosevelt Memorial Commission (Rept. No. 91–1131);

S. Res. 440. Resolution increasing the limit of expenditures for hearings before the Committee on Armed Services;

S. Res. 448. Resolution authorizing the Committee on Interior and Insular Affairs to expend additional funds from the contingent fund of the Senate;

S. Res. 451. Resolution to authorize the Committee on Finance to expend $10,000 in addition to the amount, and for the same purpose, specified in section 134(a) of the Legislative Reorganization Act of 1946; and

H. Con. Res. 679. Concurrent resolution authorizing the printing of additional copies of "Education in Israel" for use of the Select Committee on Education (Rept. No. 91–1133).

By Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, with amendments:

S Res. 442. Resolution to investigate matters pertaining to constitutional rights (Rept. No. 91–1132).

By Mr. McCLELLAN, from the Committee on Appropriations, with amendments:

H.R. 17575. An act making appropriations for the Departments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending June 30, 1971, and for other purposes (Rept. No. 91–1135).

EMPLOYMENT AND TRAINING OPPORTUNITIES ACT OF 1970—REPORT OF A COMMITTEE—SUPPLEMENTAL AND INDIVIDUAL VIEWS (S. REPT. NO. 91–1136)

Mr. NELSON. Mr. President, from the Committee on Labor and Public Welfare, I report favorably, with an amendment, the bill (S. 3867) to assure opportunities for employment and training to unemployed and underemployed persons, to assist States and local communities in providing needed public services, and for other purposes. I ask unanimous consent that the minority on the committee have until the conclusion of business today to file supplementary and individual views.

The PRESIDING OFFICER (Mr. HUGHES). The report will be received and the bill will be placed on the calendar; and, without objection, the report will be printed, as requested by the Senator from Wisconsin.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SPARKMAN:

S. 4267. A bill to broaden the coverage of section 242 of the National Housing Act to include proprietary hospitals; to the Committee on Banking and Currency.

(The remarks of Mr. SPARKMAN when he introduced the bill appear below under the appropriate heading.)

By Mr. SPARKMAN (for himself and Mr. BENNETT):

S. 4268. A bill to amend the Export-Import Bank Act of 1945, as amended, to allow for greater expansion of the export trade of the United States, to exclude Bank receipts and disbursements from the budget of the U.S. Government, and for other purposes; to the Committee on Banking and Currency.

(The remarks of Mr. SPARKMAN when he introduced the bill appear below under the appropriate heading.)

By Mr. FONG (by request):

S. 4269. A bill to provide for employment within the Environmental Protection Agency of commissioned officers of the Public Health Service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. FONG (for himself, Mr. BOGGS, and Mr. STEVENS):

S. 4270. A bill to amend title 5, United States Code, to direct the President to adjust the rates for the statutory pay systems, to establish an Advisory Committee on Federal Salaries, and for other purposes; to the Committee on Post Office and Civil Service.

(The remarks of Mr. FONG when he introduced the bill appear below under the appropriate heading.)

By Mr. McGEE.

S. 4271. A bill for the relief of Reva J. Cullen; to the Committee on the Judiciary.

By Mr. MAGNUSON:

S. 4272. A bill to assist in meeting national housing goals by authorizing the Securities and Exchange Commission to permit companies subject to the Public Utility Holding Company Act of 1935 to provide housing for persons of low and moderate income; to the Committee on Banking and Currency.

(The remarks of Mr. MAGNUSON when he introduced the bill appear below under the appropriate heading.)

By Mr. ALLOTT (for himself and Mr. JACKSON) (by request):

S. 4273. A bill to modify the boundaries of the Coeur d'Alene, Nezperce, Payette, Boise, Sawtooth, and Targhee National Forests in the State of Idaho, and for other purposes; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. ALLOTT when he introduced the bill appear earlier in the RECORD under the appropriate heading.)

S. 4267—INTRODUCTION OF A BILL TO EXTEND TO PROPRIETARY HOSPITALS HUD MORTGAGE INSURANCE

Mr. SPARKMAN. Mr. President, I am introducing a bill to amend section 242 of the National Housing Act to extend to proprietary hospitals HUD mortgage insurance authority, now available to help finance the construction and modernization of nonprofit hospitals.

This new authority is needed to help the private sector of the health industry meet the financial requirements and improve the efficiency of our health care delivery system.

The Department of Health, Education, and Welfare estimates that present hospital construction and modernization needs would cost in excess of $11 billion. Traditional sources of financing—philanthropy and government—cannot meet this need. The private sector and investor sources should be encouraged to participate in the expansion and improvement of our health facilities.

The existing provisions of the Housing Act relating to mortgage insurance for health facilities provide that both proprietary and nonprofit nursing homes and intermediate care facilities, as well as nonprofit hospitals, are eligible for the benefits of the act. This bill would simply extend that eligibility to proprietary hospitals.

There are approximately 1,000 investor-owned hospitals in the United States, representing about 20 percent of the nongovernment hospitals. In some areas of the Nation, investor-owned hospitals represent closer to 100 percent of the available hospital care because communities have been too poor to finance new hospitals or have grown too rapidly to keep up with exploding hospital needs. It is inequitable and unreasonable not to allow these facilities to apply for mortgage insurance in connection with expenditures for modernization or needed expansion.

The legislation which I am introducing requires that the designated State health agency certify the need for the capital expenditure prior to approval by the Secretary of Housing and Urban Development for mortgage insurance. This will assure proper planning and quality of care in hospital expansion programs.

The PRESIDING OFFICER (Mr. EAGLETON). The bill will be received and appropriately referred.

The bill (S. 4267) to broaden the coverage of section 242 of the National Housing Act to include proprietary hospitals, introduced by Mr. SPARKMAN, was received, read twice by its title and referred to the Committee on Banking and Currency.

S. 4268—INTRODUCTION OF A BILL TO FACILITATE GREATER EXPANSION OF THE EXPORT TRADE OF THE UNITED STATES

Mr. SPARKMAN. Mr. President, I introduce for myself and Mr. BENNETT, a bill to amend the Export-Import Bank Act in order to facilitate greater expansion of the export trade of the United States.

I ask unanimous consent that the bill, together with an explanatory statement of the bill, be printed in the RECORD.

The PRESIDING OFFICER (Mr. EAGLETON). The bill will be received and appropriately referred; and, without objection, the bill and explanatory statement will be printed in the RECORD.

The bill (S. 4268) to amend the Export-Import Bank Act of 1945, as amended, to allow for greater expansion of the export trade of the United States, to exclude Bank receipts and disbursements from the budget of the U.S. Government, and for other purposes, introduced by Mr. SPARKMAN, for himself and Mr. BENNETT, was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

S. 4268

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Export-Import Bank Act of 1945, as amended (12 U.S.C. 635), be and the same is hereby further amended as follows:

By adding at the end of Section 2(a):

"The receipts and disbursements of the Bank in the discharge of its functions shall not be included in the totals of The Budget of the United States Government and shall be exempt from any annual expenditure and net lending (budget outlays) limitations imposed on The Budget of the United States Government. In accordance with the provisions of the Government Corporation Control Act, as amended, the President shall transmit annually to the Congress a budget for program activities and for administrative expenses of the Bank."

The material submitted by Mr. SPARKMAN is as follows:

EXPLANATORY STATEMENT

World trade is expanding at an average annual rate of 9.1 percent, but international liquidity is only increasing at 2.9 percent per year. It is obvious, therefore, that financing becomes an ever-important factor each year.

The proposed legislation would strengthen significantly the ability of American exporters to effectively compete with their foreign counterparts. It thus offers an important means of improving the nation's balance of international payments, both short range and long term.

The proposed bill would remove the operations of the Export-Import Bank of the United States from computations of The Budget of the United States Government and thus also from any annual expenditure and net lending limitations imposed on The Budget. Notwithstanding the proposed change in recording the Bank's operations, its activities would continue to be subject to Executive Branch control and annual review by the Congress. The President of the United States would transmit annually to the Congress a budget for program activities and for administrative expenses of the Bank.

The Bank's basic legislation, the Export-Import Bank Act, was designed by the Congress to provide the Bank with the flexibility of financing its operations in the most economical and manageable manner as necessary to meet the changing needs of the export industry. Until recently the Bank's facilities were required principally to assume risks and terms of repayment that were beyond the capability of the private sector. Under current and projected conditions, the Bank's facilities are required also to assure the export community of continuing liquidity for the financing of sales abroad and for making financing available at competitive rates when there is demonstrated need.

The important element of the flexibility is negated, however, by the inclusion of the Bank's activities in The Budget. The magnitude of need for Eximbank participation, indeed, often runs counter-cyclically with the alternating policies of budgetary restraint and relaxation.

By removing the operations of Eximbank from the constraints imposed by the Unified Budget, the Bank would be in a position to more adequately respond to the demonstrated need for its participation in financing export transactions, to more efficiently and economically manage its resources and authority, and, importantly, to establish a new program urgently needed for supporting those export transactions requiring short-term financing at competitive rates.

Exports provide the principal portion of the nation's receipts in its balance of international payments account. Achieving equilibrium, or preferably a surplus, in this account clearly requires an increase of exports at a rate considerably higher than current growth.

A portion of the nation's export business is defined as cash transactions; this segment, of course, makes an immediately beneficial contribution to the balance of international payments. Availability of cash for external purchase is directly subject to the ever-changing cost and supply of convertible currency in the purchasing country. Clearly the success of United States exporters in the international marketplace is directly influenced by these conditions and increasingly relies on the ability to extend credit.

A look at the composition of our trade, the nature of our customers, and the practices of our competition will explain this need for credit:

First, achieving our export expansion goals depends heavily on a rapid growth of sales abroad of "technology-intensive" manufactured goods—jet aircraft, nuclear power installations, petrochemical plants, computer complexes, and the like. Over half of our potential for increasing exports consists of these kinds of products. Few buyers, public or private, are able to pay cash for such purchases. The terms, cost of financing and its availability are frequently the most important factors in the purchaser's decision as to where and when he places his order.

Second, achieving our export expansion goals depends heavily also on the development of new markets. Reduction in multinational and bilateral development assistance shifts the burden of developing new markets in the lesser developed countries to the availability of export financing. In the industrialized countries, "pay as you earn" is the byword, and incremental increases in purchases of United States goods will require that the United States supplier provide an ever larger proportion of financing.

Third, achieving our export expansion goals requires that the total United States sales package continue to be competitive. Buyers are demanding credit terms that meet their needs, and our competitors from the other countries are meeting this demand with strong government support. Twenty-nine export credit institutions representing twenty-three countries, members of the Berne Union, an international export credit forum, report significant annual increases in the amounts of export credit they are supporting. United States exporters must have credit facilities to keep pace with or surpass their competitors.

Commercial banks are traditionally the principal source for financing of United States exports in short- and medium-term. Insurance companies, trusts and funds, too, participate in longer term transactions. For half a decade until 1968 our United States private financing sources gave United States exporters a clear advantage in the world markets.

The United States Government has for many years recognized that it has a role in export financing. It is well understood that the paramount purpose of any government financing facility is to supplement and not compete with private sources of financing, but certain aspects of international trade can be provided only by government participation. Shortage of liquidity in the commercial money markets, repayment terms beyond those which commercial sources are willing or able to extend, political risks which commercial financial institutions cannot be expected to assume, and competitive interest rates substantially below the internal domestic level are serious burdens that face this country's exporters today. These deficiencies can only be met by a well financed and soundly operated government facility.

The Export-Import Bank is the principal United States Government agency for financing the expansion of commercial exports. The Bank serves this purpose by making loans directly to overseas buyers of United States goods and services, by guaranteeing and insuring export transactions financed by others, and by loaning against export debt obligations held by commercial banks.

All of these Eximbank activities result in a 100 percent direct positive contribution to the United States balance of international payments. Eximbank's disbursements are paid to United States suppliers in the United States, but *all* repayments of financing extended or assisted by the Bank are *repaid into* this country *in dollars*.

Eximbank does not require appropriated funds. Existing authority granted by the Congress provides the means of financing either through the Department of the Treasury or outside of the Government through sales of its debt obligations. The sound operation of the Bank since its inception has earned a respected position in the capital markets in the United States and abroad.

Eximbank has in the past and will continue to use its resources effectively to supplement and not compete with private financial sources. Endorsement of the nation's private banking community attests to this true partnership operation.

In May 1969, in response to urgent and demonstrated need the Bank's management began a comprehensive overhaul of programs and activities. New forms of export credit insurance were devised. Guarantee facilities were revamped. Greater emphasis has been placed on active cooperation with private, international and public financial institutions at home and abroad. Intensive and continuing consultation with United States exporters and buyers abroad has revealed areas of cooperation hitherto untapped. Notably, the Bank has revised its direct lending activities to produce more sales for each dollar supplied.

Eximbank's direct loans under its current operation are now made only in combination with funds from private institutions, thereby freeing resources otherwise not available to the foreign buyer and moderating the cost to an acceptably competitive level. The Bank has expanded use of the financial guarantee program to now cover export loans extended by foreign as well as United States financial institutions. Relending credits today are used solely, but effectively, for trade expansion. Bank credits are being combined with private sources of funds in purchasing countries to achieve effective leverage on Eximbank's cash availabilities.

The Bank's redesigned medium-term commercial bank discount program has successfully encouraged larger numbers of commercial banks to engage in export financing. Extension of the program to cover short-term transactions has not been possible because of the budgetary constraints. Iron and steel, paper products, textiles, apparel, fertilizers, agricultural products, and consumer goods move on short-term financing account. With unified budgetary restraints removed, Eximbank could provide the kind of support demonstrably needed to counter the liquidity and high interest rate problems confronting traders in these commodities, and add materially to the expansion of this important segment of United States exports.

The Bank, since its inception, has authorized direct loans, guarantees and insurance producing some $35 billion of export sales. Out of its total volume of business, less than 1/10 of 1 percent is either in default or delinquent. This ability to "collect" on Eximbank obligations is an asset that should be fully exploited.

On every hand there is evidence that foreign competition is increasing and the nation's very thin balance of trade surplus is in danger of disappearing. Eximbank's ability to meet this rising need is now so constrained that its full usefulness cannot be brought into full play.

Under present budget concepts, Eximbank's net disbursements (defined as the difference between outlays resulting from direct lending programs and commercial bank export credit discount programs) and receipts (defined as the repayment of principal and interest on outstanding loans and so-called "sales of assets") impact the Federal budget as well as the Congressionally imposed budget outlay limitations.

Thus, while in 1968, after extensive hearings and consideration, the Congress authorized an increase in Eximbank total outstanding program activity from $9 billion to $13.5 billion, the newly imposed and supplemental budget constraints effectively prevent the Bank from supporting exports as clearly intended.

It is proposed, therefore, that the Congress enact legislation which would (a) remove crippling restraints on Eximbank's ability to fund its lending activity, and (b) make certain that commitments by the Bank do not aggravate future budget deficits or endanger desirable surpluses.

It has been alleged that an exemption of this kind for Eximbank would create a precedent for a similar exemption of other Government programs.

Actually, precedent does exist for removing certain activities from the budget—the Federal old age and survivors insurance fund, the Federal hospital insurance fund, the Federal disability insurance trust fund, the Federal National Mortgage Association, the Civil Service retirement fund, the Banks for Cooperatives Trust Fund, the Federal Intermediate Credit Banks Fund, and the Railroad Retirement Fund are useful examples.

The current proposal nonetheless does not rely on precedent, nor does it establish precedent. Eximbank's activities are strikingly dissimilar to other Government net lending activities. Eximbank's activities are key in providing a beneficial impact on the balance of international payments. It is the only effective mechanism for countering the export credit schemes of competitive nations. Its disbursements are uniquely different from normal Government expenditures. They are repaid with interest. Most Government programs, laudable as they may be, involve only a specific segment of the United States economy or population and are affected only by the conditions of the domestic economy. Eximbank's programs benefit nearly every segment of industry and the population and are directly responsive to world economic conditions primarily to meet competition from other exporting countries.

Further, a successful solution to the chronic balance of payments deficits strengthens the dollar and adds to the long-term economic health of the country.

Exempting Eximbank's net lending activities from the budget constraints as they are now defined would allow the Bank over the next several years to increases its net disbursements from non-appropriated funds. However, repayments of the loans plus interest and fees would, in the course of a relatively few years, equal disbursements under its programs, adding an additional element to the future fiscal strength of the country.

S. 4270—INTRODUCTION OF A BILL RELATING TO ADJUSTMENT OF RATES FOR THE STATUTORY PAY SYSTEMS UNDER TITLE 5, UNITED STATES CODE

Mr. FONG. Mr. President, on behalf of myself, the Senator from Delaware (Mr. BOGGS), and the Senator from Alaska (Mr. STEVENS), I introduce, for appropriate reference, a bill to amend title 5, United States Code, to direct the President to adjust the rates for the statutory pay systems, to establish an Advisory Committee on Federal Salaries, and for other purposes. I ask unanimous consent that a statement of purpose and justification for the bill be printed in the RECORD.

The PRESIDING OFFICER (Mr. EAGLETON). The bill will be received and appropriately referred; and, without objection, the statement will be printed in the RECORD.

The bill (S. 4270) to amend title 5, United States Code, to direct the President to adjust the rates for the statutory pay systems, to establish an Advisory Committee on Federal Salaries, and for other purposes, introduced by Mr. FONG (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Post Office and Civil Service.

The statement of purpose and justification, presented by Mr. FONG, is as follows:

STATEMENT OF PURPOSE AND JUSTIFICATION

The purpose of this draft bill is to provide a continuing improved procedure for adjusting salaries for General Schedule employees, Foreign Service employees, and doctors, dentists, and nurses in the Department of Medicine and Surgery of the Veterans Administration. This legislation is necessary to properly implement the policy adopted by Congress in 1962 for relating the rates in these schedules to salaries paid for similar work levels in the private sector.

As stated in section 5301 of title 5, United States Code, the policy of Congress is that Federal pay fixing be based on the principles that—

(1) there be equal pay for substantially equal work, and pay distinctions be maintained in keeping with work and performance distinctions; and

(2) Federal pay rates be comparable with private enterprise pay rates for the same levels of work.

This draft bill is designed to reduce the time lag between salary surveys and schedule adjustments and to make other improvements in the procedure for applying the pay comparability principle to the adjustment of salaries for these Federal career employees.

Enactment of the salary review and adjustment procedures in this draft bill would afford an appropriate role to employee organizations, the President, and Congress. Employee organizations would be consulted regarding the coverage of the Bureau of Labor Statistics survey, the salary comparison process, and the adjustments in Federal salaries required to achieve comparability with private enterprise salaries.

In addition, employee organizations would be afforded the opportunity to have their views and recommendations with respect to the annual report of the President's agent considered by an impartial body. The proposed legislation would establish an Advisory Committee on Federal Salaries composed of three members appointed by the President from outside the Government service for six-year staggered terms. The Advisory Committee would review the annual report of the President's agent and give thorough consideration to such further views as might be presented with respect to the analysis and pay proposals in that report by unions, professional organizations, and other Federal officials. Upon completion of its review, the Committee would report to the President.

This proposal would vest in the President the responsibility for adjusting statutory schedules each year in accordance with policies established by law. Congress would con-

tinue to deal with changes in policy by the usual legislative process.

By giving the authority to the President, action can be completed in a much shorter time following the comparison of Federal and private enterprise salaries. When the President arrived at a decision on what adjustment was needed to raise Federal salaries to comparability with private enterprise rates, that adjustment could be put into effect in a timely manner. Now the President's recommendations must be sent to Congress where the necessary legislative action generally takes a minimum of two or three months and sometimes a much longer period. Especially in times when salaries in the private sector are increasing rapidly, the Federal employee should not have to wait for the adjustment to which he is entitled.

The draft bill fixes a date on or before which the President must adjust the salaries each year. If for reasons of national emergency or economic conditions affecting the general welfare the President should consider it inappropriate in any year to make the adjustment required by law, he would have to prepare and transmit to Congress in advance his alternative plan, and if neither House of Congress disapproved on or before September 30, the plan proposed by the President would become effective on October 1.

The draft bill specifies an October effective date for the adjustments. An exception is made, however, for the first two adjustments. Section 3 of the bill specifies that these adjustments will be effective in January 1971 and January 1972, respectively. The October date is introduced so that the survey schedule may be adjusted to better accommodate to the budget cycle. The time lag between the survey and the effective date of the adjustment would be unchanged. The survey would be made earlier and the adjustment would be made earlier. With the present survey schedule and a January adjustment, it is necessary to seek a supplemental appropriation not only for the current year but also for the next fiscal year.

Federal salary rates must be adequate to enable the Government to employ persons well qualified to conduct its programs; they must be fair to Federal employees and they must be fair to the taxpayer.

Salaries fixed in accordance with the principles established in 1962 meet these objectives. This draft bill reaffirms the established principles and provides improved procedures for carrying them out.

The achievement of true comparability dictates that the annual adjustments be made on a timely basis. The draft bill assures that this will be done by requiring that the President make the adjustments by a certain date.

Congress has established the policies. Congress can by this proposed legislation establish the needed authorizations for the continuing administration of the program. As with any other program administered by the Executive Branch, Congress will oversee the work and consider and enact legislation as needed to change it.

S. 4272—INTRODUCTION OF BILL RELATING TO AMENDMENT TO PUBLIC UTILITY HOLDING COMPANY ACT OF 1935

Mr. MAGNUSON. Mr. President, I introduce, for appropriate reference, a bill which would amend the Public Utility Holding Company Act of 1935 to enable utility holding-company systems to participate in federally assisted low- and moderate-income housing programs and I ask unanimous consent that this bill be referred to the Committee on Banking and Currency for consideration and action.

The bill would amend the Holding Company Act to empower the Securities and Exchange Commission by rule, regulation, or order to authorize companies subject to the act to construct, own, or operate low- and moderate-income housing either through investment in housing subsidiaries of the holding-company system or through investment in individual housing projects in which corporations created or organized pursuant to title IX of the Housing and Urban Development Act of 1968—such as the recently formed National Corporation for Housing Partnerships—participate. The bill is narrowly drawn and would limit utility holding company housing investment to federally assisted low and moderate housing projects within the service area of the holding-company system and would retain for the Securities and Exchange Commission the authority to regulate the extent and nature of this investment thereby assuring continuing review by the SEC in the interests of the utility's consumers and investors.

This bill is designed to assist the Department of Housing and Urban Development in its efforts to encourage electric and gas utilities throughout the United States to participate in low and moderate income housing projects in the communities they serve. Additionally, utilities have been encouraged to invest in housing projects sponsored in part by the National Corporation for Housing Partnerships, a congressionally chartered corporation, created to facilitate private enterprise investments in low and moderate income housing projects on a limited partnership basis.

It should be recognized that public utility companies can play a unique and valuable role in providing critically needed low and moderate income housing in their service areas. These companies have a special social and economic interest in the stability and well-being of the communities they serve. They have the financial and managerial resources to construct low and moderate income housing. They are familiar with Government regulation and can work effectively under federally assisted housing programs. They occupy positions of prestige and stability in their own communities and can play a catalytic role in involving other local business leaders in housing and community development problems.

While many private businessmen are unwilling to subject themselves to Government controls and do not desire to participate in federally assisted low and moderate income housing programs, a number of utility holding-company systems have expressed a willingness to become involved in this much-needed housing construction. I believe that they can make a contribution to attaining our national housing goals and should be encouraged to do so.

This bill is needed because of a recent ruling by the SEC that the Holding Company Act does not empower the SEC to authorize utilities subject to the act to invest in federally assisted housing development. This decision of the SEC did not suggest, however, that holding-company system participation in low and moderate income housing is detrimental to the interests of the utility's consumers or investors. To the contrary, the SEC recognized the policy of the National Housing Act to assist private industry in housing programs but concluded by a 3-to-2 vote that utility holding-company activities in this field were not contemplated by the Holding Company Act as originally enacted in 1935.

I am pleased to report that the SEC has participated in the drafting of this bill and has stated that it has no objection to its passage.

Mr. President, I have received a letter from Secretary George Romney describing the bill, its justification and the need for its expeditious passage. I ask unanimous consent that the bill and Secretary Romney's letter and its attachments be included at the conclusion of my remarks and printed in the RECORD.

Because this bill deals with housing for low- and moderate-income families under federally assisted programs, I have discussed this matter with the distinguished chairman of the Committee on Banking and Currency. I am hopeful that the Committee on Banking and Currency will be able to include the proposed amendment in this year's housing bill which I understand is now being marked up in executive session. Without waiving, in any way, the Commerce Committee's jurisdiction over the Public Utility Holding Company Act, it is our view that the need for immediate action on the subject matter of the proposed amendment is such that the housing bill is the appropriate vehicle for the amendment. Accordingly, I ask unanimous consent that this bill be referred to the Committee on Banking and Currency for its consideration.

The ACTING PRESIDENT pro tempore (Mr. ALLEN). The bill will be received; and, without objection, the bill will be referred to the Committee on Banking and Currency, and the bill, letters, and memorandum will be printed in the RECORD.

The bill (S. 4272) to assist in meeting national housing goals by authorizing the Securities and Exchange Commission to permit companies subject to the Public Utility Holding Company Act of 1935, to provide housing for persons of low and moderate income, introduced by Mr. MAGNUSON, was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

S. 4272

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 9(c) of the Public Utility Holding Company Act of 1935 (15 U.S.C. 791(c)) is amended by omitting the word "or" at the end of subsection (2), substituting a semicolon for the period and adding the word "or" at the end of subsection (3), and adding the following:

"(4) (A) securities of a subsidiary company engaged in the business of providing housing for persons of low and moderate income within the service area of the holding-company system under housing programs authorized by the National Housing Act, as amended, or a substitute thereof, or (B) securities of or interests in a company organized for such housing programs within the service area of a holding-company system and which receives financial or other as-

sistance from a company created or organized pursuant to title IX of the Housing and Urban Development Act of 1968. In no event shall such acquisitions be made except within such limitations and upon such terms and conditions, and with due regard to other provisions of this title, as the Commission may permit by rules and regulations or order as not detrimental to the public interest or the interest of investors or consumers."

The letters and memorandum, presented by Mr. MAGNUSON, are as follows:

SECURITIES AND EXCHANGE COMMISSION,
Washington, D.C., August 12, 1970.

Hon. GEORGE ROMNEY,
Secretary of Housing and Urban Development, Washington, D.C.

DEAR MR. SECRETARY: I have your letter of July 16, 1970, in which you suggest an amendment to the Public Utility Holding Company Act of 1935 so as to permit this Commission to authorize public-utility holding-company systems to participate in government assisted programs to provide low and moderate income housing. To your letter is appended a proposed bill to accomplish this purpose.

The Commission has considered your proposal. The Commission would have no objection to your proposed addition of paragraph (4) to Section 9(c) if revised as follows:

"(4) (A) securities of a subsidiary company engaged in the business of providing housing for persons of low and moderate income within the service area of the holding-company system under housing programs authorized by the National Housing Act, as amended, or a substitute thereof, or (B) securities of or interests in a company organized for such housing programs within the service area of a holding-company system and which receives financial or other assistance from a company created or organized pursuant to Title IX of the Housing and Urban Development Act of 1968. In no event shall such acquisitions be made except within such limitations and upon such terms and conditions, and with due regard to other provisions of this title, as the Commission may permit by rules and regulations or order as not detrimental to the public interest or the interest of investors or consumers."

You also suggested an amendment to Section 6(b) of that Act, but in our opinion this amendment is unnecessary. Section 6(b) as it now reads already provides an exemption, by rule or order, for the issue and sale of securities by a subsidiary company of a registered holding company engaged in owning and operating low and moderate income housing.

Our staff has discussed these changes with Mr. G. Richard Dunnells, Special Assistant to the Under Secretary.

Sincerely,

HAMER H. BUDGE,
Chairman.

AUGUST 18, 1970.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Commerce, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I am enclosing for consideration by the Senate Commerce Committee a bill which would enable public utility holding-company systems to participate in Federally-assisted programs to provide low and moderate income housing.

The bill would amend the Public Utility Holding Company Act of 1935 to permit such utilities to construct, own or operate Federally-assisted low and moderate income housing either individually or in partnership with a national housing corporation created or organized pursuant to Title IX of the Housing and Urban Development Act of 1968. Under the bill, the Securities and Exchange Commission would retain the authority to regulate the extent and nature of participation by holding company systems in these housing activities, thereby assuring continuing review by the Commission in the interests of the utility's consumers and investors.

The legislation is necessary because of a recent ruling by the S.E.C. that the Holding Company Act does not empower the S.E.C. to authorize utilities subject to the Act to participate in such housing activities. The decision of the S.E.C. did not suggest, however, that utility participation in low and moderate income housing programs is contrary to the interests of utility consumers or investors. The S.E.C. recognized the policy of the National Housing Act to assist private industry in housing programs but concluded by a 3–2 vote, that utility holding-company activity in this field was not contemplated by the Holding Company Act as originally enacted in 1935. This reversed a previous 3–1 S.E.C. decision which had authorized a utility subject to the Act to construct low and moderate income housing.

I am pleased to report that the S.E.C. has participated in the drafting of the subject bill and has stated that it has no objection to its passage.

I recognize that utility holding-company systems represent only a fraction of the nation's public utilities and that, in terms of dollar investment and number of housing units produced, their contribution to solving the critical housing needs of low and moderate income families might be deemed to be minimal. However, for some time this Department has recognized the unique and valuable role that public utility companies can play in providing low and moderate income housing in their service areas. These companies have a special social and economic interest in the stability and well-being of the communities in which they do business. They have the ability and resources to finance and construct low and moderate income housing, can work effectively with the branches of government involved in housing and, as business leaders of their communities, can play a catalytic role in involving other business leaders in local housing and community development problems.

While many private businesses are unwilling to subject themselves to government controls and do not desire to participate in low and moderate income housing, we have found that a number of utility holding-company systems are willing and able to become involved in this much needed housing construction. The Department believes that they can make a contribution toward attaining our national housing goals and should be encouraged to do so.

I realize that there are many important matters before your Committee, but I sincerely hope that you may act upon this bill at the earliest possible date. The S.E.C.'s recent decision, which was noted above, has halted plans for the immediate construction of a number of low and moderate income housing units and has postponed planning for other projects.

Sincerely,

GEORGE ROMNEY.

MEMORANDUM ON PROPOSED AMENDMENT TO PUBLIC UTILITY HOLDING COMPANY ACT OF 1935 TO AUTHORIZE PARTICIPATION IN LOW AND MODERATE INCOME HOUSING PROGRAMS

PRELIMINARY STATEMENT

The Department of Housing and Urban Development (HUD), with the participation and concurrence of the Securities and Exchange Commission (S.E.C.), has recommended to the Congress an amendment of the Public Utility Holding Company Act of 1935 which would make clear the authority of the S.E.C. to permit companies regulated under that Act to participate in government-assisted low and moderate income housing programs. This memorandum will indicate the background and need for the proposed legislation.

BACKGROUND

In adopting the Public Utility Holding Company Act of 1935, Congress provided in Section 11(b)(1), 15 U.S.C. § 79k(b)(1), that holding-company systems must be limited to the utility business in which they are engaged and "such other businesses as are reasonably incidental, or reasonably necessary or appropriate to the operations of such integrated public-utility systems."

In March of 1969, the S.E.C., by a divided vote, held that the participation by a holding-company subsidiary in low and moderate income housing programs administered by HUD satisfied the statutory standards of the Holding Company Act.[1] The majority held in this connection:

"This overwhelmingly necessary and yet relatively limited investment of private capital cannot, in our view, be considered 'detrimental to the carrying out' of the simplification and integration provisions of the Holding Company Act. Investment of private capital for such a purpose has been generally determined by Congress to be in the national interest and specifically determined by management to be in the corporate interest—and both determinations have been made on the basis of compelling and uncontroverted facts of great significance to both the country and the company."

However, in a recent ruling on the same question the S.E.C., again by a closely divided vote, reversed its position.[2] While not questioning the desirable social purpose served by utility holding-company participation in low and moderate income housing programs, the S.E.C. concluded that the Holding Company Act, as adopted in 1935, did not authorize this activity by companies subject to regulation thereunder. The purpose of the legislation now proposed is to clarify the language of the Holding Company Act in that regard.

THE NEED FOR BROAD PARTICIPATION BY PRIVATE INDUSTRY IN LOW AND MODERATE INCOME HOUSING PROGRAMS

In enacting the Housing and Urban Development Act of 1968, Congress declared as follows:

"The Congress affirms the national goal, as set forth in section 1441 of Title 42, of 'a decent home and a suitable living environment for every American family.'"

It is apparent, however, that this goal has not been accomplished and that the gap between supply and demand for decent housing has been growing at an alarming rate. In an effort to mobilize all sectors of the economy in the drive to provide adequate housing for our citizens, there has been an increasing awareness of the desirability of enlisting the efforts of private business in helping to solve the shortages of housing for low and moderate income families. In his message to Congress of February 22, 1968, accompanying the proposed Housing and Urban Development Act of 1968, President Johnson said in part:

"The Government's concern is to stimulate private energy and local action—to provide capital where needed, to guarantee financing, to offer assistance that encourages planning and construction.

"The real job belongs to local government and the private sector—the homebuilder, the mortgage banker, the contractors, the non-profit sponsor, the industrialist who now sees in the challenge of the cities a new opportunity for American business."

Similarly, President Nixon, in his transmittal to the Congress of the Second Annual

[2] Re Michigan Consolidated Gas Company, Holding Company Act Release No. 16763.

Report on Housing Goals on April 1, 1970, again emphasized that

"The Administration, the Congress, private industry, and labor must cooperate closely in removing the obstacles and making the commitments necessary to meet our housing objectives within the framework of sustainable economic growth."

The Congress has likewise expressed its conviction that private industry must play an important role in meeting the Nation's housing needs. For example, the preamble to the Housing and Urban Development Act of 1968, after indicating that "highest priority" must be given to programs designed to meet the housing needs of low and moderate income families, states that ". . . in the carrying out of such programs there should be the fullest practicable utilization of the resources and capabilities of private enterprise and of individual self-help techniques."

The principal vehicle for participation by private industry in low and moderate income housing programs is through the formation of "limited dividend" corporations, as authorized by the National Housing Act, as amended. A limited dividend corporation is limited as to its rate of return on its equity investment in the housing project, and HUD has broad regulatory control over its operations and accounting methods. In addition, HUD maintains complete control over the rents that may be charged to tenants and over construction costs, design, building methods, size of units and economic feasibility of each housing project constructed under these programs.

THE IMPORTANCE OF UTILITY PARTICIPATION IN LOW- AND MODERATE-INCOME HOUSING

Because of the regulation of rate of return and rents and the other restrictions necessarily imposed upon limited dividend corporations by the National Housing Act and HUD regulations, many businesses are unwilling to participate as sponsors of low and moderate income housing projects. However, HUD has found in recent years that public utilities are able and, in a number of instances, willing to participate in these programs, and HUD has been actively encouraging such participation.

The reasons that public utilities have responded to the call for greater participation by the private sector in low and moderate income housing programs are basically two:

First, the construction and operation of housing projects under HUD regulation is remarkably similar to utility regulation. As noted above, rents, like utility rates, are set by a government agency and may only be increased upon a showing of higher operating costs. The rate of return on the company's investment in a housing development is regulated, again like return on utility operations. A uniform system of accounts is prescribed for the housing operation which is similar to that prescribed for utility companies. A limited dividend corporation must file detailed reports on its operations, much like the utility's periodic reports to state and Federal regulatory bodies. In short, a utility is accustomed to operating within the regulated framework required by the Federal housing laws, which, to many businesses, would present a significant deterrent.

Second, utility companies serving urban areas are necessarily committed to the long-range welfare of those areas. Unlike many other businesses, a utility cannot simply remove its plant and work force to an outlying area to avoid urban problems. A utility's investment in service facilities and its customers are located in the urban areas it serves. Its interest in the rebuilding and rehabilitation of those areas is thus direct and compelling. Thus, in addition to social incentives, the utility has an economic incentive in the rebuilding of the cities that makes it a logical and sometimes indispensable catalyst in the initiation and successful implementation of low and moderate housing programs.

Finally, HUD has found that utilities generally have the managerial and financial resources necessary to insure efficient construction and operation of low and moderate income housing projects. Under circumstances where time is money, and the prompt construction of projects is essential to carry out housing programs, such expertise is of real value.

THE NATIONAL CORPORATION FOR HOUSING PARTNERSHIPS AND THE NATIONAL HOUSING PARTNERSHIP

Title IX of the Housing and Urban Development Act of 1968 authorized the creation of National Corporation for Housing Partnerships (NCHP) and The National Housing Partnership (NHP) as vehicles by which private businesses would be further encouraged to participate in providing low and moderate income housing using government-assisted programs. NHP will be managed by a general partner, NCHP. NHP's principal activity will be investing in local limited partnerships throughout the United States, each of which will construct and operate a housing project. In the usual case it is expected that these local projects will be financed under HUD programs. NHP would ordinarily become a limited partner in a local partnership and provide no more than 25 percent of the equity investment required for a project. Local investors interested in sponsoring low and moderate income housing projects would provide the remaining 75 percent.

Certain companies regulated by the S.E.C. under the Public Utility Holding Company Act have indicated that they desire to participate in the program proposed by NHP and NCHP as general or limited partners in local partnerships formed to construct and operate specific low and moderate income housing projects in their service areas.

EFFECT OF PROPOSED AMENDMENT

The proposed amendment would authorize the S.E.C. to permit companies subject to the Public Utility Holding Company Act to construct, own or operate low and moderate income housing under HUD-assisted housing programs either through housing subsidiaries of the holding-company system or through direct investment in local housing projects in which national corporations or partnerships created or organized pursuant to Title IX of the Housing and Urban Development Act of 1968 participate. The proposed amendment would retain for the S.E.C. discretion over whether to approve each low and moderate income housing activity of a company subject to the Holding Company Act, but would make it clear that the S.E.C., if it elected to do so, would have the authority to approve such an activity.

ADDITIONAL COSPONSOR OF A BILL

S. 2658

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Texas (Mr. YARBOROUGH), I ask unanimous consent that the name of the senior Senator from Pennsylvania (Mr. SCOTT) be added as a cosponsor of S. 2658, which would entitle veterans of World War I and their widows and children to a pension on the same basis as veterans of the Spanish-American War and their widows and children respectively.

The PRESIDING OFFICER (Mr. ALLEN). Without objection. it is so ordered.

ADDITIONAL COSPONSORS OF A CONCURRENT RESOLUTION

SENATE CONCURRENT RESOLUTION 80

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Nevada (Mr. BIBLE), the Senator from Kansas (Mr. PEARSON), the Senator from Kentucky (Mr. COOPER), the Senator from Colorado (Mr. ALLOTT), the Senator from North Carolina (Mr. ERVIN), the Senator from Georgia (Mr. TALMADGE), the Senator from Montana (Mr. METCALF), and the Senator from Michigan (Mr. HART) be added as cosponsors of Senate Concurrent Resolution 80, to establish a joint committee to investigate the treatment of prisoners of war in Vietnam.

The PRESIDING OFFICER (Mr. JORDAN of Idaho). Without objection, it is so ordered.

SENATE RESOLUTION 452—ORIGINAL RESOLUTION REPORTED AUTHORIZING PRINTING OF ANNUAL REPORT OF THE NATIONAL SOCIETY OF THE DAUGHTERS OF THE AMERICAN REVOLUTION AS A SENATE DOCUMENT (S. REPT. NO. 91-1134)

Mr. JORDAN of North Carolina, from the Committee on Rules and Administration, reported an original resolution (S. Res. 452) and submitted a report thereon, which report was ordered to be printed, and the resolution was placed on the calendar, as follows:

S. RES. 452

Resolved, That the seventy-first annual report of the National Society of the Daughters of the American Revolution for the year ended March 1, 1968, be printed, with an illustration, as a Senate document.

FAMILY ASSISTANCE ACT OF 1970—AMENDMENTS

AMENDMENT NO. 850

Mr. RIBICOFF (for himself and Mr. HARRIS) submitted amendments, intended to be proposed by them, jointly, to the bill (H.R. 16311) to authorize a family assistance plan providing basic benefits to low-income families with children, to provide incentives for employment and training to improve the capacity for employment of members of such families, to achieve greater uniformity of treatment of recipients under the Federal-State public assistance programs and to otherwise improve such programs, and for other purposes, which were referred to the Committee on Finance and ordered to be printed.

(The remarks of Mr. RIBICOFF when he submitted the amendment appear earlier in the RECORD under the appropriate heading.)

SOCIAL SECURITY AMENDMENTS OF 1970—AMENDMENT

AMENDMENT NO. 851

MEDICARE AND MEDICAID

Mr. BENNETT. Mr. President, on July 1, I informed the Senate of my

intention to offer an amendment to the social security bill now pending in the Finance Committee to provide a new system of professional review of health services provided under our Federal health plans. The proposal was outlined in substantial detail in my speech. At that time, I indicated that its genesis was in a draft given me by the American Medical Association. My amendment, however, is more comprehensive and more positive. In addition, it shifts the primary emphasis for review from State medical societies to local societies. The amendment also contains a number of provisions assuring public accountability and responsibility.

That amendment, which I am submitting today, would authorize the establishment of professional standards review organizations, generally at local levels, as the primary mechanism to control and moderate the soaring costs of medicare and medicaid.

We have learned from long, hard, and costly experience that the Federal Government and its various public and private agents generally have been unable effectively to monitor and assure economical and efficient use of properly provided health care services in medicare and medicaid. What we must have are assurances that, in medicare and medicaid, only services necessary to proper health care are provided; that those services are provided on a basis consistent with professional standards; and that where medically appropriate, less costly alternative modes and sites of health care are called to the attention of the attending physician.

Unquestionably, those necessary determinations can best be made by health care professionals who recognize and accept the need to provide those assurances as a legitimate responsibility and concern of their profession.

Thus, my amendment provides that Professional Standards Review Organizations would be established in each area of the country, with the Secretary of Health, Education, and Welfare giving priority to designating qualified local medical societies as those review organizations.

Let me explain what is meant by a "qualified" medical society. In some cases, it would involve groupings of local societies, or possibly multicounty organizations. In other areas, State medical societies might be designated as the Professional Standards Review Organization. In any event, however, a medical society must be willing and capable of assuming responsibility for the on-going review and approval of all health care services rendered or ordered by physicians and of making suitable arrangements for the review of other health care services rendered by nonphysicians. All of this would be undertaken in accordance with a formal plan for progressive assumption of review responsibilities which would be approved by the Secretary of Health, Education, and Welfare.

Where organized medicine is unwilling or unable to assume the responsibilities of a Professional Standards Review Organization, or where the performance of a particular organization is only pro forma or token, the amendment contemplates that the Secretary would arrange for the designation of another private or public organization or agency which has the professional competence to undertake the necessary functions.

All Professional Standards Review Organizations initially will be approved on a conditional basis—not to exceed a period of 2 years. During that trial period, all existing review mechanisms would continue to function until such time as the Professional Standards Review Organization effectively and satisfactorily has demonstrated its capacity to perform an equivalent or superior review. The amendment would give up none of the review mechanisms we now have until there is solid proof that the new organization can do better.

The on-going review would involve maintenance and regular examination of patient, practitioner, and provider profiles of care and service. Additionally, the Professional Standards Review Organization would be responsible for approval in advance of all elective admissions to hospitals and nursing homes. Emergency admissions obviously should not require prior approval, and under my amendment they would not. There would be a subsequent review and a need for further approval by the Professional Standards Review Organization where a physician desires that his patient remain in the hospital beyond the average stay for patients of a given age and condition.

I would stress at this point the fact that objective and impartial review must be provided by a Professional Standards Review Organization. Malice and vendettas by members of the review group against other practitioners are by definition "nonprofessional" and in the unlikely event of such occurrences, I would expect that the Secretary of Health, Education, and Welfare, in the absence of immediate voluntary corrective action by the organization would promptly act to terminate the contract with that organization.

Following my July 1 speech, I have talked with a number of groups representing several health professions and medical specialty organizations. All stressed their interest in peer review. Most expressed concern that review activities be performed by actual peers. In other words, they feel that any review of a medical specialist such as a neurosurgeon should be performed by other neurosurgeons. Others stated that review of health services such as physical therapy should be the responsibility of other physical therapists.

The amendment, I believe, essentially and effectively deals with these concerns. Responsibility for review is placed with physicians, since it is the physician who is ultimately responsible for ordering or providing virtually all health care services. However, the local Professional Standards Review Organizations would have authority to engage and would be expected to utilize medical specialists such as neurosurgeons for specialty review. Similar arrangements could be made with those qualified to review physical therapy and other health services.

Under the amendment, Professional Standards Review Organizations are to apply professionally developed regional norms of care and treatment in their review process. There is a large body of readily available data on length of hospital stay by age and diagnosis in all areas of the country. For example, the Committee on Professional and Hospital Activities, an organization sponsored by the American Hospital Association, the American College of Physicians, and the American College of Surgeons has developed comprehensive published data based upon many millions of hospital discharges—which indicate average lengths of stay by age, diagnosis and areas of the country.

This type of data would be used by the National Professional Standards Review Council in publishing norms of care by regions for use by the Local Professional Standards Review Organizations.

During work on the amendment, it became obvious that the present system of medicare recertification of need for hospital care makes little sense from a professional standpoint. Currently, a physician must recertify as to continuing need for hospitalization at the 12th hospital day. This point was selected arbitrarily, and bears no relation to whether the patient's age and illness would usually warrant a longer or shorter hospital stay.

With professionally developed data available, it would be far more sensible, and efficient, for the Professional Standards Review Organizations to apply the average length of stay for a given diagnosis as a checkpoint for review of continued need for hospitalization, and this is what my amendment proposes.

The professionally developed and published norms of care which would be applied under the proposed amendment are intended to be review checkpoints. They are not proposed as barriers to any additional care that may be needed beyond the predetermined checkpoint.

There is no intention, either in the operation of the Professional Standards Review Organizations or in the application of norms of care and treatment to stifle innovative medical practice or procedure or to inhibit the exercise of reasonable professional discretion. The objectives of the proposal are reasonableness—not conformism in medical practice.

Any information acquired by a review organization in discharging its responsibilties would in general be confidential and available only for program purposes or to protect the rights of patients, practitioners, and providers. Violation of confidentiality would be punishable by up to 6 months imprisonment and a fine of up to $1,000.

Many of the provisions in the amendment are patterned after medical society sponsored foundations, such as the San Joaquin and Sacramento Foundations in California.

Spokesmen for these foundations testified before the Finance Committee that it would be easier for them to do an effective job of review if they could also assume responsibility and risk with re-

spect to the review and payment of claims.

I have included in my amendment a provision authorizing demonstration programs so that the Secretary can contract with Professional Standards Review Organizations on an insured basis. This would permit comparison of results between Professional Standards Review Organizations where risk is assumed and those where no risk is undertaken.

Mr. President, the intent, substance, and safeguards of my amendment may be determined through a reading of the amendment itself and a section-by-section summary of its provisions. I, therefore, ask unanimous consent that both the amendment and the summary be printed in the RECORD at the conclusion of my remarks.

I do not contend that the amendment is incapable of improvement. It is, however, the product of a great deal of effort and consultation. Hopefully, during the course of the next several weeks and during public hearings on the social security bill in September, the amendment can be refined and further improved on the basis of the informed and thoughtful comments and suggestions of concerned and interested citizens and organizations.

All of us, Mr. President, share a common concern with the need to assure reasonable professional controls in medicare and medicaid—in fact, in our entire health care system.

The amendment which I submit today was prepared and is offered in a spirit of meeting the legitimate concerns of millions of citizens who depend upon medicare and medicaid, the professions concerned with providing health care, and the public interest in general. I invite all of my colleagues to join with me in sponsoring this amendment.

The PRESIDING OFFICER (Mr. EAGLETON). The amendment will be received and printed, and will be appropriately referred; and, without objection, the amendment and summary will be printed in the RECORD.

The amendment (No. 851) was referred to the Committee on Finance, as follows:

AMENDMENT No. 851

On page 142, between lines 17 and 18, insert the following:

PROFESSIONAL STANDARDS REVIEW

SEC. 240. (a) (1) The heading to title XI of the Social Security Act is amended by striking out

"TITLE XI—GENERAL PROVISIONS"

and inserting in lieu thereof

"TITLE XI—GENERAL PROVISIONS AND PROFESSIONAL STANDARDS REVIEW

"PART A—GENERAL PROVISIONS".

(2) Title XI of such Act is further amended by adding after section 1122 thereof (as added by section 221(a) of this Act) the following:

"PART B—PROFESSIONAL STANDARDS REVIEW

"DECLARATION OF PURPOSE

"SEC. 1151. (a) In order to promote the effective, efficient, and economical delivery of health care services for which payment may be made (in whole or in part) under title XVIII, under State plans approved under titles V or XIX, or under any other program or plan established by or pursuant to any other title of this Act, it is the purpose of this part to assure, through the application of suitable procedures of professional standards review, that the services for which payment may be made under the Social Security Act will conform to appropriate professional standards for the provision of health care and that payment for such services will be made—

"(1) only when and to the extent, medically necessary, as determined in the exercise of reasonable limits of professional discretion; and

"(2) in the case of services provided by a hospital or other health care facility on an in-patient basis, only when and for such period as such services cannot, consistent with professionally recognized health care standards, effectively be provided on an outpatient basis or more economically in an inpatient health care facility of a different type, as determined in the exercise of reasonable limits of professionals discretion.

"(b) Whenever the term 'health care services' is used in this part, such term shall include appropriate services (as determined under regulations of the Secretary) provided, pursuant to section 1121, in intermediate care facilities.

"DESIGNATION OF PROFESSIONAL STANDARDS REVIEW ORGANIZATIONS

"SEC. 1152. (a) The Secretary shall at the earliest practicable date, but not later than January 1, 1972, enter into agreements with qualified organizations whereby such an organization shall be designated in each area of the United States as the Professional Standards Review Organization for such area.

"(b) For purposes of subsection (a), the term 'qualified organization' means—

"(1) when used in connection with any area—

"(A) a nonprofit professional society (i) (or a component organization thereof) which is composed of physicians engaged in the practice of medicine or surgery in such area, (ii) the membership of which includes a substantial proportion of all such physicians in such area, and (iii) which has available professional competence to review health care services of all types and kinds with respect to which Professional Standards Review Organizations have review responsibilities under this part, or

"(B) such other public, nonprofit private, or other agency or organization, which the Secretary determines, in accordance with criteria prescribed by him in regulations, to be of professional competence and otherwise suitable; and

"(2) which the Secretary finds to be willing to perform and capable of performing, in an effective and timely manner and at a reasonable cost, the duties, functions, and activities of a Professional Standards Review Organization required by or pursuant to this part.

"(c) (1) The Secretary shall not enter into any agreement under this part under which there is designated as the Professional Standards Review Organization for any area any organization other than an organization referred to in subsection (b) (1) (A) unless, in such area, there is no organization referred to in subsection (b) (1) (A) which meets the criteria specified in subsection (b) (2).

"(2) Whenever the Secretary shall have entered into an agreement under this part under which there is designated as the Professional Standards Review Organization for any area any organization other than an organization referred to in subsection (b) (1) (A), he shall not renew such agreement with such organization if he determines that—

"(A) there is in such area an organization referred to in subsection (b) (1) (A) which (i) has not been (nor has its predecessor been) previously designated as a Professional Standards Review Organization, and (ii) is willing to enter into an agreement under this part under which such organization would be designated as the Professional Standards Review Organization for such area;

"(B) such organization meets the criteria specified in subsection (b) (2); and

"(C) the designation of such organization as the Professional Standards Review Organization for such area will result in an improvement in the performance in such area of the duties and functions required of such organizations under this part.

"(d) (1) An agreement entered into under this part between the Secretary and any organization under which such organization is designated as the Professional Standards Review Organization for any area shall provide that such organization will—

"(A) perform such duties and functions and assume such responsibilities and comply with such other requirements as may be required by this part or under regulations of the Secretary promulgated to carry out the provisions of this part; and

"(B) collect such data relevant to its function and information and keep and maintain such records as the Secretary may require to carry out the purposes of this part and to permit access to and use of any such records as the Secretary may require for such purposes.

"(2) (A) Any such agreement with an organization under this part shall provide that the Secretary shall make payments to such organization equal to the amount of expenses reasonably and necessarily incurred, as determined by the Secretary, by such organization in carrying out or preparing to carry out the duties and functions required by such agreement.

"(B) Any such payments to an organization shall be made in advance or by way of reimbursement and in such installments as the Secretary shall prescribe by regulations.

"(3) Any such agreement under this part with an organization shall be for a term of 12 months; except that, prior to the expiration of such term, such agreement may be terminated—

"(A) by the organization at such time and upon such notice to the Secretary as may be prescribed in regulations (except that notice of more than 6 months may not be required); or

"(B) by the Secretary at such time and upon such reasonable notice to the organization as may be prescribed in regulations, but only after the Secretary has determined (after a formal hearing on the matter) that such organization is not fully complying with or effectively carrying out the provisions of such agreement.

"REVIEW PENDING DESIGNATION OF PROFESSIONAL STANDARDS REVIEW ORGANIZATION

"SEC. 1153. Pending the assumption by a Professional Standards Review Organization for any area, of full review responsibility, and pending a demonstration of capacity for improved review effort with respect to matters involving the provision of health care services in such area for which payment (in whole or in part) may be made, under title XVIII, any State plan approved under titles V or XIX, or under any other program established by or pursuant to any other title of this Act, any review with respect to such services which has not been designated by the Secretary as the responsibility of such Organization, shall be reviewed in the manner otherwise authorized under law.

"TRIAL PERIOD FOR PROFESSIONAL STANDARDS REVIEW ORGANIZATIONS

"SEC. 1154. (a) The Secretary shall initially designate an organization as a Professional Standards Review Organization for any area on a conditional basis with a view to determining the capacity of such organization to perform the duties and functions imposed under this part on Professional Standards Review Organizations. Such designation may not be made prior to receipt from such organization and approval by the Secretary of

a formal plan for the orderly assumption and implementation of the responsibilities of the Professional Standards Review Organization under this part.

"(b) During any such trial period (which may not exceed twenty-four months), the Secretary may require any organization, during the period it is conditionally designated as a Professional Standards Review Organization, to perform only such of the duties and functions required under this part of Professional Standards Review Organizations as he determines such organization to be capable of performing. The number and type of such duties shall, during the trial period, be progressively increased as the organization becomes capable of added responsibility so that, by the end of such period, such organization shall be considered a qualified organization only if it effectively assumed full responsibility for all activities and functions required of Professional Standards Review Organizations under this part. Any of such duties and functions not performed by such organization during such period shall be performed in the manner and to the extent otherwise authorized under law.

"(c) Any agreement under which any organization is conditionally designated as the Professional Standards Review Organization for any area may be terminated by such organization upon ninety days' notice to the Secretary or by the Secretary upon ninety days' notice to such organization.

"(d) In order to avoid duplication of functions and unnecessary review and control activities, the Secretary is authorized to waive any or all of the review or similar activities otherwise required under or pursuant to any provision of this Act (other than this part) where he finds, on the basis of substantial evidence of the effective performance of review and control activities by Professional Standards Review Organizations, that the review and similar activities otherwise so required, are not needed for the provision of adequate review and control.

"DUTIES AND FUNCTIONS OF PROFESSIONAL STANDARDS REVIEW ORGANIZATIONS

"SEC. 1155. (a) (1) It shall be the duty and function of each Professional Standards Review Organization for any area to assume responsibility for the review of the professional activities in such area of physicians and other health care practitioners and institutional providers of health care services (including any facility for intermediate care) in the provision of health care services for which payment may be made (in whole or in part) under title XVIII, under any State plan approved under titles V or XIX, or under any other program established by or pursuant to any other title of this Act, for the purpose of determining whether—

"(A) such services are or were medically necessary;

"(B) the quality of such services meets professionally recognized standards of health care; and

"(C) in case such services are proposed to be provided in a hospital or other health care facility on an in-patient basis, such services could, consistent with the provision of appropriate medical care, be effectively provided on an outpatient basis or more economically in an in-patient health care facility of a different type.

"(2) It shall also be the responsibility of each Professional Standards Review Organization to determine, in advance, in the case of—

"(A) any elective admission to a hospital, intermediate care facility, or other health care facility, or

"(B) any other health care service which will consist of extended or costly courses of treatment, whether such service, if provided, or if provided by a particular health care practitioner or by a particular hospital, intermediate care facility, or other health care facility, would meet the criteria specified in clause (A) and (C) of paragraph (1).

"(3) For purposes of subsection (a) (2) (A), initial admissions shall be approved for periods certain determined in relation to standards intervals established by diagnosis, age, and other medically relevant criteria. The time for recertification shall be established at such point in time as will provide the attending physician and the Professional Standards Review Organization with adequate and timely opportunity for proper review of such request prior to expiration of the period of initial approval.

"(4) Each Professional Standards Review Organization shall be responsible for the development, maintenance, and regular review of profiles of care and services received and provided with respect to each patient, utilizing to the greatest extent practicable in such patient profiles methods of coding which will provide maximum confidentiality as to patient identity and assure objective evaluation consistent with the purposes of this part. Profiles shall also be developed, maintained and regularly reviewed on an ongoing basis with respect to each health care practitioner and provider to determine whether the care and services are consistent with the criteria specified in clauses (A), (B), and (C) of paragraph (1).

"(5) Physicians assigned responsibility for the review of hospital care may be only those having non-courtesy hospital staff privileges in at least one of the participating hospitals in the area served by the Professional Standards Review Organization.

"(6) No physician shall be permitted to review patient care with which he is directly or indirectly involved or with respect to care or service in any institution in which he has a direct or indirect financial interest within the meaning of section 318 of the Internal Revenue Code.

"(b) To the extent necessary or appropriate for the proper performance of its duties and functions, the Professional Standards Review Organization serving any area is authorized in accordance with regulations prescribed by the Secretary to—

"(1) utilize the services as necessary, of specialists in the various areas of medicine or other types of health care, which specialists shall, to the maximum extent practicable, be individuals engaged in the practice of their profession within the area served by such Organization;

"(2) undertake such professional inquiry either before or after, or both before and after, the provision of services with respect to which such Organization has a responsibility for review under subsection (a) (1);

"(3) examine the pertinent records of any practitioner or provider of health care services providing services with respect to which such Organization has a responsibility for review under subsection (a) (1); and

"(4) inspect the physical facilities in which care is rendered or services provided (which are located in such area) of any practitioner or provider.

"NORMS OF HEALTH CARE SERVICES FOR VARIOUS ILLNESSES OR HEALTH CONDITIONS

"SEC. 1156. (a) Each Professional Standards Review Organization shall apply professionally developed norms of care and treatment based upon average patterns of practice in their region as principal points of evaluation and review. The National Review Organization and the Secretary shall provide such technical assistance to the organization as will be helpful in utilizing and applying such norms of care and treatment. Where the actual norms of care and treatment in a Professional Standards Review Organization area are significantly different from regional or national norms for comparable conditions, as shall be determined and approved by the National Professional Standards Review Council based upon its analyses of appropriate and adequate data, the Professional Standards Review Organization concerned shall be so informed, and in the event that appropriate consultation and discussion indicate reasonable basis for usage of such unusual norms in the area concerned, the Professional Standards Review Organization may apply such actual norms in such area as are approved by the National Professional Standards Review Council.

"(b) Any such norm with respect to methods and sites of treatment for any particular illness or health condition shall indicate—

"(1) the type and extent of the health care services which are considered appropriate, consistent with professionally recognized and accepted standards, in the treatment of such illness or health condition;

"(2) the type of health care facility (including a facility for intermediate care) which is considered, consistent with such standards, to be the type in which health care services which are medically appropriate for such illness or condition can most economically be provided.

"(c) (1) The National Professional Standards Review Council shall prepare and distribute to each Professional Standards Review Organization and to each other agency or person performing review functions with respect to the provision of health care services under title XVIII, under State plans approved under titles V or XIX, or under any other program established by or pursuant to any other title of this Act, appropriate materials indicating the regional and national norms to be utilized pursuant to this part. Such data concerning norms shall be reviewed and revised from time to time.

"(2) Each review organization, agency, or person referred to in paragraph (1) shall utilize the norms developed under this section as a principal point of evaluation and review for determining, with respect to any health care services which have been or are proposed to be provided, whether—

"(A) such services are or were medically necessary;

"(B) the quality of such services meets professionally recognized standards of health care; and

"(C) in case such services are provided by a hospital or other health care facility on an in-patient basis, such services could, consistent with professionally recognized health care standards, be effectively provided on an out-patient basis or more economically in an in-patient health care facility of a different type.

"SUBMISSION OF REPORTS BY PROFESSIONAL STANDARDS REVIEW ORGANIZATIONS

"SEC. 1157. If, in discharging its duties and functions under this part, any Professional Standards Review Organization determines that any health care practitioner or any hospital, intermediate care facility, or other health care facility has violated any of the obligations imposed by section 1160, such Organization shall report the matter to the Statewide Professional Standards Review Council for the State in which such Organization is located (or if there is no such Council, to the Secretary) together with the recommendations of such Organization as to the action which should be taken with respect to the matter. Any Statewide Professional Standards Review Council receiving any such report and recommendation shall review the same and promptly transmit such report and recommendation to the Secretary together with such comments or recommendations thereon as it deems appropriate.

"REQUIREMENT OF REVIEW APPROVAL AS CONDITION OF PAYMENT OF CLAIMS

"SEC. 1158. Notwithstanding any other provision of law, no Federal funds appropriated under any title of this Act for the provision of health care services shall be used (di-

rectly or indirectly) for the payment, under any such title or any program established pursuant thereto, of any claim for the provision of such services if—

"(1) the provision of such services is subject to review by any Professional Standards Review Organization, or other agency; and

"(2) such Organization or other agency has, in the proper exercise of its duties and functions under or consistent with the purposes of this part, disapproved of the services giving rise to such claim, and has, prior to the provision of such services, notified the practitioner or provider providing such services and the individual to receive such services of its disapproval of the provision of such services to such individual.

"NOTICE TO CLAIMS PAYMENT AGENCY OF DISAPPROVAL OF SERVICES

"SEC. 1159. Whenever any Professional Standards Review Organization, in the discharge of its duties and functions as specified by or pursuant to this part, disapproves of any health care services furnished by any practitioner or provider, such Organization shall promptly notify the agency or organization having responsibility for acting upon claims for payment for or on account of such services.

"OBLIGATIONS OF HEALTH CARE PRACTITIONERS AND PROVIDERS OF HEALTH CARE SERVICES; SANCTIONS AND PENALTIES

"SEC. 1160 (a) (1) It shall be the obligation of any health care practitioner who, and hospital or other facility (including any facility for intermediate care) providing health care services which, provides health care services for which payment may be made (in whole or in part) under title XVIII, under any State plan approved under titles V or XIX, or under any program established by or pursuant to any other title of this Act, to assure that services provided by him (or it)—

"(A) will be provided only when, and to the extent, medically necessary; and

"(B) will be of a quality which meets professionally recognized standards of health care.

"(2) Each health care practitioner, and each hospital or other provider of health care services (including any facility for intermediate care), shall have an obligation, within reasonable limits of professional discretion, not to take any action, in the exercise of his profession (in the case of any health care practitioner), or in the conduct of its business (in the case of any hospital or other such provider), which would authorize any individual to be admitted as an in-patient in or to continue as an in-patient in any hospital or other health care facility unless—

"(A) in-patient care is determined by such practitioner and by such hospital or other provider, consistent with professionally recognized health care standards, to be medically necessary for the proper care of such individual; and

"(B) (i) the in-patient care required by such individual cannot, consistent with such standards, be provided more economically in a health care facility of a different type; or

"(ii) (in the case of a patient who requires care which can, consistent with such standards, be provided more economically in a health care facility of a different type) there is, in the area in which such individual is located, no such facility or no such facility which is available to provide care to such individual at the time when care is needed by him.

"(b) (1) If after reasonable notice and opportunity for discussion with the practitioner or provider concerned, any Professional Standards Review Organization determines that such practitioner or provider, in providing health care services over which such Organization has review responsibility and for which payment (in whole or in part) may be made under title XVIII, under any State plan approved under titles V or XIX, or under any other program established by or pursuant to any other title of this Act, has—

"(A) by failing, in a substantial number of cases, substantially to comply with any obligation imposed on him under subsection (a), or

"(B) by grossly and flagrantly violating any such obligation in one or more instances, demonstrated an unwillingness or a lack of ability substantially to comply with such obligations, such Organization may report and recommend to the Secretary (which report and recommendation to the Secretary shall be submitted through the Statewide Professional Standards Review Council which shall promptly transmit such report and recommendations together with such comments and recommendations thereon as it deems appropriate) and he (in addition to any other sanction provided under law) may—

"(C) require that (as a condition to the continued eligibility of such practitioner or provider to provide such health care services on a reimbursable basis) such practitioner or provider pay a monetary penalty to the United States in an amount (not in excess of $5,000) (i) determined by the Secretary to be reasonably related to the the significance of the acts or conduct involved, or (ii) in case such acts or conduct involved the provision by such practitioner or provider of health care services which were medically improper or unnecessary, an amount not in excess of the actual or estimated cost of the medically improper or unnecessary services so provided, or

"(D) exclude (permanently or for such period as the Secretary may prescribe) such practitioner or provider from eligibility to provide such services on a reimbursable basis.

"(2) The amount of any such fine may be deducted from any sums owing by the United States (or any instrumentality thereof) to the person upon whom such fine is imposed.

"(C) It shall be the duty of each Professional Standards Review Organization and each Statewide Professional Standards Review Council to use such authority or influence it may possess as a professional organization, and to enlist the support of any other professional or governmental organization having influence or authority over persons providing health care services in the area served by such Review Organization, in assuring that each practitioner or provider (referred to in subsection (a)) providing health care services in such area shall comply with all obligations imposed on him under subsection (a).

"HEARINGS AND REVIEW

"SEC. 1161. (a) Whenever any Professional Standards Review Organization takes any action or makes any determination—

"(A) which denies any request, by a health care practitioner or other provider of health care services (including any facility for intermediate care), for approval of a health care service proposed to be provided by such practitioner, or provider;

"(B) that any such practitioner or provider has violated any obligation imposed on such practitioner or provider under section 1160; or

"(C) disapproving (in whole or in part) any claim by any such person for payment or health care services provided by such person;

such Organization shall, immediately after taking such action or making such determination give notice to such practitioner or provider of such determination and the basis therefor, and shall provide him with appropriate opportunity for discussion and review of the matter.

"(b) (1) Any practitioner or provider who is dissatisfied with any action or determination of any Professional Standards Review Organization, which action or determination is taken pursuant to subsection (a) with respect to his obligation under section 1160, shall, upon request to the Secretary (filed within such time and in such manner as the Secretary shall by regulations prescribe) be entitled to a hearing on the matter by the Secretary.

"(2) Within 30 days after any such hearing by the Secretary is held, the Secretary shall make a final determination as to whether the action or determination of the Professional Standards Review Organization which was the subject of such hearing should be affirmed, modified, or reversed.

"(c) Any practitioner or provider who is dissatisfied with a final determination of the Secretary, under subsection (b) (2), which is made after a hearing by the Secretary requested by such practitioner or provider with respect to his right to provide health care services for which payment (in whole or in part) may be paid, under title XVIII, any State plan approved under titles V or XIX, or any other program established by or pursuant to any other title of this Act, is revoked or suspended by action of the Secretary pursuant to section 1160(b) shall be entitled to judicial review of the Secretary's decision after such hearing to the same extent as is provided in section 205(g).

"STATEWIDE PROFESSIONAL STANDARDS REVIEW COUNCILS; ADVISORY GROUPS TO SUCH COUNCILS

"SEC. 1162. (a) In any State in which there is located two or more Professional Standards Review Organizations, the Secretary shall establish a Statewide Professional Standards Review Council.

"(b) The membership of any such Council for any State shall be appointed by the Secretary and shall consist of—

"(A) one representative from and designated by each Professional Standards Review Organization in the State;

"(B) such number of physicians (but not more than two as may be designated by the State medical society of such State to serve as members on such Council; and

"(C) two physicians from such State whom the Secretary shall have selected as representatives of the public in such State.

"(c) (1) It shall be the duty and function of the Statewide Professional Standards Review Council for any State, in accordance with regulations of the Secretary, to coordinate the activities of, and disseminate information and data among, the various Professional Standards Review Organizations within such State.

"(2) It shall also be the duty of such Council to promptly transmit to the Secretary, reports and recommendations received by it from Professional Standards Review Organizations, together with the comments and recommendations of the Council on such reports.

"(d) The Secretary is authorized to enter into an agreement with any such Council under which the Secretary shall make payments to such Council equal to the amount of expenses reasonably and necessarily incurred, as determined by the Secretary, by such Council in carrying out the duties and functions provided in this section.

"(e) (1) The Statewide Professional Standards Review Council for any State shall be advised and assisted in carrying out its functions by an Advisory Group (of not less than 7 nor more than 11 members) which shall be made up of representatives of health care practitioners (other than physicians) and hospitals and other health care facilities (including facilities for intermediate care) which provide within the State health care services for which payment (in whole or in part) may be made under any program established by or pursuant to this Act.

"(2) The Secretary shall by regulations provide the manner in which members of such Advisory Group shall be selected by the

Statewide Professional Standards Review Council.

"(3) The expenses reasonably and necessarily incurred, as determined by the Secretary, by such Group in carrying out its duties and functions under this subsection shall be considered to be expenses necessarily incurred by the Statewide Professional Standards Review Council served by such Group.

"NATIONAL PROFESSIONAL STANDARDS REVIEW COUNCIL

"SEC. 1163. (a)(1) There shall be established a National Professional Standards Review Council (hereinafter in this section referred to as the 'Council') which shall consist of 11 physicians, not otherwise in the employ of the United States, appointed by the Secretary without regard to the provisions of title 5, United States Code, governing appointments in the competitive service.

"(2) Members of the Council shall be appointed for a term of 3 years and shall be eligible for reappointment.

"(3) The Secretary shall from time to time designate one of the members of the Council to serve as Chairman thereof.

"(b) A majority of the members of the Council shall consist of physicians of recognized standing and distinction in the appraisal of medical practice who have been recommended to the Secretary to serve on the Council by one or more national organizations recognized by the Secretary as representing practicing physicians.

"(c) The Council is authorized to engage such technical assistance as may be required to carry out its functions, and the Secretary shall, in addition, make available to the Council such secretarial, clerical, and other assistance and such pertinent data prepared by, for, or otherwise available to, the Department of Health, Education, and Welfare as the Council may require to carry out its functions.

"(d) Members of the Council, while serving on business of the Council, shall be entitled to receive compensation at a rate fixed by the Secretary (but not in excess of the daily rate paid under GS–18 of the General Schedule under section 5332 of title 5, United States Code), including travel time; and while so serving away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in Government service employed intermittently.

"(e) It shall be the duty of the Council to—

"(1) advise and assist the Secretary in the administration of this part;

"(2) collect and distribute, among Statewide Professional Standards Review Councils and Professional Standards Review Organizations, information and data which will assist such Review Councils and Organizations in carrying out their duties and functions;

"(3) review the operations of Statewide Professional Standards Review Councils and Professional Standards Review Organizations with a view to determining the effectiveness and comparative performance of such Review Councils and Organizations in carrying out the purposes of this part; and

"(4) make or arrange for the making of studies and investigations with a view to developing and recommending to the Secretary and to the Congress measures designed more effectively to accomplish the purposes and objectives of this part.

"(f) The National Professional Standards Review Council shall from time to time, but not less often than annually, submit to the Secretary and to the Congress a report on its activities and shall include in such report the findings of its studies and investigations together with any recommendations it may have with respect to the more effective accomplishment of the purposes and objectives of this part. Such report shall also contain comparative data indicating the results of review activities, conducted pursuant to this part, in each State and in each of the various areas thereof.

"APPLICATION OF THIS PART TO CERTAIN STATE PROGRAMS RECEIVING FEDERAL FINANCIAL ASSISTANCE

"SEC. 1164. In addition to the requirements imposed by law as a condition of approval of a State plan approved under titles V or XIX, and in addition to any conditions, or requirements imposed as a condition of any grant to a State to carry on any other program for the provision of health care services to individuals established by or pursuant to this Act, there is hereby imposed the requirement that provisions of this part shall apply to the operation of such plan or program.

"CORRELATION OF FUNCTIONS BETWEEN PROFESSIONAL STANDARDS REVIEW ORGANIZATIONS AND ADMINISTRATIVE INSTRUMENTALITIES

"SEC. 1165. The Secretary shall by regulations provide for such correlation of activities, such interchange of data and information, and such other cooperation consistent with economical, efficient, coordinated and comprehensive implementation of this part including usage of existing mechanical and other data-gathering capacity), between—

"(A)(i) agencies and organizations which are parties to agreements entered into pursuant to section 1816, (ii) carriers which are parties to contracts entered into pursuant to section 1842, and (iii) any other public or private agency (other than a Professional Standards Review Organization) having review or control functions, or proved relevant data-gathering procedures and experience, and

"(B) Professional Standards Review Organizations, as may be necessary or appropriate for the effective administration of title XVIII, State plans approved under titles V or XIX, or any program established by or pursuant to any other title of this Act.

"PROHIBITION AGAINST DISCLOSURE OF INFORMATION

"SEC. 1166. (a) Any data or information acquired by any Professional Standards Review Organization, in the exercise of its duties and functions, shall be held in confidence and shall not be disclosed to any person except (A) to the extent that may be necessary to carry out the purposes of this part or (B) in such cases and under such circumstances as the Secretary shall by regulations provide to assure adequate protection of the rights and interests of patients, health care practitioners, or providers of health care.

(b) It shall be unlawful for any person to disclose any such information other than for such purposes, and any person violating the provisions of this section shall, upon conviction, be fined not more than $1,000, and imprisoned for not more than 6 months, or both together with the costs of prosecution.

"LIMITATION ON LIABILITY FOR PERSONS PROVIDING INFORMATION, AND FOR MEMBERS AND EMPLOYEES OF PROFESSIONAL STANDARDS REVIEW ORGANIZATIONS

"SEC. 1167. (a) Notwithstanding any other provision of law, no person providing information to any Professional Standards Review Organization shall be held, by reason of having provided such information, to have violated any criminal law, or to be civilly liable under any law, of the United States or of any State (or political subdivision thereof) unless—

"(1) such information is unrelated to the performance of the duties and functions of such Organization, or

"(2) such information is false and the persons providing such information knew, or had reason to believe, that such information was false.

"(b)(1) No individual who, as a member or employee of any Professional Standards Review Organization or who furnishes professional counsel or services to such Organization, shall be held by reason of the performance by him of any duty, function, or activity authorized or required of Professional Standards Review Organizations under this part, to have violated any criminal law, or to be civilly liable under any law, of the United States or of any State (or political subdivision thereof).

"(2) The provisions of paragraph (1) shall not apply with respect to any action taken by any individual if such individual, in taking such action, was motivated by malice toward any person affected by such action.

"(3) For purposes of paragraph (2), an action by an individual shall be deemed to be motivated by malice toward a person or provider affected by such action, if the individual taking such action has consistently failed impartially to take similar action in similar circumstances which involved other persons or providers.

"FEDERAL OWNERSHIP OF FILES, RECORDS, AND MATERIALS

"SEC. 1168. All files, records, and materials of any Professional Standards Review Organization or any Statewide Professional Standards Review Council which such Organization or council shall have compiled or acquired in the exercise of its duties and functions imposed under this part shall be the property of the United States and shall be held, transferred, or otherwise disposed of, in such manner as the Secretary shall by regulations prescribe.

"AUTHORIZATION FOR USE OF CERTAIN FUNDS TO ADMINISTER THE PROVISIONS OF THIS PART

"SEC. 1169. Expenses incurred in the administration of this part shall be payable from—

"(1) funds in the Federal Hospital Insurance Trust Fund;

"(2) funds in the Federal Supplementary Medical Trust Fund; and

"(3) funds appropriated to carry out the provisions of—

"(A) title V;

"(B) title XIX; or

"(C) any other title of this Act (other than titles XVIII and XIX) which establishes or pursuant to which there is established any plan or program for the provision of health care services to individuals;

in such amounts from each of the sources of funds (referred to in clauses (1), (2), and (3)) as the Secretary shall deem to be fair and equitable after taking into consideration the costs attributable to the administration of this part with respect to each of such plans and programs.

"AUTHORIZATION OF DEMONSTRATION PROJECTS

"SEC. 1170. (a) In order to determine the feasibility and potential economics of methods whereby Professional Standards Review Organizations, in addition to their responsibilities under this part, assume responsibility and risk with respect to the review and payment of claims for health care services payment for which may be made (in whole or in part) under any program established by or pursuant to this Act, the Secretary is authorized to enter into agreements in periods ending not later than December 31, 1975 with such number of Professional Standards Review Organizations, in the same or in different areas of the Nation, as may be necessary to permit adequate and proper comparison of results, with respect to the review and payment of claims for such services, as between areas in which risk is assumed by Professional Standards Review Or-

ganizations and areas in which such risk is not assumed by such Organizations. The Secretary shall submit reports to the Congress on the results of such demonstration projects from time to time but not less than annually.

"(b)(1) The Secretary shall undertake such agreements with Professional Standards Review Organizations which indicate willingness and capacity to assume responsibility for review and full payment for all care and services for which beneficiaries or recipients resident in such geographic areas are eligible. Reimbursement to such Professional Standards Review Organizations for such commitments may be on a capitation, prepayment, insured or related basis for renewable contract periods not in excess of one year. Such amounts may not, on an annualized basis for the initial agreement period, exceed per capita beneficiary costs in the geographic area concerned during the 12-month period prior to the effective date of the agreement. For any subsequent periods the base 12-month period per capita beneficiaries costs shall also be applicable and adjusted by appropriate factors representing unit cost increases in covered services.

"(2) Where such agreements are negotiated, provision shall be made for assumption of risk by the underwriting Professional Standards Review Organizations through agreement to make contingent payments for physicians' services of not in excess of 80 per centum of the amounts otherwise allowable for such services in the absence of such agreement.

"(3) From any amounts remaining at the end of the agreement period, provision shall be made for equal division of such amounts between the Secretary (and the State in the case of a federally matched program) and the Professional Standards Review Organizations. The amounts actually paid to the Professional Standards Review Organizations from the divided excess may not exceed the 20 per centum of otherwise allowable amounts withheld plus an incentive payment not in excess of 25 per centum of the total amounts allowable and payable for physicians' services during that year. Any remaining amounts of the Professional Standards Review Organizations calculation in excess shall revert to the Secretary or to the State in the case of a federally matched health care program.

"(4) Any deficit shall be assumed by the Federal or State agency in order to assure beneficiaries and recipients of payment for necessary care. The Professional Standards Review Organizations shall not be entitled to the 20 per centum of the otherwise allowable amounts for physicians' services withheld in such period. In any subsequent year, the Secretary shall recover from any excess amounts remaining such additional amounts as had been paid by him to eliminate deficits in prior periods before calculation of any payments of withheld and incentive amounts to the Professional Standards Review Organizations."

The summary, presented by Mr. BENNETT, is as follows:

PROFESSIONAL STANDARDS REVIEW—MEDICARE AND MEDICAID

SECTION-BY-SECTION SUMMARY OF AMENDMENT

Declaration of purpose

Sec. 1151. Purpose of the subtitle is to promote effective, efficient and economical delivery of health services for which payment may be made under the Social Security Act, through application of professional standards review procedures which would assure that such services are of appropriate quality, and are provided only when necessary and then in the most economical fashion consistent with professional recognized health care standards.

Designation of Professional Standards Review Organization (PSRO)

Sec. 1152. The Secretary of Health, Education, and Welfare shall at the earliest practicable date, but prior to January 1, 1972, enter into agreements in each area of the United States with qualified organizations to serve as Professional Standards Review Organizations (PSRO).

In making such agreements, the Secretary would give first priority to local medical societies or subsidiary organizations which represent a substantial portion of physicians in the area. Where such groups are unable or unwilling to enter into agreements, the Secretary would make such agreements with other private nonprofit, public, or other agency or organization with professional competence.

The agreement shall provide that the designated organization will perform the duties and functions of a PSRO and that the Secretary shall pay for reasonable and necessary expenses. Agreements shall be for periods of 12 months, and may be terminated by the organization upon reasonable notice, or by the Secretary after a formal hearing.

Review pending designation of Professional Standards Review Organizations

Sec. 1153. Pending assumption of responsibility, and demonstration of capacity for improved review efforts by a PSRO, presently authorized review and audit activities shall be continued.

Trial period for Professional Standards Review Organization

Sec. 1154 (from the PSRO). The Secretary shall, after receipt and approval of a formal plan for progressive assumption of full responsibility, initially designate an organization as a PSRO on a conditional basis. During the trial period (not to exceed 24 months) the Secretary may require the PSRO to perform only such duties and functions as he deems them capable of performing. Assumption of responsibility for duties should proceed in accordance with the approved plan, so that at the end of the trial period, the PSRO is performing all required duties and functions.

An agreement by which an organization is *conditionally* designated as a PSRO may be terminated by either party on 90 days' notice.

Any duties and functions not performed by a PSRO during the trial period shall continue to be performed as presently authorized. The Secretary is authorized to waive any other review requirements where he finds, based on substantial evidence, that the PSRO meets or exceeds those requirements.

Duties and functions of Professional Standards Review Organization

Sec. 1155. It shall be the duty and function of each PSRO to assume responsibility for review of the professional activities of health care practitioners and providers with respect to health care services for which payment may be made under the Social Security Act. Such review shall be for the purpose of determining whether the services are necessary to proper health care; meet recognized professional standards of health care; and are provided in the most economical fashion consistent with recognized standards of care.

Each PSRO shall also determine, in advance, that elective inpatient admissions or extended, costly out-patient courses of therapy meet the above criteria. Hospital admissions shall be approved for periods certain related to patient age and diagnosis; and recertification by the attending physician shall be necessary for extensions of the period initially approved.

Each PSRO shall be responsible for the development, maintenance and review of practitioner, patient, and provider service profiles.

Each PSRO is authorized to: utilize specialists as needed in the review process; undertake necessary professional inquiries; and examine pertinent records and sites of care.

Norms of health care services for various illnesses or health conditions

Sec. 1156. Each PSRO shall apply professionally-developed and published norms of care and treatment based upon patterns of practice in the region as principal points of evaluation and review in determining quality and medical necessity of services.

Where actual norms in an area differ significantly from regional norms, the PSRO can, with approval of the National Professional Standards Review Council, apply such norms in its geographic area. The National Review Council shall prepare and distribute to each PSRO appropriate materials concerning the regional and national norms to be utilized as initial checkpoints.

Submission of reports by professional standards review organizations

Sec. 1157. If a PSRO determines that a practitioner or provider has violated any obligation imposed by Sec. 1160, the PSRO shall transmit a report of findings and recommendation to the Secretary through the Statewide Professional Standards Review Council, which shall transmit the report and recommendations along with such comments as the Statewide Council deems appropriate.

Requirement of review approval as condition of payment of claims

Sec. 1158. Where a PSRO has reviewed and disapproved a proposed health care service, and has prior to the provision of such service, notified the practitioner and provider and the patient of the disapproval, no Federal funds appropriated under the Social Security Act shall be used for the payment of any claim for the provision of such disapproved services.

Notice to payor of disapproved claim

Sec. 1159. The PSRO, upon disapproval of a proposed service, shall promptly notify any claims payment agency concerned of such disapproval.

Obligation of Health Care Practitioner and Providers of Health Care Services—Sanctions and Penalties

Sec. 1160. It shall be the obligation of any health care practitioner or provider to assure that the services they provide, for which payment may be made under the Social Security Act will be provided: only when medically necessary; will meet recognized professional standards of health care; and in the case of in-patient services will be provided in the most economical facility consistent with professionally recognized health care standards.

If after reasonable notice and opportunity for discussion, a PSRO finds that a practitioner or provider has consistently failed to comply or has flagrantly failed to comply with his obligations, the PSRO may then recommend to the Secretary (and he may require) that such practitioners or providers pay a monetary penalty not to exceed $5,000 (as a condition of remaining eligible for program payments for his services) or the Secretary may temporarily or permanently exclude such practitioner or provider from the program.

Hearings and Review

Sec. 1161. Whenever a PSRO takes any action which denies approval of a proposed service, or indicates that a practitioner or provider has violated the obligations imposed upon him, the PSRO shall give notice to the practitioner or provider, and provide an appropriate opportunity for discussion and review.

Following such discussion and review any practitioner or provider who remains dissatisfied shall, upon request to the Secretary, be entitled to a hearing by the Secre-

tary. Within 30 days after hearing the Secretary shall make a final determination on the matter.

A practitioner or provider who is dissatisfied with this final determination may within 60 days appeal such determination to the courts.

Statewide Professional Standards Review Councils: Advisory groups to such Councils

Sec. 1162. In each State with two or more Professional Standards Review Organizations the Secretary shall appoint a Statewide Professional Standards Review Council consisting of one representative from each PSRO, two physicians designated by the State Medical Society and two physicians from the State selected by the Secretary as public representatives.

It shall be the function of each council to coordinate the activities of and disseminate data among the various PSROs and promptly to transmit to the Secretary reports and recommendations received from the PSROs.

The Secretary shall make payments to cover reasonable and necessary expenses.

Each Statewide Council shall be advised and assisted by an Advisory Group consisting of representatives of the various types of health care practitioners (other than physicians) and providers, providing covered health care services in a State which it shall select in accordance with regulations prescribed by the Secretary.

National Professional Standards Review Council

Sec. 1163. There shall be established a National Professional Standards Review Council consisting of eleven physicians appointed by the Secretary for three-year terms. A majority of the members of the Council shall consist of physicians of recognized standing and distinction in the appraisal of medical practice nominated by one or more national organizations representing practicing physicians. The Secretary shall provide such personnel and other assistance as may be necessary for the Council to carry out its functions.

The Council shall advise the Secretary in the administration of this part; distribute among Statewide Councils and PSROs pertinent information and data; review the operation of PSROs with a view to determining their comparative effectiveness and performance; and approve or disapprove requests of PSROs for usage of other than regional norms. The National Council shall, at least annually, submit to the Secretary and the Congress a report on its activities, and comparative data indicating the results of review activities in each State and area.

Application of this amendment to certain State programs receiving Federal financial assistance

Sec. 1164. Provisions of this amendment shall apply to the operation of any State plan approved under the maternal and Child Health, Medicaid, Intermediate Care, and any other health care or health care related programs.

Correlation of functions between Professional Standards Review Organizations and administrative instrumentalities

Sec. 1165. The Secretary shall by regulation provide for correlation and cooperation between carriers, intermediaries, government agencies and PSROs. Such cooperation shall include usage of existing mechanical and other data gathering capacity.

Prohibition against disclosure of information

Sec. 1166. Any information acquired by a PSRO in the discharge of its functions shall be held in confidence, except as may be necessary to carry out the purposes of this part or to assure adequate protection of the rights of patients, practitioners or providers. Disclosures of information other than for such authorized purposes shall be unlawful and shall upon conviction be punishable by a fine of up to $1,000 and imprisonment for up to 6 months.

Limitation on liability for persons providing information and for members and employees of PSROs

Sec. 1167. Persons providing information and members or employees of PSROs shall in general not be liable if such information were genuine, and if any actions taken are not motivated by malice. An action shall be deemed to be motivated by malice if the individual or PSRO has consistently failed impartially to take similar action in similar circumstances involving other persons or providers.

Federal ownership of files, records and material

Sec. 1168. All files, records and materials of a PSRO or a Statewide Council shall be the property of the United States.

Authorization for use of certain funds to administer the provisions of the part

Sec. 1169. Expenses incurred in the administration of this part shall be payable from the Hospital Insurance Trust Fund, the Supplementary Medical Trust Fund, and funds appropriated for other Titles of the Social Security Act in such proportion as the Secretary deems to be equitable.

Authorization of demonstration projects

Sec. 1170. The Secretary is authorized to enter into agreements (ending not later than 1975) with such number of PSROs as are necessary to permit a comparison of results where a PSRO assumes a financial risk for the payment of Medicare claims in contrast to areas where a PSRO does not assume financial risk.

Where a PSRO indicates a willingness and capacity to assume financial responsibility for the review and payment of all claims, reimbursement to such PSROs may be made on a capitation, prepayment, insured or related basis for renewable contract periods not exceeding one year. Such amounts may not exceed per capita beneficiary costs in the area concerned during the preceding 12-month period.

Where such agreements are negotiated provision shall be made for the PSRO to assume a risk by making payments for physicians' services at a rate not in excess of 80% of otherwise allowable amounts for such services.

Any sums remaining at the end of the agreement period shall be divided so that the Government receives 50% of the savings. The Government shall also receive amounts, if any, remaining after the PSROs have received the 20 percent or other risk factor withheld and an incentive payment not in excess of 25% of 100% of the physicians' allowable program charges during the agreement period.

Renewable agreements shall be at the base or initial year rate of payment adjusted for appropriate increases, if any, in the unit costs of covered services during the prior year.

PUBLIC WORKS FOR WATER, POLLUTION CONTROL, AND POWER DEVELOPMENT AND ATOMIC ENERGY COMMISSION APPROPRIATION BILL, 1971—AMENDMENT

AMENDMENT NO. 852

Mr. NELSON (for himself, Mr. MONDALE, Mr. HART, Mr. JAVITS, Mr. GRIFFIN, Mr. MCINTYRE, Mr. MUSKIE, Mr. PELL, Mr. PERCY, Mr. BAYH, Mr. CRANSTON, Mr. YOUNG of Ohio, Mr. TOWER, Mr. EAGLETON, Mr. CANNON, and Mr. MONTOYA) submitted an amendment, intended to be proposed by them, jointly, to the bill (H.R. 18127) making appropriations for public works for water, pollution control, power development, including the Corps of Engineers—Civil, the Panama Canal, the Federal Water Quality Administration, the Bureau of Reclamation, power agencies of the Department of the Interior, the Tennessee Valley Authority, the Atomic Energy Commission, and related independent agencies and commissions for the fiscal year ending June 30, 1971, and for other purposes, which was ordered to lie on the table and to be printed.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES—AMENDMENTS

AMENDMENT NO. 853

Mr. PROXMIRE (for himself, Mr. SCHWEIKER, Mr. YARBOROUGH, Mr. BROOKE, Mr. YOUNG of Ohio, Mr. EAGLETON, and Mr. GRAVEL) submitted amendments, intended to be proposed by them, jointly, to the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes, which were ordered to lie on the table and to be printed.

(The remarks of Mr. PROXMIRE when he submitted the amendments appear earlier in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSOR OF AN AMENDMENT

AMENDMENT NO. 844 TO H.R. 17123

Mr. HATFIELD. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Illinois (Mr. SMITH) be added as a cosponsor of amendment No. 844 to H.R. 17123, the military procurement authorization bill.

The PRESIDING OFFICER (Mr. EAGLETON). Without objection, it is so ordered.

ADDITIONAL STATEMENTS OF SENATORS

DEATH OF FORMER SENATE CHAPLAIN, THE REVEREND DR. FREDERICK BROWN HARRIS

Mr. THURMOND. Mr. President, all of us in the Senate were saddened to learn of the death on Tuesday of the Reverend Dr. Frederick Brown Harris, Chaplain of the Senate for more than 24 years.

Dr. Harris served as Chaplain of the Senate until January 9, 1969, when our present Chaplain, the Reverend Dr. Edward L. R. Elson was elected by the Senate and assumed these duties.

Mr. President, no Member of the Senate who served here during Dr. Harris' tenure will ever forget this kind, gentle, saintly man. He was a daily inspiration to those of us who labor here. His prayers which opened the Senate each day were

inspiring and challenging. He constantly called upon us to heed the teachings of Jesus.

Dr. Harris was an eloquent and precise speaker. He was a storehouse of quotations, stories, and illustrations on religious teachings. While his voice is stilled, his words remain with us, and will provide a source of strength to all of us.

I feel a personal loss in his passing and hasten to extend my heartfelt sympathy to his dedicated and loyal wife, Helen, and to his two daughters, Mrs. Barbara Louise Marrs and Mrs. Constance Cole, who reside in the Washington area.

Mr. President, I ask unanimous consent that articles published in the Washington Post of August 19, 1970, and the Washington Daily News of August 19, 1970, on the death of Dr. Harris be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Aug. 19, 1970]

F. B. HARRIS, SENATE CHAPLAIN, DIES

The Rev. Dr. Frederick Brown Harris, chaplain of the Senate for 24 years, died yesterday after a heart attack at his home. He was 87.

Mr. Harris was elected Senate chaplain in 1942 and served until 1946 when he was succeeded by the late Rev. Peter Marshall.

In 1949, Mr. Harris replaced Mr. Marshall just as Marshall had replaced him. He retired as chaplain 20 years later.

Mr. Harris delivered a prayer every morning the Senate was in session. These prayers were recently collected in five volumes.

Once, Mr. Harris performed a wedding in the Caucus Room of the Senate Office Building. He married a 69-year-old Western Union messenger to a 60-year-old widow at a specially constructed altar.

Visiting ministers often asked their home state senators to ask Mr. Harris if they could substitute for him in delivering the daily invocation. The Senate chaplain usually agreed, but he once complained to the then majority leader, Lyndon B. Johnson, that in a matter of a few weeks he had been replaced 17 times.

"Now look here, Reverend," Johnson consoled, "if you ever want me to call a halt to this sort of thing, you let me know, and we'll just restrict the number of visiting preachers."

Mr. Harris did not remind Johnson that he already had two requests from the senator's office for permission for two Texas ministers to preach.

Born in Worcester, England, Mr. Harris came to the United States at an early age, making his first U.S. home in New Jersey.

He was graduated from Pennington Seminary in 1905, took a bachelor of arts degree from Drew Theological Seminary in 1912, and a doctor of divinity from Dickinson in 1923.

He organized and built the Greenwood Avenue Methodist Church in Trenton, N.J., moved from there to St. Luke's Church in Longbranch, N.J., and then to Grace Church in New York City.

Mr. Harris came to historic Foundry Methodist Church in Washington in 1924, retiring from the position in 1955.

He wrote a column called "Spires of the Spirit" which appeared in the Washington Evening Star and which was collected into a book.

He conducted funerals for President Herbert Hoover, Sen. Robert A. Taft and Gen. Douglas MacArthur.

Mr. Harris, who resided at 4000 Cathedral Ave. NW, is survived by two daughters, Mrs. Barbara Louise Marrs, of Kensington, and Mrs. Constance Cole, of Bethesda, and seven grandchildren.

[From the Washington Daily News, Aug. 19, 1970]

FREDERICK HARRIS, 87, CHAPLAIN OF THE SENATE

Services for the Rev. Frederick Brown Harris, 87, chaplain of the Senate for 24 years, who died yesterday after a heart attack, will be at 2 p.m. Friday at the Foundry Methodist Church, 1500 16th-st nw. He lived at 4000 Cathedral-av nw.

Mr. Harris was elected Senate Chaplain in 1942, and served until 1946 when he was succeeded by the late Rev. Peter Marshall. In 1949 Mr. Harris replaced Mr. Marshall.

He was born in Worcester, England, and came to the United States at an early age.

He wrote a column for the Washington Evening Star called "Spires of the Spirit", later collected in a book.

DISTRICT OF COLUMBIA NONVOTING DELEGATE BILL

Mr. KENNEDY. Mr. President, after consulting publicly and privately with leaders in District of Columbia affairs and with Members of the Senate, I have asked the majority leader to defer the Senate consideration of the District of Columbia nonvoting Delegate bill until after the Labor Day recess.

I believe that this brief delay will enhance the prospect of achieving full voting representation in Congress for the District of Columbia, and I am confident that it will not jeopardize the enactment of the nonvoting delegate bill in this Congress.

I fully support a nonvoting Delegate in Congress for the District of Columbia, and I commend the extraordinary success of Senator TYDINGS, Congressman NELSEN, and District leaders in bringing this goal within easy reach at last. I especially commend Mayor Washington, Sterling Tucker, David Carliner, and the other leaders of the District for the common bond of unity they formed in pressing the nonvoting Delegate issue to its successful passage by the House last week. the leaders have served the District well. There is no difference among us on our overall goal. The question that has risen is entirely one of timing and legislative strategy.

A number of Senators and District leaders with whom I have now conferred share my concern that the immediate passage of the nonvoting Delegate bill will diminish the very real opportunity we now have in this Congress to achieve our vastly more important goal of full voting representation for the District of Columbia—two voting Senators and two voting Congressmen. I intend to offer a constitutional amendment on the Senate floor in September to achieve this goal.

Already, however, sentiment is developing in Congress that the nonvoting Delegate bill is enough of an accomplishment for this session and this Congress. It is nothing of the sort. The nonvoting Delegate is not an end in itself. The very real value it has is as an interim measure, a half-way house to tide us over the brief period while a constitutional amendment for full voting representation is enacted by Congress and ratified by the States.

On Tuesday, September 8, when the Senate returns from the Labor Day recess, I hope to sit down again with Members of the Senate and leaders of the District of Columbia to plan final action on both the full voting representation amendment and the nonvoting Delegate bill. At that time, there will be ample opportunity for enactment of the Delegate bill, well before the congressional adjournment rush.

At that time also, the Senate schedule will be clear enough to know whether my District of Columbia full representation amendment can be brought to a vote early in September. Even if Senate consideration of the Direct-Election-of-the-President Amendment is delayed until later in September, it may well develop that the Equal Rights for Women Amendment will be amended by the Senate, and will, therefore, become an attractive alternative vehicle for the District of Columbia full representation amendment.

Full voting representation in Congress is an act of simple justice for the District of Columbia that is long overdue. For nearly a century, every effort to accomplish this goal has met with uniform frustration and defeat. Now, at last, we have a good chance of success, if only we keep our sights high, and do not relax our effort before the job is done.

I believe that the delay of 25 days I have requested is a very small price to pay for a better chance to achieve the higher goal we seek. Eight hundred thousand citizens of the Nation's Capital are denied the most basic right of all in a democratic society, the right of representative government, and it is long past time for Congress to end this injustice.

SENATOR MUSKIE ON THE POWER CRISIS

Mr. EAGLETON. Mr. President, the Senator from Maine (Mr. MUSKIE) delivered a significant and timely address to the American Bar Association in St. Louis on August 12 on the subject of our growing national electricity shortage crisis. He addressed himself particularly to the threats to the quality of our natural environment which are posed by the way we presently generate electricity.

Senator MUSKIE perceptively identified our shortcomings in dealing with these challenges—"an absence of planning, a lack of sense of community—and—a failure of common purpose" on the part of industry and Government at the local, State, and Federal levels. He outlined the inadequacies of the existing patchwork of local, State, and Federal responsibilities, and the absence of any overall policy to resolve the "avoidable conflict in values" between our needs for power and our concern for the environment.

Mr. President, when Mr. Nixon took office, he cast aside the results of major electric reliability studies and corrective legislation initiated by a Democratic administration in response to the giant 1965 Northeast blackout. In the intervening period of more than 18 months, rep-

resentatives of his administration have consistently opposed far-reaching legislation before the Congress which would establish a framework for achieving our dual objectives of serving our need for power and protecting our natural surroundings.

Senator MUSKIE pointed out the administration's abdication of its responsibilities to the American public on these important issues. He called attention to the fact that for 12 long months administration representatives have repeatedly promised an administration proposal to deal with these problems but have utterly failed to make good on their promises. I might note, Mr. President, that this is the administration headed by the same Mr. Nixon who harshly criticized the Congress recently for taking 6 months to responsibly and carefully consider the air pollution proposal he finally offered the Congress over 12 months after he took office.

In the face of the administration's neglect of these urgent problems, Senator MUSKIE issued a call for congressional action now to provide the tools to deal with them.

With the foresight and vision that is characteristic of him, Senator MUSKIE has introduced S. 2752, a bill which establishes a means for coordinating the activities of local, State, and Federal governments in dealing with these problems. It provides for a system of orderly and rational planning for the accomplishment of our dual objectives of adequate, reliable electricity supply and protection of the environment. Since these problems touch upon national, as well as regional interests, his proposal calls for action on a regional basis within the broader framework of national policies.

Mr. President, I want to commend Senator MUSKIE's proposal, S. 2752, to the Senate and respectfully suggest that it—and the subject matter with which it deals—deserve early and responsive action by the Senate.

It is a great pleasure to serve with Senator MUSKIE. I deeply appreciate his vigorous leadership and the deep sense of urgency which he attaches to solving our serious and increasingly urgent national power and environmental problems.

I ask unanimous consent that Senator MUSKIE's speech be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR EDMUND S. MUSKIE

I am delighted to be at your second general assembly and to participate in this unique discussion.

I congratulate the ABA that it saw fit to devote this assembly to so vital a subject.

Let me apologize in advance for being compelled to leave early. The ABM vote is coming up today and since Mr. and Mrs. Mitchell didn't make their plane available to me, I have chartered a plane to be back for the vote. I did try to convince Senator Mansfield that the *ABA* had priorities over the *ABM*, but I didn't win that petition.

At the first assembly you and the nation were privileged to hear the chief justice deliver a state of the judiciary address. It was a sober message and a call for reform.

Today this panel will be reporting on the state of life in the decade of the seventies. Here, too, the message is a sober one and the need for reform critical.

I have chosen for my topic one element of the quality of life-power. *Not establishment* power, although that *is* involved. *Not power* for *people*, although that is involved too. The power I refer to is the *raw power* of electric energy. And it is a pervasive power, affecting every aspect of our public and private life.

Its production—from nuclear or fossil fuels—is a pollution risk.

Its transmission lines and plants are an affront to the eyes of conservationists.

Its use is indispensable to a vast array of goods and services.

Its existence suggests one of the "clean" alternatives to the combustion engine.

It is the indispensable energy source for the mass transit systems so desperately needed in our cities.

It is, at one and the same time, an environmental hazard and one of the "cleaner" sources of energy.

It is a great and challenging environmental dilemma which is central to other similar dilemmas.

The automobile, the single greatest air polluter and a vital source of transportation to millions of our citizens in present circumstances.

Oil, the great actual and potential desecrator of oceans and shorelines and wild-life and whatever beauty it touches and the mover of nations in peace and war.

Nuclear energy, an environmental hazard of the first magnitude but "cleaner" than other forms, and the most likely source of the massive amounts of energy we need in our future.

These environmental dilemmas suggest that we may be in the process of consuming our very planet.

It is obvious that if such "mixed" blessings are to become less "mixed" from an environmental point of view, their use and application must be drastically modified.

We take electric power for granted. We use it to improve the quality of our life. We assume it will be there when we need it. And we assume that it is one of the benefits of our tremendous technological excellence.

But how reliable are those assumptions? Let me give you some signs and portents that have a chilling effect on this aspect of our quality of life.

Example 1—Recently there was a massive power failure in New York. It became the subject of jokes when a reporter observed that some nine months later there was an upsurge in births in New York City. But is it funny when there is a power failure in the hospitals where those births are taking place?

Example 2—Within these last months residents in our major cities were warned of blackouts and brownouts.

Example 3—For the past seven years Consolidated Edison has found no acceptable site for a new power plant to service New York City.

Example 4—Only several weeks ago, Consolidated Edison had to purchase and trade power with generating plants here and in Canada in order to keep New York City from blowing its fuse. And the supreme irony is that one of its sources was the Tennessee Valley Authority.

What does this mean? What do these examples portend? Let me tell you. Very simply:

They mean that we are in danger of massive electric power failures.

They mean that we are losing the race between the capacity of people to use electricity and the capacity of our nation to supply it.

They mean that electric power is one of the chief pollutants of our atmosphere.

They mean that power systems are in desperate need of new sites and can't find them.

They mean that our planning in this area is at such an immature stage as to approach a national scandal.

Few of us, I am sure, have focused on these problems, even in as sophisticated an audience as this one.

How has this happened, you ask? Hasn't the government, or someone, somebody, been looking after our interests?

The hard short answer is "no." And what I would like to do today is tell you *why* the answer is no and face up to the issues that need facing.

In a larger sense, our failure to cope with the twin and conflicting needs of massive electric power and clean environment is the result of a tool failure of another sort—the failure to fashion the tools needed to deal with a problem of such magnitude.

Governmentally, in this area we are at the stage of the first incandescent electric bulb.

Local and State governments, jealous of sovereign prerogatives, have failed to work out the regional plans and develop the regional sites needed both to provide for electrical expansion and to avoid environmental degradation.

And now the communities they guard so jealously are in serious danger of being damaged by the effects of pollution and power failures.

On the Federal level, the Federal Power Commission has long avoided facing up to the needs for a national power network. We know how to build and regulate broadcast networks, sports networks, merchandising networks, food distribution networks—but not a power network.

And now we end up having hundreds of thousands of kilowatts of power unable to reach New York in an emergency because the necessary transmission lines have not been built. Literally, no one is manning the switches that count the most. All too often we do not have the switches.

On the national level, too, we have not yet even developed an overall national power policy. No one—neither Government nor industry has really planned—or is yet planning—or is even in a position to start planning effectively for this decade.

Despite our numerous advisory bodies, commissions, studies, monographs, and reports, no national policy has emerged to set forth guidelines and directions.

Many persons at many levels of government have the power to say "No" to a specific power project—but no one has the clear authority to say "Yes" and make it stick.

From an overview, what we see here is an absence of planning, a lack of sense of community, a failure of common purpose. We see—

Advocates of clean air and water battle industry representatives:

1. Before public utility commissions which lack power to cross State lines,

2. Before city councils who don't know how to cope with the problem, and

3. In State and Federal courthouses with their inevitable delays and limited jurisdictions.

But no one of these institutions has any real mandate to try to balance the requirement of adequate power with that of a wholesome environment.

As long as this situation persists, the potential for paralysis and more serious pollution will spread far beyond the city limits of our major urban centers—not only in the summertime, but in every season of the year. And every aspect of our life will be affected.

Bear in mind that in the last 20 years, the national use of electric power has quadrupled:

That in the next 20 years, we will have to build at least 250 more plants to satisfy our estimated power needs.

That of these plants, more than 150 may have to be nuclear-powered, eventually surrounding every major body of water in this country.

That, no technology has yet been devised to keep today's electric power plants from releasing nitrogen oxide into the air—even nuclear-powered plants, in their present form are an inept substitute. For they pose the dangers of radiation leakage and thermal pollution of our rivers and streams.

That, we need money to support far greater research and to develop methods to limit and eliminate the polluting by-products of electric power plants.

That we need to explore entirely new methods for generating power, such as solar energy.

Given these hard facts, is it not obvious that we dare no longer tolerate a patchwork approach?

What is at stake is truly the quality of life. The need for more electric power is essential to economic growth which we badly need in and of itself . . . to modern requirements for rapid communications and more effective mass transit . . . and to the providing of homes, job opportunities, and leisure time activities to which more people are becoming accustomed, to which disadvantaged people aspire, and which they are not prepared to forego.

In an age increasingly concerned about air pollution, are we really prepared to do without air conditioning?

What, then, is the price that ought to be paid for protecting our environment and supplying our power? How do we serve both masters? How is the bill to be paid? And who is to pay it?

The questions are hard and unpleasant. And to an increasing extent, the answers are being sought in the courts—courts which are overburdened but which, nevertheless, have an overriding responsibility to preserve the opportunity for legal redress against public as well as private wrongs.

But we must recognize that the courts have been established more to resolve disputes than to formulate policy. And they cannot forever be the first or even the best answer to the fundamental problems of power and pollution.

Industry, unfortunately, has not stated *what* mechanism it would support to solve these problems. Industry has long avoided public discussion of its future needs and the location of new facilities. It has only been vocal with regard to what it opposes. And now that policy has resulted in public distrust of practically every proposal that industry offers.

And as I said, governments—local, State and Federal—have not performed much better.

That is why I (and others) have introduced legislation designed to coordinate the activities of local, State and Federal agencies *now*.

That is why we must develop a system of orderly and rational planning *now*.

That is why we must develop speedy administrative machinery *now*, where the processes are both speedy and due.

And that is why we must do this on a regional basis—tied to national policies—if we are to have a sufficiently broad resource and policy base to make informed and timely decisions on how best to supply the most power with the least effect on the environment.

I do not deny the possibility that the legislation I have proposed—Senate Bill 2752—may be susceptible to modification and improvement. There are other legislative proposals that have been introduced in the Congress, and the administration continues to promise—as it did last year and again this spring—that its legislative recommendations will be available shortly.

But the point is that we can no longer afford a casual and relaxed attitude about these problems which only grow more complex and difficult with the passage of time. . . . We must consider legislation to deal with these problems *now*. We are already running out of time.

Otherwise, the public outcry which *will* intensify with each power slowdown or failure may ultimately stampede Congress into enacting crisis legislation of the most stringent variety—legislation which might provide for Federal preemption of State and local governmental authority . . . for Federal control over industry-making . . . or for nationalization itself.

Bad cases, you all know, make bad law and bad crises, all too often make bad legislation.

Perhaps part of my function this morning is a lobbying effort. But it is also to enlist your talents.

As members of the bar, you undoubtedly possess the professional skills to help us fashion imaginative legislative solutions, and to design then new administrative procedures we so urgently require to solve these problems . . . and just as important, I believe you have the skills and understanding to advocate to your clients and your communities the need for *them* to reach decisions about these problems while *they* can still make a difference.

Just consider the influence you might exert on some of your clients. The electric power industry criticizes, for example, any proposal to lay underground transmission lines because they would cost too much under present technology . . . But the industry spends, in the aggregate, less than 2/10 of 1 percent of its annual revenues for all research. How persuasive you could be in making that point.

Most vital of all, however, we must *all* recognize that the problems of power and pollution are only a *single aspect* of the whole environmental challenge of this decade.

After all, what we are addressing ourselves to this morning is the future of people's lives . . . and the extent to which people can fulfill their potential in a decade threatened by overcrowding . . . crime . . . unwholesome air and water . . . and the failure not only of power plants but of social institutions as well.

And so, the environmental point of view in the 1970's must mean a comprehensive way of examining our lives. It must encompass not only the businessman worried about what a power failure may do to his business operations, but also the mother concerned with the tenement life and what it may do to her children . . . not only the people who care that the sky is clear during the day, but also the people who care that the streets are safe at night.

We are facing an *avoidable* conflict of values. The problem as each of you knows too well is not simple. But *we do know that* cheaper electricity at the cost of thermal pollution is not necessarily progress; that two car families at the cost of poisoned atmosphere is not necessarily progress.

All costs, private and social, must be counted and weighed.

It would be easy to declare that oceans should be fished and sailed, never drilled; that mountains should be viewed and walked upon . . . never mined—that all land should be dedicated to the preservation of wild life—never despoiled to build new towns, but man is also a part of the ecology.

To achieve the proper balance may be at one time both the most difficult and unavoidable task man has ever faced.

How we approach it, with what values, and with what commitments may determine the very liveability of this earth.

The need for electric power poses the challenge in its entirety, forcing us to recognize:

That technological innovation must now play an overriding role in any accommodation to our fragile environment;

That the scale of human activity on this globe is limited; limited by the finite capacity of the earth to absorb punishment and abuse.

That if we simply equate environmental quality with cleaning up pollution; occupying ourselves with the mess we have made, we shall fail.

That above all forceful judgments must be made immediately about what constitutes acceptable human behavior.

In short, the challenge of the seventies will require as much in the way of restraint as expenditure, the very limit of the lawyers' skill will be called in to play.

The challenge is as long as the list of human activity. We will have to decide what kind of power we can accept in an automobile. We must decide whether automobiles are to be permitted at all in major cities and if so, under what limitations.

We will have to decide what kind of products can be produced with what kind of packages. We may even have to distinguish between acceptable advertising based on necessity and wasteful product advertising appealing only to whims.

The list is inexhaustible but . . .

It should be obvious to us by now that the problems of the environment require more from us than a determination to clean up the mess we have created, although that determination is important. We must also—at this point in time—start thinking in terms of preventive law . . . to change the very habits which permitted us to abuse our environment in the first place. Our objective? To avoid the apocalypse which James Thurber once warned us about:

"Man is flying too fast for a world that is round. Soon he will catch up with himself, in a great rear-end collision and man will never know that what hit man from behind was man."

"THAT MAN NAMED H. ROE"

Mr. SYMINGTON. Mr. President, the stories told by and about H. Roe Bartle are legion in Kansas City. He is one of the most beloved citizens of our State.

Recently the Country Squire magazine published an engaging account of a reporter's encounters over the years with him.

Before placing the article in the RECORD, I am glad to update it by reporting that H. Roe Bartle is now out of the hospital and feeling much better.

I ask unanimous consent that the article entitled "That Man Named H. Roe," written by Tom Leathers, and published in the Country Squire magazine of July 9, 1970, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THAT MAN NAMED H. ROE

(By Tom Leathers)

To a 20-year-old reporter for The Kansas City Star, the huge man was an awe-inspiring sight. Not only because of his immense girth which he carried impressively wherever he went—but more important, the big one was H. Roe Bartle. And to anyone who grew up around here, Roe Bartle is as much Kansas City as the Liberty Memorial or Swope Park.

It was 1949 when I was first assigned by The Star to cover the Boy Scout Round-up at the Municipal Auditorium. It wasn't exactly the prime assignment for a reporter. Not only was it looked upon as sort of dull, but it also was difficult to cover—chiefly because of the confusion resulting from thousands of uniformed boys running every which way.

But Roe Bartle made it easy for me. He spotted my inexperience and quickly came to my rescue. Roe was Chief Scout Executive and, as such, he could have chosen a place that night in the spotlight of the Arena. But he chose to take a seat next to a young man who needed help. And help he did. Not once did he budge from his

seat during the two hours. In that booming voice filled with those beautiful Bartleisms he described each and every event. The way he told it, the Round-up was an exciting, thrilling and cherished experience for thousands of energetic, vigorous and dedicated young men. And before he was through, I believed it as much as he did.

Plenty of people can tell Roe Bartle stories. Some may start them with an off-the-cuff explanation that Bartle is a bag of wind—but before they get very far into the story, you'll see their eyes light up as they recount an act of kindness performed by the hulking man. After all, it really isn't the thing to love a man while he's alive. You're suppose to do that after he's dead. So much of the anecdotes people tell about his thoughtfulness are carefully camouflaged a bit with smiles and jokes—the same kind dished out so well by the man himself. But his love has touched many, many people, whether we're big enough to admit it or not.

Twenty years after that Boy Scout Round-up I visited him again as a reporter. It was 1969 and this time I was doing a story for *The Squire*. I felt like I was the only one 20 years older in the room. Roe Bartle hadn't changed. He had the same vigor, the same excitement for Kansas City that he had had that night in the Arena. We sat for three hours in his apartment on the Plaza, literally surrounded by memorabilia of his long service to the Boy Scouts and countless other organizations. His memory as usual was infallible. No detail had disappeared in the past. He could tell a story like it was happening right then and there, and with all the flourishes of a 100-piece brass band.

The interview took place on one of those rare days when he had been in town. Most of his time had been spent on speaking engagements in all parts of the country, speeches that netted him as much as $1,500 a time. And in each speech, he never forgot to talk about his beloved Kansas City.

Some say Roe Bartle likes money since unquestionably he's a millionaire. But those that really know admit that while Roe Bartle likes money, it's principally for what it can do to help others. For years, he's lived modestly, spending only a fraction of his earnings on himself and his family. Much of the rest has gone to charities, colleges and people who need it worse than Roe.

The other day I heard from him again. A low, raspy voice on the phone announced that "This is the Super Chief himself." He has been a patient at St. Luke's Hospital for more than two months, fighting off numerous set-backs to the amazement of a team of eight doctors.

Though his voice occasionally halted and broke for a moment, he recounted his operation as only he could do it. The doctors weren't able to give him the regular anesthetic so Roe was wide awake during the long, and undoubtedly painful experience.

"I talked to the surgeon the whole time he was carving," Roe explained. And then repeated word-for-word some of his choicest comments during those crucial times.

Then, he got his nurse on the phone to say hello.

"Do you remember that mean, old nurse at Camp Osceola when you were a Boy Scout?" he asked. "Well, she's still helping me out."

As she talked for a moment, you knew she was used to the Bartle humor—in fact, like most of us, she looked forward to it.

Then, it was time to say goodbye. Once more he lamented that he could have no visitors, something more painful to him than the operation itself.

"I'm lucky to be surrounded by people who will go the extra mile," he said. "And you can tell people I haven't fired the staff or reorganized the hospital like people expected me to do."

And then he added:

"God love you and take care of your family."

That night I was driving downtown, past the Bartle apartment and then on down the Southwest Trafficway. And I though that if Kansas City really wanted to thank its number one citizen it could name the trafficway in his honor. Bartle Trafficway would be a fitting gesture to a man who's worked so hard to keep Kansas City moving . . .

And if they're going to do it, they might as well get on with it now as later. Roe often likes to joke about his doctors who he says have been trying to bury him for years.

"But instead, I've buried all of them," he says.

Chances are that right now he's preparing for his escape from St. Luke's and his next trip to some speaking date. Like the Liberty Memorial, the Kansas City Chiefs, and the Boy Scouts, there will always be a Roe Bartle . . .

J. MARK TRICE

Mr. GOLDWATER. Mr. President, early in January 1953, a very frightened and somewhat timid desert rat landed in Washington, feeling as out of place as anyone possibly could. I had not been in my hotel room 15 minutes when the phone rang and the voice at the other end said, "This is Mark Trice," and I wondered then who that could be.

He immediately told me that he was Secretary of the Senate and his interest that morning was in helping me to get started. He came to me like a life ring comes to a drowning man, and I eagerly trotted over to his office and told him of my abysmal ignorance of everything connected with the job. He sat with me for several hours, explaining the functioning of the Senate, its committees, how I would be assigned my different committees, and what was expected of me as a freshman Senator.

Later he arranged my first press conference and supervised it in a way that a mother eagle would watch her fledgling birds to make sure they did not get hurt. I have never forgotten the great warmth and sincerity of this fine man. He went out of his way to help a freshman Senator from a far off small State. Through the years since, I have enjoyed more and more not only his friendship but also the friendship of his beautiful wife, Peggy, and his family.

It is difficult for me today to look at him and believe that such a young looking person could have been in this city and in the Government for 50 years. I know some men to have been here 2 years and they look 110 years old; but Mark long ago solved the problem of worry, and it is reflected not only in his youthful appearance but also in the extremely efficient way he gets the job done. He is an irreplaceable asset, not just to the Republican Party, but to the entire Senate and our Government, and, while I will not go so far as some of my colleagues in wishing him another 50 years, I certainly hope he is around for many years to come.

DEVELOPMENT OF A NEW HELICOPTER TO REPLACE THE "CHEYENNE"

Mr. McINTYRE. Mr. President, the Armed Forces Journal of August 17 contains an article about a new helicopter being developed for the Army as a replacement for the Cheyenne. The Armed Services Committee has recommended a termination of the Cheyenne program.

According to the article, prototypes of the new helicopter are being developed by Sikorsky with company I.R. & D. funds. The new gunship is expected to approach the Cheyenne's specs, yet to be available at less than one-fifth the Cheyenne's cost, $675,000 to $775,000 per copy as opposed to almost $4 million per copy for the Cheyenne.

I have not yet had an opportunity to verify the facts contained in the article. Nor am I fully persuaded as yet that a new attack helicopter is needed by the Army. If the facts are true, however, and if a new helicopter should be required soon, it would be ironic if the company which lost out on the Cheyenne contract itself due to Lockheed's buy-in tactics were to be the winner in the end.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIKORSKY TO FLY AH-3 PROTOTYPE IN FOUR TO SIX WEEKS

(By Brooke Nihart)

Company-funded prototype of an AH-3 alternative to the Army's AH-56 Cheyenne gunship program will be flown by Sikorsky within the next few weeks, The Journal has learned from Pentagon sources. Sikorsky recently gave the Army an unsolicited revised proposal for the armed SH-3 derivative.

Sikorsky's move is reminiscent of Bell's successful effort late in 1965 to prototype its AH-1G Cobra gunship as an "interim" AAFSS.

Capitol Hill observers say the future of Sikorsky's proposal looks a lot brighter in light of Senator Thomas P. McIntyre's (D-NH) attack against continuation of Lockheed's work on the Cheyenne. Among McIntyre's charges is that "Lockheed bid in low to get the contract, expecting to later recover any additional costs incurred." Lockheed's bid, said McIntyre, "despite the fact it had never built a helicopter—was only $77-million, as compared with Sikorsky's $114-million." Charging also excessive cost growth, McIntyre said: "The unit cost of the Cheyenne has increased from a preliminary planning estimate of about $1-million to an admitted present estimate of almost $4 million.

The company's first proposal, submitted 12 August 1969, was reported in The Journal (22 Nov.). Sikorsky's latest proposal, delivered to the Army last month, breaks down the developmental work incrementally to meet new DoD milestone contracting procedures and lower budget funding levels.

The AH-3 will use dynamic components—rotors, gearboxes, shafting engines—of the Navy's SH-3 and add them to a new cockpit and streamlined fuselage containing armament and fire control equipment. The new configuration, Sikorsky believes, would meet most of the Army's AAFSS (Armed Aerial Fire Support System) or AH-56 Cheyenne gunship requirements. (As noted previously [Journal 25 April], the Air Force has in the past attempted to lay claim to the AH-56 for its own on grounds it is a "convertiplane"—a compound [winged] helicopter—which the AH-3 is not.)

Sikorsky officials queried about the prototype were tight-lipped and would neither confirm nor deny Pentagon reports that such a project is underway or that the AH-3 will soon be rolled out and flown

Characteristics of the proposed AH-3 were believed to be as follows:

Speed—dive 200kn, cruise clean 180kn, cruise with armament 172kn.

Rate of climb—1480fpm on one engine.

Hover ceiling (95° out-of-ground effect) 4,000 feet at 17,290 pounds gross weight.

Armament—XM–140 30mm cannon, XM26 airborne TOW missile system, XM159 2.75 rocket launcher.

Cost—$675–775,000 plus GFE (government furnished equipment).

THE DISABLED AMERICAN VETERAN

Mr. DOLE. Mr. President, on August 17, Mr. Harold Russell, Chairman of the President's Committee on Employment of the Handicapped, spoke before the national convention of the Veterans of Foreign Wars in Miami Beach, Fla. Mr. Russell's remarks concern the important role played by the VFW in meeting the needs of the disabled veteran who has given so much for his country.

Mr. Russell commends the progress that has been made in fulfilling the needs of these men, but points out that much more remains to be done in order to assure every opportunity to all disabled veterans. Improved medical care, rehabilitation counseling, training, education, employment, and the elimination of architectural and transportation barriers are vital to the realization of full opportunity for every disabled veteran, and all handicapped Americans.

I invite the attention of the Senate to Mr. Russell's remarks and ask unanimous consent that they be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY HAROLD RUSSELL, CHAIRMAN, THE PRESIDENT'S COMMITTEE ON EMPLOYMENT OF THE HANDICAPPED, BEFORE THE NATIONAL CONVENTION OF THE VETERANS OF FOREIGN WARS, MIAMI BEACH, FLA., AUGUST 17, 1970

It was a very different world when the Veterans of Foreign Wars was "born" in 1900. It is a far better world today for the American veteran thanks to the leadership and dedicated effort of the VFW.

Seventy years of progress for the veteran is a proud occasion for our Nation. I am personally pleased and honored to be with you today to share in the celebration.

It is a great privilege for me to present your Commander-in-Chief Ray Gallagher, on behalf of the President of the United States a special award from the President's Committee on Employment of the Handicapped.

But, before I present the award, I'd like to make a few comments about what has happened to the veteran, specifically the disabled veteran, in seventy years of VFW leadership.

Frankly, there are no figures following the Spanish-American War. We do know that a staggering percentage of those seriously wounded in World War I died immediately after receiving their wounds. This is not, as you know, the case in Vietnam.

In 1921, the first year for which figures are available, 523 handicaped Americans were rehabilitated under the infant Federal-State Vocational Rehabilitation Program. Last year, 241,390 handicapped men and women were successfully rehabilitated under the same program.

At the beginning of World War II, in 1941, 38,000 handicapped men and women were placed in jobs by the Federal-State Public Employment Service. In Fiscal Year 1969, 324,600 disabled workers were placed by these offices.

The Federal Government alone has hired over 250,000 handicapped workers in the past 20 years; the Veterans Administration has rehabilitated 700,000 disabled veterans in the past 20 years; 6 million handicapped workers have been placed in jobs by the Public Employment Service in the past 20 years of which a large percentage have been disabled veterans.

That's real progress for the handicapped. And, it's groups like the Veterans of Foreign Wars that have led the country in committing the needed resources to make this progress—particularly for the disabled veteran.

The latest indication of VFW leadership has been its splendid "Project Alarm" which has focused public attention—and concern—on the conditions in VA hospitals. Today, thanks largely to this effort, Congress and the Administration are aware that VA hospital system needs help and are actively seeking ways to provide that help.

In the past 23 years, the President's Committee has been proud to help make the dream of opportunity for all the handicapped a reality. Our Nation has made great strides in this effort, but much more remains to be done.

The 275,000 wounded veterans returning from Indo China need our support. We must redouble our efforts to open opportunities for these fine men who have given so much for their country. Many of them will need to be retrained as they will be unable to go back to the jobs they held before the service because of their disability. Many have set their sights higher than they had before becoming disabled, and want further education. But in this vast land of ours, only a handful of colleges and universities are *fully* accessible to the severely physically disabled. And barriers are by no means limited to college campuses. There are architectural barriers barring the severely disabled from public and private buildings from coast to coast. And there are transportation barriers which prevent the severely disabled from being able to afford getting to a job.

The older, disabled veterans of World War II and Korea are confronting new job obstacles because of age and outmoded skills. They need the energetic support of your members who are employers.

And—most certainly—your full support is required to assure the disabled veteran that his rehabilitation *will* lead to successful employment and *will not* be obstructed by insurance barriers.

In too many cases, employer recognition of the desirability of hiring disabled veterans is overshadowed by the knowledge that if a disabled veteran does have a job-connected accident, workmen's compensation costs may be higher than if the same accident involved a nonhandicapped worker.

I don't think I have to tell some of you older disabled veterans what this insurance barrier is like. You and I know that workmen's compensation in the United States has been—and continues to be—a major roadblock to the rehabilitation and employment of disabled veterans.

In thirty of the States, second injury laws do not properly protect employers who would like to employ disabled veterans. In four other States, employers have no protection whatsoever.

We are trying—constantly and energetically—to get these States to improve their workmen's compensation laws so as to give employers parity of risk if they hire disabled veterans. In this, we need your help.

In addition, we are exploring the possibilities of a one-step national solution to the insurance problem of disabled veterans. We would like to see a Federal second injury program which would reimburse employers for workmen's compensation costs in the case of service-connected disabled veterans.

This is specifically where we need your full support. We have asked for consideration of a Resolution at this convention requesting the Secretary of Labor to seek Congressional authorization and an appropriation to reimburse the Nation's employers for excess insurance costs if their disabled veteran employees suffer on-the-job accidents.

It is my sincere hope that you will give this Resoltuion your most serious attention.

VFW leadership can—and does—make the difference. Your leadership in supporting efforts to more effectively rehabilitate and train disabled veterans through VA hospitals is a tribute to your Rehabilitation Commission and its dedicated Director, Norman Jones, who represents VFW on our Executive Committee.

As a veteran, and a disabled one at that it gives me personal pleasure and satisfaction to present to the Commander-in-Chief of the Veterans of Foreign Wars the following award which reads

"The President's Committee on Employment of the Handicapped Salutes The Veterans of Foreign Wars of the United States on its Seventieth Anniversary and Expresses Appreciation for its:

Seventy Years of Concern for and Active Support of Rehabilitation and Employment of Disabled Veterans.

Active and devoted participation in the programs of the President's Committee and Governors' Committee on Employment of the Handicapped;

Outstanding Awards and Public Information Programs which have greatly advanced the rehabilitation and employment of America's handicapped;

Continuing cooperation in support of the President's Committee's goal of full opportunity for every handicapped American.

BILLBOARD REMOVAL

Mr. MOSS. Mr. President, unquestionably one of the most effective one-man lobbies at work in Washington today is Douglas T. Snarr, the young and aggressive Utah billboard owner who is trying to make Congress show that it meant what it said when it passed the Highway Beautification Act of 1965 and decreed that billboards should be removed from rural sections of the Interstate and primary highway systems.

As we all know, the 1965 act has never been implemented; Washington bureaucracy has never come up with regulations that are either workable or within budget limits.

But Doug Snarr has a plan which is both practical and workable. It would not cost much, would cut quickly through the redtape, and would bring results within a relatively short time after it was put into effect. I was sold on the Snarr plan as soon as it was explained to me, and I introduced a bill which the Senate has now passed to put it into effect. The House of Representatives has taken no action, although it has had the bill for more than 9 months.

In today's Washington Post, Colman McCarthy has written an excellent column on Doug Snarr and his plan. I ask unanimous consent that it be printed in the RECORD. I commend it particularly to our colleagues in the House.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BILLBOARDS AND EYE POLLUTION

(By Colman McCarthy)

Douglas T. Snarr, 35, a Utah billboard owner, supporter of Goldwater in 1964 and Richard Nixon in 1968, a former Mormon

missionary in Ireland, is currently a one-man lobby to get the government to obey its own law. He realizes that may be asking a lot, but the law he wants obeyed is the 1965 Highway Beautification Act. "It involves pollution and saving the earth," says Snarr, "and if the public can't get action on that issue now, it never will."

The 1965 act ordered all billboards removed by July 1, 1970 from rural sections of the interstate and primary highway systems. This involved some 800,000 signs bordering 235,000 miles of roadway; the billboards are still up—despite its illegality—and have a fair chance of staying up. Because this issue comes when the public is highly sensitive to saving the environment and rural billboards are clearly anti-environment, the dispute is in many ways a test case.

Three sides are feverishly at work: Snarr, the Department of Transportation and the Minnesota Mining and Manufacturing Co. The moves of each are part of a rising curve of activity that remains calm until questions of law and money are raised.

Douglas Snarr wants the billboards down for two reasons. First, he has a simple faith in the law, born from his big sky, open-country heritage of the west. The second reason is dollars. The Highway Beautification Act provided just compensation to sign owners for their potentially illegal signs. This would pay back the bill board owners for money they invested in good faith before the law became pro-beauty. "For me," says Snarr, "with 1300 signs in 13 states, this means an original investment of $3 million. I don't want every last cent of that back. I only want a fair settlement so I can start another business."

Three years ago, Snarr, on seeing the government's fumbling and often do-nothing efforts regarding billboard removal, devised a plan. Basically, it was a lost-cost, speedy, non-red-tape approach by which the signs would be removed company by company by the owners themselves, expense free. In turn, each would be paid by the federal and state governments, in 75 and 25 per cent shares. Previously, the states, in partnership with the U.S. Bureau of Roads, were empowered to remove the signs—one by one, week by week, century by century. Since five years have passed without the first sign's getting the ax, only light year numbers are accurate in guessing when sign 800,000 would come down.

Snarr, with Utah officials won over to his plan two years ago, came to Washington. After 37 trips back and forth—and with his wife and children now holed up in a one-room apartment with sleeping bags—Snarr has had the ear of Transportation Secretary John Volpe. Surprisingly, Volpe, once viewed as a lay-on-the-asphalt man, is now actively working for highway environment and has endorsed the Snarr plan.

In an unusual move, Volpe recently sent his department's general counsel—James Washington Jr., a former dean of Howard University law school—to interview billboard owners in several Western states. He discovered that the smaller firms were sinking fast. Even worse, the beautification act mocked its original intention, because now the billboards were often unable to be either removed or maintained; so they rotted, peeled, swayed and they made the eye sorer than ever.

Washington discovered other curious facts. First, contrasted with the small owners—who were now technically in an illegal business and thus could get no financing from banks—the large companies were often doing better than ever. They could afford to buy up the signs and sign leases of ailing small firms, gambling that since the law was not enforced for the previous five years, it would not be suddenly enforced now. Second, the large companies leased land for future signs where the highways were yet to be built. Finally, and most frightening to many who value scenery, the large companies erected signs 661 feet off the highway. That distance was chosen because the 1965 act forbids signs up to 660 feet. "Obeying" the law, the companies went a foot beyond, building jumbo billboards four times the normal size, making them visible without binoculars which the companies shrewdly realized most motorists wouldn't use as they whizzed by.

With this information from his general counsel, plus advice from Snarr, Volpe is now vigorously pushing an amendment to the beautification act. With money from the highway trust fund—$50 million annually—the Volpe amendment would allow the billboard companies to move their signs within six years, fairly paid. The jumbo boards beyond 660 feet would also be outlawed, as well as the existing ones. Thus, Volpe is after a total clean-up.

The largest of the billboard companies that the Department of Transportation describes as visual polluters and resistant to the Volpe amendment is Minnesota Mining and Manufacturing Co., which owns 38,000 signs through its subsidiary National Advertising Co. 3M markets such items as scotch tape, cameras, recorders and a powerful reflective fabric, Scotchlite—used on nearly all of the 800,000 illegal signs. Last April the board chairman of 3M, Bert Cross, was appointed head of the Nixon administration's National Industrial Pollution Control Council, a group meant to advise the government on how industry can obey the law and improve the environment.

As an alternative to the billboard section of the beautification act, 3M proposes what it calls the "federal scenic area law" that "would permit a reasonable number of rural signs to survive." A 3M spokesman, in discussing his company's position, stated that billboards were actually good for the country. "Let's say you get rid of all these signs," said John J. Verstraete. "What do you do about informing and instructing the public? Ninety per cent of our signs are a direct aid to the motorist while he is a motorist. How is a guy going to find out where he can get a tire fixed, where he can get gas, where he can sleep for the night? You take those billboards down and he won't know where he's at . . . It's a safety hazard not to have billboards."

Staff men to Secretary Volpe know they are in a battle with 3M, a powerful company. "Their proposal," said a Volpe aide, "doesn't solve the problem. It's a cosmetic tampering that will leave signs on the highway." Another DOT official added: "I'm not accusing 3M of anything, but let's just say that in this matter their hands don't seem to be clean."

An early ally in the fight to obey the beautification law was Sen. Frank Moss of Utah. Much of what the DOT is proposing was originally in the Moss bill that asked for quick billboard removal and compensation. Sen. Moss has also seen the lobbying efforts of 3M. "They have used every sort of device to delay. It's economic with them, an opportunity to profit."

None of the three sides in this dispute—nor the fourth side, the public—has any idea of its eventual outcome. As usual, legislation is needed, plus money. Crucial to a decision is the House subcommittee on roads, chaired by Rep. John C. Kluczynski. It meets in mid-September to write a law.

While the politicians listen to lobbyists, argue among themselves and mosey to a decision, a few scenery-loving citizens are enforcing the law in their own way. In Fort Collins, Colo., where purple-hazed foothills rise into the distant Rockies eight billboards were found flattened one morning. Douglas Snarr didn't saw them down because he was in Washington. But it was likely some citizens who agree with him. The trouble is, they are a little less patient than he. They can't wait to see the far country again with nothing in the way but antelope and deer.

4–H CLUB WORK IN HAWAII

Mr. FONG. Mr. President, during this week, August 17 through August 22, the University of Hawaii Agricultural Extension Service is holding on its campus the 30th Annual 4–H State Conference, called the Ahaoleo—Get Together.

On this occasion, I wish to congratulate Hawaii's 4–H clubs and to commend the 4–H State leader, Mr. James Shigeta, and his staff for the excellent work they have done.

Because of the accomplishments of the 4–H clubs, their constructive youth program, their significant contribution to the development of citizenship and to the agricultural economy, the story of Hawaii 4–H clubs deserves recognition.

The first 4–H club began in Haiku, Maui, in 1918 as a club to raise prize pigs. It had 31 members. This was only 4 years after the enactment of the Smith-Lever Act—1914—which authorized the Federal Cooperative Agricultural Extension Service to work with the State land-grant colleges and universities, and under which 4–H clubs were organized on the continental United States. This was during World War I, when the Nation adopted the slogan, "Food Will Win the War," encouraging people to produce more food—to produce "two blades of grass when one grew."

Although the then territory of Hawaii was not included under the Smith-Lever Act, agricultural research and extension work was nevertheless carried on by the Federal Agricultural Experiment Station in Hawai. This included the organization of 4–H clubs on the islands. The first Haiku 4–H club was organized by the late Dr. Frederick G. Krauss, then a staff member of the Federal Experiment Station, and subsequently professor of agriculture and director of the Agricultural Extension Service, University of Hawaii.

Another pioneer was Miss Mabel Greene, also a member of the Federal Experiment Station, who was placed in charge of 4–H club work in 1923 for the then territory of Hawaii. By 1925, 4–H was a going club program on Oahu, Maui, and on the Island of Hawaii; it was extended to Kauai in 1926.

In 1928, at the request of the legislature of the territory of Hawaii, Congress amended the Smith-Lever Act to include Hawaii as a full-fledged participant in the Federal Agricultural Extension Service, a cooperative program with the State's land-grant university. Upon the enactment of the amendment, Dr. David L. Crawford, then president of the University of Hawaii, inaugurated on September 1, 1928, the Federal Agricultural Extension Service as a part of the university's program.

Soon thereafter, Dr. William A. Lloyd, U.S. Department of Agriculture, who was in charge of the Federal Agricultural Extension Service for the then 11 Western States, arrived in Hawaii to help organize its new Agricultural Extension Service. The Hawaii 4–H Club is now in its 42d year of existence.

County extension agents and home demonstration agents organized 4–H

Clubs throughout rural Hawaii with local community leaders in charge. Clubs held meetings once or twice a month, carrying out farm projects in poultry raising, home gardening, and home orcharding, under the guidance of the county agents, and home demonstration projects in food preparation and clothing, under the guidance of home agents.

From the modest beginning of 31 members and one simple pig-raising project, the 4–H Clubs have expanded dramatically in projects and membership. Today, about 14,000 members are either enrolled or participating in about 35 different projects. They are engaged in a number of constructive urban as well as rural endeavors. Boys study livestock, community beautification, soil conservation, career exploration, among other projects. Girls learn to bake pies, to sew their own dresses, to groom themselves, and to prepare nutritious and well-balanced meals, among other projects.

Though the traditional role of 4–H relating to agriculture and home economics in rural areas is still important, in recent years 4–H has kept pace with changing needs and demands by entering into urban areas. It now gives out-of-school experience to city youths in automobile repairs, electricity, planting trees, and so forth. The real-life focus of 4–H programs is fitting the needs of urban youngsters.

Again, the 4–H program is flexible enough to allow participation in international experiences. For the past 20 years, Hawaii's 4–H clubs have cooperated with the international farm youth exchange program of the National 4–H Club Foundation, receiving mainland U.S. trainees who are en route to Asia, as well as Asian trainees who are en route to the United States. This is an exchange and training program which offers an opportunity to young farmers and homemakers—20 to 30 years of age—to go to a foreign country for a period of 3 to 6 months, to live and work in rural youth programs.

Under this exchange program, Hawaii has sent six IFYE delegates to England, Mexico, Nepal, Turkey, Japan, and India. The Hawaii 4–H has given assistance to the 4–H teen caravan program sponsored by the National 4–H Club Foundation in behalf of the Agricultural Extension Service of the State land-grant universities, and has participated in two caravans—one to Japan and the other to Spain. This is a summer exchange program for older 4–H Club members—17 to 20 years of age—to go to a foreign country and live in the homes of counterpart 4–H members.

Hawaii has been exchanging 4–H members with the British Columbia 4–H department for the past 3 years.

To date, 173 delegates attended the National 4–H Congress in Chicago; 81 delegates, the National 4–H Conference in Washington, D.C.; five delegates, the 4–H Leaders Citizenship Training Forum at the National 4–H Club Foundation, Washington, D.C.; 59 volunteer leaders, the Western Regional 4–H Leader Forum which is held on a rotation basis among the 13 Western States, and two delegates representing the United States attended the Canadian National 4–H Club Week, Toronto, Canada.

At the annual Hawaii State 4–H Conference—Ahaolelo—delegates from American Samoa and Guam have attended in the past. At my request, this year for the first time, two delegates, a boy and a girl, from Okinawa attended the conference. The Department of the Army and the University of Hawaii 4–H department fully cooperated to bring the two 4–H youngsters from distant Okinawa.

The 4–H remains today a means and a process by which the character of youth is strengthened through habits of thrift, self-reliance, self-help, industry, and cooperation. Through guidance, demonstrations, and public speaking, leadership is stressed and good citizenship is taught. Through projects, a sense of responsibility and a desire for achievement are encouraged.

The 4–H challenge is, "To Make the Best Better." The four H's, incidentally, stand for "head" for clear thinking, "heart" for greater loyalty, "hands" for larger service, and "health" for better living for the club, community, and country.

This is the story of Hawaii 4–H club work which tells briefly the vital role the 4–H is playing in building our young boys and girls into useful and responsible citizens, as well as in getting them actively involved in meaningful international relationships. At a time when a tiny minority of errant youths occupy the spotlight it is all the more necessary to pay tribute to the millions of American young men and women who are busily engaged in the constructive endeavors of the 4–H clubs.

FUNDS TO ACT NOW ON POLLUTION

Mr. HART. Mr. President, in his recent message to Congress, the President of the United States warned:

> We face the prospect of ecological disaster.

The President went on to say:

> There are still large gaps in our environmental knowledge, but a great deal of what needs to be done can be identified. Much of this already has begun, and much more can be started quickly if we act now.

I agree both with the expression of urgency and with the call to action.

The President made these comments in connection with the first annual report of the Council on Environmental Quality and went on to urge congressional action on a series of legislative recommendations.

Congress is considering those proposals, and will act on those it thinks valuable in the fight against pollution.

But I was disappointed to find no recommendation dealing with one antipollution measure already on the books, a measure which if enforced could enable the administration to act with the urgency the President asks of the Nation and of Congress.

I refer to the Refuse Act of 1899.

The act establishes criminal penalties for dumping waste into navigable waters without a permit from the Corps of Engineers.

When written it was intended to prevent sediment from clogging up ship channels.

However, the language of the act is well suited to the fight against pollution. As a matter of fact, the administration has on a few occasions used the act to move against polluters, most recently in connection with reports of mercury pollution..

Yet corps officials told the Senate Subcommittee on Energy, Natural Resources and the Environment, that the present budget contained no funds to enforce this act as an effective antipollution weapon and that no funds would be requested until next fiscal year.

Apparently, the main reason the corps was not asking enforcement funds was budgetary restraints.

Mr. President, here is a clear example of what many of us mean when we say our spending priorities are out of whack.

The administration warns of a dire environmental crisis and warns that we must act quickly if we are to avoid disaster.

Yet when it comes to providing funds to enforce a law which could stop present and prevent future poisoning of our waters, the administration begs off until next year.

How does that position square with the urgent call to action?

Following our hearings, the corps said it could use $4 million to begin full-scale enforcement of the act this year.

I have written the Senator from Louisiana (Mr. ELLENDER), the able chairman of the Appropriations Subcommittee on Public Works, urging the inclusion of $4 million for this purpose in the public works appropriations bill now before his subcommittee.

I hope for and seek the support of the administration in this request.

If Congress provides the money and the administration spends it, then the Federal Government will have indeed moved with a sense of urgency against pollution.

If we do not, we can only expect renewed criticism from those who point to the gap between the rhetoric of the Nation's leaders and the reality of their actions.

THE CHICAGO MARKET

Mr. PERCY. Mr. President, in volume 34 of Markets of America, Mr. Louis Goldblatt, president of Goldblatt Bros., Inc., has written an article detailing the economic strength of Chicago and the qualities that make Chicago a unique and vibrant city.

Mr. Goldblatt has participated actively in the life of the city for many years and is a noted philanthropist in Chicago.

I think this profile of Chicago is of general interest and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MACKEREL—AND CHICAGO LIKE IT REALLY IS

(By Louis Goldblatt)

Mackerel must swim constantly to stay alive. If they stop swimming they sink to the bottom and die. That is a fact . . . not a

statistical fact, but one way of telling you about the Chicago market.

The statistically based facts are—as you'd expect them to be, outstanding . . . extraordinary. After all, it is Chicago . . . and Chicago didn't "just happen". I leave statistics to later, and at all will hopefully offer both the ones you didn't expect even for Chicago . . . and those to update its spectacular market image.

CHICAGO IS "DIFFERENT"

I want to measure Chicago's character for you, its real differences from other great cities as a greater market. Firstly, it's a city with an economy that is healthy, wealthy and wise because . . . of its work force of about four million people there is no one particular industry or business that controls its economy.

Thirty percent are employed in manufacturing; about eighteen percent in wholesale and retail trade; thirty-five percent in services . . . and the remainder in a wide variety including government. That is sensible and amounts to a claim to fame that the other "advertisers" can't make . . . like New York, Detroit, or Los Angeles.

What is there really about the 8,000,000 people of the Chicago Metropolitan Area . . . that has built a city ideal for manufacturing and business locations, better servicing the created demand for goods . . . not to omit economical distribution . . . all under most favorable operational conditions? After all, you advertisers and manufacturers just as we, tap a "people-market" too in seeking to increase product sales.

The answer is "growth" . . . and growth stems from a natural power that forms within some men like a tornado. Chicago has more than its fair share of those men. They are more than just mackerel; merely existing is never their concern . . . it's empire building! The abundance of such extra-endowed men that continuously reseed the markets for growth of their "piece" of the trading area, provided a thrust so great as to force a main stream . . . and so much of the rest is caught up in that main stream.

AWARE AND AGGRESSIVE

What about those who cannot be empire builders; are they different too? In an important way they are.

It has been said that Chicago is a city of villages; that it therefore has not one heart, but many. Clearly, this compounds civic interest, and clarifies the affairs of a man and his family. Often his neighborhood is of clannish nationality and a pillar of religious strength, providing contentment that grows from this and the preservation of his culture. (The tendency of people to cluster with others of their own background holds true in the suburbs too.) It's a form of security . . . and has a way of heightening his interest in a new plant, or in his industry rising toward Number One output. He seems more "aware" of his Chicago business community, and is more aggressive too.

We have the best of what is big (Chicago); and the best of every part (the neighborhood and community) . . . and everything grows together. It's both . . . a breed that grows out here and builds a city, and a city that makes a breed grow.

Let's look at growth . . . signs of increasing product sales. In almost every one of the neighborhoods, and certainly in every suburb, there are many manufacturing plants, shopping centers and other evidences of a great, vital and expanding market. Despite the remarkable growth of the suburb areas, Chicago's largest and most famous shopping market still is the Loop . . . a thirty-five block area containing the city's biggest stores and many of its most important businesses.

CLUSTER OF DEPARTMENT STORES

On just one street . . . that great street, State Street . . . within only 5 blocks, the aggregated major department stores represented (Carson's, Field's, Goldblatt's, Sears, Ward's, Wieboldt's), create the world's most concentrated shopping area. Your product growth in sales . . . the expanding market . . . lies not only in the powerful new developments and trends "inside" and "at the edges", but you readily see the retention and flourishing, in fact, of the core itself. That's not a transfer for growth, it's a two-fold expansion *of* growth

SWEEPING URBAN PROGRAM

This is not to be confused with redevelopment where no less than 27,000 buildings were leveled in Chicago in what was the nation's most sweeping urban redevelopment program. No sooner had the old buildings toppled when the new arose to replace them: Carl Sandburg Village to the North; Hyde Park—Kenwood to the South; Chicago Circle campus on the near west side. There is a unique vitality to such growth and it carries promises of great rewards . . . greater markets. Fine new high rise apartment buildings sprang up all along the lake front . . . Lake Shore Drive, Sheridan Road, and Marine Drive. There was new construction throughout the near North Side, and in Old Town, and many other parts of the city.

Any great city has a right to build something special, but only Chicago emits a whole volley: Marina City, the John Hancock, the 60 story First National Bank Building costing $94,000,000, the 35 story Equitable Building, Inland Steel's all steel headquarters, the $87,000,000 Civic Center, and the almost finished 30 story Time and Life Building. For half a mile on the west bank of the Chicago River is arising a series of four 22 story office buildings, part of the $100,000,000 Gateway Center.

Then there are the new networks of expressways, built to link the burgeoning suburbs with the central city—Edens and the Kennedy to the north and northwest; the Eisenhower to the west; the Dan Ryan to the south. All this on top of having built one of the world's longest bridge approaches, the Calumet Skyway that speeds traffic over congested industrial areas.

MEANING OF CHANGES

Expansion—redevelopment—construction—and some of the finest transportation in the country and indeed the world!

Alright, so the last 15 years produced metamorphic changes in Chicago . . . what have all those changes produced in terms of strengthening the market place?

Chicago is Number One in steel production (we wrested the title from Pitttsburgh a few years ago), Number One as an airline and transportation center, Number One in manufacturing radios and television sets, Number One in meat product manufacturing, Number One in the manufacture of household appliances (from percolators to refrigerators), for decades Number One in mail order business (accounting for 93% of all the mail order business in the nation), Number One in export trade selling more goods to foreign countries than any other city in the United States.

IMPORTANT FIRST

It exports by air, and from "the fourth seacoast" . . . the St. Lawrence Seaway . . . (four-fifths of a billion dollars of manufactured goods a year), Number One in candy manufacturing, Number One in industrial machinery manufacturing, metal products manufacturing, tool and die making, musical instruments, in commercial printing (from bubble gum wrappers to encyclopaedias, telephone directories, Life, Time, The New Yorker . . . with 1100 printers in the city and 2200 printers in the suburbs), furniture marketing, business form production, athletic goods, plastics, railroad equipment, lighting devices, telephones, soap, Diesel engines, wire products, lamp shades, office machines . . . and I could go on and on, aware that Chicago may well be second in some respects, but this youngest of the world's ten biggest cities has so many important Firsts that it can take justifiable pride in itself, and especially in its hopes and prospects for the future.

I like to think of all these firsts as adding up to a lush and natural setting for all who seek to do business here. Notice that we're first in so many different areas.

A greater market must produce greater wealth.

Not too long ago the New York suburb of Scarsdale in Westchester County ranked as the nation's wealthiest community with an average annual family income of $29,276.

OPULENCE

This past year, at least three Chicago suburbs exceeded that figure. Kennilworth leads with a median family income of $35,866. Barrington ranked second with its $32,700. Flossmoor ranked third with its $30,693. Three other suburbs (Winnetka, Glencoe, Olympia Fields) had median family incomes above $25,000 a year. In fact, the median family income for the ten leading suburbs is reckoned at $26,000.

Similarly, in no fewer than 6 suburbs (Kennilworth, Barrington Hills, Flossmoor, Winnetka, Olympia Fields, and Lake Forest) the median value of a home was above $50,000. In 6 others, the median value of a home was between $40,000 and $49,000. In a very real sense, of course, it's the City of Chicago that makes the suburbs great. It is where most suburbanites earn the money that helps them achieve those remarkable median family incomes and pay for the expensive homes. Nor is the wealth confined to the suburbs . . . what with areas in Chicago like the near north (Gold Coast) where the median family income is reckoned at $27,960—topped by only the three leading suburbs.

AIR CENTER

Suburbanites accounting for many of the more than 30 million airline passengers who passed through O'Hare International Airport this past year—helped make Chicago the undisputed air center of the world. Imagine, a plane lands or takes off every 47 seconds on the average, around the clock, day and night, spring, summer, fall and winter. No other airport in the world even comes close.

Let's get back to mackerel. Mackerel eat almost every kind of small fish and will even sometimes eat a smaller mackerel. They glide through the water like torpedos and they swim together in schools. Schools break up at night and come together when it is daylight . . . always moving lest they die. The habits of a species! I wonder . . . do we Chicagoans have the right to call ourselves a species? (I would hate to think of us eating our own kind, of course . . . but the pace, the competition of a fast track keeps us improving and "off the bottom".) Look at all that's happened where we live and work . . . it can't all be luck. If we are different I leave it to the social technicians to really find out why.

I do know, however, of the unbelievable saga of brothers who founded and forged a business that grew to giant proportions and who began with only three assets. They had each other, $500, and the people of this city.

FROM ACORN AND THREE ASSETS

The incredulous part of the story, the Goldblatt's story, is the support of employees who rallied to every new location and with every administrative expansion, as though part of the family itself with deep and rare ownership interest. Presumedly there are such people everywhere, but I can't help believe that the number of them, within the total that came with us, is so high . . . they are indeed our greatest asset. No other single factor so assuredly is responsible for our growth . . . and the relative swiftness with which it came.

We believe Chicago and its people are different. In a sense, our company has proven it. The golden tales of success and fortune in America that reached us from a foreign land long ago lauded Chicago as the land within a land of opportunity . . . the tug at the boot-strap and the American dream. The memories of success tucked within the pages of my mind . . . are memories of people.

You readers who seek markets, locations, and create demands, who collectively spend about twenty billion dollars annually in advertising (in all media) . . . think warmly of Chicago and its total facets for living. It is not only a place to work:

By any yardstick, Chicago could boast the greatest concentration of educational facilities in the country. It has more fine colleges and universities than you find elsewhere. There are such institutions as Northwestern University (both in Evanston and Chicago), the University of Chicago, the University of Illinois, and a host of smaller colleges and Junior Colleges, along with such specialized institutions as medical, dental, business, and law schools.

FOREMOST CONVENTION CITY

Chicago is the foremost convention city in the world. More people come here for meetings, conferences and exhibits than go anywhere else. In 1969 there were 1100 conventions here. The Furniture Market alone attracts 80,000 furniture dealers.

Typical of the big exhibitions are the Home Furnishings Market; Chicago Automobile Show; National Houseware Show; National Boat, Travel, and Outdoor Show; Chicago Golf Exposition; Chicago World Flower and Garden Show; Chicago Shoe Show . . . there's no end. The popular site for many is the International Amphitheater, and soon the new McCormick Place rising from the ashes of a disastrous fire.

The city's facilities for such spectator sports as baseball, football, basketball and hockey . . . and virtually all the participatory sports are outstanding, whether it be fishing, boating, swimming, or tennis.

Our city excels with one of the world's most intense concentrations of medical research facilities. Both patients and practitioners come here from around the world, and it has been estimated that one out of every five doctors in the United States gets much or all of his training in Chicago.

Our theaters and auditoriums, while not first in number in the nation, nonetheless present some of the finest and most artistic productions to be found anywhere.

This is the home of the world-famed Art Institute and of the Field Museum, the Shedd Aquarium, the Adler Planetarium, and the Museum of Science and Industry.

There are 438 parks, and one of the longest beachlines anywhere. Its major athletic teams are the Cubs, White Sox (each with its own park); and there are the Chicago Bears, Chicago Bulls, Chicago Blackhawks, a host of others . . . even in soccer and rugby.

TRANSPORTATION HUB

I would be remiss if I didn't apply special attention to Chicago's role as the nation's ground transportation center. Twenty trunk line railroads representing half the nation's railway mileage come here. Chicago handles more than 35,000 freight cars in its switching district, along with more than 140,000 rail passengers and commuters. An average 1200 buses carrying more than 35,000 passengers enter the city daily. Besides it is port-of-call for 90 percent of the ships engaged in Great Lakes overseas trade, and the only connecting link between the St. Lawrence Seaway and the Mississippi Waterway system.

WORLD TRADE

Accordingly, consider its position in the world of trade, from retail to international. In the year just ended, retail sales for the eight county area that make up Metropolitan Chicago came to $14,600,000,000. Over 30,600 retail establishments do business here. There are 12,000 wholesalers with sales of $37,520,000,000 in 1969 . . . over two billion dollars more than the preceding year.

Typical of this city's vigor, is its manufacturing activity beginning with its champion steel output what with twenty percent of the country's raw steel coming from the district. In 1969 production of 26,200,000 tons of ingots broke all previous records. All of this in 16 companies with melting furnaces, and 24 plants where steel is rolled, forged or drawn, amounts to $17,422,000 a day in business.

Because of Chicago's easy access to raw steel and metals, and its incomparable transportation system, its Number One position in the making of steel products follows naturally . . . from storm windows and doors to automobile parts, from gutters and downspouts to huge tanks for oil and water.

Through the Chicago Mercantile Exchange, this city is the world's biggest trader in futures in egg, butter, poultry, farm produce, live cattle and hogs. Although no longer "Hog Butcher To The World" it holds its Number One position in meat products manufacturing with such giants as Armour, Swift, Wilson, Oscar Mayer, Mickelberry's and Rath headquartering here. And more and more:

The Chicago Board of Trade at the South end of the LaSalle Financial District, is the world's leading commodity market.

The world's largest hotel, the Conrad Hilton . . . it's here too.

The world's biggest water filtration plant, in Chicago.

The world's largest underground garage, accommodating nearly 4000 cars beneath Grant Park.

The Merchandise Mart, the world's largest commercial office building . . . in Chicago. The world's tallest apartment building, the Lake Point Tower; the John Hancock Center, the tallest apartment-office building (only a bit shorter than the Empire State Building.)

The world's largest Home Center, a Goldblatt's innovation in retailing of home furnishings and an exhibition in styles of living . . . a few miles west of Chicago in Downers Grove.

EYE-ON-THE-FUTURE

Whatever has been written or said about Chicago, one thing stands out above all else: It will never stand still.

In 1969 the gross metropolitan product was $47,200,000,000, 2 billion dollars more than the preceding year. Employment reached an all time high and so did total investment in construction and purchases of leases of industrial facilities plus land purchased for future expansion.

Chicago too has its housing problems, but it moves forward in an urban renewal program that will cost $900,000,000 and will hopefully, says Mayor Richard Daley, "eliminate slum and blight from every neighborhood." This is but a part of a Comprehensive Plan of Chicago that will cost $6,000,000,000 to benefit the millions who will reside here by 1980—and to create virtually a new city by the year 2000.

Additionally, $2,000,000,000 spent by 1200 industrial firms and educational institutions for research and development, point up Chicago "tomorrow". Some 60 colleges and universities as well as Chicago-based trade, professional and service associations engage in probing everything from economics to future mass transportation, to atomic energy, aerospace, theoretical physics and the stubbornest of man's serious diseases (the latter inspiring a unique organization and mass effort of our own many thousands of Goldblatt's employees, mobilized under the masthead of the Nathan Goldblatt Employees Cancer Research Foundation).

Let it be noted that the war against cancer is deeply woven in the Chicago fabric. It was Fermi's demonstration of the world's first controlled nuclear reaction at the University of Chicago that led to creating radioactive substances such as cobalt used for irradiation of deep-seated cancer. The use of methotrexate for certain rare cancer in women, although pioneered in Bethesda, Maryland, was strongly substantiated at Chicago's Passavant Hospital. Dr. Charles Huggins of the University of Chicago was awarded the Nobel Prize for relating some types of cancer of the breast and prostate to sex hormones. Furthermore, the use of Yttrium seeds for destroying cancer tissue was developed at the University of Chicago.

RELENTLESS WAR AGAINST CANCER

Permit me to pay tribute to my brother Maurice Goldblatt, founder in 1947 of the University of Chicago Cancer Research Foundation and still its Chairman. A leading merchant of this city, he has somehow paralleled a brilliant career with a lifetime of anti-cancer activity and philanthrophy in countless important compartments of cancer research . . . here in Chicago, but for all humanity, in all the world.

Whatever pressing problems confront us in the 1970's our history is certainly on our side, and we have many examples to inspire us. The years were dotted with disasters: the financial panic of 1837, the Great Fire of 1871, the Depression of 1929, and many others. Each time Chicago thrust back like the indomitable and forward moving giant it is.

I might conclude with . . . "holy mackerel, Chicago's on the GO!" It is obvious that with Chicago's typical zeal, its expanding facilities of past-present-and-future, a tremendous energy and potential, Chicago will continue to achieve goals in the years ahead.

VIEWS OF FORMER REPRESENTATIVE FISH ON U.S. INVOLVEMENT IN SOUTHEAST ASIA

Mr. PELL. Mr. President, several weeks ago, on June 17, 1970, I brought tc the attention of the Senate the prescient testimony presented by former U.S. Representative Hamilton Fish, of New York, during Senate consideration of the Southeast Asian Collective Defense Treaty in 1954.

In his testimony before the Committee on Foreign Relations at that time, Mr. Fish issued a warning against U.S. military involvement in Southeast Asia, predicting the result would be a long, bloody, and costly war that would be immensely unpopular and contrary to our national interests.

I have since been in communication with Mr. Fish. He has prepared and sent to me a statement reflecting his current views on the war and his own suggestion on how the fighting might best be ended.

Believing that Mr. Fish's statement and suggestions have very real merit and that Senators will be interested in Mr. Fish's views, I ask unanimous consent that his statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AUGUST 5, 1970.

WHY NOT STOP THE KILLING IN VIETNAM BY AN OFFER OF CEASE-FIRE SIMILAR TO THAT BETWEEN THE ARAB STATES AND ISRAEL?

(By Hon. Hamilton Fish)

No one knows whether the offer of a cease fire between the Arab States and Israel will eventually be successful. But it is certainly a worthwhile, constructive suggestion by

President Nixon and Secretary of State Rogers.

Why not offer a similar cease fire on a status quo basis, to the Communists in North Vietnam and the Vietcong, by the United States, South Vietnam and its allies. It would have the overwhelming approval of the American people, probably 90% or more, irrespective of partisanship, just to stop the killing and peace negotiations could follow. The longer they took, the better as it would provide time to train, equip and arm additional troops from South Vietnam and Cambodia to defend themselves against Communist aggression.

As one who believes that our involvement without the consent of Congress, in virtually a civil war in Vietnam, 10,000 miles away, was in the wrong place, at the wrong time, and in the wrong war, I am convinced that the time has come for immediate action to end the war by an outspoken worldwide offer of a nonpartisan cease fire, on a status quo basis, subject to later peace negotiations.

Sixteen years ago in opposing the SEATO Treaty, before the Senate Foreign Relations Committee, I stated that the signatories would run out on us and leave us holding the bag which they did, including France and Britain. I further stated if we became involved in a civil war in Southeast Asia and sent our armed forces there, that the Communist PolitBureau and the Communist General Staff would celebrate by getting drunk for a week as they would like to keep our armed forces in the jungles and swamps of Vietnam. Unfortunately that is exactly what they have succeeded in doing by draining our military and financial resources while they were taking over economically, politically, and militarily, the Arab nations, the eastern Mediterranean areas, and jeopardizing American oil reserves there.

The initiation of a cease fire between Israel and the Arabs, by Secretary Rogers and President Nixon establishes a sound precedent for an open appeal to North Vietnam and the Vietcong for a similar cease fire in order to stop the killing and casualties on both sides.

It seems somewhat strange that the United States should take the leadership in urging a Near East cease fire instead of publicly proclaiming to the world, a cease fire for the cruel and far more deadly war in Vietnam.

I believe in the integrity and sincerity of President Nixon and his determined efforts to end the war in Vietnam on a basis of a fair and honorable peace. I commend him for taking the first step by the withdrawal of over 100,000 American troops from Vietnam and believe by the end of the year it will be reduced by over another 100,000. But why continue the killing of American soldiers, those of our allies and our enemies, in Vietnam for a single day in this tragic and bloody war; the longest in the history of the United States and the third deadliest.

I urge President Nixon to immediately offer a cease fire by our armed forces and those of the enemy without any reservations of any kind on a status quo. Such an offer by President Nixon would be acclaimed by all neutral nations as a definite act by the United States to secure peace in Vietnam and to stop the bloodshed.

President Nixon in answering a question at a press conference, six weeks ago, stated that he was in favor of a cease fire, but indicated there might be difficulty in supervision of the Vietcong and guerrillas. This may be so but not half as much as in the case of the Arab guerrillas. The United Nations by its very nature ought to be willing to cooperate to provide the necessary supervisory forces. If not, both sides could maintain the status quo of their armed forces and could provide sufficient supervision.

A cease fire offer by President Nixon should be made on a non-partisan basis directly to the leaders of North Vietnam and the Vietcong. It should be supplemented by a world wide television public announcement supported and endorsed over the same television by Sen. Mike Mansfield, the Democratic leader of the Senate representing the entire Democratic party. If North Vietnam and the Vietcong turn down a peace offer based on a cease fire, then all the neutral nations will place the stigma for any continued fighting and killing upon the Communists in North Vietnam and the Vietcong.

There may be some risk but there are always risks in war, to begin it, to make it or to end it. But as a combat officer and former member of the General Staff, I believe a cease fire offer has been grossly exaggerated and am inclined to think that most of our top generals would favor a fair cease fire.

The fundamental concept of military tactics is to get your enemy into an area of your own choosing. This our enemies have done and I firmly believe we are playing into the hands of the world Communists by being there.

If President Nixon publicly urged a cease fire, and I see no sound reason why he doesn't, it would help stop all the Vietnam war unrest that has been going on in the United States increasingly and change overnight our prestige and influence in the free nations of the world. No Vietnam peace offer on a massive world-wide scale has yet been made. The Communists in North Vietnam and the Vietcong have suffered enormous casualties, their country and farms have been devastated, and they might be willing to stop the killing in order to secure a just and honorable peace. Certainly a cease fire offer on a non-partisan and global basis, should be made. Even if the chances of success are uncertain, like that in the Middle East, yet if a non-partisan cease fire offer is made and succeeds there is enough honor and glory for all those who participate in it. "Blessed are the peacemakers, for they shall be called the sons of God."

DETERIORATING POSTAL SERVICE—TULIA HERALD CALLS IT A NATIONAL DISGRACE

Mr. YARBOROUGH. Mr. President, Mr. H. M. Baggarly, one of the Nation's most respected country editors, recently wrote a hard-hitting editorial on the disgraceful decline in postal service during recent months. In this editorial, Mr. Baggarly points out some of the incredible practices in which the Post Office Department has engaged.

For example, in Tulia, Tex., the square dance news was mailed at the Tulia Post Office on Monday and was placed in the post office box maintained by Mr. Baggarly's newspaper in the Tulia Post Office on Thursday. This means that it took 3 days for a letter to go from the drop box to a post office box within the same post office building. The reason for this delay is that the letter was taken from the Tulia Post Office and sent to Amarillo, approximately 50 miles north of Tulia, where it was given an Amarillo postmark and then it was sent to Claude, Tex., which is approximately 28 miles east of Amarillo and 72 miles northeast of Tulia, for some reason which is yet to be explained, and eventually returned to the Tulia Post Office and placed in Mr. Baggarly's box, Thus, to send a letter from one place within the Tulia Post Office to another, the letter traveled approximately 150 miles. This outrageous situation is a typical example of "Blountized" corporate inefficiency in handling the postal affairs of this country.

This is but one example of the lack of concern the present administration seems to have for the needs of our citizens of rural America. The Post Office Department (or Postal Service as it is now called) has restricted the use of local postmarks in many of our smaller cities, such as Tulia, Dumas, Hereford, Littlefield, and Plainview, a city of 25,000 people, to local mailings, thus causing these cities to lose their identity. All of this loss of identity of cities and long, expensive and useless hauling of mail is to get it to machines in Lubbock or Amarillo for cancellation. Letters are hauled a a total of 150 miles just to run it through a canceling machine, with days of time lost in getting the mail from sender to receiver. This is an example of Blount's increasing inefficiency. We cannot afford to run the Post Office like a Government contractor runs the cost-plus contracts.

Instead of trying to correct these problems, all that the Postmaster General has devoted his energies to has been the conversion of the Post Office into a corporation type moneymaking institution. In other words, the motto of the new postal corporation should be "Less Service for More Money."

Mr. President, Mr. Baggarly is close to the people of rural Texas and knows what things concern these people. I submit that the people of America will not tolerate this type of postal inefficiency for long. So that all Senators may have the benefit of Mr. Baggarly's insight into this problem, I ask unanimous consent that the editorial entitled "Postal Service—National Disgrace," published in the Tulia Herald of August 13, 1970, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POSTAL SERVICE—NATIONAL DISGRACE

Maybe not "from the halls of Montezuma to the shores of Tripoli" but at least from Caribou, Maine, to Birchville, California we read severe criticism of the postal service.

The Wilmington, N.C., Star reports that it frequently has been forced to omit syndicated columns mailed in New York and Washington and received in Wilmington four days later . . . by air mail!

Columnist David Lawrence reports that one air mail letter addressed to him in Washington from Sarasota, Fla., reached him 11 days after it was postmarked.

New Mexico residents complain that it takes mail three days to travel 20 miles!
